Manifestly, the drift of public sentiment is in the direction which answers all such interrogatories affirmatively. Jay Gould does not enter the arena in self defense. With him silence is golden. His mission in the world is to make money. The more mysterious his methods the better he is pleased. He likes to be regarded as inscrutable, unfathomable, dark. He is not particular what people say. He is a student of character, disposition, deeds. He believes that men, like railroads, stocks and bonds, are purchasable. When he wants a man, a judge, a legislature, he bids and buys. There is no foolishness about Jay Gould. There are no flies on him. In his line of endeavor, high or low, as people may choose to regard it, Jay Gould has been a financial success. He has large assets. As a youth, we see him with a trap, and now in his mature years, bordering upon the sere and yellow leaf, the November of life, we see him with lots of game. His philosophy teaches that—

"Gold is the strength, the sinews of the world;
The health, the soul, the beauty most divine;
A mask of gold hides all deformities;
Gold is heaven's physic, life's restorative.

But the question arises, why single out Jay Gould for censorious criticism? Has he amassed a colossal fortune by ways that are dark? It is equally true of others. Has he the power to change water into wealth? Others possess the miraculous faculty, and do not hesitate to use it when opportunities

are presented. Jay Gould is only one of a thousand of the same type who pursue the same methods in different enterprises—the difference being simply in ability to concoct schemes and use money to carry them out. As they accumulate cash they become more potent, as it was said of the "Young Napoleon," Ives, keeping well within the law, they manage to make the world pay tribute and defy the courts.

The strange feature about the business is, that Jay Gould comes in for by far the largest share of denunciation. "As the savages of Africa," says one, "make for themselves an idol to be beaten when the weather does not suit them; as the boys of England prepare an effigy of Guy Fawkes to be gibbeted and burned, so our politicians, from the ragged anarchist to the well-fed congressman, dress up an image constructed of the odds and ends of their own worthlessness, and label it Jay Gould." This is very pretty, and is chiefly objectionable, because Jay Gould alone is selected for condemnation. It is a great mistake to suppose that "ragged anarchists" and "well-fed congressmen" are the only persons who censure Jay Gould. Occasionally this fault-finding becomes epidemic and defies all quarantine barriers, and then Jay Gould becomes the object of universal wrath, and yet it is difficult to discern wherein he is worse than others of his type, except that he has more money than some of them and more ability as a schemer.

It is well known that Jay Gould dabbles largely in railroads. His connection with the Union Pacific has brought him before the country in a way which seemingly justified the charge of general malversation; but says a writer in a paper devoted to railroad interests—

Now, the fact is that when in 1873 he (Gould) bought a controlling interest in its stock he found it so poor that there were none to do it reverence. Even its projectors and constructors had no faith that a profitable business could ever be created in the sterile plains through which it ran, or built up upon the Pacific coast against the competition of water routes. It was chiefly constructed with iron rails laid upon pine ties and with numerous wooden bridges and culverts; it had no efficient protection against snow blockades; it was poorly equipped with rolling stock. It had neither a branch of any nature nor an ally upon whose friendliness it could rely. It was attacked by would-be rivals with prolate schemes which if successful would instantly have bankrupted it. It had never earned nor paid a dividend, and there were but few, if any, besides Mr. Gould who had faith that it ever would be able to pay one.

Now, we submit that, accepting the fore-

going as true, Jay Gould stands out conspicuously as a benefactor of his country. To take an old, decaying bankrupt railroad, and make it an efficient highway for commerce and travel is equal to making two blades of grass grow where but one had previously flourished, and Jay Gould, being credited with having accomplished such a work, ought to receive proper credit. It is further said :

Immediately he commenced a system of utilization of its resources to the utmost. By his influence with other lines in which he was interested, he secured for the Union Pacific the power to make through rates over other lines upon as favorable terms as were enjoyed by any of its competitors ; moreover, these rates were divided between it and its connections, not upon the pro-rata basis which was customary throughout the country, but upon a basis much more favorable to it, a basis which the commissioners report to be still in force, and by which the Union Pacific is even now earning in excess of half a million dollars per annum in excess of the amount which it would receive if this arrangement had not been enforced by the power and favor of the man whom they abuse. Every natural resource of the line was by him steadily encouraged and rapidly developed ; the tracks were raised above the plains by embankments three or four feet in height, so that the winds, instead of blowing snow upon the track and thus blocking it, would blow the snow off and thus keep it clear. Steel rails were substituted for iron, oak ties for pine, masonry and earthwork and iron bridges for wooden bridges and culverts. No rates were increased, but such reductions were made as would lead to an increase of business and of revenue. The result was that the line commenced almost immediately to earn dividends, and having earned them the company actually distributed them to their stockholders instead of laying up the money to pay a debt that did not become due for nearly twenty years, and for the ultimate payment of which they were engaged in making another provision.

In such matters the readers of the *Firemen's Magazine* are as good judges as can be found. They are practical railroaders. They know a good road from a bad one, and can quickly distinguish between an efficient and an inefficient management.

It is in the interest of society, when it can be honestly done, to rescue the names of men from obloquy. At least the truth should be spoken, and always due credit given. We do not believe that Jay Gould is a sinner above all the rest of his class. As a matadore he has slain a good many bulls and bears and taken their hides. As a trapper he has been a success. He spreads out amazingly, but is no where very thin. He may lack conscience and soul because he can't buy such things nor trap them. He has gold, brass, water and steam, an iron will and a sharply defined purpose. In such things he is neither worse nor better than the Vanderbilts, the Sages,

Scotts, Garretts, Corbins, *et al.*, to the end of the list. He is credited with a clean home. He is said to be an affectionate husband and a doting father. In such things he is human, if not a Christian. If he prefers gold to God as an object of worship he can play pagan to his heart's content, and if he wants a monument when he dies to perpetuate his name and deeds he can build it while he lives, or direct how it shall be done when he is dead. But he is entitled to credit if he keeps his railroads in good order, and if he pays fair wages to his employes and deals justly with men who earn their bread in the sweat of their faces he may find favor with St. Peter and step in through the "pearly gates."

W. E. LEFLET, Esq., editor of the *Railway Service Gazette*, takes Mr. C. S. Wheaton to task for making assertions "absolutely and wholly false." The *Gazette* says :

Mr. C. S. Wheaton, in the last issue of his publication, states that the editor of the *Railway Service Gazette* "wore the emblem of the Order of Railway Conductors two or three years," and "used the reputation of the Order to procure transportation."

This statement is absolutely and wholly false, and we cannot permit it to pass unnoticed. We can hardly believe that it is willfully and maliciously made, and if it is not, Mr. Wheaton will either correct it or he will produce the proof to support it.

The foregoing places Mr. Wheaton, to speak mildly, "in the soup." Mr. Wheaton, by the verdict of all honorable men, must now substantiate what the *Gazette* pronounces false, retract the slander or remain silent, the latter course being equivalent to a confession. The *Gazette* doubtless explains the matter when it says :

This untruthful statement of Mr. Wheaton's publication is apparently inspired by the fact that the *Gazette* has opened its columns to print the news of the young and rapidly developing Brotherhood of Railway Conductors.

The *Gazette* appears to have a corner on Wheat-on—or Onwheat.

Two interesting relics of the past were lately exhibited to the members of the Engineers' Club of Philadelphia. One was a piece of the first rail used by the Camden & Amboy Railroad, weighing about twenty pounds per yard. The other specimen shown was a piece of 7½-inch rail, laid about 1847, on the same road. It was of slightly differing sections, weighing about ninety pounds to the yard.

LABOR ORGANIZATIONS.

We are not required to offer tabulated statistics to prove that labor organizations have during the past twenty-five years rapidly multiplied. And, on the other hand, the proof is equally conclusive that the great majority of working men refuse to enroll their names in any of the guilds, unions or brotherhoods designed to improve the condition of men dependent upon their labor for existence. The fact that a majority of working men are not members of labor organizations has often provoked the inquiry, Why do they stand aloof from such organizations? No one, so far as we are informed, attempts to answer the interrogatory. That it is one of supreme importance no man credited with common sense will gainsay. In the line of elucidating what may appear to many as a difficult proposition, we inquire why it is that within the past twenty-five years, working men, more than ever before in the world's history, have instituted unions designed to promote their welfare? We unhesitatingly assert that during the period named working men have possessed more intelligence in the aggregate than at any previous time known to authentic history. We refer to the United States of America, but the declaration holds good in England, and in some countries on the continent of Europe. In the United States, where the declaration that "all men are created equal" stands forth as a political fact of powerful and conquering significance, there are special reasons not found in other countries why American working men should organize to protect themselves from injustice at the hands of employers, because here a working man is a sovereign in his own right, with all the privileges and prerogatives that belong to any other man, and because any injustice to him is a blow aimed at the fundamental principles upon which the government rests. But there is another reason why American working men have been actively engaged in organizing during the past twenty-five years. They have seen on the part of employers a purpose to reduce their wages to a point totally insufficient to maintain them and their families as should become American citizens. The charge is fully substantiated by the facts, and the alarm has extended from the center

to the circumference of the country. On the one side statistics have shown fabulous prosperity and the accumulation of untold wealth, while on the other hand there have been such exhibitions of poverty and wretchedness as to defy exaggeration. The working men who produced the wealth have been the victims of continuous calamities, the result of policies as vicious as were ever put in practice in any land. Working men have believed that by organization, by united action, many of the ills to which they have been subjected could be modified, and in time extirpated. This being an eminently rational and practical view of the subject, the question recurs, Why do so many working men remain outside of labor organizations? There are, we conceive, many reasons, the chief of them all, we assume, being the inability to comprehend the logic of facts, circumstances and conditions—in a word, a lack of intelligence and a disinclination to study those problems which relate to their own welfare, and upon the proper solution of which depends their emancipation from degradation. Such persons constitute the great bulk of that degraded and labor degrading army known as "scabs." They are men who never had an aspiration above those counterfeit men who crawl on their bellies in the dust and lick the boots of bosses, creatures of the parasitical type, who would rather be a flea in the hair of a rich man's dog, or a louse in the hair of a king, than one of nature's noblemen, with the independence and courage of a free man who dare hold up his head and assert his rights. The scab, in practice and purpose, is the enemy of labor organizations. He may not be absolutely beyond the reach of the educating and elevating influence abroad in the world, and as a consequence here and there one of the tribe may be converted, but as a general proposition we should deem it quite as probable that a tree toad could be transformed into an arch angel as that a confirmed scab could be made a loyal, intelligent member of a labor organization. But fortunately all the workingmen outside of labor organizations are not scabs. Thousands of them are thoughtful men who act upon convictions, and of their ultimate action there need be little anxiety. They are in sympathy with truth and justice, and desire to see labor

emancipated from every degrading thralldom. They do not antagonize labor organizations, but in many ways evince their approval. It is to be assumed, and we doubt if any intelligent man will controvert the proposition, that the educating influences abroad in the country are on the whole advancing the cause of labor organizations. In saying this we are not unmindful of the power of a subsidized press. We do not under-estimate the impelling, controlling and directing power of money, and yet facts satisfy us that in spite of every adverse circumstance, labor organizations are moving forward in the direction of ultimate triumph. Labor has a press. It has a literature. It has knowledge. It has not only the wisdom of experience, but it has men capable of solving the most abstruse problems relating to the growth and permanency of organization. Labor organizations have succeeded in getting labor into politics. In saying this we have no reference to partisan squabbles over the loaves and fishes. We refer to that higher plane of politics which relates to the enactment of just laws for the protection of society, in which labor has vital interests. If it is said that little has been accomplished in that direction, we unhesitatingly admit the impeachment, but it must be remembered that working men so far have done but little in that direction to modify or to repeal vicious laws, or to enact laws calculated to improve their condition. Labor has not federated for this wise purpose to any applaudable extent. Still, much has been done, enough to show workingmen that when they decide to federate for their own emancipation, and for the welfare of society, a great victory will be achieved. It is simply required to be patient and to work. Labor organizations have nothing to lose, but everything to gain by having their purposes earnestly investigated. Their aims are few and easily understood. They are totally exempt from deceit—no art of dissimulation is practiced. Labor organizations seek, first to obtain fair wages, and then to maintain fair wages. The wage question is the supreme question. With fair wages obtained and maintained, labor organizations are in a position to inaugurate and carry forward enterprises the benefits of which inure to society as well as to those who are identified with

such organizations. We could indefinitely elaborate upon this feature of labor organizations. Having secured fair wages, they are in a position to adopt plans for the benefit of their membership, and be it remembered that these benefits are in proportion to the wages received.

With such data as we have at hand, we assume that since their organization, the Brotherhoods of Engineers, Firemen, Brakemen, Switchmen and Conductors have paid out a sum of money closely approximating \$5,000,000 as benefits to disabled members and to widows and orphans who, in numerous instances, would have been absolutely destitute without such aid. In doing this, the brotherhoods named have assumed such burdens as have relieved society, the state, the tax-payers of all responsibility in providing for the welfare of their poor. Widows and orphans have not been required to go from the grave, where husbands and fathers were buried, to a pauper asylum, but the brotherhoods have come to their rescue, and out of the earnings of their membership, too often far below the demands of justice, have rescued them from want and the degradation of mendicancy. And this the brotherhoods have done while contributing their full share to the revenues of the state and to the maintenance of those unfortunates who, failing to become members of labor organizations, are thrown upon the cold charity of the world and compelled to endure hunger and nakedness, or accept such comforts as a "poor house" affords.

We have referred to certain labor organizations because we happen to be more familiar with their operation than with other labor organizations, but if it were possible for us to tabulate the payments made by all the labor organizations of the country for purely benevolent purposes the sum total would be of such magnitude as to excite surprise and admiration. The facts would demonstrate beyond cavil that labor organizations are the staunch friends of society, the promoters of peace, order and prosperity, and are therefore deserving of encouragement. To antagonize labor organizations is scarcely less than a crime, and those who seek to disrupt them are the enemies of society. The objections urged against labor organizations relate chief-

ly to their efforts to secure honest pay for honest work, and of their scanty earnings they give back millions to redeem men, women and children from pauperism. As we have stated, the benefactions of five of these organizations amount to millions taken from their earnings, and it would be interesting to place beside the sum total of the benefactions of labor organizations in the United States the sum total of gifts for charitable purposes made by their enemies. Fortunately for society labor organizations are increasing in

number and in power. They are doing good Their purposes are honorable and their high ambition attainable. They are all young in years. Taught in the school of experience, they are displaying capabilities of the highest order. Under the influence of educating forces they will learn to appreciate more fully the strength of unity, and then will come federation. With this obstacles to success will disappear and labor, emancipated from every form of oppression, will receive its just reward.

THE ALL-KIND MOTHER.

I O, whatever is at hand
Is full met for the demand;
Nature oftimes giveth best
When she seemeth chariest.
She hath shapen shower and sun
To the need of every one—
Summer bland and winter drear,
Dimpled pool and frozen mere.
All thou lackest she has still,
Near thy finding and thy fill.
Yield her fullest faith, and she
Will endow thee royally.

Loveless weed and lily fair
She attendeth here and there—
Kindly to the weed as to
The lorn lily teared with dew.
Each to her hath use as dear
As the other; and thou clear
Thy cloyed senses thou may'st see
Haply all the mystery.
Thou shalt see the lily get
Its divinest blossom; yet
Shall the weed's tip bloom no less
With the song-bird's gleefulness.

Thou art poor or thou art rich—
Never lightest matter which;
All the glad gold of the noon,
All the silver of the moon,
She doth lavish on thee, while
Thou withholdest any smile
Of thy gratitude to her,
Baser used than usurer.
Shame be on thee and thou seek
Not her pardon, with hot cheek,
And bowed head and brimming eyes,
At her merciful "Arise!"

—James Whitcomb Riley in *February Century*.

W. D. ROBINSON.

We conjecture that many patrons of the *Magazine* will read the name that constitutes the caption of this article, and will look upon the accompanying portrait, and then mentally inquire, "Who is W. D. Robinson?" "Why is such prominence given him in the *Firemen's Magazine*?" Thousands may say, "I never heard of the man before." Such queries and remarks are quite natural. It is the fate of some men to bestow their wealth of intellect and energy with princely liberality for the good of others, and then be forgotten and neglected by those who have profited most by their devotion and generosity—such is the ingratitude of the world.

"If there be a crime
Of deeper dye than all the guilty train
Of human vices, 'tis ingratitude."

And yet, it is a vice which men are compelled to contemplate in many ways in their every day experiences. Among the various phases of ingratitude which men of generous natures are required to ponder, forgetfulness and neglect, are by no means

the least conspicuous. It rarely occurs that the real benefactor receives his just reward, and all too often, he lives "unhonored, and unsung," and dies "unwept." It has been written that

"In this perverted age,
Who most deserve, can't always most engage;
So far is worth from making glory sure,
It often hinders what it should procure."

If this is true now, it has been quite as veritable in all ages. There are, fortunately, instances which serve to show that human nature is not universally so depraved that it cannot appreciate that nobility of character which unselfishly seeks the good of others, regardless of personal sacrifices—but, it will be conceded by those who are familiar with events that such instances are exceptions to the rule. As a rule, the true benefactors of men, the men who have blazed out new highways for the armies of progress, who have been the avant-couriers in enterprises that brought untold blessings upon men and nations, have been the victims of ingrati-

tude, of forgetfulness and neglect, while some vapid and declaiming demagogue, reaps a harvest of shekels and applause.

It is well for men to frequently engage in retrospection—to retrace, in fancy, at least, the pathways along which the conquering hosts of civilization have marched, if for no other purpose, than to find if some one who should wear the title of "Benefactor" is not languishing in obscurity and possibly in indigency, some one, who better than the most successful candidate for popular favor—better than he for whom the people erect triumphal arches and whose path they strew with garlands, and who served his generation, regardless of sacrifices and rewards, has not been the victim of neglect. It may be found that here and there a veteran survives, who throughout all his early manhood and in the prime of his years, struggled for the good of his fellow man, until at last, forced by the infirmities of years from his profession or vocation, is lingering out an obscure old age, with no consolation for a life of unrequited toil, but that it has been a useful life; devoted with fidelity and singleness of purpose, to the well-being of his fellow men. If such a man is found, he is one, who more than statesman or politician, deserves to be honored with monumental marble—and days of public festivity and rejoicing. He should not be a stranger in the midst of a new succession of men. His services and sacrifices, for the good of others, should be known and should be held in grateful remembrance.

In the foregoing we have briefly outlined the purpose the *Firemen's Magazine* had in view, when of its own free will it proposed to write of W. D. Robinson, a veteran railroad man, and the founder of the great Brotherhood of Locomotive Engineers.

To do full justice to the subject is a task we do not expect to accomplish. We might be content with the statement of dates and incidents in the life of W. D. Robinson. Room will be found for these, but something more is required in writing of a man, who, in his youth possessed that "mystical lore," which saw the shadows of coming events, and was alert to prepare for their advent.

When W. D. Robinson was born, May 22d, 1826, there was not a mile of railroad on the American continent, and when, in 1846, he began railroading, as a fireman, on the New York Central, there were 4,633 miles of railroads in the United States. W. D. Robinson was at that time 20 years of age. It is said of him that he early acquired a good, general knowledge of history, biography and polite literature, ancient and modern, but it may be assumed, that he did not neglect other studies, scientific, mathematical and mechanical, for we notice that in 1848, two years subsequent to his beginning work as a fireman, he was promoted to

the responsible position of engineer. This fact demonstrates beyond controversy, that young Robinson was ambitious. Some writers have classed "ambition" as the "vice of great minds;" that depends. Ambition is only a vice, when its purpose, its aim is vicious. Ambition may be "longings sublime and aspirations high"—it may take the form that animated an Alexander, a Cæsar, or a Napoleon, who peopled the cities of the dead, and built for themselves monuments of human skulls, but it should be remembered that

"Ambition is the germ,
From which all growth of nobleness proceeds."

There is an ambition, fortunately for the world, which, whatever may be said of the master passions, "the love of Honor and the love of Gain," which are said to "govern the intellectual few and the intellectual many," seeks to promote the welfare of men. There are ambitious men who, though they may seek for honor and gain, do not forget their fellow men, but use their power, their influence and their knowledge to advance the well being of others. Such men are not showy—they are not obtrusive. They sow and cultivate and then invite the world to reap and divide the harvest.

W. D. Robinson in his youth and mature manhood was evidently ambitious. He was eager to cultivate his mind, to develop and strengthen his intellectual powers, and as a reward we see him in the short space of two years advanced from fireman to engineer. From 1848 to 1855, a period of seven years, Mr. Robinson followed the responsible and arduous calling of locomotive engineer on the New York Central. From that time until 1861 Mr. Robinson had been a student of railroad men and of railroad management. He had been something more than a "runner." No one of the craft had studied more profoundly situations and conditions. From experience he knew what it was to be a locomotive engineer, and he also knew that, considering the skill required for the position and the responsibilities it imposed, the men who held the throttle were denied just wages and did not occupy, neither in the minds of railroad officials nor in public esteem, their rightful position, hence, when in 1855 a call was made to take steps to form an organization Mr. Robinson was made a delegate to represent the engineers on the N. Y. C. R. R. at a meeting held in Baltimore, Md., October, 1855. At this time Mr. Robinson was twenty-nine years of age. He was then an advanced thinker. At Baltimore the foundation was laid for the national superstructure now known as the Brotherhood of Locomotive Engineers. At the Baltimore meeting seventy delegates were present and participated in the discussions, and then and there the organization of railroad employes was formed and launched. The organization bore

the title of "Grand National Protective Association of Locomotive Engineers," and W. D. Robinson was made Grand Secretary.

It has been written that "the organization, lacking some of the essential elements of success, its originators and friends were forced to witness its failure." But it was not a failure. The right is never a failure; the wrong is never a success; the most that can be truthfully said is that the movement was premature, but we doubt the propriety of any such suggestion. The Baltimore meeting planted the seed from which has sprung, not only the B. of L. E., but every other organization of railroad employes. There were defects, doubtless, but they were not found in the purpose of the organization. That was right, and Time, that makes no mistakes, has placed upon it his ineffaceable stamp of approval. It set the organization ball in motion. Then began agitation. A new star arose in the sky of labor; for a while it was above the horizon, nor did it set until it had aroused an intense desire in the minds of all locomotive engineers that its light should be perpetual. But it set to rise again in May, 1863. Since then it has been steadily rising. Other stars have arisen and joined the resplendent train until now the constellation of "Labor" is as bright and luminous as can be found in the railroad employes' firmament of hope.

From 1855 to 1863 W. D. Robinson had not been a man of doubt and despondency. The word "failure" was not found in the lexicon he studied. Neither a croaker nor a kicker, he was built, like an ocean steamer, to go ahead in defiance of adverse tides and winds and billows. He wrote, he spoke, he worked, he agitated. His early fondness for books, his habits of study, qualified him to stand forth more than a quarter of a century ago as the champion of labor, and it is not surprising that in 1863, when the "Brotherhood of the Footboard" was organized, W. D. Robinson, then thirty-seven years of age, in the prime of his young manhood, was made Grand Chief Engineer. That he was the master spirit in the meeting at Detroit, May, 1863, where the Brotherhood of Locomotive Engineers was born, we do not doubt, and this we say without intending any disparagement of others of the noble band who assisted in laying the foundation of an order now of continental proportions.

We do not hesitate to declare our admiration of a man of the type of W. D. Robinson. We confess to a liking for their heroism, their faith in their fellow-man, for their hopefulness when others are despondent. We confess to no little amazement when we contemplate the prescient qualities of their minds. W. D. Robinson, as early as 1855, aye, before that date, saw the necessity of the organization of the Locomotive Engineers for their own welfare and the good of

society. He was not a prophet, nor the son of a prophet. In 1855, when there were but 18,355 miles of railroads in the United States, he may not so much as dreamed that in thirty-three years there would be 160,000 miles of railroads in the country. It is not given to any man to comprehend the marvelous strides of Anglo-Saxon civilization, but he did see with unclouded vision the benefits which were to flow from organized labor. He did not see "men as trees walking," but he saw men as men, standing erect with their hats on instead of under their arms, asserting their sovereignty and demanding their rights, and with this he was content; for this he labored; for this he made a thousand sacrifices; but with that valor which has won every recorded and unrecorded victory for truth and right since God decreed that man should eat bread in the sweat of his face.

We have said that in May, 1863, in the city of Detroit, W. D. Robinson was elected the first Grand Chief of the Brotherhood of Locomotive Engineers. That was twenty-six years ago. Then the Order may have numbered a dozen or a score of members all told. Then everything was new, untried. Then the supreme demand was ability, fidelity, tenacity. Then the Grand Chief Engineer run an engine by day, and though worn and fatigued, he was required to attend to his official duties at night. There was no cash in the treasury. The supreme demand was work on trust, faith and hope. Write, speak, travel, build, for the good of others. Do it uncomplainingly, assiduously; do it in the face of opposition, "Unawed by power and unappalled by fear." In this way did W. D. Robinson work to lay the foundation and build the Brotherhood of Locomotive Engineers. In this connection it may be worth while to say that Mr. Robinson filled the office of Grand Chief Engineer from May, 1863, to August, 1864, and during this brief period fifty-four sub-Divisions had been formed, and the Order was fairly on its feet.

Only those who have had the experience are in position to estimate the qualities of head and heart required to lay foundations for a permanent organization of a Brotherhood, to enact laws and map out a policy, and if this be a difficult task, what must it be to take the helm and steer the ship successfully for the first voyage and bring her with all her treasures safely into port. But W. D. Robinson possessed in a marked degree the mental, moral and physical qualities for all these labors. His intellectual qualities were equal to the task of arousing his fellow engineers to the necessity of organization, and when assembled for the work his thorough mastery of the situation enabled him to propose such laws and such a policy as would best subserve the end in view, and at this supreme juncture his asso-

ciates had the wisdom to place him in command. We applaud their judgment.

From 1864 when Mr. Robinson retired from the position of Grand Chief Engineer of the Brotherhood of Locomotive Engineers a position which he adorned and dignified, to 1883, when he retired from active railroad life, he was constantly employed on various railroads throughout the country as a runner and master mechanic and he now resides in the city of Vincennes, Ind., and where at the age of sixty-three years, though his toils are unrequited by any great abundance of this world's goods, he enjoys the tranquility befitting his years, and is loved and honored by those who are so fortunate as to enjoy his acquaintance.

But it must not be supposed that the subject of this sketch has lost any of his interest in Brotherhood, or labor questions; such is not the case; on the contrary, he takes, if possible, a deeper interest in such matters than ever before. With all his mental faculties intact, with an experience of active railroading of forty-one years, and a retentive memory stored with facts, his retrospects are replete with interest. He surveys the whole field of labor, and few there are, whose views upon topics which bear directly or remotely upon the welfare of workingmen, indicate a profounder comprehension of requirements. In proof of this we quote from an article from the pen of W. D. Robinson, which appeared in this *Magazine*, June, 1887. Mr. Robinson, in the article referred to, speaks of the condition of the masses in European countries, who "are born to an inheritance of servitude" and who are kept in ignorance that they may be the more easily oppressed, and says:

Education such as these countries afford is too expensive for their (the masses) means, too remote from their positions, and too inconsistent with the hereditary degradation of their condition. It is because these governments are in the hands of the privileged classes, and are administered for their benefit. Education reveals both the injustice and usurpations of aristocracy; it is therefore pronounced contraband for the masses. It is not from stinginess but it proceeds from principle—knowledge unfetters the mind and lets in upon the human soul a consciousness of its dignity and its destiny. It raises the vassal into a freeman, and the ignorant rustic into the fearless champion of human rights. Popular education and tyranny can not dwell together.

Those who value education for the emancipating power it confers upon its possessor will experience no little difficulty in finding a more glowing tribute to its redeeming efficiency than that which Mr. Robinson bestows, and were we disposed to eulogize the B. of L. E. we could pay it no higher compliment than to commend it for having, in the beginning of its career, conferred its highest office upon a man capable of appreciating the value of education.

Mr. Robinson sees that education elevates its possessor into a loftier sphere of being;

that it creates new senses of enjoyment, new desires, new hopes, new aspirations, and forms the whole soul to a nobler and sublimer life. It emancipates the vulgar and untaught mind imbedded in ignorance and animalism, and enables it to ascend the heights of science, forever multiplying the sources of happiness. To have a man of such comprehensive power in the ranks of workingmen, a practical fireman, engineer, master mechanic, is to ennoble labor, to dignify its badge, to glorify its aspirations, and to demonstrate to the world, that it has a right to be heard, when men of intellectual force meet to discuss and solve problems relating to the welfare of society.

Mr. Robinson sees clearly that workingmen should receive fair wages for their work. If there is a failure here, it is a failure all along the line, and that the degradation may be avoided the workingmen must be educated. He says:

"If you would drive every particle of manliness out of a human soul, create and maintain such institutions as will keep the mass of the people at the starvation point."

It might be said that in the foregoing paragraph, Mr. Robinson has epitomized all arguments relating to the emancipation of labor from oppression and degradation. Reduce wages and enslave the people, advance wages and emancipate the people. Labor organizations have in view fair wages, the disenfranchisement of workingmen from the curse of squalor and all of its attendant ills. Says Mr. Robinson:

"The wage-worker, dazed, bewildered, and nearly overwhelmed by the magnitude of the forces which threatened the prosperity and happiness of himself and the loved ones at home, his cry for relief unheeded except by scorn, his faith and hope in truth and justice ebbing low, turned at last almost in despair, and gazed with pallid cheek, and eager inquiry in the face of his fellow workman. The mute question conveyed in that wistful glance, was this: 'Can you and I depend upon and trust each other?' And in the outstretched arm and open palm, came the mute reply: 'We must and will, now and forevermore.' That silent compact, born of haggard necessity and nurtured through many years of poverty and peril, at last has borne noble and lusty fruit, and across the continent to-day, from north to south, from east to west, a common brotherhood of labor now stands unabashed in the presence of Courts and Senates, and demands justice and fair play and nothing more."

We could further embellish this article with gems from the writings of W. D. Robinson, but it is not required. Our readers will readily discover from the quotations we have made, that Mr. Robinson, in his retirement from active railroad life, is still observant of matters that relate to the welfare of laboring men, and is as ready now as ever to enter the arena of debate and champion their cause.

But we should be derelict, were we to close this article without referring to the fact that W. D. Robinson possesses a poetical

as well as a practical mind. It has been written that

"The world is full of poetry; the air
Is living with its spirit; and the waves
Dance to the music of its melodies,
And sparkle in its brightness."

That Mr. Robinson, at times, drinks in this "spirit" is well known to many, indeed, the pages of this *Magazine* bear testimony of his splendid gifts, and when in the mood, he can give his thoughts rhythmic melody and sing in concert with ancient and modern bards. In the May number of this *Magazine*, 1888, we reproduced the poem entitled, "The Free-for-all Race," which, in every stanza bears the stamp of poetical genius. Our space does not permit us to reprint the poem entire, nor is it required, but we take special pleasure in referring to the poetical production and of reproducing a stanza or two, referring to one of the members of the "Every Day Club" who entered "The free-for-all race," and the final result.

"And next was a veteran of three score and ten,
With hands all unsteady and thin;
Borne onward by 'Hope,' again and again,
He'd fairly outridden much stronger young men,
And surely once more he must win.
'Hope' to him was the same as at manhood's
first dawn.
As strong as the lion and fleet as the fawn."

We do no violence, at least no violence to fancy, by the surmise that the poet might have had reference to the founder of the B. of L. E. when he wrote the stanza we have quoted. He was standing within a few steps of the sun burnished highlands of the three score and ten and realized how often he had been borne onward by "Hope," and that "Hope" was then the same "as at manhood's first dawn." He might have soliloquized—

"Oh hope! sweet flatterer! thy delusive touch
Sheds on afflicted minds the balm of comfort,
Relieves the load of poverty—sustains
The captive, bending with the weight of bonds,—
And smoothes the pillow of disease and pain."

Those who entered the "free-for-all race" struggled for the mastery, for the prize—

"The signal was given—the field was away;
The struggle was furious and fast;
The struggle of life and of every day,
For out of the race no mortal can stay,
And death conquers all at the last.
So the tumult of life and the funeral pall
With the Every Day Club and its great free-for-all
In this likeness familiar is cast."

In closing this article, which is prompted by a desire to do simple justice to a man who led the way to the organization of railway employes, who having successfully organized the B. of L. E., taught locomotive firemen that they too could organize, and thus having laid foundations for one assured all that their well being depended largely upon organization. Having done so much for his fellow railroad men the question arises, what can railroad men do for W. D. Robinson? Write eulogies? Build a monument to perpetuate his memory? Such things can be done and ought to be done. Any suggestion

of that kind shall have our hearty support. What more?

We have written of no ordinary man. We have not sought to magnify a pigmy. Indeed, the more we contemplate the work, the sacrifices of W. D. Robinson the more our admiration is excited. As we contemplate the strength of his convictions, the heroism of his character, his tenacity of purpose, his intellectual force and acumen, he grows grandly in our esteem. His whole life has been one of self abnegation. He has wrought for others. Modest, unassuming and unobtrusive, others have reaped where he has sown, and now, in the autumn of his well spent life, what is the harvest for him? While gleaning in the field where others have gathered an abundance, is there a harvest home song for the veteran sower? We are satisfied that he finds a splendid reward in the consciousness of work well done. He loved his fellow-man—testimony as immutable as God's decrees and as indestructible as God's throne, that he loves God. Still, the question recurs, what can railroad men, now, in the plenitude of their prosperity, do for W. D. Robinson? Railroad men of the pick and scoop and railroad men of the throttle? We feel that our brothers anticipate us. It is well. Let it go forth that steps should be taken to make W. D. Robinson a pensioner. What say you, brothers? Thirty-four years ago W. D. Robinson began the work of organizing railway employes. Untold benefits have resulted from his labors. Shall we make his old age free from care and anxiety, and by awarding him a pension, see to it, that no storm clouds lower along the horizon when the sun of his life declines, and fades out of sight?

THE RAILROAD MAN.

Some people think that a railroad man,
Has a down hill pull through life,
That he draws big money—has nothing to do—
And has a very small share of strife;
That he is a solid muldoon with the girls.
Well, that statement is possibly true,
But its little they reck of the hardship which
He is daily passing through.

When the R. R. man leaves his darling wife,
Away over the road to roam,
He knows fate may decree, their next meeting
may be
In their beautiful, heavenly home.
For there's danger in every cut and curve,
There are collisions and broken rails,
And any "old timer" a story can tell
Of wrecks, some ghostly tales.

Thus, when on a wild, wintry night,
You sit by your fireside warm,
Just think of the hardy railroad boy,
Out in the cold and storm.
He is braving the dangers of the treacherous
rail,
Burnt bridges and snow drifts too,
And he's looking grim death in the face all the
while
These dangers he's passing through.

T. H. Richardson.

NOTE.—Air: "In search of my railroad boy." Repeat last two lines of each stanza.

THE POWER OF FEDERATION.

In discussing federation, the policy of Bismarck may be prudently cited. When France declared war against Prussia (not then a German United Empire, as it is now), she made the fatal mistake of supposing that Prussia, would in all probability be the only state she would have to deal with. But Bismarck well knew the power of federation, and but for federation, there is little doubt that the French would have entered Berlin, instead of the Germans entering Paris. If Bismarck had not succeeded in federating the German states, it is well understood that the result would have been the overthrow of Prussia and all the other German states. We all know how the war terminated and that the success of Bismarck was owing to the federation of all the German states. At the close of the Franco-Prussian war, Prussia did not cast aside her allies, but cheerfully divided the three millions of francs equally amongst all the federated states. To-day, Germany is one, by virtue of federation, and is in a position to demand her rights. True, France declared war against Prussia, but the other German states had the same interests at stake, and hence fought as desperately as did Prussia.

During the C., B. & Q. strike, firemen belonging to the Brotherhood of Locomotive Firemen, fought and suffered, and made sacrifices for the Brotherhood of Locomotive Engineers, and when the struggle was over, a certain class of engineers seem to assume superiority over firemen and switchmen who fought as heroically for right and justice as did the engineers, and the engineers show a disposition to figure as autocratic dictators over those who helped them and who, I dare say, with their wives and children, suffered to a greater or less extent, because of their devotion to the interests of the engineers. In conclusion, I will say strikes are failures for the want of federation, corporations comprehend the fact fully, and hence it is seen that all the colossal monopolies federate, form syndicates. Railroad magnates, iron kings, coal mongers, land sharks, rolling mills, and other great enterprises form trusts, unify for the purpose of securing large profits, and not satisfied, they enact laws to uphold Pinkertonism, and all this is done for the purpose of reducing wages and of oppressing working men.

I am persuaded that as long as railroad employes refuse to federate for their own protection, decline the motto, "*Ephuribus Unum*," so long will they be subjected to injustice. I am not a railroad man, but a farmer, still I am deeply interested for the welfare of all working men, and would have a proportionate division of accumulated wealth to those who create it, whether it be brawn, brain, or bullion.

John Vollman.

For the Magazine.

SONG OF A FIVE DOLLAR BILL.

Smoother me out softly and lay me away,
Where none can disturb my rest;
For I long to be left out of business to-day,
And this is my earnest request.
And ere I have rested in quiet repose,
In the dark and inviting till,
I shall first try to tell of my weals and my woes;
For I am a Five Dollar Bill.

I was not always ragged, as now you behold,
With edges all tattered and torn;
I am, notwithstanding, as good as the gold,
Although of my beauty I'm shorn.
And you will but wonder, when you shall have heard

The story that I am to tell,
That I have not long since been dead and interred
Instead of appearing so well.

I came from the treasury, pure as the snow
That falls on the slumbering earth;
Like a bird on the wing, I have passed to and fro
Since the morning that dawned on my birth.
I was first given out from the National Bank
To a merchant who lived in New York;
And then, to be lowered a little in rank,
I was owned by a Paddy from Cork.

While going up Broadway, poor Paddy got dry,
And broke me to get him a drink;
Thus bringing me lower, a great deal than I
Had ever intended to sink.
Then up from that base degradation to rise,
The bar-keeper took me away
To pay up his license; and to my surprise,
In the purse of the Mayor I lay.

From thence to the Alderman, then to the store
To pay for a box of cigars,
Then paid to a clerk, with a few dollars more,
And then for a ride on the cars.
My elegant V's the conductor admired,
And crammed me down into his vest;
But a "spotter" was there—the conductor was
"fixed"—

He resigned by a gentle request.

Though I had been used in a manner so rude,
Much trouble awaited me still:
I was owned by a coachman, and loaned to a dude
To settle his restaurant bill.
When sent in a letter, a light-fingered clerk
Detected with delicate touch
My presence; and brought me thence with a jerk,
As though quite accustomed to such.

I was given for missions but once in my life,
And paid to a preacher but twice,—
Believe me, one fellow gave me to his wife!
In the hands of an editor thrice.
From farmer to merchant, from merchant to clerk,

From the clerk to the landlord I went
From the landlord in turn to the servant for work,
By the servant again was I spent.

Although very transient has been my career,
My path was exceedingly rough:
For I have been squandered for brandy and beer,
And even been broken for snuff;
Been picked out of pockets, embezzled from banks,
And paid a divorce lawyer's fee;
Been put up by gamblers, and courted by cranks,
And passed for the "bumper's" degree.

From ocean to ocean, I've wandered about,
And scarcely a day in a place;
No sooner paid in than I was paid out,
And often in shame and disgrace.
And yet I am forcibly led to admire
The power that has kept me at par;
But likely as not I am doomed to expire
In lighting a bumper's cigar.

—Geo. W. Hall.

STANBERRY, Mo., April, 1888.

Mechanical

Letters and Papers pertaining to Locomotive running, firing and management and other topics of interest to locomotive engineers and firemen are solicited for this department.

Correspondents are required in all cases to give their real names, not for publication necessarily, but as a guarantee of good faith.

Communications should be plainly written on one side of the paper only, and as brief as possible. No matter should be introduced for illustration or otherwise that does not have a bearing, directly or remotely upon topics of a mechanical character.

Contributions to this department should reach the Editor not later than the eighth day of each month to insure publication in the next ensuing number, and should be addressed to

MECHANICAL DEPARTMENT,
Locomotive Firemen's Magazine,
TERRE HAUTE IND.

MAY, 1889.

MR. EDITOR:—In my last article I intimated that I would next take up the alleged "hammer blow," and, though it is now some time since this subject was first presented to the readers of the *Magazine*, many of whom have no doubt passed judgment in their own minds on the question and dismissed it from further attention. But those who know me best know how hard it is for me to listen to statements, the correctness of which I disbelieve, without entering some form of protest. These I am sure will be willing to give me a hearing even at this late day.

Since writing the March article I learn through the *Engineers' Journal* of the construction of a dynamometer for the purpose of testing the force of the supposed blow. In this connection I wish to say that if the device to be constructed is the same as that proposed by the joint committee of the Franklin Institute and the Master Mechanics' Association, on May 1st, 1886, and an illustration and description of which was given on page 341 of the June, '87, *Magazine*, that its showing will not be satisfactory if used as contemplated. That is by placing the locomotive with her drivers standing on the wheels of the dynamometer, and securing her so that she can not run off of them when the drivers are put in motion. The reason of this is that the device will not be subjected to the influences of the motion of translation which, from Mr. Lockwood's view of the case, has a very important bearing on the "hammer-blow" question. But to return to my original purpose, that of raising some objections to the "hammer-blow" theory. That a rotating wheel or cylinder that is out of balance produces

more or less of an excess of pressure on its journal bearings in the direction of the heavier side, and that where the wheel or cylinder rests on its circumference, as a locomotive driver on the rail, this excess of pressure during a portion, at least, of the revolution, will be brought to bear on the point of support, as any "old farmer" who has ever run a threshing machine very well knows. But that a wheel that is in balance at all speeds of rotation when supported at the bottom half of its axle, is out of balance at all speeds when it rolls on a rail, "is denied in each and every allegation." To the lover of debate there is nothing more pleasing than to defeat an opponent on his own grounds, that is by turning his own arguments against him. In the April, '87, *Magazine*, page 212, Mr. Lockwood says, "one-half the wheel in one-half its revolution is moving downwards towards the rail, while the other half is moving upwards." On page 271, May, '87, *Magazine*, he says, referring to Fig. 2, "the crank-pin and counter-balance being at rest (pin at back centre) and about to reverse their motion from left to right, to right to left; nevertheless, they are moving at the rate of fifty miles per hour by the speed of translation." These statements, coupled with the one that "the bottom of the wheel stands perfectly still," brings us to the following conclusions: First, that there are four halves to the wheel, one moving upwards, one downwards, one to the right and another to the left. Second, that there are three points in a rolling wheel at rest, the forward centre, the back centre and the bottom; and in the same paragraph in which he says that the two former are at rest, he declares that they move fifty miles per hour. With all due respect to your superior ability and mental attainments, Mr. Lockwood, this kind of business has got to be stopped if you want locomotive engineers and firemen to pin their faith to your statements. You will have to stick to your positive statements or as positively retract them or your auditors are likely to make allowances for what you may have occasion to state.

Also on page 269 of the same number Mr. Lockwood in "fig. 1," shows us where the alleged "hammer-blow" is struck, and on the next page he explains it by saying that, at a speed of the train of sixty miles per hour, the counter-balance descends with a speed of 120 miles an hour at the top of the wheel to nothing (no speed) at the bottom, where, according to the statement of Mr. John W. Cloud, it strikes a blow of a little over four and one-half tons, with the force of gravity added. Now Mr. Lockwood, listen: In a genuine hammer-blow, one struck with a hammer in the hand of a mechanic who means business, there is no slowing up. The hammer is going just as fast at the in-

stant before it comes in contact with the object aimed at as when it started, and I may say a good deal faster. If this statement of yours is correct, it eliminates the momentum that would result from the weight falling from above the axle to the rail, in which case the speed would be greater just before striking than at the start. I think the name, Cloud, used in connection with this proposition, the proposition as laid down by Mr. L., is decidedly cloudy. But another point presents itself here. From all Mr. Lockwood has written for the *Magazine* I infer that he likens the action of the counter-weight to that of a huge hammer, the end of the handle pivoted to rail and the hammer-head swinging over from the rail on one side of the pivot to the rail on the other. But here another difficulty arises. The true axis of motion, he says, is the rail where the bottom of the wheel comes in contact with the same. So that we have the hammer striking its blow at its own axis of motion, and to meet this requirement the hammer-head would have to run down the handle instead of swinging at the end. Fig. 1 represents a

driver with an imaginary line drawn from top to bottom, terminating in a point at the rail. If Mr. Lockwood can move the top of that wheel either to the right or left without separating the end of the line from the point on the rail, I will admit that that point is the "true axis of motion."

Again, if Mr. Lockwood's statement of facts was more nearly in accord with my own experience it would be easier to accept his theories. On page 271 of the number just referred to, I find this statement: "It will be found that there is a flat place on the tire corresponding with the point of the arrow in contact with the rail, Fig. 4;" and for the benefit of those who may not have the *Magazine* referred to, I will state that this point is directly below the pin when the pin is at its lowest limit.

The further statement, also—"and a corresponding flat place on the upper part of the axle," etc., which point I find by reference to the figure, to be a little back of the centre line up and down through the axle. As a matter of fact, flat spots *might* be found at any point on the tread, and especially is this the case where the locomotive is equipped with driver brakes. But the counter-balance in the wheel is not the responsible party. You will be more likely to find him up in the cab. I have several times asked practical mechanics and engineers, who have had years of experience and observation to months of mine, men whose integrity I cannot challenge, where, on making repairs on locomotives, do you find the tire most worn? The answer has been, briefly, on the quarters, forward and back of the pin. These two places are located, as shown in Fig. 1, between the points a, b, and c, d. None of them locate the place either opposite the pin or counter-balance, except in very rare cases. For this statement there seems to be sufficient reasons, one or two of which I will try to present before closing. As to the flat spot on the journal I will only say that if there is any such thing in practice, it must be slight indeed, for I have known axles to run for years, in all kinds of service, without requiring turning up in the lathe, and if this evil was very great, turning would be imperative. The further statement is made that "driving boxes often break." This is true, but they seldom break across the crown of the box, and when they do, there are a multitude of causes known to engineers that would produce such a result. Mr. "L." also calls the attention to three or four notable bridge disasters, and from them draws the conclusion that the counter balance is "the straw that breaks the camel's back." As an offset to the above, let me present a few statistics. According to the report of the Board of Railroad Commissioners of Iowa, for the year ending June 30, 1885, there were, in the state, 11,090 wooden trestles and pile bridges alone. Add to this the number of all other bridges and trestles in the state, and we have a total of 11,704, with an aggregate length of 983,740 feet. Supposing that four trains per day pass over each of these structures each day in the year, and we have 17,087,840 chances for a bridge disaster, yet the report referred to, while it gives a tabulated statement of all accidents occurring in the state, makes no mention of any bridge or trestle failing to carry its load. These figures, together with what I personally know of the general condition of a good many bridges in use in the state at that time, and the frequency and manner of making repairs and renewals, I am convinced that if the destructive influences cited by Mr. Lockwood, had existed in the locomotives of Iowa, the record would have been vastly

different. When we come to consider what a small proportion of the railway bridges of the world, and the amount of traffic that passes over them, these figures represent; and while we must admit that bridges *do* sometimes fail, it is not the strongest argument possible, that the destructive influences under discussion, do not exist, that *so few* of this vast number fail? In the February, 1889, *Magazine*, Mr. Lockwood presents an illustration of a draw-bar and coupling-pins and attributes their comparatively bad condition to improper counter-balancing. This reminds me of those political economists who submit a page of statistics showing a certain condition of things, each one to prove his own particular theory. One will claim that bad tariff regulations is the cause of the showing, another, that it is "private ownership of land," another, that it is bad finances, and so on, to the end of economics. Those cuts may be convincing to the Franklin Institute, but men who wear out draw-bars and pins will be able to point out a half dozen influences to account for the different showings of the two samples. One of these, "Vulcan," in the March number, has pointed out. I will add, that if that pin and bar represents the best effort of the P. R. R. at economy, they are to be pitied. We can run, at least, 10,500 miles in freight service, over track that is a "shade" less favorable than the P. R. R. track, and not show any more wear than is shown in Mr. Lockwood's illustrations. If it is impossible to counter-balance the weight of the pin and its appendages by a weight placed opposite to it in the wheel, and according to Mr. Lockwood's deductions, it cannot, because he claims that when the pin is directly below the centre of the wheel, it only has one-third the speed that the counter-weight has, provided the centre of gravity of the counter-weight is the same distance from the centre of the wheel as the pin; and having only one-third the speed, of course, only has one third the momentum that the counter-weight has, and hence, must be sadly out of balance. But it mystifies me when I try to distinguish any change in these conditions by simply substituting another pin and connections for the counter-weight.

"A standing balance can never be a running balance," says our friend; and then tells us how *fast* the locomotive, constructed on "correct mechanical principles," run, supported on four jack screws, to convince us how perfectly she must be balanced when on the rail. If Mr. Lockwood would admit that the fulcrum is at the centre of axle he might properly claim that there was a better balanced application of the power in the engine with two cylinders with pistons connected to opposite sides of the wheel, and the more available points equidistant from the centre of axle, and from

each other, to which the power can be applied, the more perfect, or correct in principle, will that application be; but some one will have to invent a rotary engine, capable of working steam expansively and applicable to the modern locomotive, before this point is attained.

The fact is, that after having read and re-read all that Mr. Lockwood has written in our *Magazine*, there is one conclusion that presents itself very forcibly to my mind, and that is, that a locomotive with *wheels under her*, is a very dangerous and destructive machine, and that the designers and builders ought to be "court-martialed" for using *wheels* instead of *runners*. I know, that to abandon wheels takes us back to the stone boat and ox team principle of locomotion, but it seems that we are to stick to "correct mechanical principles," at any sacrifice. My reasons for these reflections are, that owing to the inequality of speed in the parts of the wheel above and below the centre, together with the greater leverage of the portion above the centre, the top half will always overbalance the bottom half; and to equalize the "tangential" and "centrifugal" forces is impossible, that is, accepting Mr. Lockwood's position as correct. Another point to be taken into consideration in the study of Mr. Lockwood's motion curves, is, that the direction which a moving body takes does not determine in what direction its force is acting. In fact it seems to me that mechanical forces act only in straight lines; and while the counter-balance curve in Mr. Lockwood's illustrations doubtless shows the path of the counter balance, it does not follow that its force is exerted in that direction, nor that that force will be expended at the point where the counter-balance curve touches the rail. In support of this I wish to repeat, in substance, a statement which I recently saw in the *American Machinist*. "A body put in motion will continue in motion in a straight line, to infinity, if it is not acted on by some other force." Fig. 2 represents

four positions of a counter-weight in a locomotive driver. If the above statement is true, the force exerted at the counter balance at the points given, would be in the direction of the arrows; and should the counter-weight become detached at either of the points indicated, it would take the direction indicated were it not for the force of gravity, which would give it the direction indicated in Fig. 3. Taking this view of the question,

it is plain that the counter-weight will not strike a blow at right angles to the rail, in the position a, but its force will tend in a direction parallel with the rail; while the same weight in the position d, is exerting its force at right angles to the rail, and would, if it could follow its inclination, so to speak, strike the rail at the point e. As it is, were it not counteracted by the force of the weight of the pin and connections, opposite to it, it would exert a certain amount of force on the rail, acting through what is practically a bell-crank lever, as indicated by the lines a, f, d, Fig. 2.

I promised to give some seasons for the excess of wear of the tire as indicated, but this communication has so far exceeded the space I intended to consume, that I will be compelled to leave that promise unredeemed.

A. H. Tucker.

WILLIAMSBURG, VA., March 18, 1889.

MR. EDITOR:—I see by the *Magazine* for the present month, that "E. S." has had some experience with the brick arch. Will you kindly allow me to propose an exchange of ideas with him on that subject. Combustion will, in the very near future, be the all absorbing topic and then the brick arch and its almost indispensable adjunct, the deflector, must come to the front. "E. S.," you say "you fired a mogul with a low arch." If you have fired an engine with a high arch, which gave the best results?

Many try to improve on the original, but as it is one of the few things about a locomotive that was born perfect, such attempts only detract from its usefulness, as its object is to prevent the escape of the gases until ignited, and the lower it is the better. While allowing convenience for careful firing, I have always found them the best when a man is standing on the foot-plate with a slightly curved hoe, he can clean out the ashes from the flue-plate; with the inverted scoop or deflector in the door, you can easily double the quantity of coal at each firing. I have never seen a mogul, and after twenty-four years on the foot-plate, I have now been locked in the side track nineteen years. You may wonder why I am interested in the Mechanical Department of the *Magazine*. In answer, I will borrow that beautiful line from E. J. Rauch, and say "I want to be a boy again if only in imagination," and remembering how everything was mystified and hidden from us then, I can appreciate the generous flow of information through this department for the benefit of the young men of to-day who are surrounded by information on all subjects.

Yours respectfully,
William Gore.

MR. EDITOR:—"The boys," our way, were figuring on the details of the Shaw locomotive as given in the April *Magazine*, page 310. It is there stated that the two cylinders are each ten and one half ($10\frac{1}{2}$) inches in diameter. Some assume that as compared with a single cylinder, they are the equivalent of one twenty-one (21) inches in diameter, because twice ten and one-half ($10\frac{1}{2}$) inches are twenty-one (21).

In the statement herein referred to I find the comparative equivalent as fourteen and eight thousand four hundred and ninety-two ten thousandths ($14\frac{8492}{100000}$) of an inch.

Won't "Vulcan," "Vacuum," "E. S.," "Rauch," "Tucker," "Amboy Division" or any other of the noted experts of the "Mechanical Department of the *Magazine*," give us the correct solution of this problem. We want this point established to enable us to make comparison of the work done.

From the experience of Mr. Lockwood with this locomotive and the statements made by him, I have no doubt she is a "flyer," but the question often asked is "can she pull?" Won't he give us some examples of her work in pulling and oblige others as well as

Eccentric.

RICHMOND, VA., March 8, 1889.

MR. EDITOR:—Please let some of your readers answer this: Does an engine suck black smoke in the cylinder, when it is shut off rolling down hill, unless it is reversed?

Ink Bottle.

MR. EDITOR:—The April Mechanical Department starts off with a vigorous "leader" on the wheel and lever question, in which Bro. Tucker has "knocked the underpinnings" out from the "rail fulcrum" arguments, and has left no peg for "our friends of the opposition" to hang on to, but as Friend Tucker says that he thought my proposition in the January number had settled the matter, but found that "A. D." "still sticks to the rail," so I suppose that even yet he will fail to see the point or acknowledge it. As Bro. Tucker says, "If we locate the fulcrum at the rail, we ought to continue from the rail to the tie, and from that to the earth and down 4,000 miles to find that fulcrum around which we are all turning, or would our friends continue the search and locate it in centre of the universe around which innumerable worlds are revolving?"

I have said about all that I can say on this question and propose now to leave the field, provided, that I am not forced to reply to some special point, but will add a little anecdote of personal experience about the word fulcrum, which will illustrate the vague idea some men entertain in regard to mechanical terms. Some years ago I was firing for an old engineer, and during a respite from labor we got to talking on mechanics a little, when he suddenly popped the question at me: "Where is the fulcrum of an engine (locomotive)?" I looked at him to see whether he meant it in earnest or whether there was a catch about it, but finding no signs of a catch about him, I answered rather guardedly that I thought that there were a number of fulcrums about a locomotive." He, however, in good earnest, said: "Oh! no; there is only one." I answered, "If there is but one I do not know where it is and would be pleased to have you show me where it is." The reply was, "I will show you," and he pointed to the pin passing through the end of the throttle lever, and as the stem was attached between that end and the handle it was only too true that it was "a fulcrum," but while I admitted that it was a fulcrum, I asserted that I believed that it was not the only one, but was assured there was no other, and as this was during the first years of my fireman's apprenticeship, I did not try to carry my argument against the views of a man who had nearly fifteen years of railroad experience then, but I have as yet found no reason to change my views, either on the question of *one fulcrum* on a locomotive, or in regard to the *fulcrum of the driver being in its centre*.

"Seeking Information" gives us the scientific and Websterian definition of water and steam. As stated by "S. I." the component parts of water are oxygen and hydrogen. The addition of heat to this mixture makes steam but does not destroy or in any

manner change the properties of the component parts, and just as soon as the heat is withdrawn water again assumes its former state, and in order to do this it requires the stated proportions of its ingredients, and would leave nothing unused in the boiler, as it would need every particle of the ingredients to form the proper proportions for the combination. While I answered that there is a vacuum in a cooled boiler, I have also asserted that a perfect vacuum is a difficult matter, even with the most approved appliances, how much more difficult must it be in a boiler which is not designed as much to exclude air as to confine steam? The circumstance of air being expelled from the boiler in getting up steam has been noted by me frequently, and is no proof that there is not a vacuum provided that every thing had been shut air tight, but it is a proof that air has found its way into the boiler, where it certainly was not when steam occupied said space.

I see that our old friend, W. A. Gore, agrees with me in regard to not sucking dirt into the cylinders by the action of the piston, when running unreversed, and also in regard to the vacuum in a cooled down boiler, but in skipping over Mr. Lockwood's article on the Shaw locomotive, we come to Lewis H. Evans, who writes as not in favor of a vacuum in the cooled down boiler. As an answer, I would call his attention to previous *Magazines*, and also to former part of this article for my argument on the vacuum, and also as answer to the last question "L. H. E." asks in his communication, for it appears to me that the introduction and withdrawal of heat does not produce any chemical change in the water, for, while heat is in, we have steam, but when withdrawn we have the same water without any change of its component parts. "L. H. E.'s" query, how to calculate the horsepower of a locomotive, has been answered before in these pages, but as "L. H. E." did not give any speed of piston, or number of revolutions per minute, and, as much depends on this, we will have to assume a speed and to state that the greater the piston speed, the greater the power will be, as all of us are well aware that it takes more power to pull a train thirty miles an hour than it would to pull it twenty miles an hour. "L. H. E." supposes 18x24 cylinders with 140 pounds pressure; we will take these figures as he gives them, although it would be impossible to have an average of 140 pounds of pressure on the piston in actual practice, unless you had about 300 pounds on the boiler, for the loss of pressure on going through the steam pipes, chest and ports, and by early cut-off makes it pretty certain that in actual practice, we do not get an average of half the pressure on the piston that we have in the boiler. A piston eighteen inches in diameter presents an area of nearly

254.5 inches to the action of the steam for $18 \times 18 = 324$ (which would be its area if it were square); but as a circle of eighteen inches is smaller than an eighteen inch square, we find that $324 \times .7854 = 254.4696$, or nearly 254.5 inches. A surface of 254.5 inches with 140 pounds pressure on each inch would be subject to a strain of 35,630 pounds, or, taking the two sides, to a pressure of 71,260 pounds. Now add a twenty-four-inch stroke, 71,260 pounds pressure would be exerted through a space of four feet at every complete revolution of the drivers, thus equalling 285,040 foot-pounds. Now, if the driver was to be a trifle over 56 feet in diameter it would be 17.6 feet in circumference and would revolve 300 times to the mile. At twenty miles per hour the drivers would have to revolve at the rate of 100 revolutions per minute; now, 285,040 foot-pounds multiplied by 100 would give us a total of 28,504,000 foot-pounds exerted in a minute. As 33,000 foot-pounds is the standard for one-horsepower, 28,504,000 foot-pounds is equal to nearly 864 horsepower. A locomotive with 18 inch cylinder, 24 inch stroke, having a pressure of 140 pounds on the piston, running at the rate of twenty miles per hour on drivers about five feet seven inches in diameter would develop about 864 horsepower, but of course, if the boiler pressure is 140 pounds, the actual working pressure on the piston will not be over seventy (if it reaches that figure) and the horsepower would, of course, be only half as much, or 432. Steam, with a working pressure of 140 pounds, according to Forney's table, has absorbed over 1,223 degrees of heat to bring it to this pressure, and the sensible heat of steam at this pressure, is given at 361 degrees, and its volume at 179, that of the water from which it is raised. No amount of calculation could determine these matters, for it requires a thermometer to determine the heat, and nicely adjusted balances to determine the relative weights or density of steam at different pressures. The weight of a cubic foot of water has been fixed at sixty-two pounds; a cubic foot of steam at 140 pounds pressure is said to weigh thirty-five hundredths of a pound, and this still further emphasizes the fact that the addition or subtraction of heat, does not add or subtract anything to the component parts of the water, for if steam at 140 pounds pressure weighs thirty-five hundredths of a pound, it weighs as much as the $\frac{1}{17}$ part of a cubic foot of water, and therefore has just that much water in it, for the heat is not a thing that can be weighed.

"F. T." joins the majority in approving the short cut off and full throttle theory, but supposes cases which do not often occur, and that is, that locomotives would be allowed to run with so light a load, as to make too fast time when hooked up in the short-

est notch with a full throttle. The vast majority of our railway managers are not fond of sending locomotives over the road light, and are rather inclined to load them so heavily as to make it an absolute impossibility to run them at anywhere near the shortest notch.

As "Philadelphian" will no doubt have noticed, the rule as given him by that civil engineer is correct, for it is in universal use, and seems to be the most simple of several that may be used. As he may have seen, I used it in answer to "Lewis H. Evans'" query. Vulcan.

PALESTINE, TEX., April 1, 1889.

MR. EDITOR:—I have in my left hand the April number of the *Magazine*, and I can see in it where "Vulcan" says that he is "sorry to say that there are a number of roads which are penny wise and pound foolish," etc. Now, why I wrote the article in March issue was to illustrate a fact that I am going to give now. We are, none of us, running the Master Mechanics or roads, but we are running or firing the engines which we are put on, and often we are expected to keep them in repairs, to a certain extent. Now, the fact is, we must take these engines as we find them and all the essays on "Fulcrums," "Powers," "Resistances" and "Hammer-blows," will not help us out; what we want is such articles as "E. S." gave us about the lame engine and his tough time with his Mogul.

The question of a full throttle and short cut-off is something that is necessary, and the only way to solve the question is to try it and let your judgment dictate to you which way to work your engine. "Vulcan," I think, is an advocate of "full throttle," but his remark about "penny wise and pound foolish" is (though all right with my Roger's engine) clear off with the Grant engine I spoke of in March number, for this Grant engine was entirely new from the Grant works. "Vulcan" should have given his opinion of both cases.

Bro. "F. T." bobs up serenely and says he, in his "short experience," prefers the full throttle; "F. T." if I had you here I could make you wish that the throttle was tied very close to the boiler head, so it could not be opened full. Another thing that makes me dislike the full throttle, is, with lubricating devices which can only be used when steam is shut off, the great pressure on the valve wears it too fast. I have had this fact demonstrated to me by experience.

Mr. Lockwood gives us a detail of "The Shaw Locomotive," and tells how fast she will go with one loaded passenger car. Will Mr. Lockwood tell me what would be the probable average speed of this same engine with five cars (mail, baggage, two day coaches and a sleeper) on a level track, and will she

make good time on a slightly hilly road with this train?

The brother "Seeking Information," does not believe that a partial vacuum will be formed in the space between the water and the top of boiler when an engine is allowed to cool down but he proves to us that it is possible, and at the same time takes his experiment as conclusive evidence that there is no vacuum. Now, Bro. "S. I.," you say that there were no indications of pressure on the steam gauge. I have taken engines across the turn-table out of the round house when the steam gauge only registered ten pounds, therefore your steam gauge may have been light; then you say the water in the first gauge was warm; was not it a little more than warm? It must have been, so it kept the steam from entirely condensing. Next time let the water get cold and you will find that water will not run out of any of your gauge-cocks, but will suck air.

Lewis H. Evans asks how to find the horsepower of a locomotive with 18x24 cylinders and 140 pounds pressure; that is not very easily done if my ideas are right; he can find the horsepower of the cylinders, but to get the horsepower of the locomotive he must take into consideration the size of wheel. Will some one tell me, do driver brakes affect wedges, and why?

Brick Arch.

MR. EDITOR:—Somewhere I have heard or read the story of a man who had an untried bear dog. This dog had a wonderful reputation in talk. Finally the day of trial came and the dog was lost in supposed pursuit of the bear. The owner started out in earnest search of his wonderful dog. Meeting a man coming from the direction which the dog and bear had taken he inquired if he had seen anything of a bear pursued by a dog, and how much was the bear ahead of the dog. "Yes," said the man, "when I last saw them the dog was just a leetle ahead of the bear."

For the last three years I have been writing for the Mechanical Department of the *Magazine*. I have often been reminded of this story, in the various discussions on mechanical questions. Sometimes it was the "bear just a leetle ahead of the dog," and then again it was "the dog just a leetle ahead of the bear." When "Amboy Division" turned bear and began chasing me on "two times nothing," then I thought the dog was just a "leetle ahead of the bear," and the dog was saved by hard work and a little deeper and more thorough investigation; this work and investigation was fully described and illustrated in the December *Magazine*, 1888, pages 893-896. I believe the statements there made are true, and with the illustrations establish the propositions beyond question; until it can be demonstrated

that they are not true by practical illustration and convincing argument, outside of unsupported assertion. I must believe the bear, the *modern standard type of American locomotive*, is just a "leetle ahead of the dog."

In this line I know of no one of all the writers, either as "bear" or "dog" I feel more like criticizing in a good natured way than "Vulcan," one of the ablest of all the writers for the Mechanical Department.

In the January *Magazine*, 1889, page 19, I will make a correction. He says, "Mr. Lockwood says 'not two times nothing' but 'four times something.'" If "Vulcan" means to be understood as meaning "four times something," and not "four times nothing," then I have rightly understood him. This *something* as stated in the December *Magazine*, just above *nothing*, the point of contact of the tire on the rail, has commenced a movement, which as compared with the top of the wheel, the top is moving at four times the speed, and in all cases it must be understood the wheel does not slip. This is true without regard to either speed or diameter.

Again "Vulcan" quotes me as to the mechanical action of the standard type of locomotive: "1st Centrifugal, 2nd tangential, 3rd hammering, 4th swaying, 5th gyrating, 6th weewahing, 7th nosing around, 8th rocking, 9th rolling forces," "and their bridge destroying effects, I shall not endeavor to follow his 'train of statements,'" for they are not reasons. Will "Vulcan" take up these statements in their order, and by number, and by reason, authorities, illustration, and argument, not based on assertion without proof, prove "that they are not reasons."

In this connection I will ask Mr. Lewis H. Evans' attention to his article on page 891, December *Magazine*, 1888, 2d paragraph, and to my article on "Wear and Tear," in February *Magazine*, pages 118-119, and to the statements herein contained. If all these things exist as mechanical defects, can "the present American locomotive fairly be considered an established criterion of excellence, etc., etc., etc.?"

William E. Lockwood.

LOCH AERIE, March 23, 1889.

PALESTINE, TEX., March 26, 1889.

MR. EDITOR:—I am not much of a scholar and do not know that I will be correct in my assertions or opinions, but I see everyone is entitled to air his opinion in the *Magazine*, so I will start out and see how many times I will be delayed on the road. First, I see some arguing on "hammer-blows," and it occurred to me, how is it that engines do not jump the track when said hammer-blow takes effect on the upward, for you must see that you cannot have these blows all in one direction, and when an engine is equalized, does not that do away with the hammer-

blow? Then I see powers, fulcrums and resistances mixed up in such a tangled mass that it would take the great Archimedes to straighten it out; but I am going to add another tangle to it. Steam, of course, is the power, but, taking the wheel as the base of the argument, the pin will, to my notion, be the place where the power is applied, the box the fulcrum, and the rail the resistance, but, as the rail cannot move or be moved, the locomotive has to obey the laws of mechanism and move itself. Now, if the brothers who are writing on this subject can spare time between fires, going up some long hill, where the engineer has to use a little grit to hold her down, they will see the said grit obeying the laws of mechanism in moving toward the caboose; then get the engineer to drop a goodly stream of sand when the engine is shut off, going down hill, or on level track, and see how the sand will work. It will do like dough does under the rolling-pin—go ahead of the driver.

Then I see a fellow Texan on the G. C. & S. F., who writes from Cleburne and Galveston, over "Eccentric Strap," gives us a long formula to find a short leg of an engine, but Bro. "E. S.," while a man was going through all that trouble with your diagrams, if he had the injector or pump on a little too strong, wouldn't he have "the tableau" you speak of in regard to the engine which was such a thirsty thing that she drank herself full every night. Bro. "E. S." seemed to have had his feathers rubbed the wrong way by the way he talked in the wind-up of his first article in March number; but I will say that his second article, is, to my notion, far superior to the first, for he tells how he gets over that tough 100 miles, to make \$2 35. I would like to know of Bro. "E. S.," did the said Mogul have an extension front end, and what was the size of her fire-box? And I would like to have some one tell me what to do with an engine that burns about ten tons of coal to the 150 miles, and does not steam; she apparently burns her fire all right, and keeps the dirt out of it; also, what can be done to keep an engine from stopping up her flues.

I will repeat Bro. "E. S.'s" invitation to the boys on the "elevated" perch: Come down and try a spell at firing here, you need not worry about living, you will make enough to buy your meals, and the weather will soon be so you will wish you didn't have to wear clothing, and you can sleep on the top of the cab. I almost envy Bro. "E. S." his job of hosting this summer, even if he is a "night hawk." But I live in hopes that I can get a run into Galveston this summer, then I can cool myself off in the waters of the Gulf of Mexico, which makes Galveston beach famous. If I do I will tell you all know.

Yours truly;

Jim Dooley.

NEW YORK, April 2, 1889.

MR. EDITOR:—You have, perhaps, heard of the Swinerton driving wheel for locomotives, and if you have, you no doubt thought, like myself and many others, that the idea was a fallacy. Just think of a locomotive driving wheel being made flat to improve the power of the engine, and yet such is the fact.

Two weeks ago I went to the city of baked beans—Boston—to have a look at a novel device on a locomotive driving wheel, and will tell you just what I saw there.

At 8:30 A. M. I left Boston on engine "Onward", equipped with the Swinerton wheel. We had a train of six cars—passenger—and made the run to Portland, Maine, in four hours and fifteen minutes; distance, 110 miles, over an undulating road-bed, with grades from twenty five to sixty feet per mile; and some of the heaviest of these grades six to eight miles long, with stations on the grades ascending. Just the kind of road to try the powers of an engine. The engine weighed forty-five tons, net, cylinder 18x24, drivers (only one pair) five feet seven inches diameter, weight on each driver, 12,000 pounds; ordinary truck under cylinders and pair of trailing wheels behind drivers. There is a device forward of drivers by which 3,000 pounds can be transferred from truck to driving and trail wheels, in the ratio of two on drivers to one on trail wheels. Steam pressure, 165 pounds; enough to make any engine slip her wheels if she could slip at all.

The novelty is in the tire, the entire face of which is filled with facets, one inch wide, across from outer edge to base of flange; these facets are so slight as to be scarcely perceptible to the eye, yet a straight edge shows them plainly. It is well known that a round wheel is only in contact with the rail a mathematical line, whereas this wheel gives a surface of contact, when resting on the facets, of an inch, thus giving the wheel much more friction on the rail, and consequently the engine has just so much more traction, and hence, is less liable to slip her wheels.

It would naturally be supposed that a wheel of this description would cause a rattling noise on the rail, but it is as noiseless as a perfectly round wheel; in fact there is nothing about the engine when running or starting to lead one to think he was on any other than an ordinary four-wheel connected passenger engine, unless it would be the ease with which she curves. A remarkable feature of this wheel is the fact that these facets retain their shape and individuality as the tire wears down. The engine has run about 25,000 miles in passenger service and the tires are worn about one-eighth of an inch hollow, yet the facets are just as perceptible as when they were first cut.

I rode from Boston to Portland and back on the engine and watched the cross-heads the whole distance to detect any slipping, and she only let-go once, where the rail was wet on a heavy grade, but she caught on again before the engineer could shut her off or give down sand.

The opposite train, same number of cars and time schedule, is hauled by a fifty-ton, net, five feet six inch four-wheel connected engine, cylinders 18x22. These two trains are about as heavy as any on the road, thus showing that the "Onward" is not being petted or put on light work to create an impression that she does not deserve.

I am indebted to the engineer of the "Onward", Frank Coggins, for many courtesies in Portland and Boston. He did all a man could do to make my time pass pleasantly.
E. J. Rauch.

SAVANNAH, GA., March 26, 1889.

MR. EDITOR:—A stranger is at your door asking for admission to the "feast of reason" and flow of mechanics that is to be found only in the Mechanical Department of our great *Magazine*; if granted permission to enter, he will promise to try not to occupy too much of your valuable space and to contribute his mite to the entertainment. First, I would like to thank Bro. "E. S." for his valuable diagrams and explanations of lame exhausts and how to cure them; they are the best of the kind I have seen anywhere, and easiest to understand. I entirely agree with "E. S." that the cross head moves forward all the time when considered with relation to the earth's surface, but that it should be considered in relation to the machine of which it is a part.

In regard to the question of movement of the wheel, it is my opinion that if considered with regard to the earth, the point of a wheel of a locomotive in motion, actually in contact with the rail, has no motion whatever for the infinitesimal space of time that it is thus in contact, but if considered in relation to the machine of which it is a part, it undoubtedly has a rotary movement all the time. I think that nearly, if not all, of those who are discussing the subject have about the same idea but express it somewhat differently. Bro. Tucker has undoubtedly placed his engine in such a position that the bottom moves, but I think he will find that all who wrote on the subject meant the point in contact with the rail when they said bottom, and not the true bottom of the wheel. Before closing I want to say a word in praise of the Department and the *Magazine*. It is the best of all Brotherhood *Magazines* and the best and most interesting Mechanical Department that it has been my fortune to see, and I must sincerely thank all the contributors and you, Mr. Editor, for making it so.
Sandy.

WILLIAMSBURG, VA., April 5, 1889.

MR. EDITOR:—I have seen in the *Magazine* for this month a very interesting and carefully written letter on the contents of a boiler under a variety of conditions, by Mr. L. H. Evans. He certainly handles his subject in a masterly way, which gives me strong hopes that he will kindly give us a little more on the same subject, and tell us what holds the water suspended in the boiler when all the four corner plugs are taken out. At one period of my railroad experience I was employed to work on a branch connecting a small sea port town with the main line. Our water being pumped from below the sea level, was brackish, causing scale to form so rapidly that I found it necessary to clean out the leg of the fire-box every Sunday, which I did one day by taking out the plugs and scraping out the scale, and finishing by opening the throttle and letting out a dash of water, then by closing the throttle the flow of water entirely ceased. I then put in my plugs, let air in on top again and all was solid and safe. Next Sunday I washed out thoroughly, and I always gave "Vacuum" credit for helping me. In so doing I must have cheated some other agency; please tell me what it was.

Another idea of mine was, and still is, that when a boiler gets steam up and goes to work the atmosphere that was in her passes out immediately on going to work, and it certainly never gets in again. Any one can easily test the truth of what I say, but they must be sure that no air is let in from the time she goes into her stall in steam until cooled down. I was eight years on that branch and had several changes of engines. It used to be common with our old cage and ball valves to have the boilers fill themselves up sucking water from the tender.

Trusting that this will be taken and answered as kindly as it is given, I remain
Wm. Gore.

WE desire to say to our able corps of contributors to the Mechanical Department of the *Magazine*—that is to say, avoid introducing such matter as properly belongs to other departments. The Mechanical Department is not a matrimonial, domestic, poetic, romantic nor free for-all department. Its pages are devoted to the discussion, more or less directly, of mechanics. Should our correspondents have something to say upon other subjects a separate letter should be written. We have departments for the accommodation of a pretty wide range of talents, but our Mechanical Department must be kept exclusively for the discussion of mechanical powers and appliances. Please bear this in mind.

Limits to High Speed.

There are some people who seem to think that a train of cars could be run at a speed of one hundred miles per hour as well as at sixty or eighty, by simply increasing the strength of the propelling parts of the locomotive, and by burning a little more coal. The physical difficulties in the way do not seem to have occurred to them, and they continually blame engineers for not making engines that will far outstrip the machines of twenty or thirty years ago. Let them investigate the subject, and they will find that the driving wheels of a locomotive, seventy-eight inches in diameter as now made, running at the rate of sixty miles an hour, must make $238\frac{1}{2}$ revolutions a minute, and with a twenty-four inch stroke the piston speed will be 1,034 feet per minute. Increasing the speed to one hundred miles an hour adds two-thirds to the above numbers, and gives 430 revolutions, and a piston speed of 1,723 $\frac{1}{2}$ feet per minute. This is a tremendous speed, and will be better appreciated by comparing it with the initial velocity of a cannon ball fired from an Armstrong gun, which is only forty-one times as fast.

Bearing in mind that momentum increases as the velocity, and the centrifugal force in proportion to the square of the velocity, then, noting the combined weight of piston rod, piston head, cross-head and connecting rods moving a solid body at the point of their gravity, they will see that it would be practically impossible to absorb the energy of these, reciprocating parts at the end of the stroke. Assuming that these parts weigh 600 pounds, it would be equivalent to catching and throwing a cannon ball of that weight a distance of two feet seven times a second.

Then the bursting strain developed in the drivers from the centrifugal force at this high speed would tend to overcome the cohesion of the metal, and the danger limit would be reached. Again, as the speed increases, the air head resistance becomes greater, and more of the power of the locomotive is required to move itself.

One of the minor difficulties, not often thought of, was suggested at a meeting of the Western Railway Club, where it was shown that the seams in the journal of an axle that was made of muck bar iron were opened from the expansion caused by the heat generated at high speed so that the bearing was rapidly cut out.

Some of these difficulties might be overcome by introducing an intermediate gear between the piston and driver axle, or by increasing the diameter of the drivers and the length of the stroke; but they in turn develop other difficulties that render them impractical.

People who are ambitious to travel at a higher rate of speed will no doubt have to content themselves with the present attainments for some time to come.—*Journal of Railway Appliances.*

The above will no doubt be fully appreciated by our readers who have a practical experience of the difficulties involved, and the dangers incurred by such extreme speeds as are indicated above. When a train is run a mile in a minute, it is not child's play, or mere sport to sit, as it were, in the "front of the battle," and to know that the momentum acquired by the engine and train would involve disaster, if any one man along the line ahead should even for one moment forget or neglect a duty. Besides this, is the strain on the machine and its parts which, as has been shown, move with such speed as to be compared to a cannon ball. All are aware that iron and steel have certain limits of strain, beyond which they become weak, and at such rates of speed as eighty to one hundred miles per hour, the breaking limit

is not very far ahead, and by imperfection in a weld or casting may even be found before that speed is attained. While the permanent way or road bed on some of our roads might be good enough for such rate of speed at some points, it is a matter of doubt whether there is a road that could furnish a piece of track sufficiently safe to make one hour's run at eighty miles, much less at 100 miles. While much has been done in reducing time between distant points, it is not so much by an increase of speed as by a shortening of distance, and making fewer stops, and of a shorter duration. No doubt we shall have an increase of speed also, but it seems that a few miles more in a decade is all that can be expected. Some of the very first locomotives built were able to attain a speed of twenty-five miles per hour, with all the imperfections of the machines and the road bed, and at present we have reached a limit of about sixty miles, which is rarely exceeded. This apparently slow development of speed is no doubt owing to the difficulty presented by limits of strength in the materials at hand for construction. Whether we shall ever have any stronger materials is a question of the future.

Patents About to Expire.

Relating to expiring railroad patents, which become public property during April. Furnished by F. B. Brock, Patent Attorney, Washington, D. C.

Signal, J. F. Andrews.

Elastic Wheel, J. J. Sherman.

Car, I. G. MacFarlane.

Coupling, G. W. Loyd.

Brake, J. Darling.

Car Ventilator, S. E. Kirkpatrick.

Splice Piece for Rails, R. French.

Car Wheel, J. A. Woodbury.

Rail, E. Wiley.

Heater for Preventing Accumulation of Snow upon Railways, R. B. Miller.

Car Seat, N. S. Whipple.

Car Roof, J. L. Burnham.

Dumping Car, S. D. King.

MR. EDITOR:—I would like to ask if I am right in saying that starting from the top quarter, the pull on the pin presses on forward part of driver-box until it has passed forward centre a little, and from this point until it has nearly reached back centre, the pressure is back and up on box and then to top quarter it is forward, giving a forward movement to two-thirds of the circumference of the wheel.

J. Rice.

ASHLAND, Wis., March 25, 1889.

MR. EDITOR:—Having had quite a controversy upon the question, "What is the first rule in railroading?" I would like to have it answered by some contributor to the *Magazine*.

T. Godfrey.

Comparison of a Pulley and a Locomotive Crank.

"An Inquisitive Locomotive Fireman" writes us:

"If a pencil were attached to the center of a crank pin of a locomotive driving wheel, and the locomotive placed alongside of a large drawing board, so that the pencil would register the movement of the pin, what form of line would be made in running the engine?" In investigating the question, other questions, of which I cannot satisfy myself as to the solution, arose. One of which was, considering the apparent difference in motion of rolling and revolving wheels whether any fixed center of motion would apply in both cases? While a revolving wheel, such as a shaft pulley, is continually moving about one point—the axle—it seems to follow that this must be taken as the center of the wheel's motion. In the case of a rolling wheel, such as a locomotive driving wheel, there appears to be two motions—a revolving and a linear motion. While the wheel revolves, as before, around the axle, the line followed by any fixed point on the wheel seems to dispel the idea that the center of the axle can be taken as the fixed center of motion, for while any fixed point of the pulley wheel travels in a continuous circle about the center of its axle, a point on the driving wheel, such as a crank pin, travels in a curved line, the length of which, for each revolution, is equal to the circumference of the wheel, and which moves above and below the path of the center of the axle, a distance equal to that of the fixed point from the center of the axle. The path of the fixed point of the pulley wheel is always an equal distance from the fixed center of its axle, while the path of the fixed point on the driving wheel crosses and recrosses that of the center of its axle at each revolution. The peculiarity of this motion leads to conflicting ideas. If you consider the question worthy of your time, will you please give us some enlightenment in the March number of the *National Car and Locomotive Builder*?

[ANSWER.—It appears to us that a great deal of unfruitful investigation and speculation have been devoted to the effect which the motion of translation has upon the operating machinery of locomotives. So far as the application of power is concerned, the motion of a locomotive works in the same way when the engine is moving through space as it would do if the machine were jacked up, and the power transmitted through belts placed on the periphery of the driving wheels. And the driving axle would be the center of the path of the crank-pin just as truly in one case as in the other. And the center of the driving axle is as certainly the fixed center of motion as the center of a pulley.—EDITOR.]

The foregoing appears to indicate that there are a number of "Inquisitive Firemen" "Seeking Information," and "so forth" who are studying up the problems, presented to them while at their work, and who devote some of their time to the acquisition of knowledge. The problem above indicated is the same which has been discussed so fully in the *Magazine*, namely the wheel lever or fulcrum question, and the answer given by Mr. Angus Sinclair, the able editor of the *National Car and Locomotive Builder*, and author of the famous work on Locomotive running and management is therefore of interest to the readers. The closing paragraph, "the center of the driving axle is as certainly the fixed center of motion as the center of a pulley," leaves no doubt that Mr. Sinclair locates the fulcrum at that

place, and confirmation from so good a mechanical authority will no doubt be appreciated by "Vulcan" and others on that side of the question.

Rolling Stock.

The Georgia Central are in the market for 800 freight cars and a number of locomotives.

The Harrisburg Car Company are building one hundred refrigerator cars for the use of the company.

The Cincinnati, Jackson & Mackinaw are about to order 500 new box cars and some coaches and flat cars.

The Iron Car Company's office, formerly at 115 Broadway, New York City, has been removed to the Equitable Building, 120 Broadway.

The Union Pacific road has placed orders with Detroit works for the construction of 1,000 box cars, 250 refrigerator cars, 300 stock cars and 450 coal cars.

The St. Louis & San Francisco Railroad Company, and the Louisville & Nashville Railroad Company, are both about to order new freight cars from contract shops.

The Union Pacific Railway Company are getting ready for service, several trains of vestibule cars, which will be run from Chicago to the Pacific coast. Connection with Chicago will be made over the Chicago & Northwestern.

The Widdifield & Bowman Electric and Air Brake Company, of Toronto, Canada, whose brakes were recently exhibited on a train on the Lehigh Valley railroad, will soon equip a much larger train, making all the parts stronger and more durable than heretofore.

The old Philadelphia & Reading parlor cars, ten in number, will be exchanged to excursion cars, to be run on the Bound Brook the coming summer. The cars are too broad to be run on the main line, and an estimate to rebuild them was \$3,000, for which price almost an entire new passenger car could be built.

The Cylindrical Steel Car Company, have recently decided to locate a plant in St. Joseph, which will employ 1,000 men, and is having constructed in Boston a car to be called "City of St. Joseph," which will be sent to all eastern cities. The car is to be built entirely of steel, furnished in silk plush, upholstered and ornamented with hammered brass.

The South Baltimore Car Works has just completed for the Baltimore & Ohio two hundred gondola cars. The draw-bar made by the American Continuous Draw-bar Company, of Aurora, Ind., was applied to these cars. The Superintendent of motive power of the road is reported as saying that the company has arranged to use this draw-bar on all the cars which receive extensive repairs.

The Chicago & Alton road put on a new Pullman vestibule limited train on Sunday between Chicago and Kansas City. It has the popular features of an ordinary train, to which passengers are admitted without extra charge, except the usual charges of the palace buffet sleeper. Besides this, it contains a smoking car, regular coach, and rocking-chair car. The time between the two cities is about fifteen hours.

The safety Car Heating and Lighting Company, of New York, report that some Pullman cars are to be lighted by their Pintsch gas system, and heated by their new standard system. Also, that the new Wagner compartment vestibule train of the New York Central, is to be lighted by the Pintsch system. Twenty five new cars of the Central railroad, of New Jersey, are also to be both heated and lighted by this company.

WOMAN'S DEPARTMENT

EDITED BY IDA A. HARPER.

All Correspondence pertaining to this Department should be directed to
MRS. IDA A. HARPER,
TERRE HAUTE, IND.

MAY, 1889.

ADDITIONAL NOTES FROM WASHINGTON.

No more rapid and complete a change could be made by the kaleidoscope than was seen in Washington on the Fourth of March. Before noon Grover Cleveland occupied the highest position possible to any man in the United States. His wife was unquestionably the first lady in the land. The seven Cabinet officers commanded seven great departments with thousands of subordinates under their control. Their wives were the acknowledged social leaders in that brilliant city. The numerous officials with their families formed the aristocracy of the nation. Benjamin Harrison and his wife were private individuals. The members of the new Cabinet were enveloped in obscurity.

In a few brief hours all was completely changed. Mr. Harrison and his wife were installed in the White House. Mr. and Mrs. Cleveland had retired to private life. The old Cabinet were gathering their effects and preparing to leave the city. The new members had arrived and were basking in that fickle adulation which may be transferred in the twinkling of an eye. The officials in the various departments were rapidly making ready to step down and out. A few evenings before, I had attended one of Mrs. Whitney's elegant parties where were gathered the "beauty and the chivalry" of Washington. At the Inaugural Ball the whole *personnel* was changed. It was the inauguration of the new social regime, the obsequies of the old.

But the most striking change was observed at the Executive Mansion. At the grand receptions given there, the President and his wife and a few distinguished people stand in line and receive the guests. Back of them or "behind the line," as it is called, stand a large party of invited friends beautifully dressed and only to be looked at. A few days after his inauguration President Harrison gave a reception to Indiana Congressmen and their friends. I could not but notice that in and behind the line was not one face that had been seen there at all the previous receptions. The Green, the Red and the Blue rooms were unaltered. In

the long hall and the great East room the portraits of the Presidents for a hundred years looked calmly down. The choicest plants from the conservatories filled the air with fragrance and beauty. It was only in the people that the great transformation had taken place, but it seemed wonderful that, in so brief a time, the whole administration, political and social, could be so completely changed.

These frequent revolutions are the salvation of our government. They sweep over the country like a thunder storm in summer, cleansing and purifying the atmosphere. The knowledge that this change may possibly occur every four years makes those who fill official positions honest and careful, as they are likely at any time to be called to account; it also prevents them from becoming excessively arrogant and haughty, as they are liable after each election to step down from their high place and become one of the common people.

THEY have a very disagreeable way of shaking hands at Washington receptions which is peculiar to that society. The hostess, bland and smiling, stands just inside the door and holds out her hand in a most cordial manner. You take it in good faith and attempt some polite remark but you discover that attached to the hand is a fence rail which gives you a most decisive shove forward and you are pretty well along in the procession before you know what hit you. This habit is doubtless due to the large number who must be shaken hands with, but no woman of sense would stop for an extended conversation when there was a long line of people behind her. This custom of taking a guest's hand and giving her a push at the same time always seems to me an inexcusable rudeness.

I noticed repeatedly that with all the demands upon Mrs. Cleveland, and she has had to shake hands with more people than any woman in the country, she never acquired this habit. She took the visitor's hand warmly, gave it a friendly shake and permitted him to pass on at his pleasure and I never saw her imposed upon. In this and in many other respects she set an example worthy of imitation by many ladies who are older and more experienced.

As it has been necessary to have the mail for this department forwarded to three or four places during the winter, some of it may have been lost. We hope this is not the case.

"SCHOOL GIRL:" If your poem is original we will use it but we cannot find space for selections. It is very good but has a familiar sound. Let us hear from you.

THE Nevada Legislature have passed a bill prohibiting the saloon keepers from selling liquor to women. Now if they would only give the women a chance to pass the same kind of a bill in regard to men, Nevada would be a very nice state to live in. The assertion is often made that men are not willing to let women vote because they are afraid they will make prohibitory laws. But it seems they are in favor of such laws when they apply to women but not when they apply to men. How do the sisters who "do not want to vote" like this rule, which only works one way?

A NUMBER of entertaining contributions have been sent in, containing the writers' opinions on whether or not marriage is a failure. Everybody has some ideas on this popular subject and we would like to hear from the husbands as well as the wives. Be brief, come to the point at once and say what you think.

WE will close up the Woman's Department and turn it over to the Firemen if the ladies do not rise up *en masse*, as one injured individual, and sit down unanimously on Shandy Maguire in response to his poem in the April *Magazine*, entitled "Is Marriage a Failure?"

OVER twenty letters were received this month, all interesting. They will appear as rapidly as possible and we will ask our correspondents to exercise patience.

GRAND RAPIDS, MICH., March 5, 1889.

To the Editor of *Woman's Department*:

Dear sisters, please allow me to come in just a few moments to tell you about the masquerade ball given by Progressive Lodge, Ladies' Society, B. of L. F. It was given on the 21st of February, at Red Men's Hall, and was a success financially. All seemed to enjoy themselves and we hope they did. Bro. Leech cannot be beaten in representing an Indian, he acted his part so well that some of his palefaced sisters were a little inclined to be afraid of him at first but, Bro. Leech, it did not take us long to find out who the big Indian was. We wish to thank the Bros. of No. 265, who so kindly assisted us that evening. We do not know what we would have done without their assistance. Brothers, we hope you will never have cause to regret your kindness towards us. The merry dancers tripped the light fantastic until 2 o'clock in the morning when all went home seemingly well pleased with their evening's enjoyment. The object of our society is to assist and to encourage the B. of L. F. in their good work, to extend to each other the hand of charity in a time of need, to promote sociability, and to create a friendly feeling among all families of the Brotherhood, and we sincerely wish all the brothers' wives, mothers and sisters would join with us. I will close with best wishes for the Brotherhood and the Ladies' Society.

A Sister.

INDUSTRIES.

DO YOU KNOW HIM?

And so every day he gave the Almighty
Advice which he deemed of great worth;
And his wife took in sewing
To keep things a-going
While he superintended the earth.

The Churchman.

MRS. MARTHA STRICKLAND, Detroit's woman lawyer, argued a motion in a divorce suit recently, before the supreme court of Michigan. This is the first time that a woman ever appealed to that tribunal in the capacity of an attorney.

Queen Bee.

MRS. MARGARET PARKER, a Scotch lady, at present stopping at Wrights, Santa Clara County, is interesting herself in the solution of the problem of domestic labor on the coast in order to supply care-worn women of family thoroughly trained female help who shall be temperate, honest and willing workers.

MISS CATHERINE G. WAUGH, who is a lawyer, has a place on the Faculty at the Business College of Rockford, Ill., as Instructor of Commercial Law, Civil Government, and Political Economy.

THERE are nearly two hundred type writer girls in the city of Minneapolis, Minn. They are employed mostly by wholesale houses, in law offices and in the offices of manufacturing establishments.

It is said that there are over five hundred firms in New York City employing from one to two hundred girls and women in making neckties.

DR. SARGENT is a young lady physician from St. Louis, who has charge of the Maternity Home of the Woman's Homœopathic Hospital in Philadelphia.

THE Woman's Exchange is one of the permanent institutions of Little Rock Ark. It has paid to consignors during the year ending October 21, \$3,586.75, and its total sales have been \$3,984.45.

DR. METCALF, is a graduate of the medical department of the Iowa State University, being the only lady in her class of forty-five, and has the first post graduate diploma ever issued by the same University. She has made a long study of her specialty.

THE *Daily* published by the *Union Signal* during the National W. C. T. U. Convention was well edited. Miss Mary F. Seymour, of New York, had the management of the stenographic reports, and there were a series of articles upon woman's work in general in New York City, by Hester M. Poole.

MISS JENNIE HOPKINS is a reporter on the *Denver Republican* and holds a difficult position with much credit to herself and her employers. Her work is the same as that of her brother reporters and is of all kinds, from reporting a street fight or socialist meeting to taking society items. The hours of work are from two in the afternoon to three in the morning, and Sunday is no holiday. Miss Hopkins is a young lady of pleasing appearance and attractive manners, and her work commands the same salary as that of a man.

EDUCATION.

MISS LYDIA E. BECKER, editor of the English *Women's Suffrage Journal*, has been elected for the seventh time to the Manchester School Board.

MISS LOTTIE E. GRANGER has been elected president of the Iowa State Teachers' Association. Iowa has 25,000 teachers and 650,000 pupils.

THE *Springfield Republican*, in its New Year summary, calls the large vote cast by Boston women at the recent school election "the principal political event of the year."

THERE are twenty-three women inspectors in the New York Custom House. Among them are a niece of the late Thurlow Weed and a sister of Roscoe Conkling. They receive twenty-one dollars per week.

MISS MAMIE DAVIS, a telegraph operator, remained at her post during the entire season of the yellow fever epidemic at Jacksonville, Fla., and thus afforded communication from that city with the outside world.

MRS. FRANCES HODGESON BURNETT has concluded negotiations with a leading story paper of New York City for her next story. The price agreed upon is \$15,000 for the serial rights—the largest sum ever paid a novelist for such rights.

NEARLY one hundred women are now serving on school boards in England and Wales. Boards in country districts have women as clerks. Fifty-eight women are serving on boards as guardians in England and Seven in Scotland. A few instances are on record of female overseers, churchwardens and parish clerks being appointed.

ENGLAND.—The training college at Cambridge is the youngest of the educational institutions for women, and admits no students but those who have graduated in some university or passed an equivalent examination. It devotes Friday afternoon to instruction in carpentry, over which the young women become very enthusiastic.

TO INSURE modesty, I would advise the educating of the sexes together; for two boys will preserve twelve girls, or two girls twelve boys, innocent, amid winks, jokes and improprieties, merely by that instinctive sense which is the forerunner of matured modesty. But I will guarantee nothing in a school where girls are alone together, and still less where boys are.—*Jean Paul Richter*.

THE thirty-fifth annual meeting of the Iowa State Teachers' Association, held in Des Moines a few days ago, scores another victory for women. From five hundred leading educators of our State a woman was selected as president for the ensuing year, succeeding Dr. Picard, president of the Iowa State University. The State Teachers' Association of Iowa is composed of the best talent of the country, for Iowa ranks foremost in educational statistics, and our State superintendent's report for 1888 shows 25,000 teachers and 600,000 pupils. This is indeed a host, and to place a woman at the head of it is a significant straw, to say the least.

TEMPERANCE.

THE W. C. T. U. petition to Congress contained over fourteen million names.

THE Kansas senate passed a bill lowering the age of protection from eighteen to twelve years. The W. C. T. U. is making a vigorous protest against its passage by the House.

THE *Farmer's Voice* says that a law has been recently passed in Waldeck, Germany, forbidding the granting of a marriage license to a person addicted to the liquor habit.

THE mayor of Keokuk, Iowa, is author of the following: "This thing I have learned: the saloon cannot be fought by prayer-meetings. All the trousers in Keokuk can be worn threadbare at the knees and the saloon would still exist."

THE first Home for Intemperate Women in the United States was founded by Mrs. Mary E. Charplot, in Boston, Mass., in 1879. Since then similar institutions have been opened in Chicago, Providence, R. I., and New York City.

FRANCIS POWER COBBE, the author of "Duties of Women" and a well-known anti-vivisectionist, offers the W. C. T. U. for free distribution in America any number of thousands of copies of some of her leaflets on the subjects of anti-vivisection and mercy to animals.

THE Illinois W. C. T. U., through Supt. Ada H. Kepley, is making an especial effort to interest our foreign speaking people in temperance. The most prominent method employed is the distribution of temperance literature in various languages.

I HAVE no doubt that many of our influential city police are in receipt of a regular revenue in the way of "hush money" from gambling saloons, brothels and grogeries, and that the word is passed all along the line to let them alone.—*Anthony Comstock*.

MISSISSIPPI Masons, in a recent session, pronounced against the saloon by unanimously sustaining the action of Grand Master Evans in arresting the charters of Lodges disregarding the resolution passed at their last general meeting that no saloon-keeper could remain in fellowship with the Masonic body.

TWENTY-FIVE years hence people will be astonished that the Christians and reformers of this day allowed the tobacco curse to grow to a \$500,000,000 magnitude, and opium to get into general use, without any protest save from a few women and a few men who were called fanatics for meddling with these "outside issues."—*California Censor*.

REV. JOSEPH COOK in the prelude to his Monday lecture, Feb. 11, said that there is more money behind the rum-shop oligarchy than there was behind slavery, and that so intrenched is this power that there is hardly hope of succeeding without the military arm. Although one point after another of the intrenchment may be carried, the victory will not be complete until there is a constitutional amendment.

FRANCHISE.

THE Municipal Council of Paris has voted 500 francs toward the expenses of an International Woman's Suffrage Congress, to meet there this year.

THE Methodist Episcopal Conference, lately held at Pittsburgh, Pa., voted almost unanimously to ask the State Legislature for the submission of a woman suffrage constitutional amendment.

REV. DR. GOTTHIEL (N. Y.) thinks "the fact that three women—Mrs. Harriet Beecher Stowe, George Eliot and Mrs. Ward—have written three of the greatest books of the century, scores a good point for the advocates of woman's emancipation.

WE women are born governors by virtue of our motherhood, I pity the man, the miserable coward, who says women must not vote because she cannot fight. The whole tendency of the day is toward a peaceful arbitration.—*Mrs. Zerelda G. Wallace.*

FOR over forty years I have not hesitated to declare my conviction that justice and fair dealing, and the democratic principles of our government demanded equal rights and privileges of citizenship, irrespective of sex. I have not been able to see any good reasons for denying the ballot to women.—*J. G. Whittier.*

ATTORNEY-GENERAL MOWAT, premier of Ontario, has given a favorable assurance to a large deputation of ladies from the new Canadian woman's enfranchisement association, who desire woman's suffrage extended to voting for members of parliament. He says their reasons are unanswerable, and that municipal woman's suffrage has worked so well in Canada as to justify this extension.

THE bill for the equal rights of husbands and wives has again been brought forward in the Denmark Rigsdag. The Danish Woman's Association is earnestly engaged in securing signatures for the petition that municipal suffrage be conferred upon women. In many places women have been chosen on boards of superintendent of institutions for the poor.

MRS. ZERELDA G. WALLACE lately gave a woman suffrage lecture at Cotton Plant, Ark. It had been arranged that the Rev. Joseph Jones, a brother of the Rev. Sam Jones, should speak after Mrs. Wallace on the other side, he being a strong opponent. When Mrs. Wallace sat down, Mr. Jones rose and announced that he was converted, and should henceforth encourage rather than oppose the movement.

WOMAN suffrage was heard from in the United States Senate bright and early in the year. January and General Manderson presented to the Senate the petition of the Woman Suffrage Association of Nebraska, in favor of allowing women to vote for delegates to constitutional conventions in case of the admission of Dakota, Montana, Washington and New Mexico. Mr. Hoar presented the petition of the National Woman's Suffrage Association of Massachusetts, praying the adoption of a constitutional amendment giving women the right to vote.

DOMESTIC.

A CLOSE approximation: In 1864, in Memphis, in a refugee school that I visited while chaplain in the army, the bible lesson was John xv: "I am the vine and my father is the husbandman." One little fellow recited it thus: "I am the vine and my father is a married man."—*American Missionary.*

AT a recent meeting of a Boston Woman's Club a hot discussion was aroused by the assertion of some unbeliever that a "high education unfits a woman for household duties." The question occupied the society's attention for several weeks, when a unanimous decision was rendered declaring the Club's belief in Miss Sedgewick's well-known assertion "that the more intelligent a woman becomes, other things being equal, the more judiciously she will manage her domestic affairs."

THE condition of women in the European countries was a matter of some interest to me. I knew, of course, that I should see women working in the fields in Germany and Switzerland, and harnessed with dogs to milk-carts in Belgium and Holland; I expected to find them in some countries brutalized by drudgery and degraded by the social customs. All this I found, and the reality was no more winsome than the representation. The sight of a woman performing the functions of a beast of burden is not alluring. All things considered, the lot of the women of Continental Europe, so far as I was able to observe, is inferior to that of the women of America.—*Rev. Washington Gladden.*

GOOD MINISTER (a married man)—Do you wish to marry this woman?

Man—I do.

Minister—Do you wish to marry this man?

Woman—I do.

Minister—Do you like the city as a place of residence?

Man—No; I prefer the suburbs.

Minister—Do you like the suburbs?

Woman—No, indeed, I prefer the city.

Minister—Are you a vegetarian in diet.

Man—No; I hate vegetables. I live on beef.

Woman—I can't bear meat. I am a vegetarian.

Minister—Do you like a sleeping room well ventilated?

Man—Yes; I want the window way down summer and winter.

Minister—Do you like so much fresh air?

Woman—No; it would kill me. I want all windows closed.

Minister—Do you like a light in the room?

Man—No; can't sleep with a light; want the room dark.

Minister—Are you afraid in the dark?

Woman—Indeed I am; I have always had a bright light in my room.

Minister—Do you like many bedclothes?

Man—All I can pile on.

Minister—Do you?

Woman—No; they suffocate me.

Minister—I hereby pronounce you man and wife, and may the Lord have mercy on your souls.—*New York Weekly.*

MISCELLANEOUS.

VISITOR—Don't you miss your little nephew very much, Fredlie?

FREDDIE (whose nephew had died the week before)—Yes, I miss him very much, but I like to be the uncle of an angel.—*Life*.

A POOR WOMAN, coming from a garret in an inland manufacturing town for the first time to the seashore, gazing at the ocean, said "she was glad for once in her life to see something which there was enough of."

A LITTLE Buffalo girl was not feeling well, and her parents suggested that she might be about to have chicken-pox, then prevalent. She went to bed laughing at the idea, but early next morning went into her parent's room, looking very serious, and said: "Yes, it is chicken-pox, papa, I found a felder in the bed."

UNCLE JACK returns from a long walk, and, being somewhat thirsty, drinks from a tumbler he finds on the table. Enter his little niece, Alice, who instantly sets up a cry of despair. *Uncle Jack*—What's the matter, Allie? *Alice* (weeping)—You've drank up my aquarium, and you've swallowed my free pollywogs.

Harvard Lampoon.

"AND do you doubt my love?" he asked passionately.

"No, George," she answered with admirable poise, "but when you say that the day you call me yours will usher in an era of lifelong devotion and tender solicitude, you—pardon me, dear—you put it on a trifle to thick. You seem to forget, George that I am a widow."

JOHNNY QUINLAN, of Evanston, has the most wonderful confidence in the efficacy of prayer but he thinks that prayer does not succeed unless it is accompanied with considerable physical strength. He believes that adult prayer is a good thing, but doubts the efficacy of juvenile prayer. He has wanted a Jersey cow for a good while and tried prayer, but didn't seem to get to the central office. Last week he went to a neighbor, who is a Christian and believer in the efficacy of prayer, also the owner of a Jersey cow. "Do you believe that prayer will bring me a yaller Jersey cow?" said Johnny. "Why, yes, of course, Prayer will remove mountains. It will do anything." "Well, then, suppose you give me the cow you've got and pray for another one."—*Philosopher Nye, in New York World.*

A picture memory brings to me,
I looked o'er vanished years, and see
Myself across my mother's knee.
I feel her strong, firm hand restrain,
While whack, whack, whack, I feel again
A child's blind, burning sense of pain.
But wiser now, a woman grown,
My mother's trials better known,
The justice of the blows I own.
With riper sense, I plainly see
That as my mother paddled me,
So must my children paddled be,

LOUISVILLE, KY., February 18, 1889.

To Woman's Department:

As I have not seen a letter from Lodge 103, I concluded that I would write, but I cannot tell you much Lodge news. In regard to the much debated question: Is marriage a failure? I think it is a draw, that is, there are as many failures as successes and *vice versa*. Now, for instance, when the master of the household comes home off of the road and hangs his lunch pail in its place, tells his better-half how becomingly her back hair is arranged, jumps the baby and in fact makes home cheerful, the thankful heart of the wife overflows with joy and in her thoughts she is repeating, "Oh! how happy I am! What a success marriage is. I wouldn't be single again for anything."

But again! Listen, Oh ye Gods! When that hubby dear, (the same one, mind ye, only he's in a different humor) comes in and throws his lunch-pail in one corner, his overalls in another, upsetting the baby with them, his devoted "frau" meanwhile protesting against such rude playing, he growls: "Why didn't the brat get out of the way then." And the following day when he has gone out with the boys, she toils wearily over his clothing sewing on buttons, etc., getting everything ready for the next trip, she spies a piece of note paper protruding from the pistol pocket. Somehow or other her heart manages to get up in her throat but she whispers: "Oh, pshaw, it is only a dispatcher's order," but she concludes she will read it anyhow. Contents:

Dear —: I got your note last week but I am just as mad as I can be for you did not wave your hand at me as you went by yesterday. Emma Ryan, that lives farther down the road, says you waved at her and kissed your hand to her, too. Farewell. Your own little

Vendetta.

When this same wife looks to see if his coat pockets need mending (she is determined to look well too), she finds another, sealed ready for the mailed. Contents:

My Dearest Love: I got your dear, little note and am both sorry and surprised, for when I waved at that girl yesterday I thought it was you, yet I should have noticed the inferiority.

As ever, your true

H. W.

Now what does our meek heroine do? She just stamps the letters with both feet (please excuse the expression), "The Jezebel," she exclaims, "Oh won't I pull every hair out of her head, the hateful thing. I won't live with him another hour, I just won't, I am going home. Oh, I wish I was single again, marriage is a complete failure."

When I was single
My pockets did jingle,
I wish I was single again."

Now I know I have not written this in true novel style but it is an actual occurrence.

I would like to hear from "Acme" again. Now I know this letter is brim full of mistakes but if you will please set it down to my trepidation and print it anyhow, I will do better next time. I agree with the engineer's wife; the railroad men do flirt, and it is not just to their love and respect for their wives or for all ladies. Let us hear more on this subject.

Sarcastic.

IS MARRIAGE A FAILURE?

To the Editor of *Woman's Department*:

"Is Marriage a Failure?" This question is I think, fraught with deep interest to us all, both as regards our lives in the narrow circle of home life, and also our lives as citizens, for on it rests all earth's best happiness, or her direst misery. And if once we seek to prove it a failure, then the world around us will soon sink down to the lowest depths of degradation. It belongs to each man and woman to make marriage either a failure or a grand success. It was instituted as the last crowning act of our Creator, to complete this work of creation, and as a means whereby man might enjoy to the full, all earth's other pleasures and joys, because man needs a kindred heart and a kindred mind to sympathize with his own, so that joys may become more full and enduring, and sorrows, less bitter and overwhelming. And what constitutes this sweet blending of interests and desires? One must not imagine that married happiness is only attainable when all goes smooth, and the world seems full of love, for if this be so, then I fear very few would attain it, but if both husband and wife are each striving to promote the other's happiness, overlooking the faults and imperfections, smoothing down the rough edges of their characters, being to their faults a little blind, and to their virtues very kind, studying to avoid what may lead to harsh thoughts and words, striving to bring out and cherishing the good points of each other, and building up around them a halo of love kept ever pure and bright by loving plans and deeds to make each day happier than its predecessors, then I think marriage is and will be anything but a failure.

Then outside the home circle, marriage is of vital interest to the world at large, it is giving, not only the social influence of two persons, but the children which may be born, are one day to be the citizens of this great continent, and as they are, so will our country either progress or relapse. They are the stones which will make up the fabric of the next generation, and the influence and example of the parents is going to make them either better or worse citizens. We never can find where our influence ends and we parents would do well to consider this. I say let us start with our children, let them see that marriage is no failure, or if it seems so in some cases, it is only as people choose to make it so. The whole social question rests on whether marriage is a failure or not. Once let it be condemned as a failure, then purity of life, purity of heart and action will be gone from us forever, and a country or state governed by those who believe and would teach that it is a failure, will soon sink to the lowest depths of vice and misery, and there would be no more energy to make that country great or good, for man would then live only to please himself, regardless of all around him. I am quite sure that marriage may be the very summit of earth's highest happiness, attained most by those who are each day living not for themselves but for one dearer still, bearing

and forbearing one with another, thus making one little spot of this earth indeed "Home, Sweet Home," and perchance influencing others to go and do likewise. *Alice Brooker.*

GODERICH, ONT.

[We are very glad to hear again from our old friend, Mrs. Brooker. In a personal letter she writes that three babies, all under four years old, leave very little time for letter writing. We can readily believe this and appreciate more highly on that account her admirable tribute to married life. We always welcome Alice Brooker.—Ed.]

STRATFORD, ONT., March 4, 1889.

To the Editor of *Woman's Department*:

In looking over the last number of our *Magazine*, I noticed your invitation to us to give our opinion on that great and popular question, "Is marriage a failure?" I never intended to give my opinion on that question, for I, for one, have found out that it is not a failure. I think that if all mothers would bring up their daughters as I was brought up, the question need not be asked so often. What do they call a failure? Is it a failure because we cannot sit with our hands across and play the lady? I am afraid where women can and do do that, it has proven a failure. I, as a girl, had to work for my own living, and very early in life at that. I often knew what it was to work very late at night too, but it was for a dear mother who found in her children her greatest comfort. She taught us early to sew and mend, and all that was necessary for girls to know who would, altogether likely, get workingmen for husbands, if they got any. Therefore, when we started out in life for ourselves, we knew how to keep house, and not only how to keep house, but to keep homes. We did not expect to get angels for husbands, we had brothers of our own, and therefore did not expect other girls' brothers were to be any better than ours. Our brothers were never taught to do house work, but we always found, in case of sickness or trouble, they were ever willing to help, even in *scrubbing* or *washing*, and many a scramble they had to get out of sight when they heard any one coming. I will tell you what I think makes marriage a failure. Girls marry workingmen and they do not know how to keep house, nor how to work. Their husbands cannot afford to keep experienced servants—they could afford to keep a young girl to help that needed to be taught, but then when a wife does not know herself, how can she teach another, and then things go from bad to worse, debt and trouble, often fast and thick, and what is the end? Very often, in your country, divorce, and in ours, complete misery? And why? Because mothers would not teach their daughters to work. How many mothers have I heard say, "I had to work both early and late and I was determined that my daughters should have a better time than I had." They forget that if they had not been taught to work and keep house, that they would never have had the means to keep

them from work. Girls, rise above this false pride. Learn all you can about a house and home. If you never need the knowledge it will never be a burden, and before you marry be sure you love the man you are about to make your husband. And one more bit of advice, learn to cook, for in this day I really believe the way to a man's heart is through his stomach. What man could resist a woman who can set him down to a well-cooked meal (Independent of a servant) especially when that woman is his wife. He will never tire of singing her praises. And then you will find marriage a blessing instead of a failure, at least it is the opinion of

One Who Has Found It a Blessing.

[This is excellent as far as it goes, but a woman who possesses all of these good qualities can only make *half* of a happy home. What is required to make the other half?—Ed.]

CLINTON, ILL., Feb. 10, 1889.

To the Editor of Woman's Department:

Oh, for the power to give intelligent expression to the thoughts that crowd my brain. These seasons of thought are so spasmodic and at such long intervals as to render the flooding of the market with my literature quite impossible. I generally get my thinking-cap set squarely on my head just after reading good letters in our *Magazine*. The January number contained, beside our editorial, which is always inspiring, a letter, which I enjoyed very much, and I join our leader in her invitation to our Grand Rapids correspondent to come again.

I have never taken much interest in the subject of "Woman Suffrage." Probably because I knew I would meet with no opposition at home, as my "better half" is an earnest advocate of equal rights for men and women. I think the most passive of us only need the subject presented to us in a strong light, with convincing facts and figures, such as our leader gave us in December, to become enthused. And if it amounts to nothing more than conviction and enthusiasm, we are the better for exercising our mental faculties instead of allowing them to rust while others are doing all they can for a cause, which, when gained, will be of equal benefit to the sluggish and the active one. We should at least keep ourselves posted as to what is being done, so that when the *good time* comes we will not have to refer to history to find who has brought about the great change.

We are not all called on to go out from our homes to work and struggle for our rights. There are those who have no other responsibilities resting on them, and who are better qualified in every way to do this work. But that ought not to relieve us to such an extent that we take no interest in what they are doing. We can give them eye and ear, and heart service, and they will surely feel the benefit of it sooner or later. I, as I sit in my cosy room with my knitting, do not know that my rebellious

thought will do any good, but no one will be harmed if my needles click viciously when instances of injustice of a personal nature come to mind, and we all know of such cases, where the woman makes the living for herself and a family of children and a drunken husband. She strives to give her children a little of the education so freely offered in our public schools. She knows the value of it, for she is generally well educated, and could appreciate a kind protector if she had one. When election day comes, the male, (for he does not deserve the name of *man*) drunk or sober, is in his element. He can lord it over her then, although he is dependent on her for his three meals. What little brain alcohol has not absorbed is of far greater value than her whole brain, rendered stronger and more active from having to earn support for him and his.

And yet I can excuse this man more readily than the one who makes so many pretensions of gallantry and love for women, yet denies that her mind, though stored with all useful knowledge, is equal to his. Thank the Lord I am not obliged to live with such a man.

I am in blissful ignorance of the doings of Main Line Lodge. Doubtless the nobility of her members will prove to be on a par with their brothers.

Since writing the foregoing letter, the February *Magazine* has come, and, if I understand it, we are asked to give up our Editorial. I say no, no, no, we cannot do that. Ask anything else of us. I find good sentiments, well expressed, in any and every book and paper I read, but they do not "go right to the spot" as Mrs. Harper's do. Nothing will reconcile me to the new order but the knowledge that she is physically unable to continue her good work with us. Even then I would be selfish enough to ask her to give up some of her; other literary work in favor of us. Knowing all will join in the protest, I will close this long letter.

Mrs. L. H.

[Thank you for appreciative words. The editor is always in perfect health. With so much that is good crowding in upon us, it is difficult to make a selection, and the editor feels that it is occasionally her duty to yield as she is obliged to ask others to do. Your letter is very readable. Come again.—Ed.]

OMAHA, NEB., February 19, 1889.

To the Editor of Woman's Department:

Having been an interested reader of the *Magazine* for some time, I wish to write a few lines. I think your article in this month's book about "Breaking the Ice," and "the Waste Basket," and "the Flourishing Condition of the Lodge," they, of course, know nothing about, very good as most every letter was full of this. Let the boys take care of the Lodges and the ladies write something to make *home* attractive for the boys. Am glad to see Woman's Department enlarged. Let us hear from Alice O. Darling again, by all means.

Respectfully,

Donnybrook.

For Woman's Department:

THE MIDDLE AGED BACHELOR.

He loved one for her graceful ways,
Another for her eyes,
Another for the smiles she gave,
Another—hush those sighs.
He loved them all—to all was true!
He loved me with the rest;
But listen, I would speak it low,
He loved himself the best.

Thus chanced it that he never wed,
No one had perfect grace;
No one but had some little fault
In form, or heart, or face.
(Could he have found combined in one
The good he found in all)
Surely his heart had been enslaved;
His mind had felt love's thrall.

God made him not an angel quite,
Yet quite too perfect man;
There seemed well written in his face
Do all the good you can.
Therefore he loved all woman kind,
The short as well as tall.
He said such sweet, sweet things,
But said the same to all.

Alas, Alas! his way won hearts,
He did not mean to win.
He deemed the life of a flirt
A most disgraceful sin.
He never flirted, no, not he,
Nor won a heart as yet.
Or if he did, 'twas an easy thing
For a young heart to forget.

He loved all girls—they loved him,
He loved me with the rest;
Though many true hearts loved him—
He knew not which he loved best.
But the love he scorned in others
May yet in him find place,
And like Narcissus he may die
For love of his own face.

A Fireman's Sister.

TROY, N. Y., February 26, 1889.

To the Editor of Woman's Department:

I have read the Woman's Department of the Magazine with great interest for the past two years, and take pleasure in informing you that I have been vastly entertained by the many eloquent writers. I often like to refer back to the beautiful poems of Mrs. Henry B. Jones, Nellie Bloom, Cousin Nel', Angeline S—, Shandy Maguire and others. The February number is at hand and I see on the top of the first page of our Department, that we really feel quite out of the fashion when we think that our Department has not yet discussed the popular subject, "Is marriage a failure?" I hope you will excuse me if I do not write to please everyone, because I don't know how, as this is the first time I have written to you. I will try to express my opinion on this subject, and would like to hear others express theirs.

Home is the centre of woman's sphere, because nature teaches us so, yet there are many who do not make it such. A lady acquaintance of ours says that "women were not meant to stay in the house to wash, and darn, and darn, and darn." She dresses in her best and goes to suffrage meetings, she says, in the afternoon. I think that if some would do more darning with a needle and less with their tongues, and pay more atten-

tion to their homes, they would find more comfort in that home than in showing their finery on the streets. When women object to doing housework, then who will do it? Surely the husband cannot. Why not the husband object to work too, and walk the streets in his best and attend the street corner meetings? Surely it is necessary that husband and wife should strive to make their home as comfortable for each other as possible. It is not necessary that woman should worship man. I know that I will not, nor am I afraid of being left. A person who respects himself or herself, will be respected. In the race of life, if the girls should stop and look around them and choose "only one man," of good principle and character, instead of catching at the shadow of something that looks like a man, it would do more good than all the suffrage meetings that could ever be held; and instead of the young ladies looking for the young men, as it is with about every young couple nowadays, the young man would have to seek the lady, and husbands would not have the opportunity of running away two or three times.

"Is marriage a failure?" This popular subject depends entirely upon the woman. The wife has the controlling power over man. She can lead him like a lamb and cause the fountain of his tears to flow through sorrow or through gladness; or, she can excite him to war.

"Marry in haste, repent at leisure."

There have been many proofs of this which we all will acknowledge are failures. The advice of a father to his son (when he told him to "Go slow! Be sure you're right, then go ahead!") would, I think, be good advice to all. Hoping to hear from others on this subject, I am,

Jessie White.

[We feel quite certain that our lady readers will be compelled to answer some points in this letter. The subject is open for discussion.—Ed.]

"ROBBIE."

[In memory of my dear little son, Robbie Ryan. Died November 16, 1887, aged four years and six months.]

In my few short hours of slumber,
And neath sorrow's welting wave,
I can speak or think of nothing
But my darling Robbie's grave.

For our darling, precious Robbie,
From this earth has passed away.
Such a short time he was with us
It seems but one short day.

I can see him yet before me,
In his little waist and skirt,
With his bright blue eye dancing
As he lapped his childish mirth.

Still a sadder thought comes o'er me
An another melting wave,
For, alas, my heart lies buried
In my darling Robbie's grave.

Yet I know the blessed Jesus
Did my little Robbie save,
And I now must look up higher
Than my precious Robbie's grave.

Mrs. J. E. Ryan.

DAYTON, O., March 25, 1889.

For Woman's Department:

TO MR. "SHANDY MAGUIRE."

DEAR SIR:—The lines you have sent me,
I have read with cheeks all aglow;
The pleasure you gave me, friend "Shandy,"
Was so felicitous I would fain have you know
How the words set my heart in a flutter—
Filled my breast with ecstatic delight,
And, while the shadows of evening are falling,
These stanzas to you I'll indite.

"Tis true I composed the poem called "Waiting,"
Ne'er thinking that you would reply,
Yet, 'twas not for myself that I wrote it,
As the answer you sent would imply;
But 'e'en tho' I had been thus neglected,
My "bosom vibrating 'twixt hope, doubt and fears,"
My face I should ne'er have "disfigured"
By having sought consolation in tears.

To pretend that I don't understand you,
Would absolve you from thinking me obtuse;
And the kisses you tender so freely,
Were you here, I should have to refuse;
For I have a husband to kiss me, friend
"Shandy,"
(Who don't do it by halves, I confess),
So your wishes would be disregarded,
And your lips to mine ne'er would be pressed.

I oft think you are given to flirting—
Can it be that the thought is quite true?
'Tis naughty to flirt with the ladies—
Yet, "Shandy," I believe that you do;
Otherwise you would not be so ready
With your insinuations against Mr. Bloom;
But knowing so well your own failings,
Like yourself, you deem him a loon.

Kind Sir: Do not feel offended,
But reply to this poem straightway;
And when next I write some nice verses,
Your answer please do not delay;
And, should you imagine that I've been neglected,
By that "strolling indifferent elf,"
Spare my feelings! and be not obtrusive
By offering to console me yourself.

—Mrs. Nellie Bloom.

WEST OAKLAND, CAL., February 20, 1889.

MISSOULA, MONT. TER., February 4, 1889.

To the Editor of Woman's Department:

I have been a reader of the *Fireman's Magazine* for a long time—and as the women have a column, I thought I would write a few lines, and as I am a woman, I think I may say, just what I please to say. Well, first, I am glad the C., B. & Q. strike is off. I can't see what good it has done any one of the strikers, as so many are out of work. One thing I do know it was a pretty hard strike on our boys' pocketbooks. As I am going to say what I please, I say I think those old timers on the C., B. & Q. were tired and wanted a lay off to go fishing. Whether I am correct or not, I am truly glad the strike is off. It was tiresome reading about it. I take the *Magazine* and commence at the first page and read it straight through. So you see I was compelled to read all this strike. There is another thing I like about this month's *Magazine*, that is different ones contributing poetry. I don't care for poetry as some do. In fact I could do without it altogether, yet a little good, sensible poetry like "Tired Wife" or Mrs. Penn's will do very well,

but that horrid Shandy Maguire does serve out the trashiest, love sick stuff. I skim over his poetry as fast as I can and never stop to digest it. A fireman made me a present of a whole book full of that Shandy's moon struck ravings. I took them and thanked the giver, as he thought he had given me something nice. Well I read the book through for his sake. I mean the fireman, of course. When I got to the last line I shut the book and laid it away never to be opened by me again. If I were his wife I would stop him from making love to every woman, much less let him be offering himself to married women, as he did to Mrs. Bloom, but then his wife may be a delicate little thing who is not able to manage him. Such men get that kind of a wife. Well I am glad I don't have to read so much of his poetry. My nerves are getting a little more settled since the strike is off, and Shandy does not put so much poetry in the *Fireman's Magazine*.

Now I am going to tell you that there is a fireman's Lodge here, but I am not going to tell you that it is in a flourishing condition for I do not know anything about that. I do know that the boys are all in a flourishing condition, and I conclude the Lodge is all right. There are a fine lot of firemen on this division. They are all industrious, sober, moral, brave boys. Brave, yes, they are that, it takes a brave lad to fire on the Rocky Mountain Division. Some have been expecting promotion for some time but promotion comes slowly, so slowly that a few of the brave boys lay down the shovel and hoe and leave the field with the battle only half won.

Most of the boys are a long way from home and loved ones. If the mothers and sisters of these poor, lone firemen would write often to them it would tend to make their life more pleasant and shorten the long days and nights of hard toil. Thinking I have said enough, I will sign myself
Fireman's Friend.

[Bear up, Mr. Maguire, poets have been killed with criticism. You shall never feel that you cannot get justice in the Woman's Department. If you have any apologies to make for "offering yourself to married women" we will suspend the discussion of whether marriage is a failure and hear what you have to say.—ED.]

FIGURES compiled by the National Bureau of Labor shows that the old theory that the ranks of the fallen of the country are recruited from working girls, is fallacious. Investigation made in the large cities shows that in Boston 7 per cent. of these women were married before entering the houses of ill-repute, in Chicago 25 per cent.; Cincinnati, 20; Louisville, 26; New Orleans, 2; Philadelphia, 3, and San Francisco, 25. The occupation which give the greatest number of recruits to this army is that of house work and cooking, it being 30 per cent. of the whole, but the alarming figure is the 32 per cent. which enter on a life of shame directly from the home.

"WAITING."

I'm waiting to-night for a loved one
Who may be far, far away,
But seems to me that he is near,
And I've waited all the day,
Hoping so fondly to see him
On this bright and beautiful day.
Hoping with a confidence in my heart
That beats so light and gay.

As the sun rose up this morning
Streaming forth its golden light,
A hope awakened in my heart,
Just as radiant and bright.
For awhile it grew stronger,
For, Oh! I felt quite sure
That it would once be realized
In happiness so pure.

But as the sun was sinking low
Into the distant West,
I watched with a saddened silence
And my joy turned to unrest.
A sudden fear came over me
While I watched with increased woe,
My eyes were filled with unbidden tears
Which seemed they fain would flow.

Oh! how bravely I struggled
With a sad and trembling heart,
Lest a "tell tale tear" should linger
And my fears to all impart.
I saw the shadows were falling fast,
The last sunbeam fade and die.
I gave up my day's waiting
And heaved a bitter sigh.

But as the moon rose brightly
Lighting up this vast dark plane,
The chord of hope seems touched
And I'm waiting again.
Patiently, hopefully, prayerfully,
I'm waiting as never before;
I start at the sound of each footstep
And listen for his rap at the door.

While my heart is filled with longing,
I watch the stars in the sky—
And fancy they looked down upon me
With a softening, pitying eye.
Perhaps they know he is coming
And will teach me to longer wait.
Ah! if I could only feel as certain
Before it is too late.

Oh! how I would welcome him
With a tender trusting heart,
For the love I cherish for him
Can never, no, never depart.
Perhaps if he knew the anguish
Which I endured through the past day,
And had forgotten and was waiting again
His coming, he would no longer delay.

But the moments now are flying,
The dew is falling fast,
And the hour for his coming
Oh! Heaven it has surely past!
I have taken my last look at the stars to-night.
At the moonbeams fadingly glide
I can no longer wait for him now,
My hopes have faded and died.

Ohve.

[This was doubtless some other girl's day, or perhaps his spring suit was not done. Hunt up another young man. The one you are writing about will keep his wife waiting seven nights out of a week. Get one that runs on schedule time and can be depended upon.—Ed.)

To the Editor of *Woman's Department*:

The *Magazine* for March is at hand and I would suggest to Cousin Nell that if she will read

a few of the prominent daily papers thoughtfully for a year, she will receive more light than can possibly be crowded into the pages of the *Magazine*. Some say they have no time to read. It is true that if a woman does her own work there is not much time for reading, but there are very few households where one cannot get a few minutes each day, if the work is planned with that object in view. Some say that they are not interested in such subjects, but I have noticed that most of such women find time for, and are interested either in gossip or reading such papers as the *Saturday Night* and the *Fireside Companion*. If we are not interested in the great issues of the times that are sure to affect our government, it is our duty to become so as soon as possible. I heartily agree with Cousin Nell that we should try to learn all we can that is "useful and ennobling" and "fill our places" in the very best possible way. In trying to do this, would the right of suffrage help or hinder us? In my opinion it would be a great help. Until we receive that right the best we can do is to study, and think, and try to prepare ourselves to use it intelligently when it does come. Every woman must have capital to yield an income for her support or be supported by her own work, or that of some one else. Now, in either case, ought she not to be concerned about the laws which govern our land? If she has capital she should know how and where it can be safely invested to bring her the best income and at the same time benefit others. If she works or is supported by the work of another, surely she is interested in the laws which affect every laborer. Would it not be some benefit to have something to say about who shall make and execute those laws? I should think every woman would like to give her opinion as to whether places of responsibility and trust should be given to honorable men who will do all they can for the welfare of the nation and the good of humanity, or to tricky rascals who will sacrifice anything for personal gain. Now, don't understand me to mean that we should all deliver public lectures. Most of us could not do that if we tried, and it is necessary that we be at home most of the time and always prepared to put up a lunch, or sew on a suspender button, or do anything else that occasion or our husbands may call for. But once or twice a year we might, without neglecting any home duty, speak through the ballot box, and we would be heard like the women of Boston recently were. I was disappointed that no one said anything about that question, "Is marriage a failure?" I have very decided views on that subject, but time and space both have a limit.

Lucy Lynn.

[Let us have your views.—Ed.]

WOMAN lives longer than man, goes insane less numerous, commits suicide one-third as often, makes one-tenth the demand on the public purse for support in jails, prisons and almshouses, and in every regard manifests potentiality for good citizenship physically, mentally and morally.

MAY, 1889.

Cost and Benefits of Membership.

MR. EDITOR: As a member of the Brotherhood of Locomotive Firemen, I am interested in all things that concerns its welfare. I don't often appear in print. I don't profess to be educated, and I confess I am timid. But I read our *Magazine* and I hear a good deal of talk about it, in fact, I hear so much, that I have been trying my hand at writing for the purpose of telling the boys what I think upon subjects which are so much talked about, but as often as I have tried to get things in shape, I have to confess that my way of writing don't please me, and then I play editor, and put it in the waste basket. After a while, I try it again, and this contribution I am going to send. If it suits, O. K., if not, I won't get mad. The bell rings and here goes:

I hear that some of our members have quit, on account of the "Q." strike. It don't surprise me in the least. It was a hard fight and cost a pile of money, but it didn't cost any one member a very big pile. Now, I don't profess to be very good at figures, but I was talking the matter over a few days ago with a brother, who seemed to be dissatisfied and so I tried to quiet him down a little with some arithmetic. I am going to tell you how I ciphered it out. It was this way:

Suppose a man begins firing when he is twenty years old, and fires till he is fifty years old, then he has fired thirty years. Now suppose he pays dues and assessments every year to the amount of \$30.00 that would be \$900. Suppose at the age of fifty he dies, or becomes totally disabled, then he gets \$1,500, and is a clear gainer of \$600. But suppose you divide the thirty years into periods of three years each, ten periods, in any of which he is liable to die, get killed or totally disabled. Now, I showed the brother I was talking to, how he would be gainer. If he died in the first period of three years, or got disabled, he would be gainer \$1,410, second period \$1,320, third period \$1,230, fourth period \$1,140, fifth period, \$1,050, sixth period \$960, seventh period \$870, eighth period \$780, ninth period \$690, tenth period, \$600. Now, I don't know if that is the best way to put it, but my brother fireman caught on at once, and said he hadn't thought of it that way before, and was glad I had showed him how it worked. Now, you see that it takes fifty years for a man to pay in \$1,500 at \$30.00 a year, so that a man beginning to pay in at twenty years of age, would be seventy-years of age before he got through with it, then if he should die at seventy years of age, he would get back, or his heirs would, all he had paid in. But I want to make this important matter so

clear that every brotherhood fireman will see it without any trouble and I state it again as follows:

Periods.	A'm't. of Insur.	Amount paid in.	Amount received over amount paid in.
First period	\$1,500	\$ 90 00	\$1,410 00
Second period	1,500	180 00	1,320 00
Third period	1,500	270 00	1,230 00
Fourth period	1,500	360 00	1,140 00
Fifth period	1,500	450 00	1,050 00
Sixth period	1,500	540 00	960 00
Seventh period	1,500	630 00	870 00
Eighth period	1,500	720 00	780 00
Ninth period	1,500	810 00	690 00
Tenth period	1,500	900 00	600 00

Now, Mr. Editor, I think if a man he looks at these figures and studies them a little he will see that it is a good thing to stand by the Brotherhood, and my brother fireman told me he was satisfied and that he should never kick again on the question of dues and assessments.

But, Mr. Editor, there are a great many advantages connected with the Brotherhood, besides those that relate to benefits, when a man gets hurt or gets killed or is totally disabled, but I can't tell all of them in this letter, maybe I will try my hand again, if this letter is worth printing.

Now, I think the *Magazine* is just right in its talk about federation, and I don't know a single member of the Order who opposes it, and I have talked with lots of them. They all say you are right and they like the *Magazine* because it has the courage to talk right out in meeting; you bet, the boys are with you to a man. Firemen on my road never get tired of talking about the good things in the *Magazine*, they compare it with other books published by railroad men, and it makes them feel good all over, and there are a great many engineers who talk just as loud in favor of the *Magazine* as the firemen talk. They say our *Magazine* has got lots of sense and lots of sand, that it has good fuel, the right sort of a fire box and knows how to make steam. They like it because it don't put on any airs and try to be aristocratic and turn up its nose at brakemen and switchmen and other men who work on railroads. I can tell you, Mr. Editor, that I know lots of engineers members of our Brotherhood who swear they will never join the B. of L. E. as long as that order keep standing its odious laws that are an insult to the B. of L. F. They say that every word the *Magazine* has printed on that subject is right and that they will stand by it. But I guess I have said enough for this time so I will stop.

Yours fraternally,
A. M. Pickensoop.

WATERLOO, IOWA, March 25, 1889.

MR. EDITOR:—Cedar Valley Lodge, No. 30, B. of L. F., gave their first annual ball January 28, at Turner Hall, Waterloo, Iowa. To say that it was the finest affair of the season would hardly describe it. The boys all worked hard, this being their first and as they always try to never be de-

feated. The hall was beautifully decorated with National flags, and red, white and green signal lanterns were suspended in arches around the hall. A motto (Cedar Valley Lodge, No. 30, B. of L. F., Welcomes You) was suspended from the stage; beneath it was hung a picture of our Master Mechanic, T. W. Place. About two hundred couples were on hand when the Dubuque Italian band struck up the Grand March, and I dare say fully that number remained until the programme, which consisted of twenty-eight numbers, was completed; everybody departing expressed themselves as having a good time and bestowed many praises on the B. of L. F., hoping they would give them the opportunity of attending another such affair. The boys all feel proud of their success, realizing \$180, which helps to fit up our Lodge room, and have a neat sum left in case of emergency.

The success of the ball was due to the work of the following committees: Executive—J. E. Campbell, Frank Feree, J. A. Mulkern, L. McFarlan, H. H. Bucklin. Invitation—C. A. Mills, Frank Feree, H. H. Bucklin, J. Clacey, J. Boughner, J. C. Payne, Mart Scroggy, H. B. Smith, J. Fuhrman. Reception—C. Wight, J. W. Worrell, E. T. Gregory, R. M. Feree, H. P. Estey, C. A. Mills, J. V. Burr, H. A. Smith, Wm. Alderman, J. C. Fergusson. Floor—J. E. Ryan, J. J. Banton, W. E. Penn, J. A. Mulkern, L. McFarlan, J. E. Campbell. Bros. R. A. Dorson and J. Fuhrman officiated at the door. J. E. C.

EAST SAGINAW, MICH., March 12, 1880.

Editor Firemen's Magazine:

As I have a few moments to spare, I thought perhaps some brother of ours in some distant part of this land might be casting his eye through the *Magazine* to see if there was a line in it from his old home, No. 286. I will be brief with my remarks so that our editor will give me small space some other time. Our *Magazine* never was as interesting as it is now. A prominent member of the B. of R. B. told me that he read all the railroad papers and journals, and that the B. of L. F.'s *Magazine* took the lead. Some of our engineers think the editor is a little hard on the B. of L. E., but they cannot but admit that it is all true in regard to the ending of the C., B. & Q. strike, and the way they closed their doors against the B. of L. F. Well, they need not be alarmed, for the men they get away from No. 286 until they recall that clause in their Constitution will not do them much good. They cannot break us up. Nearly a quarter of our membership are engineers of over a year's experience. We have come out of the strike in pretty good shape. We number sixty members and they are old stagers too. Some who had to drop out because the bottom fell out of their pockets caused by the constant strain of nine months' draining, will, in time, come back to us. We do not think any the less of them because they thought more of keeping out of debt than they did of the strike, and for the little benefit we obtained from the strike, I am afraid

I would be tempted to let her go too, if the same thing was to be repeated, but I hope for the good of all, it is past. We have a few promotions. Messrs. Strong, King, Bessenetts, Schmidt, and Bros. Fred Smith, David Patterson and Wm. Phillips have laid the scoop away and are now numbered among the engineers. With a single exception they have earned their promotions, and I wish them good luck. We have got one of the best roads in the state to work on. Our engines are all kept in good shape and our road cannot be excelled. The F. & P. M. has bought the Port Huron and Northwestern railroad, and that will add 218 miles of track to our pathway, and will make nearly six hundred miles of main line.

Bro. John Kull has gone to board with Sister Anthona. She has six of our young brothers to cook and bake for, and I pity her too, if they all eat as much as that young engineer who runs the "23" in the B. C. yard, does. The landlord had to dispense with his free lunch. I heard that Bro. Faust has made a mash on a dark beauty at Twenty-third street. I think his right hand man ought to train him to always look ahead farther than that. If any of you brothers have a girl to spare please drop a card to Bro. Tibbits; he is sighing for the girl that left him behind, and I would like to see him consoled. Billie is good enough for the best of them, and I am sorry for the girl that left him behind. Bro. James Wortsmit is looking for a house to rent. *What does he want it for?* Bro. Hinds claims that the Belt line makes him dizzy and when he gets through he does not know which way to go home. Bro. Wadell is cultivating as fine a beard as a man from Canada could wish for. If he was not from *over home* it would not be becoming. Bro. Patterson is going to build a cupola on the "10" so he can stand up straight without putting his head outdoors.

There is no one on the sick list and no applications for relief, so I will close. But for the good of the Order I wish some of you brothers who have no other place to go on Lodge day, would make it a point to call around at the hall at 2 P. M. We will try and use you well. Ten out of sixty is not a very good average. I remain,

No. 286.

HORNELLVILLE, N. Y., March 18, 1880.

Editor Firemen's Magazine:

It is seldom that anything appears in the *Magazine* relating to H. G. Brooks Lodge, No. 169, therefore permit me to say we are not asleep. We have a good working Lodge of about 135 members, all of whom take a lively interest in the welfare of the Brotherhood. We were sorry not to have the pleasure of the company of our Grand Officers at our sixth annual ball, which was held February 28th, but "what cannot be cured must be endured," nevertheless we had a grand time. There were 215 couple present, including our Superintendent and Master Mechanic, and the verdict was that all enjoyed themselves to the fullest extent of their expectations. Hoping to see you in this latitude soon, I am fraternally yours, E.

Aristocracy of Labor.

MR. EDITOR:—In reading the *Magazine*, I have noticed that once in a while, you make some reference to what you call an "aristocracy of labor," an aristocracy which makes one workingman regard with contempt another workingman, because his pay is not of aristocratic dimensions. That, I conclude, is about the size of it. You are right. I have myself seen some exhibitions of this aristocracy of labor—the aristocratic workingman. It is entirely a pay-roll aristocracy. It is not an aristocracy of brains, of character, of reputation, nor of education, but an aristocracy of pay—of dollars and cents. Not of dollars and *sense*—no, not of sense, for find an aristocratic workingman where you will, and you will find, as Josh Billings would say, a "damp-hool."

Now, Mr. Editor, as a workingman who knows what it is to begin life working on a New England farm, fruitful in rocks, mullin, and toad-sand, driving a pair of mules in railroad building, serving a year as a wiper, four years as a fireman and six years as an engineer, I have had fair opportunities for studying the aristocratic workingman and the aristocracy of labor. If you can spare the space in your valuable *Magazine*, I will tell you what I know about such things. My "daddy" had a small New England farm, and as soon as I was old enough to work, I helped him cultivate it. I worked on the farm in the summer and went to school in the winter. I was taught to work; when a little fellow, I drove the cows to pasture, did chores, and then I was promoted to picking up stones and placing them in little piles so they could be carted away. Then I was advanced to the hoe, then to the plow, and finally to general farm work. Then along came the railroad and I helped to build it. After all this, I took a fancy to railroading and I served in every capacity, from a wiper to my present position of engineer. I get as much pay for my work as any engineer, but I am not an aristocratic workingman, nor do I belong to the aristocracy of labor—that is, I don't sneer at men because they don't get as much pay as I receive. I was just as much of an aristocrat when I received 75 cents a day, as I am now, with my \$3.50 a day.

Now, Mr. Editor, just here, let me say I don't associate, in social intimacy, with men of bad habits. If a workingman chooses to get drunk, gamble, and neglect his family, I don't countenance him, he's not my style, but if he is a sober, industrious man, he is my brother, regardless of the pay he receives. I have been a "wiper," and a fireman, and I was just as *big* a man then as I am now; just as respectable, just as honorable. When I was promoted to the throttle. I didn't begin to cultivate a turn up nose. I didn't learn to strut and swagger.

Now, Mr. Editor, I guess you think I am a brotherhood man. You bet I am just that, for all it is worth, and it is worth more than I can tell. I am not only a Brotherhood Fireman, but

in spirit and in hope, I am a brotherhood brakeman, switchman, engineer and conductor. Having said this, don't you see, I am for *federation*. I want to see railroad employes, the men who make railroading a success, receive fair treatment and honest pay. This is equality, it is not aristocracy. Is is unity, not faction; it is harmony, not war. I think I know what I am talking about.

The reason why I am dead set against the odious laws of the B. of L. E., or one of the reasons is, that the laws bear the impress of arrogance and snobocracy. They make the B. of L. E. say, "I am better than thou"—when all the world knows that the B. of L. E. is no better than any other order of railroad employes, no better than any other order of workmen. Isn't it about time, Mr. Editor, for workmen to have some other standard of estimating each other, besides dollars—pay—position? If that is to be the rule, then labor is to have class and caste distinctions, worse than ever existed in India or any other pagan land. Look at it, Mr. Editor. A gets 50 cents a day, B 75, and therefore B cuts A. C gets a dollar a day, and taboos A and B. D receives \$1.50 a day and with aristocratic disdain, refuses to recognize A, B and C—and thus this miserable business proceeds until Jay Gould, or a Vanderbilt, with their \$20,000 a day, wrung from the toll of workmen, become the all-devouring aristocrats of the land. In all of this, character, virtue, good citizenship—everything that goes to make up honorable manhood—is sacrificed to establish an aristocracy, based on money, on pay. Do workmen want that sort of an aristocracy? If they do, all that is required of them is to oppose federation. Let one organization assume aristocratic superiority over another, emulate the B. of L. E. and the O. of R. C., and an odious aristocracy of labor will be established, and workmen will forever remain the slaves of the corporations.

Mr. Editor, for one, I don't believe such is to be the fate of the workmen of America. I don't believe it, because, in my limited circle of acquaintances there is a growing sentiment of opposition to aristocratic workmen, and to an aristocracy in labor. The chain-gang of dudes and dunces is not going to rule the mighty armies of workmen. There is redeeming power in federation. It combines reason and righteousness and in its advocacy the *Magazine* is performing a noble work.

Fraternally,

Signal.

ELDORADO, KAN., March 23, 1889.

Editor *Firemen's Magazine*:

I believe that we have the stillest lot of Brotherhood firemen here that can be found in the country, or, at least, they are backward in making any effort towards keeping up the columns of our Department in the *Magazine*. Wake up, brothers! this will never do. It is time for the

committee that was appointed to do the writing to be ashamed of themselves. The Brotherhood of Locomotive Firemen gave their first annual ball here in Eliett's opera house, December 20, 1888, and not a word about it ever appeared in the *Magazine*. It is too long ago to tell of it now, but it was a grand success. We have organized the Brotherhood of Locomotive Firemen's Walnut Valley Dancing Club, which meets every Wednesday night. We have twenty-five members and all are Brotherhood men. We generally postpone our job of running from the engine to the back end of the tank a'ter the black diamonds, on Wednesday night. The extra men are always sure of a trip on Wednesday. The club gave a big ball Wednesday night, February 28, 1889. It was a grand success, everybody seemed to enjoy themselves and we hope they did. Bro. G. P. Mettler is our ringleader. He is the ladies' man and is always getting up some kind of amusement. No. 369 is still alive. We have thirty members in good standing and we never miss a quorum. There are from ten to fourteen brothers present on the second and fourth Sundays, and we are thoroughbred Western Brotherhood men, and will extend our right hand to any brother who is in need who will give us a call. I will close by saying it is time for the firemen to stay together and work for their own interest, and of refusing to wear the "big E" till the B. of L. E. has changed its laws.

Y. M. C.

SAVANNAH, GA., March 16, 1889.

MR. EDITOR:—We seem to have a bashful lot of boys down here in Georgia Lodge, for although a good many things of interest have happened here this winter, I have looked in vain for some mention of them in our splendid *Magazine*, so I have concluded, since none of the other boys will say anything, to let folks know that we are alive and kicking, if not very high. Bro. Hannahan was down our way some time since and gave the boys a splendid talk and some mighty good advice. On Sunday, about ten or twelve of the boys from No. 245 and Bro. Davidson, of No. 246, went with Bro. Hannahan down to Waycross to assist in the organization of Satilla Lodge, No. 325. We were indebted to the courtesy of the Masonic Lodge there, for the use of their hall. Satilla Lodge is composed of good material and will no doubt make its mark. We have needed a Lodge on that road badly. Bro. Hannahan is a wheel-horse and no mistake, and the right man in the right place. As an organizer he can't be beaten. The boys of No. 245 exerted themselves to make his stay here pleasant, and all fell in love with his beautiful little girl and charming wife. Come again when you can, brother.

I am "stuck" on the "cogitations" of Bro. "Switch;" he "arrives Elijah in great shape," as the boys say. I cogitate a little myself occasionally, and although I haven't the gift of putting them in verse as Bro. "Switch" has, I would like to ask you a question, or, rather, a pair of them: Firstly, did you ever hear of a dingus called a boomerang? Secondly, don't you think

that the present policy of the B. of L. E. is likely to act in the same manner?

I must congratulate the *Magazine* and you, Mr. Editor, on its new dress and improved appearance. It was always among the foremost of labor and Brotherhood journals, but now it excels them all easily and will compare favorably with any *Magazine* of any kind in point of general excellence. I like, and shall heartily support the stand taken by our *Magazine* on all subjects on which it has been called to express an opinion, and I particularly notice how hard it is for any public slur on labor to escape the eagle eye of Bro. Debs and staff, and the scathing rebuke invariably administered. I guess I had better close before I become tedious, or I may find my way to the gaping jaws of that terror of young writers, the waste basket, so with best wishes for our noble Brotherhood and Georgia Lodge, I remain,

Fraternally yours,

Sandy.

[In reply to Bro. Sandy's queries, we will take "firstly" and "secondly" together, and say that the policy the B. of L. E. pursues toward the B. of L. F., will, in our opinion, do the B. of L. E. far more harm than it will the B. of L. F. The B. of L. F. in all of its sympathies, is fraternal. If it is for federation it is because federation is the one thing needful for organized labor to maintain its rights. The B. of L. E. has mapped out its policy, has taken its stand, and the same is equally true of the B. of L. F.—ED. MAGAZINE.]

WORCESTER, MASS., March 27, 1889.

Editor *Firemen's Magazine*:

The sixth annual ball of Bay State Lodge, No. 73, B. of L. F., was given in Horticultural Hall last evening. There was a large attendance, and the ball was one of the most successful and enjoyable of the season. The painting representing an engine, loaned for the occasion by brothers of Hamden Lodge, No. 307, attracted great attention, and the decorations of the hall were in excellent taste, among which were pictures of all the noted men of Worcester. The program was excellent and carried out to the letter. There were 125 couple in the grand march. The invited guests included Mr. M. Daws and wife, Mr. Langley and wife, Mr. Pressey and wife, Mr. Bassett and wife, Mr. Goodwin and wife, Mr. McCambridge and intended, and Mr. Barrett and wife. There being more gentlemen than ladies in attendance there were no wall flowers when the dancing began. The dances took the usual range, and were highly enjoyable. The various committees performed their duties in a way to win universal approval. The supper was all that could be desired, and about 100 couple enjoyed the rich repast. In the sale of tickets to the ball Brother Newton took the lead, having sold seventy-five, and Brother Conway came next, having sold thirty. The event will long be remembered for the enjoyment it afforded all the guests.

Driving Brake.

Important Questions Settled by the Laws of the Brotherhood.

SAN DIEGO, CAL., March 27, 1889.

MR. EDITOR:—As everybody seems to be keeping quiet in this section of the country, with your permission I will pen a few things to the *Magazine*, although I am unable to address you as "Brother," which I very much regret. Still, I have the Brotherhood at heart and always shall. The boys have organized Kamara Lodge at National City and promise to make it rank with the first in the good work of the Order.

The Dodge brothers, who are old veterans in the Order, are members of this Lodge, and although not connected with railroading, they take as much interest in the Order as ever. Any of the boys coming this way wanting to smoke a good cigar can have it of Jack, as he has started in the business.

Now, the question I want to ask is this: When a member pays up dues and assessments regularly when he can, and through adverse circumstances is unable to do so any longer and notifies the Lodge of how he is situated, is he constitutionally deserving of being expelled from the Order? I would like you to answer this question for me. I have always done all within my power to elevate and respect the Brotherhood, and always shall do what I can for a member of the Order, although I am compelled to suffer the humiliation of signing myself as an

An Ex Member.

The writer asks an important question, a question frequently asked by others. Owing to the explicit wording of the laws of the Order touching such matters it is strange that such questions are ever propounded at all. But such is life. That there need be no mistake in the future, before giving the reply required, we re-state the question as propounded by "An Ex-Member."

When a member pays up his dues and assessments regularly when he can, and through adverse circumstances is unable to do so any longer, and notifies the Lodge of how he is situated, is he constitutionally deserving of being expelled from the Order?

Before replying to the interrogatory of "An Ex-Member," he should be required to answer certain interrogatories. First, were you a member of your Lodge in good standing? Did you present to the Lodge in writing, as the laws require, certified by the Board of Relief, a statement of your inability to pay your dues and assessments? Did you furnish satisfactory proof as to your condition and need? And if absent from your Lodge, did you at least once in every thirty days correspond with your Lodge? If "An Ex-Member" complied in such matters strictly with the law, if such questions can be truthfully answered in the affirmative, then in that case he could not be constitutionally expelled. The constitution makes special provisions for such cases, as will be seen by Section 166, which we quote as follows:

SEC. 166. When a member in good standing

through lack of employment, sickness or other disability shall be unable to pay his dues or assessments and such fact is presented to the Lodge in writing and certified to by the Board of Relief, the Lodge shall authorize the Receiver to advance a sufficient sum to prevent said member from becoming expelled, and the Secretary shall draw an order on the Receiver for the sum thus allowed; provided, that said member, if absent, shall correspond with his Lodge at least once in every thirty days; and provided further, that he shall furnish satisfactory proof as to his condition and need.

Now, then, we apprehend that "An Ex-Member" did not comply with the requirements of the constitution—that he omitted something, perhaps everything the law requires, and if so he was constitutionally expelled. The provisions of Sec. 166 are simple, easily understood and easily complied with. If they are neglected the expelled member has no one to blame but himself.

But, suppose, on the other hand, that "an ex-member" did comply with the law as contained in Section 166, of the Constitution, and notwithstanding, was expelled—he is not without redress—the laws provide for such a case of injustice done a member, as will be seen by Section 142, which we quote as follows:

SEC. 142. Any member considering that an injustice has been done him by the decision of the Lodge, may, within thirty days thereafter, appeal in writing to the Grand Lodge, stating his reasons for so doing. Such appeal shall be filed with the Secretary, and submitted to the next regular meeting and entered upon the minutes. The Secretary shall, within thirty days thereafter, forward a copy of the appeal, together with a copy of the charges, testimony, proceedings and reports to the Grand Lodge properly certified to, under seal of the Lodge.

If the "ex-member" complied with the law, then the Lodge failed to do its duty. If he did not comply with the law, the Lodge did its duty and the "ex-member" is therefore, constitutionally expelled.

The laws of the Brotherhood propose under all circumstances, absolute fair dealing with its members. The humblest member, can comprehend the laws, and can appeal to them for protection. The laws involve no circumlocution—they are not made to mystify, but they are made to be obeyed. If they are violated they take effect and only those who disregard their provisions suffer.

In the foregoing we have sought to make matters plain, and to serve as an answer to all who are in the condition of our San Diego correspondent.

WATERTOWN, N. Y., April 2, 1889.

Editor Firemen's Magazine:

Seeing that the C., B. & Q. strike has come to an end and the special assessments that have been levied to support the strike are to be discontinued, Empire Lodge, No. 212, in expressing the sentiments of its members, through the pages of the *Magazine*, would say that we hope peace and harmony may be restored between the various organizations employed in the railroad

service as well as a curtailment of assessments that will follow the discontinuance of the strike. We are sorry to learn that at present a dissatisfied feeling exists on some railways between the B. of L. E. and B. of L. F., which, if continued, will prove as detrimental to one Order as to the other, and our worthy associates of the B. of L. E., should stop to consider an old saying which is, "Do not deny yourself as being a part of the rock from which you were hewn." The gulf that now separates the two Orders should be gradually closed over instead of being made wider, as our interests are identical, but we are proud to say, as employes of the R. W. & O., that no discord exists here and may we hope to continue as members of the B. of L. E., B. of L. F., O. R. C., B. of R. B. and O. R. T. to journey through life with peace and harmony, as a guide and always willing to extend a helping hand in time of need while working for the best interests of our employers. Very truly,

A Member.

ALGIERS, LA., March 17, 1889.

Editor Firemen's Magazine:

I have concluded, with your permission, to let the Brotherhood know something about Endeavor Lodge, No. 267. I regret to say, the Lodge is not doing as well as it should, as the boys are negligent in attending the regular meeting when they have a chance to do so. Bro. Hannahan, when in New Orleans, organized a Lodge in that city. He visited our Lodge, but only four or five members were present, although many more could have been on hand if they had so desired.

The engineers on the Southern Pacific system recently played a smart trick on the firemen on this road. The engineers had a grievance against the Master Mechanic, a man by the name of Ryan, at San Antonio, Texas, at least they pretended to have a grievance, and they wanted him discharged. The company refused to accede to their demands. Finding the company determined to stand by the Master Mechanic, the engineers called a meeting of the firemen of the Southern Pacific and told them that they had better get their grievance committee together and join them in getting Ryan discharged. The firemen, thinking that the engineers would stand by them, called a meeting of the firemen of the B. of L. F. and appointed a committee to go with the engineers to demand the discharge of Ryan, although Ryan had been a good friend of the firemen, and they had no grievance against him. The joint committee of engineers and firemen went to the General Manager, but he refused to grant the request. The joint committee then went to California to see the Board of Directors. While in California, the firemen's committee thought it would be a good opportunity to present some of their grievances to the Board of Directors. The grievances were therefore drawn up and presented to the engineer's committee for approval, when lo! and behold! what a change had suddenly overtaken the engineer's committee. It would have nothing to

do with the grievances of the firemen, and the committee was politely (?) told that they must go with their grievances by themselves; that they, the engineers, would have nothing to do with them. As a consequence, the firemen's committee returned home with their fingers in their mouths, and as mad as hornets. The firemen's committee staid with the engineer's committee nearly six weeks and their bill will be a large one for the firemen of the Southern Pacific to pay, and all to learn how much the firemen can trust the engineers in time of trouble. Bro. Brown was on the committee, and he says that the engineers seemed to think that the firemen had to do as they, (the engineers) said, and expect nothing in return. Well, when they want the firemen again, they will find that they know their rights, and dare maintain them.

Bro. Calhoun has gone to join the B. of L. E. and I hear that Ford and Maguire will also soon go. These men are charter members of Endeavor Lodge, No. 267, and a few years ago, the engineers would not recognize them. They are leaving the Lodge that helped to make them engineers for a Lodge that tried to down them. Well, I think we can do without them. Business is good and the boys have all they can do. Bro. Donan was married to a belle of Algiers. The ladies of the B. of L. F. committee of Algiers gave a ball and it was a success. The boys all want to know when Bros. Donely and Donner will give them a piece of cake?

Go to Work.

[In the foregoing letter, we have statements which members of the B. of L. F. will do well to consider. It appears that firemen consented to aid engineers in the removal of a Master Mechanic who was an acknowledged friend of the firemen, and against whom, firemen had no grievance whatever. Why, in the name of all the gods at once, should firemen ask for the removal of such a man? In such a case, what could firemen say to a General Manager, or to a Board of Directors?

It appears that the firemen on the Southern Pacific surmised, as in the case of the C., B. & Q. that if they stood by the engineers, the engineers would stand by them, a case of misplaced confidence the penalties for which were disappointment and humiliation. After six weeks of endeavor to promote the interests of the engineers, six weeks of travel, expense and sacrifice, the engineers tell the firemen when their assistance was asked, "You will have to go it alone." Then came in "strict neutrality." Experience is always a dear school, but the lessons it teaches ought to be remembered, and we are not surprised to learn that the firemen on the Southern Pacific will, in the future, be cautious. It is easy to see that such cases of misplaced confidence on the part of firemen, and "strict neutrality on the part of engineers," breeds bad feelings. —EDITOR MAGAZINE.]

Private Opinions Publicly Expressed.

MR. EDITOR:—I will say since reading so much about our Brotherhood, and also the B. of L. E., that the more I read, the more I study the matter over as a Brotherhood fireman, I think that the engineers are trying to use us as tools. We have stuck to them through thick and thin and I must say that we have a majority of the engineers in our favor in this western country. I have heard several speak of what Mr. Fackenthal had to say, and from what I can learn, they agree with him. I must say that I think the engineers should do away with their obnoxious laws as there is not another Order in the world that requires a member of the B. of L. F. to withdraw from his Order to make him eligible to membership, and there are no two orders in the world that should be more brotherly than the B. of L. E. and the B. of L. F. If the engineers throughout the country would look at this matter as I do, I think they would see that just as long as they keep their obnoxious laws in force as at present, they can never prosper, not that any fireman would do them an injustice, but because railroad officials think that just as long as the oppressive laws of the engineers stand, as they are, there will be a misunderstanding between the two brotherhoods. The engineers on this road think as much of the Firemen's Brotherhood as any set of men can, but unfortunately they have not the power to repeal the odious laws of the Order of which firemen justly complain. *A Brother.*

TYLER, TEXAS.

MR. EDITOR:—I belong to the B. of L. F. and to the throttle federation. Let us cease talking "federation," and go to work. Federation means, in my mind, that we are right, therefore go ahead. It is safe to be right. It is dangerous to do wrong. "To thine own Order be true, and it follows as the day the night, thou canst be false to no man." Moral law is the law which teaches men their duty to their God, and to each other. Man, know thyself. If the B. of L. E. thinks it is right and can play a lone hand, let it do so. The B. of L. F. can establish an Engineer's Department and can change its name to that of the Brotherhood of Locomotive Firemen and Engineers. This done, the firemen hereafter promoted to engineers, will be in their own Order, without taking a final withdrawal card, and will not be required to turn their backs upon their parent Order, nor turn traitor to the Order. God bless our Order, and long may its banner wave in triumph. The obnoxious laws of the B. of L. E. which require a member of the B. of L. F. to withdraw from his Order to become a member of the B. of L. E., are destined to destroy the B. of L. E. We all know, that a safe plan of federation was carefully drawn up and offered at the Richmond Convention of the B. of L. E., and flatly rejected. Now, mark, revolutions force themselves upon the people, and federation will come whether the B. of L. E. wants it or not.

The engineers of the C. B. & Q. are well aware that at the time of their strike, the firemen on that system could have taken the engineers places, but the firemen showed the engineers that they were true hearted men and too much of gentlemen to do that sort of dirty work. The officers of the road offered the firemen the engines of the engineers and would have promoted all of the B. of L. F. boys, but the firemen made the cause of the engineers their own and sacrificed everything to loyalty and federation.

Mr. Editor: I would make the suggestion that you draw up rules for a brotherhood to be known as the Brotherhood of Locomotive Firemen and Engineers, and lay the same before every Lodge of our Order, for the purpose of taking a vote upon the same, and that we enter into federation with the B. of R. C., the B. of R. B., the S. M. A. C., Telegraph Operators and Knights of Labor.

Lay these rules before the various Orders, and appoint a day, in the near future, for a Union meeting, at which a constitution and by-laws could be drawn up, and submitted to the federating orders for their approval,

Sand Boz.

MERIDIAN, MISS., March 21, 1889.

Editor Firemen's Magazine:

While engineer F. W. Brown, F. A. E., of Division No. 230, B. of L. E., was walking up the street to-day, he was taken in charge by a committee from Faith Lodge, No. 200, B. of L. F., and led into Silverstein's jewelry store where our Master, Pete McHale, in one of his happiest efforts, presented Mr. Brown with a beautiful pin in behalf of the Lodge, as a token of esteem. Fred. was taken by surprise, not expecting such a testimonial from the boys he had known in the Lodge room, and most of whom had fired for him on the foot-board. Fred is small in stature, but his heart is as big as his engine. It is in the right place and always throbs in unison with his pard's on the left side, and as a consequence, there exists at all times, between him and his fireman, that true cordiality which ought to distinguish members of the two great Brotherhoods. Mr. Brown, in accepting the token of respect and good will, said that as it came from the brothers of Faith Lodge, in good faith, he should always wear it, and that whenever the beautiful emblem of faith met his eye he should hope and pray that the members of Faith Lodge would have faith in the doctrines and teachings of their Order, and never allow their faith to waver in the B. of L. F., but endeavor to place Faith Lodge, No. 200, among the first lodges of the Order, so that when the Vice Grand Master again paid them a visit, he would have the faith to proclaim in all the Lodge rooms of the Order, that Faith Lodge, No. 200, had been tried and found true as steel, weighed and found not wanting. He said have faith in yourselves and you will accomplish much and make a record, of which your Vice Grand Master will bear testimony. "You are all right." *J. E. M.*

Some Serious Propositions.

BOSTON, MASS., March 22, 1889.

MR. EDITOR:—I am a member of the B. of L. F., having joined the Order in 1878. I am also a member of the B. of L. E., having joined that Brotherhood before certain laws were made, or I should not now be a member of that Order, for I love my "first love" best. You can see by these dates that I am not a sudden growth, nor an upstart, as has been said of others whom we all know.

From what I have read and heard I think we would do well to add the word "Engineers" to the name of our Brotherhood, making it the Brotherhood of Locomotive Firemen and Engineers, for by so doing we would do justice to that large portion of our members who are engineers, men who are not willing to obey the command of the B. of L. E., and will cling to their "first love" regardless of the benefits to be derived from the B. of L. E. travelling card. What, I ask, in the name of justice is the reason that our card for our engineers can not be made to answer every purpose claimed for the card of the B. of L. E.? The interests of our engineers (and we have them) who will not pull out to join another organization ought to be, and must be looked after, and with the able men at the head and smart men in the rank, we are assured of success, and nothing succeeds like success. We have capable men in the Firemen's Brotherhood, but we do not claim to have all that are born. We allow that there are men of brains in other railroad orders, and outside of them too, and we are prepared to prove the declaration. Has the B. of L. F. been given the "cold shake" within the memory of our members? Yes, we have been given it once. Now, let us do the "shaking act." We will, if we have the pride of men. Do we wish to be humiliated still further? Do we wish to see the Great and Mighty on their knees as they were in the Pennsylvania Railroad insurance scheme? I say no. We have had enough, and everything that lives knows when it has had enough, but a hog. What are our officers for if they are to be ignored and belittled? And what kind of stuff are we made of to stand the insults to our Order and officers? Will we stand it, or will we not? That is the question, and it demands an emphatic "NO" for an answer.

I know of certain orders that remind me of a clam. They keep shut as long as things are cool, but watch the shells and see them open when they get into hot water.

I do not like to discuss the wrongs we have endured from the B. of L. E., because if I were to even curse and swear I could never do the subject justice. Let us perfect federation and add "Engineer" to the name of our Order and we shall succeed.

Yours fraternally,

Charles H. Trenholm.

Boston Lodge, No. 57.

[In the foregoing letter we have the words of a moral hero, who, knowing when he is right, dare go ahead, nor is he afraid to sign his name. He has right and truth

on his side, and he is not afraid to fling the banner under which he fights to the breeze. As he well says he is not a "sudden growth," not an "upstart." A member of the B. of L. F. and the B. of L. E., he loyally retains his regard for his parent Order. There is an army of engineers in the B. of L. F. who think as does Bro. Trenholm. They are coming to the front. They are speaking right out in meeting. Their words have force. They know whereof they speak. It will be observed that in our April number we discussed the new name question. We conclude the suggestions are timely and prudent. We want our members to give us their views upon the subject.—ED. MAGAZINE.]

DANVILLE, ILL., March 19, 1889.

Editor *Firemen's Magazine*:

Herewith I make my first call on you, of asking a few questions through the columns of the *Magazine*.

First. Why is it that the *Firemen's Magazine* contains more original reading matter than the *Engineer's Journal*?

Second. Why is it that the type and the paper used in producing the *Firemen's Magazine* are so much superior to the material used in getting up the *Engineer's Journal*?

Third. Why is it that the *Firemen's Magazine* contains two-thirds more practical sense than the *O. R. C. Monthly*?

Fourth. Why is it that the *Firemen's Magazine* is always advocating federation, and the *Engineer's Journal* has little or nothing at all to say on the all important subject?

Fifth. Are the Grand Officers of the B. of L. E. willing to submit the question of the federation of railroad employes to the sub-Divisions of the Order, for a vote on the question, before the next Convention comes round?

Sixth. Where is the railroad that has starving engineers and firemen, on account of the "Q" strike, as was intimated in the *O. R. C. Monthly*, sometime since?

Seventh. Why is it that conductors, when discharged, have always to go on some other road as brakemen, while, when engineers are needed on other roads engineers are hired or competent firemen are promoted?

Eighth. Why is it that the *Firemen's Magazine* recognizes the humblest fireman, while the *B. of L. F. Journal*, ignores many members of the Order?

Ninth. How many railroads have adopted the chain-gang system with economy to themselves, and with satisfaction to the engineers and firemen?

Tenth. How many railroad companies have adopted the extension front-end single nozzle and fine wire netting, and have their engines run with economy, and all their engines steaming well?

Good-bye. I will call again and it will be on the federation question.

Ex-Fireman.

A New Name for Our Brotherhood.

MR. EDITOR:—Many have been the comments, made from time to time, on the action of the B. of L. E. in their ostracism of the B. of L. F. And now, after all the means that have been used, after all the overtures made by our Order to induce the B. of L. E. to grant us, who were entitled to it, the opportunity to join them without apostasy to our own Order, after every means to bring the brotherhoods into a closer and lasting relationship has failed, it is our duty to do the next best thing for ourselves, as a Brotherhood, to strengthen and bind in a closer and more lasting bond the members of our Order who are now, and who may eventually become engineers.

Since the B. of L. E. will not remove from their Constitution those obnoxious clauses that have made so many apostates of weak-kneed and backboneless members of the B. of L. F., we must take a new departure, so that our aspiring members who are engineers, and are so anxious to belong to an Engineers' Brotherhood, can have their aspiring souls satisfied. And will not the changing of the name of our Brotherhood meet the case. Why not in future let our Order be known as the Brotherhood of Locomotive Engineers and Firemen. In my opinion this should be done at once. I know it will be said we must wait until the 1890 Convention takes place. Not necessarily so; the Lodges have been called upon quite recently to take a vote on questions which in my opinion were of no more importance, and the name could be changed by taking a majority vote of the Lodges. By taking this new departure we should see our Order progress with a permanency hitherto unknown, and the members of the B. of L. F. will live to see the day when this great B. of L. E., like the red men, which our forefathers found on this great continent, will die out before the advancing march of intellect and the rapid strides of progress. How disappointing it must have been to those of our members who were at Atlanta, last September, who so frantically and vociferously applauded the little GREAT I AM when he was dealing out his common-place platitudes, with that cold, calculating chicanery, of which he appears to be a perfect master. The sophistry and bold effrontery of the man was only equalled by the cupidity, and which events have proved, the stupidity, of those who so child-like believed what he said. For, after the engineers' convention at Toronto, it was made very clear beyond any doubt to the most casual observer that any change in the policy of that body towards the B. of L. F. was out of the question, and subsequent events have proved that all appeals from the B. of L. F. to remove those obnoxious laws would be treated with scorn and contempt by the sycophants of the *Great I Am*. Those of us who know engineers as a class, never expected, and do not even now, expect them to recognize any twin relationship of the "Throttle and Scoop," only so far as it suits the Throttle's purpose to call the Scoop "Brother,"

as in the case of the C. B. & Q. strike, where the Throttle had everything to gain.

Let the past be a lesson to be everlastingly remembered by every member of the B. of L. F., and I for one, protest against any further overtures being made to the B. of L. E., and if they are so intent upon keeping up their reputation as a narrow-minded, bigoted, boastful organization, be it so.

So now let us make every effort to bring about a new departure in our organization, and rest assured we shall soon see a further new departure in the permanent progress of our beloved Order.

An old timer,

Fifty-Seven.

ROCKLIN, CAL., March 6, 1889.

MR. EDITOR:—Sacramento Lodge No. 58, B. of L. F., gave their sixth annual ball March 4, '89, which was a grand success in every respect, being the largest ball ever given in Rocklin, the grand march consisting of one hundred and sixty couple. The hall was elaborately decorated with two head lights one at each end of the hall and twenty-five red, green, and white lights suspended from the ceiling, amid festoons of spruce boughs and banners representing every state in the Union. Mirrors, flags and oil paintings, decorated the side. Most conspicuous among the decorations was an engine and four cars painted on canvass and bearing the mottoes of our Order, Protection, Charity, Sobriety and Industry. The engine being numbered 58 B. of L. F. on the tank. A special train from Sacramento and return was allowed us by our worthy Superintendent, J. B. Wright, for which we wish to return our sincere thanks. Every member was present through the kindness of our M. M., M. W. Cooley, for which we tender him our sincere thanks and also for hall decorations. During the evening Mrs. C. E. Warmington presented (in behalf of the members' wives) a beautiful banner to the Brotherhood, which was accepted by our Worthy Master C. C. Brown, with a few appropriate remarks. A fine supper was given by J. P. Burchard, which was highly appreciated by all.

Hoping you will make room in your next *Magazine* for this item. I remain yours,
C. E. Warmington, Secretary.

TO MY DEPARTED HUSBAND.

How drear this world is now to me,
Since your kind face no more I see.
The brightness of this world has fled
From me, dear one, since you are dead.

The loving heart lies still in death;
You blessed me with your latest breath.
No more my husband's fond caress
Can shield me from this world's distress.

The voiceless tomb, the cruel grave,
Now holds the heart so true and brave:
Yet, there's one joy—I know my love
Rests with the saints in heaven above.
Elizabeth Ueberback.

TERRE HAUTE, Ind., March 4, 1889.

Stirring Up Bad Feelings.

MR. EDITOR:—Have you any space to spare for a brotherhood man to do a little talking for the good of the Order? Some people don't believe in talking unless one talks their way. If a man crosses their track, they are quick to say "Oh he's all lip, or, all jaw," or something of that sort. Now I don't believe in quarrelling. I don't belong to that class, but I do believe that a man should, on all proper occasions, tell just what he thinks upon any and all subjects that in any way concerns his rights, his interests, his character or his vocation. And if he belongs to a brotherhood, I believe it is his duty to defend the rights, interests and character of his brotherhood, as it is to defend his own individual character. If "brotherhood" don't mean that, what does it mean? Now, I am a reader of the *Fireman's Magazine*, and when any one in my presence attacks the position it has taken on the course pursued by the B. of L. E. towards the B. of L. F., I do not hesitate to state my views upon the subject, in the best English I can command.

I notice that engineers, members of the B. of L. E., have not one word to say publicly in defense of the laws the Order has passed which reflect upon the B. of L. F. I read the *Engineer's Journal*, but I don't find its editors trying to defend its laws, which are an insult to the B. of L. F. Why is Mr. P. M. Arthur silent? It is because he has not one good reason to advance for the bad treatment the B. of L. E. has shown the B. of L. F. But when it comes to discussing what the *Firemen's Magazine* publishes, then you will hear certain members of the B. of L. E. crying out that the *Magazine* is creating "bad feeling" between engineers and firemen. I was in a crowd of engineers and firemen the other day when an engineer said, "the *Firemen's Magazine* is stirring up bad feeling."

I asked him, what the engineers were doing in San Francisco, when they passed a law that no engineer, a member of the B. of L. F. and a member of the B. of L. E., should ever represent his Division in an annual convention of the Order, but "stirring up bad feeling?" and he couldn't make any reply. He didn't want to talk. I asked him if the B. of L. E. didn't stir up "bad feeling" at New Orleans, when it made a law that no engineer, a member of the B. of L. F., should ever become a member of the B. of L. E.? and he could not reply. I asked him if the B. of L. E. in convention at Richmond, did not shamefully ignore the B. of L. F., in the settlement of the "Q" strike? and he couldn't, or he didn't say a word. But there was present, an engineer, a member of the B. of L. E., who spoke up and said, that "the B. of L. E. was responsible for all the bad feeling that existed between the two brotherhoods, and that the B. of L. E. ought to repeal its bad laws."

What I want to say to my brothers of the B. of L. F. is to stand by their Brotherhood and to stand by the *Magazine* that is fighting the battles of the Brotherhood, stating facts and arguments

showing that the B. of L. F. is right. Some would have me believe that because firemen stand up for their Brotherhood that engineers will be down on them. This may be true in some cases, but the great body of engineers are not of that class. They have been firemen and they don't put on airs. I fire for an engineer who don't think any the less of me because I stand up for my Brotherhood, and it wouldn't make any difference with me, if he wanted me to keep silent. I am my own man, and I want a fair deal for my Brotherhood, and I don't propose to stand any nonsense about it, either.

I am with the *Magazine* on the federation question, and we are going to get there whether the B. of L. E. comes in or stays out. I don't profess to be an educated man, but I can see that federation is a winning card. I don't have to be told that all sorts of efforts are being made to break up labor organizations. Corporations don't like them, and this is what railroad workmen see, and they see that they must federate to maintain their footing. *Sand.*

VINCENNES, IND., March 28, 1889.

MR. EDITOR:—In the March number of *Magazine*, "Eccentric Strap" says: "Come down to Texas from your 'elevated' perch, some of you, and learn what *fring* is." From the description he gives of his *coal shoveling* I think it is about equal to what the firemen here have to do, but he does not say anything about the amount of cleaning he has to do on his engine. This is of the greatest importance here, as a fireman's work commences in *earnest* after the trip is made, in the way of blacking front end, scouring her up, and shining the brass, for no other purpose than to please the engineer, who takes great pride in having his engine a "shining," to the great inconvenience of the fireman.

You can go to the round-house any time and find the engineers standing around waiting for their turn out, and making some awful big runs, etc., and you look around for the fireman and you find him busily engaged "shining" the brass with some new kind of "scouring stuff."

Thus, you see, the fireman puts in more hours in making a trip than any other man on the train. I am in favor of the fireman's work ending when the trip is completed. The engineers, conductors, brakemen, baggagemen, expressmen and the porters are all done when their trip is ended; will some one tell me why the fireman should not be done also?

Tried and True Lodge, No. 361, has been organized a year and a half and has fifty-three members in good standing.

While at Terre Haute, Ind., recently, we had the pleasure of meeting quite a number of Brotherhood men, among whom were Brothers Zink and Brennen, of Lodges No. 14 and 217.

Brothers, whenever you visit Vincennes you will find the latch string hanging out.

Freight business on the O. & M. is very dull.

Yours fraternally,

Walking Oil Can.

Unjust Laws of the B. of L. E.

NEW YORK, February 14th, 1889.

Editor Firemen's Magazine:

My firemen to-day handed me a copy of the *Firemen's Magazine* for January 1889, and called my attention to an editorial article which it contained. My mind halted on the one sentence which referred to the law of the B. of L. E., compelling firemen to leave the B. of L. F., in order to join the B. of L. E. I was at one time very favorable of the law, but experience has taught me that the law was very unjust and unkind as well as selfish. All intelligent men ought to now realize that neither organization can conquer without the support of the other, and the sooner they drop jealousies, the nearer they will be on the road to success. I did imagine at one time that the Richmond Convention of the B. of L. E., would rescind this law, they could have done it for the encouragement of the firemen who have proved so true and loyal to the engineers on the C. B. & Q. R. R. I think it is now time that every engineer, who has a spark of manhood in his body to say, "let us come closer together." I read the article, referred to all through, and I have no hesitancy in saying that I heartily coincide with your views as set forth. In conclusion, I will say that I regret that I am not, nor have been, a member of the B. of L. F.

With the kindest regards for your Order, I trust that it may always be crowned with the brightest gems, won in the battle fought in defense of Justice which should be the motto of every true man.

I am yours very truly,

J. Puffenberger.

[In the forgoing, we have the unequivocal indorsement of the course pursued by this *Magazine* in calling the attention of its readers to certain odious laws enacted by the B. of L. E., and the endorsement comes from an engineer, a member of the B. of L. E., who worked "honest and hard for the enactment of the law, and when it was on the statute books of the Order, "said Amen to it." But, now, Bro. Puffenberger sees the mistake, and with a courage equal to honest conviction, pronounces the law "unjust, unkind and selfish." Such instances of heroism, of moral courage, are rare, but they do occur occasionally, and when they come they are received with grand acclaim. Gen. Grant, when he found that he had done injustice to Gen. Fitz, John Porter, promptly proclaimed it to the world, and at once set about doing the injured man justice. He had been General of the army and President of the United States, all earthly honors had been lavished upon him, he had earned an eternity of fame, but he recognized that he could and had made a mistake, and he had the sublime, moral courage to say it to the world, and to do all that lay in his power to remedy the evil consequences of his error. Bro. Puffenberger has placed himself on record as a man equal to the task of undoing, so far as it lies in his power, the wrong done the

B. of L. F. by the B. of L. E. And that this is his purpose, his letter which we print bear irrefragable testimony. Such letters ought to have a wholesome effect upon the B. of L. E., and that such will be the effect, we shall hope, but be this as it may, such testimony triumphantly indicates the position taken by the *Firemen's Magazine*, and cannot fail of having a most salutary effect upon the entire membership of the B. of L. F.—ED. MAGAZINE.]

ST. PAUL, MINN., March 24, 1889.

Editor Firemen's Magazine:

I have been requested by my fireman to pen you a few lines on the subject of "dissatisfaction." I confess that I find it difficult to introduce the subject. Some persons are always dissatisfied, while others are contented and happy. We are all men born of woman, and start from the cradle on the same footing—that is to say, our theory of government is, all men are born equal, though, it must be confessed, there are some who start in the race of life with advantages which others do not possess. This may be a cause of dissatisfaction; if so, I know of no remedy for it. It may be said that the capitalist possesses many and great advantages over the workman. Let us see.

The capitalist invests money in a railroad because he thinks it will earn him large profits. But after he has got his railroad he can't operate it without employing the working man. This brings the employer and employé upon a level. Now, if the employer treats the employé honestly and fairly there will be satisfaction, otherwise dissatisfaction will occur. This honest treatment involves promotion, advancement, and if this does not take place the employé becomes dissatisfied. Quite possibly the capitalist entrusts the general oversight of his business to a man who is responsible for the injustice that is done the employé, and that the real facts are never known by him until dissatisfaction is aroused. Or, the capitalist may know all about it and be deaf to the grievances of the employé; in either case dissatisfaction takes place. The fact is, capitalists should choose men of brains and of conscience to watch their interests, men who are willing to arbitrate grievances that arise.

I acknowledge that engineers and firemen need a little prompting, like all other men who get careless, and who also get dissatisfied like other men, and as they are very sensitive, too much so sometimes, they are liable to get dissatisfied frequently. Now, show me a railroad company that in making promotions is governed strictly by seniority, capacity and ability and I will show you a set of men who are satisfied, but when promotions are made in disregard of such things dissatisfaction exists. When a wrong exists, if thorough investigation is made and the wrong is righted employés will be satisfied.

I believe in strict discipline, as men are apt to get too careless if it is not enforced. If an engineer or fireman is entitled to promotion seniority

ty should be practiced strictly, and this should extend down to the wiper. If this is not done it breeds discontent. An official who enforces strict discipline and deals out justice as it should be done, usually makes a success in life. Now, one word to our firemen, who in less than ten years will all be on the right hand side and in our places. Do not get dissatisfied because you think your time has come when you should be running an engine instead of firing. There is some work for you to do beside keeping your old mill hot and keeping her brass polished. You should seek for more knowledge. You can obtain it by reading good works on mechanics and by reading papers edited by good men. And above all don't get the throttle fever too soon. I had it once, and know it is a very bad sickness. Don't think you ought to be an engineer before you are a successful fireman. I have been an engineer for nine years, and never can forget, and wouldn't if I could, that I was once a fireman. We should all unite our efforts and work as men together, for we are striving for the same end. The fireman makes the steam, the engineer utilizes it in handling the train. Of course the conductor calls "All aboard" and sees that none get left. The brakeman holds the train steady upon the track, and the switchman stands with his hand upon the switch, with its red light burning, and signals "all is well."

J. J. Leighton.

LACROSSE, WIS., March 24, 1889.

Editor Firemen's Magazine:

Seeing that the *Magazine* desires replies to the query, "Is marriage a failure?" I have to give your readers a little of my experience. I have been married two years and can say they have been the happiest of my life, and the reason for it is, I was fortunate in securing the right sort of a woman—and further, because there has come to my home a little son. I have often heard men say they would like to get married, but postpone it because their means barely enabled them to take care of themselves. Let me say right here, that such excuses are rarely admissible. I was a year and a half trying to save up money enough to get married, and after all, I had to make the venture on one big month's pay, thinking I might never again be so financially well fixed. I saw I could not save money while I was alone, so I said to myself, "here, old boy, the sooner you enter into a partnership with Miss ——— to help you save the better it will be for you," and now I am mad to think I did not enter the double harness life sooner. I have gone all through the great strike, paid all my assessments, and am out of debt. Does any one, with such facts before them call marriage a failure? According to my view of the subject, I think marriage a splendid success. Now I want some of the young fellows who are afraid to tackle matrimony, on the sponduilicks plea, to chip in, as I have done, and I hope their success will be as satisfactory as mine has been. Marriage is not a failure. Respectfully,

B. A. T.

THE MASQUERADE.

I have read in Saxe's poems how Count Felix once essayed
To enjoy a flirtation at a fancy masquerade;
How a stream of florid language ran in rapture from his tongue,
As he wooed a stately lady, whom he fancied fair and young,
'Till the moment of unmasking, then the doating fool beheld
His own handsome, comely daughter, and his fiery pulse was quelled.
Pay attention, patient reader, to these lines, and ere they close
You will find more fools than Felix shuffling 'round on ancient toes.

T'other night, on invitation, off I sauntered to a ball.
Soon I saw a lonely "flower" that was growing near the wall.
She appeared a perfect Hebe, bust delightful, slender waist,
Ah, thinks I, this prize I'll capture—in deportment she is chaste—
And I'll have a flirtation while the dancers are in glee,
If I can induce the charmer to exchange some talk with me;
Soon, without an introduction, I was filling up her ears
With a tale of admiration, that would melt a saint to tears.

She was mute, she scarcely answered, and her voice was meek and low;
To my queries she would simply give a whispered yes and no.
I grew eloquent, emboldened by her silence then and there,
And her reticence, I told her, was a jewel very rare,
"If I had a wife I'd love her, should she be so mannered mild,"
Then methought the darling creature at my language merely smiled;
Oh! I glowed with ardent longing, and I told her that her charms
Would be sung in strains of rapture if she'd nestle in my arms.

"Lonely years through life I wandered, seeking 'round for my ideal,
Now, my dear one,—moving closer—here you stand a perfect real,
For I'm sure you are an angel, one who loves this sinful earth,
Full of charity for creatures, like myself, of mortal birth;
I am fond and very foolish to confess my heart-felt love,
But you know mankind is finite, and the heart inclined to rove,
Here I stand in adoration, like a pious devotee,
And I hope your lovely features you'll unmask, my love, for me."

'T was a waltz the band was playing, and a chord of louder strain
At that moment seemed to thrill me, and to fire my longing brain,
Most imprudently I caught her; she resisted, in the strife
Off her mask came, great Jehovah! there before me stood my wife!
And her tongue, that scarce could falter yes and no for half an hour,
Grew as natural as ever, filled with all its pristine power.
Heaven help me, for I need it, yet, dear reader, there are more
Like your truthful, humble servant, who got caught and suffered sore.

Shandy Maguire.

HARRISBURG, PA., March 24, 1889.

Ed tor Firemen's Magazine:

I have been a reader of our *Magazine* for the last six years, and a member of the B. of L. F. for the same time, but this is my first attempt to write anything for its pages.

I desire to express my feelings towards the B. of L. E., as I am not a little dissatisfied at the talk I hear, especially on the P. R. R. system, against the B. of L. F. Now, I am a promoted engineer, but we are only "grabbers" in the eyes of the B. of L. E. True, they are not the only people in the world; no, no. There are the B. of R. B. boys, who surpass them in manhood and honor, and have proved themselves as such. We do not need the assistance of the B. of L. E. They think they can go it alone. Let them go it alone. They need us only when there are chestnuts to pull out of the fire, as was the case on the C. B. & Q. I am one of those who stuck to our boys and paid my assessments. I made sacrifices to do it, and haven't forgotten it, nor shall I forget it. I am a Brotherhood man, not only in talk, but my heart and hand are in the work, and it galls me to think that B. of L. E. men will come to us young runners and say: "Here, you don't belong to the B. of L. E. You ain't an engineer nor a fireman—but join the B. of L. E. then you will be an engineer." I will sooner choose to be a "grabber," as they term us. After a man has handled the scoop eight or ten years, and is then promoted, to be told that he is a fool, is to outrage all the proprieties of life. But the B. of L. Engineers think they are the great "I Ams." They may be that in their own estimation, but not in the estimation of the B. of L. F. Brothers, there is more manhood in the B. of R. B. than in the B. of L. E., and they show it. If there is any honor in the B. of L. E. I can't see it.

Now, Mr. Editor, there are members of Harrisburg Lodge, No. 174, who are leaving us to join the B. of L. E. who are not straight on the books. They were put out of 174 for non-payment of dues and assessments, and the B. of L. E. took them in without a card. I ask this question: Can this be done? The B. of L. E. say they don't do that, but they do, and more. There is a member of No. 174, B. of L. F., who joined Division 74, B. of L. E., and then came to the B. of L. F., this last Sunday, for a final withdrawal card, but it wasn't granted, because he was in debt. It galled him, but he had to swallow it. As for myself, I haven't any time for the B. of L. E. Nor shall I have. They can repeat all the laws they want to at their next convention for me, but I am a Brotherhood Fireman, heart and hands and shall remain so. There is nothing gained by joining the B. of L. E. But to leave the B. of L. F. is a loss, for the B. of L. F. boys are men of principle and honor. Here in the East, especially during the C., B. & Q. strike it was all union meetings and federation, among the B. of L. E. men especially. Why was it? Just because they were in trouble, and wanted us to help them out. But did they help us any at their convention? They spit in our face. The

B. of L. F. and the B. of R. B. wanted federation, but the B. of L. E. wanted to go it alone. Now, then, I say, let them go it alone, and they will get left every time. They are too big feeling for us and roost too high, but the B. of L. F. don't roost too high for the B. of R. B. boys, and never will. They are brothers. But the B. of L. E. men are not brothers of mine.

What did the B. of L. E. do in 1887? I know. I was a brakeman on the P. R. R. at that time; and in 1888, on the C., B. & Q. It is all plain enough. It is "firemen, hold yourselves ready for us when we call for you!" That is what they want. But, no, no, I think the wool has been drawn over the B. of L. F.'s eyes once too often, and for the last time. Engineers claim that we lost nothing in the C., B. & Q. strike. I differ with them. We lost more than the B. of L. E. could replace. Nevertheless, we are happy to have found out the deceit the B. of L. E. practices. It will not be forgotten. Now, they say, that at their next convention they are going to rescind the law requiring a member of the B. of L. F. to withdraw for the purpose of joining the B. of L. E. They have piled it on with both hands, and now want to shovel it off with a fire scoop, but it isn't big enough. A great wrong has been done the B. of L. F., and they can't shovel it off easily. Why, the members of the B. of L. E. all come from the B. of L. F., or nearly so. The firemen have made the B. of L. E. what it is to-day. Why should a fireman, as soon as he gets to be an engineer, turn around and kick the Brotherhood that helped him advance in his chosen calling? Why should the B. of L. E. demand of a member of the B. of L. F. to commit such an act of disloyalty to everything manly? Simply because of the big feeling of the B. of L. E. There are some engineers who think if they were to get down off of their engines the road would stop business; but let me say just here, there are as good and competent engineers in the B. of L. F., as ever pulled a throttle, as good as the B. of L. E. ever had or ever will have, and there are plenty of them. But we are termed "grabbers." The term don't hurt us in the least, we have principle, all the same. There isn't any bugs on our backs. We didn't throw our members out because they joined the P. R. R. Relief. This is a free country, and, members of the B. of L. F., don't forget that. Now the B. of L. E. wants all the members they threw out because they joined the Relief, and is glad to get them back to fill up the ditch they dug.

We don't want to hear any more about the "Twin Brotherhoods" It is all taffy, and the fact has been demonstrated. It was only a bait to catch gudgeons. The time has come for plain talk.

D. D. V. Puller.

TRINIDAD, COLO., March 6, 1889.

Editor Firemen's Magazine:

I am not much of a literary fellow, only a common fireman, more commonly known in Colorado as a "tallow pot," having never before written anything for the *Magazine* I will try once, and if successful, will try again in the

future. We have no Lodge here yet, but will organize soon. In a letter from our Grand Master, in regard to organizing here, he asks if we think we have good material to begin with. I will answer Bro. G. M. by telling him that of twelve Brothers in good standing who are working here, nine are ex-"Q." men, or strikers, and see what kind of material he now thinks we are. This is a new road, not yet a year old. Last September there were only two B. of L. F. men employed here, now, all told, there are fifteen, and more to follow. We cannot speak in too high terms of our M. M., Mr. F. W. Morse, also our Round House Foreman, Mr. John Facer. They are both men who know who to hire and who are worthy of promotion, and do not hesitate in saying they are in favor of Brotherhood men. But I must not forget our General Manager, Mr. Charles Meek, for kindness shown his employes, and also for transportation to Brotherhood men. You bet they don't walk when they come our way. And I can say that firemen ride the same as engineers if they are entitled to wear the B. of L. F. badge.

Business is not very good, as it is mostly coal at present, and winter seems drawing near a close, but while not at work we try to keep up our spirits, saying, some day the Denver, Texas & Fort Worth railroad will be among the solid lines of the West.

Hoping I have not made anyone weary, I will close by signing myself.

Q. Striker.

HORNELLVILLE, N. Y., March 19, 1889.

MR. EDITOR:—The sixth annual ball of H. G. Brooks Lodge No. 169, which was held at Metropolitan Hall Feb. 23, was a complete success both socially and financially, over 250 tickets being sold. The ball was handsomely trimmed with evergreens and colored lanterns; a floral locomotive five feet in length, composed wholly of immortelles, occupied a position in front of the orchestra and was the admiration of all. The music was furnished by Green's orchestra, of Elmira, and was in every respect first class. From eight to nine o'clock they gave a concert; at the close of which the grand march was commenced and participated in by ninety couples. Then dancing commenced and continued until midnight, when all repaired to the Page House and did ample justice to the feast prepared by Landlord Gillis. Then the company returned to the hall and danced until daylight appeared and then called a halt.

The Kicker was there and said: "I knew we would have a big time; told you so. Why can't they keep out of the check room? The bill for decorating is too much. Bet I can tell you got the hats. Don't you know I should think the boys would take a little interest in the badges and not throw them on the floor. Guess cigarette stubs won't be as thick on the floor as they were last night. Wonder where Harry went that time?" Just then some one asked him to go and smile, and the last heard of him he was kicking on such a small glass, don't you know.

Fireman.

Chicago, Burlington and Quincy's Bad Showing.

Boston, March 19.—The annual report of the Chicago, Burlington & Quincy Railroad Company for the year 1888, as compared with that of the preceding year, is as follows:

Gross earnings	\$23,789,167	Dec. \$3,786,910
Expenses and taxes	18,882,459	Inc. 2,784,546
Net earnings	\$4,906,708	Dec. \$6,571,437
Total net earnings, adding interest, exchange, and other income	5,076,209	Dec. 2,291,486
Fixed charges	5,996,712	Inc. 710,628
Dividends	3,819,578	Dec. 2,291,486
Deficit	4,739,980	Inc. 5,689,051
Land receipts	408,555	Dec. 158,528
Miles operated	4,917	Inc. 224
Capital	76,893,505	Inc. 3,205
Debt	99,065,988	Inc. 8,399,281

The miscellaneous income was reduced by reason of the strike on the Hannibal & St. Joe and the Council Bluffs roads, so that they returned no dividend to the Chicago, Burlington & Quincy, while in 1887, they paid \$618,761. The operations of these and other outside lines of the company are given more fully than usual. These controlled properties consist of 1,115 miles of standard gauge, 218 miles of narrow gauge, and 95 miles jointly operated. The total debt of these properties outstanding and not owned by the Chicago, Burlington & Quincy is \$16,400,000. Their comparative reports are: Gross earnings, \$3,041,990; decrease, \$1,402,487; expenses and taxes, \$1,738,351; increase, \$151,063; net earnings, \$1,303,645; decrease, \$1,553,550.

The report says: "After many prosperous years the Chicago, Burlington & Quincy Company has experienced a year of serious reverses. After paying fixed charges, including \$700,000 contributed to sinking funds, and dividing 5 per cent. upon the stock, the accounts show a deficiency for the year of \$4,331,425, which it has been necessary to take from the accumulated surplus of the company. Chief among the causes of the falling off in the net revenue from the operations of the road was the strike in February. This was not the only cause, however. There has been a diversion of traffic to other roads and a decline in rates. The decline in rates has been due to the difficulty of self-regulation among the railroads without the right to pool, which was taken away by the Inter-State Commerce law. An effort is now being made among railroads west of Chicago to provide, through an association, for the maintenance of uniform rates, which, it is hoped, will be successful."

The directors find it difficult to understand what serious evil the recent railroad laws are designed to remedy and say that it cannot be denied that much the most serious feature of the railroad situation is the attitude of the law-making power, both National and State. The increase in expenses during the year is due partly to the fact that the company operated an average of 4,850 miles as against 4,239 in 1887. The new mileage was unproductive. A large part of the increase in expenses is due to the strike of the 2,500 trained men, which destroyed a large part of the great machine, the task of reconstruction which had to be undertaken and performed without allowing the machine to stop or become impaired. This involved and still involves extra expense. To make the present force equal to the old in all respects is merely a question of time.

President Perkins devotes two pages, in closing his report, to a concise statement of the relations of the C. B. & Q. to the Chicago, Burlington & Northern road. The C. B. & Q. began the construction of the line to St. Paul in 1883 to strengthen its St. Louis and transcontinental business, and expended \$800,000 on it in 1883, 1884, and 1885. In the summer of 1885, when the directors were considering the question of building or of selling, Mr. Toucelaine made a proposition to pay back what the C. B. & Q. had expended, with interest, and to organize the C. B.

& N. and build a road to St. Paul as a feeder to the C., B. & Q. This offer was accepted, on condition that the C., B. & Q. stockholders had a right to subscribe to the new company. The C., B. & Q. became the owner of 30,000 shares, and by the operations of the contract now owns 30,970 out of 90,975 shares.

Mr. Editor: The above report of the C., B. & Q., for 1888, embracing as it does the period of the recent strike, forms interesting reading to our members, who were so recently in array against this railroad company. Summed up in a few figures we find that while the earnings of the road were decreased nearly four millions, its expenses increased nearly three millions, making about seven millions of dollars difference in the net earnings.

Corporations are said to have no souls, but they certainly have pocket books, and as these are vulnerable points when touched, it may be presumed that this corporation has learned a lesson, which it may not forget, and which it has obtained at a rather liberal price in money and the estimation of the public.

—♦—
FORT WORTH, TEXAS, March 26, 1889.

Editor Firemen's Magazine:

If you will allow me space in the columns of the *Magazine*, I will contribute a few remarks for your readers. I notice that there is a good deal of dissatisfaction existing among the members of the B. of L. F. and the B. of L. E., the two greatest labor organization in the country, yes, I might say in the world. I must say that I am proud to hold membership in both of them. I see that the columns of the *Magazine* criticise the Engineers for not giving them a square deal in regard to the "Q" troubles. You should not condemn all for the acts of the few, who had the power in such matters. I think I am, and I know a number of engineers who belong to the two orders that are good and true friends of the Firemen's Order. Now, that law which prevents a Fireman from becoming a member of the Engineers, is something that I do not approve myself, and I know plenty of engineers whose sentiments are like my own in regard to this subject. But I did not help to make such laws, and I with the rest must bow my head till such times as better laws will take their place. When you are firing at them again, please make the statement, that you know of some engineers who are true friends of the Firemen's Brotherhood. I think if the Engineers don't want the Firemen's Order, that the Firemen's Order can get along without them, and have just as smooth sailing without them as with them. But this is what I have found out in my twenty years on the rail: Two wrongs don't make a right. Let the Firemen's Order show to the world that it is ever and always ready to do right, no matter what other labor organizations may do.

I should like to say a few words in reply to that "smart Alec" of a superintendent on the Reading road, who says that the assessments on the "Q" were too heavy, and that the men could not stand them. I am at a loss to understand where he obtained such information, un-

less he received it from some back-slider, who joined the Order or Orders for all the benefits he might secure while peace and harmony prevailed, but when put to the test, backed water like a craw-fish. I can inform the Reading superintendent, poor, ignorant creature that he is, that he don't know what he is talking about, from my own personal experience. I carry an insurance policy in the Engineer's Order and in the Firemen's Order, besides a policy for \$3,000 in the Accident Insurance, of Hartford, and I have had plenty to pay "Q" assessments in advance in the two Orders, besides, I pay dues and insurance for a worthy brother, whose misfortune it has been to be sick and out of employment, who belongs to our noble Firemen's order, and we are square on the books. Now, if I can pay for three, why cannot a brother, that is if he is a true brother, pay for one? But, alas, some brothers are all right until you touch their pockets, then you touch their hearts. Such men carry a big "E." or a big "F." pinned to the flaps of their vests, and that is as far into their Brotherhood's principles as they ever get. Now, Mr. Superintendent of the Reading railroad, you want every one to know who you are, and you want the public to believe you, and you want to throw all the insults you can against organized labor, but be careful, you might take a tumble the same as F. Gowan did on the Reading. He was Manager and President on that line in 1873, but alas, his name went like himself into obscurity, and if the brothers who are on the Reading are true to their principles, they need have no fear of the Superintendent.

May God speed our noble Brotherhood.

I am yours,

T. H. C., No. 40, B. of L. F.

—♦—
RUTLAND, VT., March 18, 1889.

Editor Firemen's Magazine:

The members of Marble City Lodge, No. 353, gave their first annual ball, March 1st, in Town Hall, and it was pronounced a grand success, which was owing largely to the various committees who had the affair in charge, viz.: On arrangements: C. F. Underhill, Wm. E. Moynhan and William H. Murray. On invitations: C. Thompson, J. Grady, S. Sears, C. Munson, S. Bashaw, C. Wickham, C. F. Underhill, J. Shean, Wm. Dunn, Wm. Sandwich. On introduction: C. F. Underhill, H. Lasell, C. F. Whitehouse, R. Cannon, Wm. Dunn, J. Corcoran. The floor managers were Wm. Moynhan, J. Cannon, M. Mahoney, C. Wardwell, Wm. H. Murray, A. Shlan. The Rutland daily papers complimented the ball, and there were on the floor 150 couple. The music was furnished by the Rutland Cornet Band orchestra, and the grand march was led by C. Wardwell and wife. The supper at the Berwick House, was all that could be desired and the decorations of the hall, lanterns, headlights and evergreens were admired by all, and the Marble City boys feel justly proud over their first venture in the way of an annual ball.

353.

COGITATIONS AND INTERROGATIONS.

BY SWITCH.

MR. EDITOR:—I love to read the Bible, I have read it from my youth,
But I guess the age of miracles has long since gone by;
Still, suppose Paul Morton should consent to tell the truth?
If that wouldn't be a miracle, pray tell the reason why?

Well, if Paul should tell the truth, it might be owing to the Christianizing influence exerted in Chicago by the Pinkertons. The C., B. & Q., regards them as a Salvation Army.—ED. MAGAZINE.

MR. EDITOR:—Suppose a corporation, like the bankrupt "Q.,"
Should wake up some fine morning, with its scabs all cast out?
If that wouldn't be a miracle, please, in a line or two,
State, if not a miracle, whereon to hang a doubt?

It might appear to some like a miracle, but still we should attribute it more to the fact that the Boston baked beans and codfish aristocracy, after examining the "Q's" balance sheets had concluded that a strike against organized labor was a financial damp-hoolism and that a scab on the "Q." was as certain a sign of disease as a scab on a leper.—ED. MAGAZINE.

MR. EDITOR:—Suppose the B. of L. E., with P. M. Arthur in the lead,
When it meets in Denver, should be able to see,
That to repeal its odious laws, would be a graceful deed?
Would that be a miracle? If not, what in thunder would it be.

Not a miracle at all, but simply the exercise of good, hard, common sense. Besides, it would evince moral courage, that exercise of the faculties which enables men to do the right thing just because their heads and hearts are right. It might be regarded as a miracle of stupidity, for the B. of L. E. to champion "strict neutrality," at a time when the voice of workingmen, like the voice of many thunders, demands federation for the welfare of railroad employes.—ED. MAGAZINE.

MR. EDITOR:—Suppose the B. of L. F. should continue to cower,
Evinced to the world that it has neither muscle nor backbone,
Wouldn't it take a miracle of the old-time power,
To put it on its pegs, and give it strength to go alone?

We are inclined to the opinion that that is about the size of it. But, fortunately, the B. of L. F. has got muscle and spine in abundance. It demands no miracle. If to go it alone was the demand, the B. of L. F. has demonstrated its ability to stand, to march, to climb, but the B. of L. F. grasps the idea of federation, it appreciates the power of one in many—many in one—when

the crucial test comes of maintaining rights due to all.—ED. MAGAZINE.

MR. EDITOR:—Do you think the age of miracles was long since left behind
By the advancing hosts of progress? If so your head is level.
If working men would triumph, they must mass their powers of mind,
Nor expect by any miracle to overcome the devil.

We think the present is a wonderfully practical age, and that "Switch" sees the fact without the aid of spectacles.—ED. MAGAZINE.

MR. EDITOR:—"Shake!" I am with you in the battle and the storm.
By all the gods, among the living or the slain,
I am for federation, and I see the conquering form.
Of the genius that walks with us, and I hear the grand acclaim.
"We will conquer!" "Dinna ye hear the slogan," 'tis a divine decree.
"Vox Populi, Vox Dei"—"Workingmen are free."

RATON, N. M., March 25, 1889.

Editor Firemen's Magazine:

Permit me to inform the readers of the *Magazine* that Kit Carson Lodge No. 257 is keeping abreast of the times, and that we had our annual ball on the 18th of March, which was in every particular a success. The committee on reception were Bros. J. R. Smith, A. Allison, B. F. Vine, Al Bennett and Charles Miller. Floor managers were Bros. J. McPherson, J. F. Campbell, A. B. Cullen, Lee Summers and John Emison. Bro. Miller and lady looked well, and would grace any ball room. Bros. Allison and Martin took charge of the money at the door, so there were no dead-heads. Bro. McPherson and wife were as happy as happy could be. Bro. Summers and lady were perfection. A. R. Cullen was to the front, you bet. John Emison looked well, but I am afraid that he talked her to death. J. R. Smith and wife were in the head seat. That's right, Bro. Smith. J. F. Campbell and lady had a good time and were admired by all. But I do not think that Bro. Campbell had much sleep for the few nights previous to the dance, as I heard he slept on Third street with his *Magazine* note book for a pillow. Is the ground a good bed, Jim? You had no right to send for your trunk so soon. Brace up, old man. Mr. Geigoldt, our Master Mechanic, was in the height of his glory when he was called to a wreck on the Raton Mountain. No one hurt. The boys were sorry that he had to go so early, but he and his foreman acted the perfect gentlemen in letting so many of the boys off. The ladies' costumes were splendid and their dancing perfect. At 4:30 A. M., when all were satisfied and the morning stars were out, every one said that the St. Patrick ball given by the Brotherhood of Locomotive Firemen was the best ever given in Raton, and the wish of the entire house was that the boys would give one oftener.

Will close by thanking every one and hope to meet again when the music calls forth at our next. Yours fraternally,

One of the Boys.

The Brotherhood of Locomotive Men.

MR. EDITOR:—Noting your suggestion in regard to change of name of B. of L. F., permit me to say that you are doubtless aware that on many roads, the "Engineers" as you call them, or those who manage the engine are called "Englnemen" and those who manage the fire "Firemen." Your new title of "Locomotive Englnemen" would still have a restricted meaning. You know how fond I am of the Locomotive idea, and I suggest the name of "Locomotive Men."

Yours truly for B. of L. M.,
X Y Z.

[We are greatly obliged for the suggestion of "X. Y. Z." Our suggestion of a change of name, strictly in consonance with facts is awakening, we are glad to know, very general interest. "X. Y. Z." seems to comprehend the wisdom, necessity and importance of a change of name that should clearly define the true status of our Brotherhood. Now is the time for discussion and we hope to hear a general expression of the views of the membership of our Order.—ED. MAGAZINE.]

ST. PAUL, MINN., March 28, 1889.

Editor Firemen's Magazine:

It seems to me that the boys of the B. of L. F. should be careful, while condemning the action of the B. of L. E. at Richmond, not to injure the feelings of those members who neither make, nor have the power to correct any rule or rules adopted at that or former assemblies of that Order. I know that the majority of engineers, in the northwest, at least, have the best of feelings for the firemen, and if they had the power to undo any wrong that has been done to the B. of L. F. I think they would do so cheerfully. During the strike on the C., B. & Q. the O. R. C. was bombarded on all sides and, while no doubt, a great many of them deserved it, there were more who did not, as has been proven by several communications published in this *Magazine* and written by members of the O. R. C., and we have further proof of their manhood in the new order of conductors organized at Los Angeles, Cal. During the strike there were firemen and engineers who were not particular whom they reproached, so long as he was a member of the O. R. C. It seemed sufficient reason for giving him a "roasting," and in this way the feelings of a great many good men were injured, and enemies made where friends were needed. I don't want the members of the B. of L. F. to keep quiet. I know that they have suffered indignities, and that there are wrongs to be righted, but they should not allow their indignation to run away with reason. Remember that there are hundreds of friends among the boys of the B. of L. E. I have travelled, and the engineers have shown me many favors, and in some cases I could not have been treated better had I been a member of their order. I have no doubt but what there are hundreds of the members of the B. of L. F. who can say the same in regard to their own experience, while traveling or seeking

employment. Plain talk and manly debate there can be no objection to, but I would advise the boys to drop all sarcasm and abuse in their articles published in this or any other periodical. We cannot reach the few in this way without striking the many. Let us preserve our manhood but at the same time try to hold the friends we have, and there are many of them in the B. L. E. Things have turned out sadly indeed, and while I know the boys are right in making their wrongs conspicuous, I cannot help but picture to myself, the enjoyment of some of the railroad officials at this inharmonious state of affairs between the two Brotherhoods.

E. B. Harris.

[In the foregoing communication, locomotive firemen, members of the Brotherhood, are cautioned against speaking harshly of conductors and engineers who are the friends of firemen. It should be said and we deem it a duty to put the fact on record, that so far as our knowledge extends, no Brotherhood fireman ever speaks unkindly of either conductors or engineers who are the friends of our Order. No communication of that character has ever appeared in this *Magazine*. It has been known all the time that there were railway conductors members of the O. of R. C., who in their heart of hearts were loyal to the strikers on the C., B. & Q., whose very souls revolted at the idea of scabbing, and it is as well known that there are thousands of engineers, members of the B. of L. E. who are righteously hostile to the obnoxious, insulting and humiliating laws of their order aimed directly at the B. of L. F. No criticism of conductors or engineers, ever applied to such individuals, and the fact is well known to all. When those who control the O. of R. C. indorsed scabbing for the purpose of defeating engineers and firemen in as holy a cause as ever animated workmen to secure their rights, when they advised conductors to coöperate with the C., B. & Q. to defeat the strikers then Brotherhood firemen denounced the whole infamous business and all who took part in it, but none others were ever denounced, not one; on the contrary conductors who abhorred the policy, whose manly hearts revolted, have been eulogized. With regard to engineers the same is true, absolutely true—engineers who are opposed to the insulting laws of the B. of L. E., are not held responsible for this by Brotherhood firemen—no censure touches such engineers. This is well known by engineers, and the pages of the *Magazine* bear irrefutable testimony of the fact. The severest criticisms of the insulting laws of the B. of L. E. have been by members of the B. of L. E.

It is high time for Brotherhood firemen to distinguish between persons and policy. The B. of L. F. has no war with individual conductors or engineers. It denounces

wrongs, wrongs which to bear without protest would be the sacrifice of all independence and self-respect.

The B. of L. F. is not responsible for any gratification railroad officials may realize. It sought by every power and device at its command to be on terms of fraternal equality with the B. of L. E. It exhausted every resource. It pleaded and petitioned and protested, and was insolently thrust aside. It cared nothing for "injury" to feelings—nor did it care what railroad officials might think about it. It demanded an absolute, unqualified divorce from the B. of L. F. and has obtained it. Locomotive firemen, members of the B. of L. F. will do well to study the bald facts and note the B. of L. F. fights a policy, not persons.—ED. MAGAZINE.]

ROCHESTER, N. Y., March 6, 1889.

Editor Fireman's Magazine:

I guess I will have to try it again, and while the boys are getting "stirred" up, I will give you some pointers in regard to the 99's. There is Bro. Gus Luttringer, who has been throttling the 36 for a few days. Gus has had to give her up and go back to firing. "Could not stand it," he says. Some folks say that "Gussle" gets awful mad when the boys hold up four fingers to him. Bro. Finch has the night job at Lincoln Park. Wake up, Finchie, and sign the book. Bro. Benedict is O. K. again. They say that trip to Wyoming acted like magic on the broken toe, "Billie." Bro. Mansfield has the night job at Ashford. It is the cause of a great deal of sorrow among the girls along the line. I have heard people call Lovie the "dancing master" before now. Bro. Kellogg has a sore knee, he says he let his feet hang out the window at A. D. the other night and caught cold, never mind Bob, it is not as bad as going to Genesee Junction for bull frogs. Bro. Billis seldom sleeps except when in the Lodge room. Keep away from Fairport, Freddie, and you will be all right. Bro. Geo. Ainsworth is still pegging away at the 52 with old "Amie." George is a brother to be proud of. I expect Bro. Kingsley will look like an alderman if he keeps his present position much longer. You must make the boys pony up, George. Master Pryune is the same "old reliable" as of old. Give him good support brothers and he will make 99 something to be proud of. We have had Brothers Pope and Ward visiting us from the West. They say that there are some twenty B. of L. F. boys working with them, who are on the right hand side, and who will have nothing to do with the B. of L. E. That is right and if they and others will let the other "twin" alone, they will find the "knocking for admittance" on the other side of the house. Yes, brothers, let the B. of L. E. alone and they will be on their knees to us yet. They have got to come to it. If you all felt as I do, you would let them severely alone, and call it an honor to belong to the B. of L. F. and always remain

One of Them.

IN MEMORIAM.

[Lines in memory of John F. Creede, who was killed in a railway accident near Lusk, Wyo., on the Douglas branch of the F. E. & M. V. R. R. The deceased was a member of Smoky Hill Division No. 141, B. of L. E., of Ellis, Kansas. Written by the fireman's brother, W. H. D.]

When the golden gleams of sunlight
Slowly faded from the west,
And the soft and silv'ry moonlight
Calmly crept across the crest,
And the dew was on the heather,
And the autumn leaves were sear,
Hast'ning along the dark iron road
Dashed the daring engineer.

See the headlight break and shiver,
As she wrestles with the rail,
Ev'ry shew seems to quiver,
As she trembles o'er the trail.
Two brave hearts are proudly beating
Keeping time with the machine
That through darkness, swiftly fleeting
Bears her burden on to Keen.

Where the misty mountain ranges
Lift aloft their polished peaks,
Ev'ry curve her course now changes,
While the whistle wildly shrieks;
And the bell that's in the bracket
Rings with ev'ry rock and reel,
Echoes through the crags and canons
With a wild and weird peal.

Now the agent at the station
Looks with awe and holds his breath,
While a proud heart's quick pulsation
Marks its meeting point with death.
See! she strikes some cattle
Lying down upon the trail,
And without a moment's warning
She madly leaves the rail.

Now the fireman, bruised and bleeding,
Climbs the rough and rugged hill
Through the stean to where his mate
Lies pinioned 'neath the engine still.
"George," he whispered, "tell my mother—
Go and tell her how I died;
Tell her could I've lived to see her
All my hopes were satisfied.

How the cruel monster scalds me!
Oh! my time is coming now;
I must go; my Master calls me—
See the death dew on my brow?"
Soon strong hands with picks and shovels
Moved the wreck and ruins back;
Soon they reached him and bore him
To a seat beside the track.

The pale moon seemed more than tender,
As it kissed his face so fair;
And the gentle autumn zephyrs
Faintly fanned his auburn hair.
Then he took my brother's hand,
And a tear was in his eye:
As my brother stooped he whispered,
"Can't you take me home to die?"

As they laid him on the cushion
Whence he went to his heav'nly home,
They could hear the dying requiem
Of the stean from out the dome.
They knew another hour would find him
In his heav'nly Father's care,
At his heav'nly home with angels—
God had heard his simple prayer.

FORTH WORTH, TEXAS, March 17, 1889.

Editor Firemen's Magazine:

I would like to monopolize some of your valuable space for the purpose of talk with the brothers. Brothers, many of you are dissatisfied with the settlement of the "Q" difficulties, in

fact, all of us western men are, and many are intending to take final withdrawal cards. Brothers, *don't do it*. The Brotherhood has, it is useless to deny, received a blow which shocked it to the foundation and sorely tried its strength. Whether or no the trouble was conducted rightly is a thing of the past, but we have been taught a lesson and a dearly bought one. Should sailors desert their ships because of one storm? Should an army give up, because it has lost a battle? No. Stand by your colors, brothers. Reorganize on the "Q," organize brothers, everywhere. Extend the hand of good fellowship to the B. of R. B., to the B. of R. C., machinists, switchmen, and in fact, to every branch of railroad labor. The engineers dare not defy us. They may insult us, as they have done in the past, but they must stand by us to protect themselves. Remember that but for the B. of L. F., God bless it, you would be getting forty or forty-five dollars a month instead of from seventy to one hundred and twenty. For shame, brothers, to murmur because for once in years, your assessments have been heavy, after all the B. of L. F. has done for you and yours. I am nothing but a common fireman, but I have handled a scoop-shovel for more than eight years and know something of hardships. I know what it is to get out of bed at 8 A. M., with the mercury at 45° below zero, while the caller blandly informs you that "32 will leave on time," the villain knowing that the engine isn't fired up yet. I know what it is to have leaky flues; I know what it is to have 100 lbs. of wind when you should have 140; I know what it is to have an engine reposing on top of my manly form, five hours, while in a ditch. I know where the prettiest girls live along the line; I know what it is to have my check short ten or twelve dollars, and have the thick-headed monkey who acts as paymaster gently inform you, "He don't know anything about it, and don't care a damn." I know how fifty dollar debts, sizes up alongside of a check for thirty-seven dollars and twenty-six cents, but best of all, I know what the B. of L. F. has done for me, and I spy nall the flag to the mast boys, and stay with the ship—and by the grace of God we will conquer yet, and make that poor excuse of a tailor-goose, called H. B. Stone, so sick of this business, that he will want to go to Canada, all the samee bank cashier.

Yours in B., C., S. and A.,
F. H. Richardson.

SCRANTON, Pa., March 25, 1889.

Editor Firemen's Magazine:

The fourth annual grand ball of Acme Lodge, No. 228, given at Turner Hall on the evening of February 22d, was acknowledged by all present to be the grandest event of the season. There were three hundred couples in attendance, among whom were Brother Bowen, Master of No. 220, and wife, and Brothers Yokey, Rickett, Cannon and Owen, of Lodge No. 71, and Engineer Bates and wife, of Oneonta, N. Y. There was also in connection with the ball a contest for a

gold watch valued at \$120, the contestants being Engineers Ed Parmeter, of Sam Sloan Division B. of L. E., of this city, and William Blake, of Sammy Dotte's Division, of Carbondale, Pa., and two more worthy gentlemen could not have entered the contest. Mr. Parmeter took the watch, he being \$29.50 ahead. The ability of the committees to whom the management of the whole affair was entrusted is well worthy of comment, and too much credit cannot be awarded the supper and table committees for the able manner in which that part of the affair was conducted. On the supper committee were Mrs. Lewis Livistin, Mrs. E. M. Tukesbury, Mrs. H. D. Curdy, Mrs. John Spence, Mrs. A. N. Beldin, Mrs. Horace Harrel and Mrs. Harry Seely. The table committee were Miss Lizzie Finestlin, Miss Mary Finestlin, Miss Carrie Shiffer, Miss Mame Shiffer, Miss Mame Swarts and Miss Maggie Bell. The matter of a ladies' society for the B. of L. F. is being thoroughly discussed by the members of 228, since the ball, and judging from the deep interest manifested by the ladies, in the near future, we are to be able to boast of one of the finest societies of the kind known to the fraternity.

Brother Lewis Finestlin took the premium on selling tickets for the ball, having sold ninety-five. A. R. W.

P. S.—One thing more I should have mentioned—

Excuse, please, the mistake—
Our engine dispatcher is the chap
Who carried off the cake.

TOM'S EXPERIENCE.

O, but it was a comical sight,
To see Tom running with all his might
To make the accommodation.

Away across lots, on, on he flew—
In a swampy place he lost a shoe—
That spoiled his calculation.

That shoe regain'd, he started again,
He still had hopes he would make the train.
But as plans "of mice and men,"

Their greatest schemes aft gang a glee,
'Twas so with Tom, as you soon may see,
For he lost that shoe again.

He fish'd it out, but with shoe and mud,
He scarce can make the lost time good,
For the train is at the station.

He ran as he never ran before,
He got so mad that he almost swore,
He was vex'd to desperation.

The last misfortune that befell
Our respected friend, is yet to tell—
His foot caught the end of a tie.

Just as the train was moving away,
He measur'd his length in a bed of clay,
No wonder he heaved a sigh.

Regaining his feet he gazed around
For his dinner bestrew'd the ground,
But his lunch basket, where, O where?

He follow'd the trail his dinner made,
Across the track, within the shade
Of a freight car, he found it there.

Edward Splatine.

Personals.

SEBASTIAN excels as a soloist.

SPRING POETRY is blossoming.

THE name of Pinkerton will soon be Den-
nis.

G. C. MORTON holds the gavel at Los An-
geles.

SAN FRANCISCO is looming up in the dis-
tance.

THE Brotherhood is booming, and don't
forget it.

HAVE you secured your subscriber to the
Magazine for this year?

JOHN DANDY is Receiver of No. 371. He
is of the Jim variety.

WE will have 20,000 members in good
standing before the close of 1889.

EUGENE MCAULIFFE makes Fargo Lodge,
No. 85, a first-class Secretary.

FEDERATION means equity and justice for
all who toil for their daily bread.

GRAND MASTER SARGENT will address the
union meeting to be held in Milwaukee in May.

M. W. JAMISON is in the harness again.
No. 52 can't leave Mart on the retired list very
long at a time.

FRANK J. THOMER, Receiver of No. 378,
honors his position. As an officer he stands
second to none.

H. J. BOHN handles the cash for Hercules
Lodge, No. 63, in a way to do credit to himself
and to his Lodge.

J. L. PHILLIPS can still be found at the old
stand, Marshall, Texas, with a royal welcome for
Brotherhood men.

THE "Q" men are rapidly finding posi-
tions. The last of the "Old Guard" will soon be
in out of the rain.

TOM TAYLOR, of Meadville, after plunder-
ing his Lodge, of which he was Receiver, has left
for parts unknown.

"SCHERMERHORN" is the Collector of 361.
The boys say he hangs his name on the outer
wall when he retires at night.

W. H. ROUGEAN is doing heroic service
for the Lodge at River du Loup. His staying
qualities will bear the severest test.

THE verdict of the Dutchman who met
Vice Grand Master Hannahan a few days ago,
was: "Der vas no flees on dot shentlemens."

CHAS. STEVENS, of Hercules Lodge, No.
63, bids fair to outstrip the "Lunch Friend of the
Delaware." He made a great record at Terre
Haute.

DAVID FREEMAN, of 204, was lately mar-
ried to an accomplished young lady of Bird's
Point, Mo. The *Magazine* extends its hearty
congratulations.

It is said that Bro. White, of No. 119, is
about to startle the world with some great inven-
tion. His close inspection of the flanges of No.
16 has aroused the suspicion.

JOSHUA A. LEACH is now a grand honorary
membership of our Brotherhood, made so by the
Convention. Bro. Leach is the only man who
carries credentials of that kind.

T. W. KERNS, of Alabama Lodge, No. 277,
Mobile, Ala., is to be congratulated. "The coun-
try is saved," and all owing to C. d. liver oil and
g n—and not the cotton gin, either. 'Tah for the
glorious mixture!

W. R. LANAN, Master of Red River Lodge,
No. 8, at Denison, Texas, comprehends the value
of active work, and is, therefore, fully up to the
requirements of the times and to the demands
of his responsible position.

BRO. O'HAGAN, better known as "Pat, the
Sailor," of East Albany Lodge, No. 215, is not an
advocate of raffling, preferring a boot-leg distri-
bution. At the recent fair he sailed his own
schooner, fearless of the foam.

JOHN MYERS, who presides over Hercules
Lodge, No. 63, Danville, Ill., is a Brotherhood
man from his head to his heels. He has for a
long time been on the right hand side, but the B.
of L. F. is good enough for him.

D. L. FORSYTH, Master of Fort Pickering
Lodge, No. 206, Memphis Tenn., is a man and a
brother who is equal to all emergencies, and can
afford to be proud of his record. Such men are
master spirits and make the world move.

A. J. SCHERMERHORN, of Tried and True
Lodge, No. 381, is a philosopher. Among other
profoundities of speech worthy of the Grecian
schools, he exclaims, "As the boy said when the
bull chased him, 'Here goes.' " Bully for you.

WE have the pleasure of announcing the
marriage of Bro. G. Farnham, of Cactus Lodge,
No. 94, to Miss Kate Moody, of Big Springs,
Texas. The happy event occurred at Big Springs,
February 1st, and the *Magazine* sends congratu-
lations.

A. W. SPURR, Collector of Boston Lodge,
No. 57, is an official who comprehends the im-
portance of efficiency in financial matters, and
who fully realizes the fact that "standing square
on the books" gives a Lodge commanding influ-
ence.

BRO. DOONER, on behalf of Georgia Lodge,
No. 245, presented Mrs. J. J. Hannahan, wife of
the Vice Grand Master, an elegant present. Such
testimonials of regard are among the pleasant
things that embellish life and make it worth
the living.

THE *Magazine* is informed that on the
evening of March 13, Bro. C. W. Reeves, of No.
75, was married to Miss Ella James. Rev. J. H.
Menger tied the matrimonial knot, and at last
accounts the happy pair were enjoying full tide
honeymoon bliss.

BRO. DECKER and his loving spouse are to
be congratulated upon the arrival of a 12-pound
baby at their home in Herrington Kansas. Mc-
Allister Lodge ought to feel proud of Bro. Decker,
but it is needless to say that Bro. Decker is proud
of his baby. You bet!

HUGH BIDDLE, of Bartholdi Lodge, No.
309, and Miss Anna Rogers, of Long Island City,
were happily united in marriage on the evening
of February 27. The *Magazine* offers its congratu-
lations and good wishes for the unalloyed hap-
piness of the bride and groom.

ANDERSON LODGE, No. 278, shows its ap-
preciation of ability by electing Bro. H. V.
Nevill, its Master. He knows how to preside.
Nevill and Gavel make a full team, but when
the gavel is laid aside Nevill keeps right on ad-
vancing the interests of his Lodge.

It is a source of satisfaction to say that
First Assistant Engineer Brown, of Division 238,
B. of L. E., Meridian Miss., extended favors to
our Vice Grand Master when in that city. We
can assure Bro. Brown that his courtesies were
appreciated and will not be forgotten.

THE members of Hercules Lodge, No. 63,
are mostly quite young men, both in years and
in membership, but they have the interests of
the Order at heart, and are working earnestly
and faithfully to make their Lodge what its
name indicates—a tower of strength.

ABE VOGEL now represents the Fourth ward as Alderman in the Council of St. Cloud, Minn., having been elected for a term of three years. Abe promptly passed the cigars and the members of No. 22, of which he is Master, smoked heartily to his health and success.

We take pleasure in announcing to our readers that Bro. Geo. Hoffman, of J. M. Raymond Lodge, No. 40, now running the Brockaway House, at Hot Springs, Ark., is succeeding splendidly and making the Brockaway popular with the travelling public and home patrons.

E. G. HITCH, an active and efficient member of C. J. Heburn Lodge, No. 100 has been promoted, and is now running a sawch engine at Evansville, Ind. It affords the *Magazine* pleasure to announce the good fortune of Bro. Hitch, for he is worthy of the position he occupies.

The meeting of Vice Grand Master Hannahan with Trinity Lodge No. 83, Fort Worth, Texas, was a most agreeable event, and his visit was crowned with good results. Bro. Hannahan has a way, all his own, of doing a "heap" of good. Long may he hold aloft the banner of our Order.

GEO. V. PLANT, late Secretary of Fairmont Lodge, No. 333, has been rewarded for his faithful service with promotion to the right hand side. No Subordinate Lodge ever had a Secretary who was more faithful in the discharge of his duties than Bro. Plant. Success to him, is the wish of the *Magazine*.

FLORIDA boasts of Pensacola, and Pensacola, boasts of Flowery Land Lodge, No. 346, B. of L. F., and Flowery Land Lodge may boast of having in Bro. Frank Dean, a Master who can in turn boast that there are "no flies" on him. As master of the Lodge he is there every time, and meets every emergency.

It affords the *Magazine* a great deal of satisfaction to chronicle the glad tidings of the arrival of angels, male or female, at the residences of our Brotherhood firemen, and we therefore felicitate Bro. Burgess and his wife upon the arrival of a 10 pound boy at their home, Point Edward, Ont., February 20, 1880.

J. I. DAVIDSON, it is conceded, exerts a commanding influence in his Lodge, No. 245, and that influence is for harmony and efficient work. The colored citizens still salute him as "Massa Davidson," a compliment of much wider significance than is usually understood. It speaks volumes for his head and heart.

We acknowledge the pleasure of a brief visit from Bro. W. F. Brundage of Rocky Mountain Lodge, No. 77, who was in Terre Haute recently, enroute to the East. We were pleased to greet him. Bro. Brundage is one of our main stays in the West, a representative Brotherhood man whose head and heart are in the cause.

J. K. ROBINSON, Receiver of Bee Hive Lodge, No. 179, writes us most cheerfully from Lincoln, Nebraska. As a locomotive engineer no man more thoroughly comprehends the needs of railway employes, and his endorsement of the *Magazine's* suggestion of adopting for our Brotherhood the name of "The Brotherhood of Locomotive Enginemen," meets his hearty approval.

It affords us real pleasure to hear from our brother, Harry Barnes, formerly of Terre Haute and a member of Vlig Lodge, No. 16, and now a member of Pine City Lodge, No. 81. Bro. Barnes takes an intelligent and a comprehensive view of all matters pertaining to the welfare of our noble Brotherhood, and is doing good work in upholding its principle and policy. The duty of our membership is now to stand fearlessly by our Brotherhood flag, and this Bro. Barnes is doing with characteristic heroism.

CHAS. A. CRANE is Receiver of Fort Pickering Lodge, No. 206. He came into the office under trying circumstances, but is the right man in the right place as his statements to the Grand Lodge demonstrate. They rank No. 1, and are models of perfection, which are a credit alike to himself and to his Lodge.

At the charming home of Bro. J. I. Davison, member of Georgia Lodge, 245, Savannah, Ga., Vice Grand Master Hannahan and family were entertained by the sister of Bro. D., Mrs. Burke and her husband. The hospitalities were elegant and warm as the sunshine, and Bro. Hannahan and family were delighted.

THE many friends of Bro. Wm. J. Hugo, will learn with regret of the death of his brother Edward, after a long and painful illness. In a few brief months Bro. Hugo has lost his mother and two brothers. The *Magazine* tenders its profoundest sympathy to Bro. Hugo and his family in the sore affliction that has overtaken them.

We notice with no little satisfaction that our esteemed brother, W. F. Hynes, of Denver, is of the firm of W. T. Davoren & Co., Denver, Col., manufacturers and dealers in fine brass castings, bar-lead and Babbitt metals. The *Magazine* makes this notice in the hopes that it may contribute something to the success of the firm.

THE Vice Grand Master has only complimentary words for the Lodges located on the Central Railroad & Banking Co. of Georgia. The Lodge fires are always burning brightly, and to say they are "O. K." only feebly states the case. The members are true Brotherhood men, full of zeal, and gentlemen in the best sense of the word.

THE death of Bro. P. J. McCarty, honorary member of Hercules Lodge, No. 63, Danville, Ill., occurred at Terre Haute on April 1st, after a lingering illness with consumption. The remains were buried at Terre Haute, under the auspices of Hercules Lodge, No. 63, and Vigo Lodge, No. 16. The funeral was largely attended. Bro. McCarty was a worthy member and had the respect and esteem of all who knew him.

BLUFF CITY LODGE, No. 55, of Memphis, Tenn., is fortunate in having on its roll of membership Bro. Jacob Fuchs, an old pioneer engineer, and a member of the B. of L. F. Bro. Fuchs is not only one of oldest but one of the best engineers in the service, and when he says the B. of L. F. is "good enough for him," it is testimony of the highest character, and should be so regarded by every member of our great Brotherhood.

WM. COBAUGH, Master, and Lafayette Friddy, Secretary of Columbia Lodge, No. 252, two royal good fellows, visited the Grand Lodge in the latter part of March. They were received and entertained by the "Social Seven" at "our Boarding House," where mine hosts Zink, Brennan, Rigby, et al, carve the goose and pass the cigars. Cobough and Friddy made hosts of friends, and departed with the good wishes of all. We suggest that the boys on their return go slow in the matter of having the full minutes of the proceedings of the trip read.

A LARGE circle of warm personal friends will deplore the tragic death of Harry Keler, which occurred March 21, the result of an accident on the Mexican National Railroad, on which he was employed as an engineer. Mr. Keler was in all regards an excellent man, and made sacrifices for the Brotherhoods of railway employes. He was a good writer, and his pen did much to promote the welfare of railroad men. We, in common with his numerous friends, lament his untimely death. Such men leave aching voids when they die, but death is relentless and loves a shining mark, and seldom has he sped his arrow at a more manly man than Harry Keler.

TOM MEA has hung out a sign at Minneapolis, which reads "Veterinary Surgeon." Tom is a "Vet" himself, and ought to do a land office business.

RALPH H. LACY and Chas. Sanborn, of Progress Lodge, No. 105, both of whom fought valiantly in the late "Q" strike, have gone West and are now located at Denver, where they have gone into business. They are located at 1222 Larimer street, and their business is known as the "Crystal Light, Oil and Gasoline Co." Every member located at Denver should see to it that Lacy & Sanborn are liberally patronized by workmen.

FRANK J. CARNEY, of Alabama Lodge, No. 277, is known as the "Plumed Knight" of the South. He has a brother-in-law, Father John Shaw, who has just graduated, and is known to be a young man of brilliant intellect, who, if he lives, has a splendid future of usefulness before him. Father Shaw's mother's heart is in our Brotherhood, and she is a woman of noble type, one who favorably impresses all who meet her.

P. McHALE, Master of Faith Lodge, No. 200, and Bro. S. F. Baker, Magazine Agent of the same Lodge, deserve special thanks for sending us a big subscription list for the *Magazine*. They have set a splendid example for the South, and for every other section. It is good work for the Order. The *Magazine* is doing what it can to promote the welfare of the Brotherhood, and the wider its circulation the greater the good it can accomplish.

THE true Brotherhood spirit helps a brother when in trouble. Nor is it confined to the brother, but broadens out and reaches the family—the wife and children of the brother, and that is the spirit which animates the members of Overland Lodge, No. 123, a signal display of which is found in the case of Bro. Poole and family in his recent great affliction. In this case the members of No. 123 performed noble acts worthy of the highest commendation.

ONE of the pleasantest incidents we have experienced for a long time was a visit from Mr. H. B. Miller, now an engineer on the N. Y. & N. E. R. R. with headquarters at East Hartford, Conn. Mr. Miller is F. A. E. of the B. of L. E., and is widely and favorably known among the engineers of the East. Our first experience with Mr. Miller was at Port Jervis, N. Y., some fifteen years ago, when we were on our way East in the interest of our Lodge. The Order had just been started, and Bro. Miller was a prominent and active member of Lodge No. 1, at Port Jervis, and so remained until by force of circumstances the said Lodge became defunct. Upon our arrival at Port Jervis Bro. Miller took us to his home and we were made to enjoy the generous hospitalities of his household. The meeting with Bro. Miller after a lapse of fifteen years and all the intervening changes, was a strangely felicitous one. Old recollections were revived and the panorama of the Brotherhood from its birth to its present continental proportions was unfolded for mutual delectation. Bro. Miller was one of our pioneers, he is now and ever will be a staunch friend of our Order, a friendship which is cordially reciprocated all along the line. Come again, Bro. Miller, and we can assure you that you will find the latch-string on the outside.

There is work enough for the B. of L. F. to do connected with its own organization without bothering about other organizations, and listening to the twaddle of people who would attempt to create dissensions. Let the B. of L. F. hold off in dignified silence and continue to be indifferent as to whether the B. of L. E. takes it into its fold or not. Let the B. of L. F. go ahead and improve its members socially and morally, and make them as good and efficient men as they can be. Then let the B. of L. F. wait, quietly and contentedly, for as sure as fate the time will

come when the B. of L. E. will need the help of the B. of L. F., and when that time does come, the B. of L. F. can listen and accept or reject the terms which some misguided individuals urge the B. of L. F. to demand now. To do so at present would mean loss of dignity to the B. of L. F.—*New York Dispatch*.

Thanks. There is perhaps nothing on the market that is of less value than advice, offered when it is not wanted, a fact which the *New York Dispatch* does not seem to have caught on to. The B. of L. F. has gained enviable distinction by minding its own business, which it fully understands. It is not asking for admission into the B. of L. E. "fold," a fact which the *Dispatch* does not seem to know, and not knowing leads it into silly utterances. The trouble with the B. of L. E. is that it thinks it is "one degree above" the B. of L. F., a folly which the *Dispatch* has helped to hatch and which, for aught we know or care, may be beyond eradication. This "one degree above" idea, has led the B. of L. E. to pass certain exceedingly vicious laws touching members of the B. of L. F. This being true the B. of L. F. discusses the question as it deems prudent, and in a way to suit itself. And as the B. of L. E. has not deemed it prudent to offer any excuse for its repeated affronts, we fail to see any reason why the *Dispatch*, "having no special axes to grind," should volunteer its services in defense of the policy of the B. of L. E. Besides, the *Dispatch* in its efforts to carry water on both shoulders plays the very devil with consistency, a "jewel" upon which it seems to set no value at all. As for instance, it says, "as sure as fate the time will come when the B. of L. E. will need the help of the B. of L. F.," and then referring to the action of the Richmond convention, says: "Every man on the engines who had the pleasure of doing his own reasoning knew, and knows to-day, that a fireman is a fireman, that he is under the orders of the engineer, that he is not his equal in the handling of an engine, and that he is one degree below him in the scale of skilled labor." Here again we have a repetition of the silly slush of "one degree below," that "a fireman is a fireman," and such other twaddle as excites contempt. The *Dispatch* illustrates the condition of the unfortunate creature who, when he had had one devil cast out of him, went off and took in seven other devils—filled himself full of them. What kind of devils they were we are not informed, but if they were fool devils then the condition of the *Dispatch* becomes exceedingly apt.

THE *Monthly* of the O. R. C. states, by "permission of two delegates," that the B. of R. B., at its Columbus convention, did not agree to federate, "by a large majority." It would be quite as "near the truth for Wheaton to say that he did not favor scabbing on the C., B. & Q.

Correspondence must in all cases be brief and to the point.

Subscriptions must begin with the January, April, July or October number and expire with the year.

Changes of Address of subscribers should be reported to us promptly to insure the safe delivery of the book.

Subscribers failing to receive their Magazine will please notify us, giving name and location of Agent to whom they subscribed.

Matter for Publication should be written on one side of the paper only, in a clear, legible hand, and all letters relating to the Magazine should be directed to

LOCOMOTIVE FIREMEN'S MAGAZINE,
TERRE HAUTE, INDIANA.

MAY, 1889.

A NUMBER of excellent communications, crowded out for lack of space, will appear in our next issue.

THERE seems to be some misunderstanding upon the subject of "total disability claims." It should be understood that under the law as it now stands, total disability claims can be allowed only in case of the loss of a limb or total blindness.

It is rumored that in the near future, Mr. E. H. Belknap, of the O. R. C., will deliver himself of several pent-up thunder storms on the question of "spotters." Wonder if the O. R. C. *Monthly* will print all the storms in one issue?

THE officials of the O. R. C., to get a little nearer the throne, are doubtless sending the advance sheets of their reports to railway officials to ascertain if they are all O. K.; if not, to make such suggestions as will make them pass muster.

A PHOTOGRAPH has been taken of the small "switch shanty" at Port Jervis, N. Y., in which the Brotherhood of Locomotive Firemen was first instituted in December, 1873. Members desiring copies may procure them by addressing J. P. Walsh, 16 New street, Port Jervis, N. Y.

WORD comes from Jersey City that the Pinkerton bill has passed the Legislature of New Jersey. This is good news. It shows what railroad men can do when they work together, and there are no better workers on the continent than the boys of grand old Washington Lodge, No. 13. The *Magazine* heartily congratulates them.

It affords us pleasure to say that Henry Lathrop, Esq., General Foreman of Transportation of the Central Georgia railroad at Macon, Ga., is a friend of our Brotherhood, and gives its members preference. This is a high compliment to the Brotherhood, offered, as it is, by a gentleman capable of forming correct estimates of men.

THE Inter-State Commission has deemed it the part of wisdom to order bound volumes 10 and 12 of the *Firemen's Magazine* and to become a subscriber. In doing this the commission evinces good judgment, and we feel assured that the more they read the *Magazine* the better they will like it. It contains a "power" of good reading.

A UNION meeting, one of the very best we have ever attended, was held at Parsons, Kansas, on April 10. Our limited space prevents a full report in this issue, and as we are desirous of doing full justice to the subject, we have deferred the report until our next number. We will have much to say about the meeting, the members, the officials of the road and Parsons generally.

WE regret to learn that the editor of the O. R. C. *Monthly* "is sick; just plain sick." The disease is not given, but the cause is intimated—"over 80,000 miles in 1888, and nearly 10,000 miles in January, together with constant strain." During 1889, Bro. Wheaton will have to travel about 250,000 miles and increase his "strain," if he expects to get in ahead of the B. of R. C.

A CONUNDRUM has been submitted for the special benefit of Messrs. Wheaton and Daniels, of the O. of R. C., who have won distinction as the champions of scabbing. Suppose the tribe of spotters, who follow conductors on numerous trains and are ready, for a consideration, to blacken the character of conductors, were to strike. Would Messrs. Wheaton and Daniels insist upon conductors taking their places on the trains? If not, why not?

WE notice that Division No. 1, of the Brotherhood of Railroad Wipers has been organized at Newton, Kansas, and that the event was appropriately celebrated by a grand ball and prize mask carnival on the evening of April 25th. We acknowledge with much pleasure an invitation to participate in the festivities and regret that pressing engagements prevented. We wish the new Brotherhood a successful career. The Brotherhood spirit is abroad in the land and it means business with a big B and don't you forget it.

It affords the *Magazine* real satisfaction to say that J. J. Casey, Esq., Superintendent of Motive Power on the L., N. O. & T., has the best wishes of our Order at heart. He is a man who gives dignity to his position and whose influence is always exerted in the right direction. In giving such men positions in the management of railroad affairs, railroad owners consult their best interests.

* *

It is pleasant to know that the relations existing between the engineers and firemen on the Central R. R., of New Jersey, are harmonious. There is no good reason why they should be otherwise, anything else would be abnormal. Firemen, members of the B. of L. F., have done all things required to entitle them to the esteem of locomotive engineers, members of the B. of L. E., and when mutual good feelings prevail it affords us satisfaction to chronicle the fact.

* *

We desire to impress upon members of the Order when writing to the Grand Lodge, particularly those who are away from home, to give their full address and state to what Lodge they belong. This omission is always annoying. A brother may be in California and hold his membership in some Lodge in New England, and it is absolutely impossible to determine where his membership is held unless he states the fact. We earnestly desire that our brothers will remember this request.

* *

THE C., B. & Q. is having trouble with its "scabs." A scab engineer, by the name of Bill Webb, discharged from the New England road, was induced to "go west" from Hartford, Conn., and "grow up" with the C., B. & Q. as a "scab." Bill seemed to be of the right dimensions for the C., B. & Q. He was to have \$4.00 a day. He went all the way to Lincoln, Nebraska, worked while the strike lasted, and was then unceremoniously bounced, December 23d. Bill sues for \$435.33 back pay, and for \$2,500 on broken contract, and for \$2,064.67 for injury to character, making a total of \$5,000. The action of the C., B. & Q. in bouncing Bill Webb, is entirely characteristic. It is capable of doing injustice to honorable men, and certainly would not hesitate to violate every sentiment of probity in dealing with scabs. We know nothing about Bill Webb except what we gather from the papers, but whatever else he may be that is mean, in addition to being a scab, he is the peer of the C., B. & Q., and we hope Bill will win the fight. When a corporation goes hunting for scabs it should be made to pay every penalty in luck or law such an outrage justly merits.

At the Atlanta Convention Bro. J. A. Leach, the founder of the B. of L. F. and its first Grand Master, was honored by being elected an honorary member of the Brotherhood, and the necessary certificate of his election has been issued and forwarded to him at his home in Sedalia, Mo. Bro. Leach is the only one upon whom this high honor has been bestowed and the wish of the *Magazine* is, "long may he live to wear it and enjoy the esteem of the great Brotherhood."

* *

THE *Chicago Times*, some time since, published a dispatch from St. Paul saying that the Milwaukee & St. Paul road had issued a secret circular reducing the wages of a large number of its employes 33 $\frac{1}{3}$ percent.—or one-third—that is to say, if an employe worked for \$1.50 per day, he went down to \$1.00. This reduction is said to be owing to the fact that the earnings of the road for 1888, decreased \$500,000, and the operating expenses increased \$2,000,000. To get things right it was necessary to reduce wages. Thus it goes steadily forward. The way to make money is to reduce wages, and it should not be forgotten that it is also the way to make anarchists.

* *

We are advised that there is to be a grand Union Meeting held at Milwaukee, Wis., on Sunday, May 19th. Headquarters of visitors will be at the Republican House, and terms have been arranged at \$1.75 a day. C. S. McAuliffe, Milwaukee, will attend to all details and reply to all correspondence relating to transportation and other matters. The meeting will be held in Germania Hall, on Grand avenue, between Fourth and Fifth streets. Good speakers will be in attendance. There will be a secret meeting in the afternoon and an open meeting in the evening. A large attendance is expected and Grand Master Sargent and Vice Grand Master Hannahan, of the B. of L. F., will be present to take part in the proceedings.

* *

We desire to call special attention to Patton's Railway Torpedo Holder, invented and patented by R. J. Patton, member of the B. of R. B. The Railway Torpedo Holder is a simple but effectual device for holding torpedoes and is attached to the top of the flag-staff, as a result the flagman always has his torpedoes with his flag and in a safe place, which is not always the case when the torpedoes are in his pocket, nor are the torpedoes liable to be misplaced, causing great anxiety and danger. The simplicity, security and effectiveness of the torpedo holder are such recommendations as are certain to secure its adoption and make it universally popular. They are supplied by Messrs. R. J. Patton & Co., dealers in railroad flags, etc., Hartford, Conn.

GRAND MASTER SARGENT is making the tour of the continent, that is to say, he has concluded to personally visit every "shaky" Lodge throughout the entire jurisdiction. The time has come to the Brotherhood, too long postponed, when the demand is "spot cash." The financial department of our Brotherhood affairs must be sound. Credit is dangerous, always was, always will be. No Order ever was, or ever will be run successfully on credit. Debt is death, cash is king. With it a Brotherhood can solve problems, remove obstacles and advance, without it decay and death are inevitable. This every thoughtful member of our Brotherhood knows. It is not required to argue the case. Bro. Sargent will visit every Lodge in bad condition, nor will he leave until things are fixed up.

* *

THE *Locomotive Firemen's Magazine* has been greatly improved since the opening of the year, and it is now certainly one of the very finest publications of its kind in the world. As a stalwart and able defender of the true interests of those who labor upon the railways, Bro. E. V. Debs holds a commanding and advanced position. Indeed, he has long been leading the most advanced skirmish lines, and he has advanced some of the most valuable ideas that to-day inspire the world of labor.—*Railway Service Gazette*.

In transferring the complimentary words of the the *Railway Service Gazette* to our columns, we shall not be charged with affected modesty, we accept the situation with such regulation blushes as seem suitable, but aside from such play of words, we appreciate the generous expressions relating to the *Locomotive Firemen's Magazine*, and reproduce them because the membership of our Brotherhood will be glad to know that their official organ commands the respect and approval of those outside of our Order whose opinions have weight. With such an indorsement as the *Gazette* gives our *Magazine*, the members of our Order can well afford to increase their efforts to extend its circulation and feel that in doing so they are conferring a favor upon those whom they induce to subscribe. We hope our *Magazine* Agents will read the ringing words of the *Gazette* and go forth with renewed energy to increase the circulation of "one of the very finest publications of its class in the world."

* *

THE *Locomotive Firemen's Magazine* appears to be extremely annoyed at the good words which this paper has to say for the O. R. C.

The O. R. C. is doing good work, in banding together for mutual advancement, and is as well organized a body as there is in the railroad field. Yet we fail to find in the *Order of Railway Conductor's Magazine* any demand that the conductors be placed upon a par with superintendents, or that its members be recognized as at least the equals of assistant superintendents.—*New York Dispatch*.

This *Magazine* is not "annoyed at the good words" which the *Dispatch* "has to say for the O. R. C." The O. R. C. needs them all, and if each word of the *Dispatch*

weighs a ton instead of a grain, the O. R. C. would still require them all. The objection to the O. R. C. centers in the fact that it orders its members to scab when railroad officials demand such humiliation—such degradation—such lickspittleism. Thousands of conductors revolt at the disgrace, and that is the reason why the B. of R. C. is rapidly taking the place of the O. of R. C. As a matter of course, while the "*Order of Railway Conductor's Magazine*" (monthly) advocates reducing the members of the Order to the disgraceful level of scabs, it would hardly be proper to "demand that conductors be placed upon a par with superintendents"—or even "assistant superintendents." There is an immense gulf between a scab and a superintendent, and how successful the *O. R. C. Monthly*, and the *Dispatch* will be, in throwing a bridge over the chasm, time will determine, but we surmise the undertaking will prove a failure.

* *

On the New York Central, March 25, an engineer, Levi S. Lewis, fell dead with his hand upon the throttle, while the train was running at the speed of a mile a minute. His fireman was a man by the name of Parker. It seems that when the train left Buffalo it was about twelve minutes late, and it was the purpose of the engineer to recover the lost time between Buffalo and Rochester, and this accounts for the high rate of speed. The fireman noticed that Lewis looked pale, but was too busy throwing in coal to give special attention to the engineer. Suddenly Lewis, with his hand firmly grasping the throttle, fell back dead. In falling the throttle valve was opened wider, and the speed of the train was increased. The fireman, alone in the cab with a dead engineer and a train running at a speed of a mile a minute, had his skill and nerve put to the severest possible test. Parker was equal to the occasion. By a powerful effort he wrenched the dead man's hand from the throttle and shut off the steam. Then he applied the air brakes and the lightning express came to a standstill. The incident is fruitful of reflection. It emphasizes a fact often discussed in this *Magazine* of the intimate relations existing between engineers and firemen in pursuing their perilous calling—an intimacy that exists independent of the great disparity of wages the men receive. The sudden death of engineer Lewis, while the train was going at a fearful speed, placed Parker in command under circumstances of extraordinary peril. He was equal to the emergency, and the circumstance illustrates a great truth. Engineers and firemen in the cab, by virtue of dangers inseparable from their calling, ought to maintain the most amicable relations, and those relations ought to exist when they are off as well as when they are on the train.

Harper's Weekly refers to the strike of the employes of the surface railroads of the City of New York, and introduces a number of weak, flabby sophisms in justification of the action of the manager of the roads, and in opposition to organized labor. The *Weekly* assumes, that when employes are "harshly treated" by corporations that public sympathy is with the employes. This is not true—it never was true. The public wants to be served, the public don't want to be inconvenienced—and if it is not served, if it is inconvenienced, it don't stop to consider any right or wrong involved. The *Weekly* says the trouble in New York grew out of the fact that the railroad companies refused "to treat with officers of a union as the representatives of their employes"—and "that," says the *Weekly*, "is something which the companies have an unquestionable right to do, and the refusal is not of itself a good reason for great bodies of employes to refuse to work, causing their families to suffer, injuring the public, and endangering their future chances of employment." The officials of the surface roads of the City of New York, were simply the representatives of the stockholders of the roads, and stood in the same relation to the stockholders, as the officers of the labor unions, stood in relation to the men employed on the roads. The employes could not treat with the stockholders, only with their representatives; this being true, why should not the employes have representatives to treat with the representatives of the stockholders? There is no reason why such should not be the case, indeed, it is eminently wise and proper that such should be the case, and it is the only way that the right can be reached and the wrong be alienated. The *Weekly* says:

Intelligent employes must see also that the companies may rightfully decline to treat with representatives who are of bad character, and whose pecuniary interest it is to make trouble between the companies and the men. The right of employes, as of employers, to combine to advance their interests is unquestionable. But the right of the employers to insist upon dealing directly with their men is equally unquestionable, and it is so reasonable that it carries public approval and sympathy with it. In the present instance, if the men felt justified in demanding fresh terms of the companies, and knew that the companies would treat with them directly, but not through intermediaries from the outside, the sensible course was to deal directly. But to strike in order to force the companies to treat with disreputable agents, and in striking to annoy the public and to stimulate disorder, is justly to forfeit the public sympathy.

This is not only disingenuous, but is intended for a blow aimed at organized labor. The assumption that the representatives of workingmen are of "bad character," is not only false, as a general proposition, but is maliciously false. The officials of labor unions, brotherhoods, or whatever name the organization may bear, are themselves workingmen, honorable men, often in in-

tegrity and every other virtue, the superiors of the representatives of corporations, having a higher sense of justice, and in every regard, better citizens. It is this debauched condition of the press of the country, in too many instances, as exhibited by *Harper's Weekly*, forever pleading for the corporation, and "damning with faint praise" workingmen, that creates a false public sentiment and aids the corporation to perpetrate injustice and degrade labor. The labor press of the country has no higher duty to perform than to expose the mendacity of such sheets as *Harper's Weekly*.

It is not contended by the employes on the New York Elevated railroads, that clothes make the man. There are, nowhere in the country, a set of railroad men, engineers and firemen, who are more sturdy, more efficient or less afraid of work in the line of duty. They are not duds—"mashers"—men who set for fashion plates, but they have a fondness for soap and water, clean underclothes and gentility in the best meaning of that term. Filth is not a recommendation anywhere in this age, when the sun of our civilization is supposed to be near its meridian glory. Good clothes are cheap, including hats and shoes—clean cuffs and a white collar is no disgrace, and a "shine" is within the reach of all who aspire to average respectability in personal appearance. The engineers and firemen are known to be men of exemplary habits, industrious and worthy of confidence, and, if to their virtues, there is added a fondness for good clothes and the refinements of society, they do neither themselves nor the Brotherhoods of which they are members, any discredit.

It is our purpose at an early day to make an extended notice of the acts passed by the Indiana Legislature at its late session, but in advance we desire to say that great credit is due Hon. John J. Nolan, member from Evansville, for his championship of a bill for the repeal of the odious conspiracy law of Indiana, passed soon after the great railroad strike in 1877. Mr. Nolan is himself a workingman, being a telegraph operator, and is entitled to great praise for his untiring efforts in the interest of railroad workers. In this connection we desire to say that Bro. Wm. J. Hugo, of Eureka Lodge No. 14, for weeks gave every hour he could spare in urging forward bills in the interest of railroad employes. Nor should Bro. Henry Davey, of the B. of L. E., be overlooked, for he too spared no pains to secure righteous legislation, and the great success that rounds out the credit of the Legislature for enacting wise laws and repealing vicious ones is largely due to the efficient work of Bros. Hugo and Davey.

MEETING TO PERFECT FEDERATION.

On June 3d, the first Monday in the month, a meeting will be held in the city of Chicago for the purpose of perfecting a federative compact between the Brotherhoods of Railway Brakemen, the Switchmen's Mutual Aid Association and the Brotherhood of Locomotive Firemen, in accordance with the directions of the last conventions of these Orders. Each Order will be represented by its three chief Grand Officers, to whom full power has been delegated to formulate the principles upon which the compact shall be established and put into practical operation. Since the date of the conventions of the Orders, conferring authority upon their Grand Officers to establish federation, the subject has been widely and pretty thoroughly discussed, and while much has been said in favor of federation, not one rational objection to the contemplated alliance has been urged from any quarter, whatever.

This silence is easily explained. No objection can be urged against federation, while a thousand convincing reasons can be assigned in its favor. Federation contemplates no wrong. It is simply a compact between Orders having certain interests in common, for the purpose of repressing wrongs and of maintaining the right,—a compact, the influence of which extends far beyond the parties immediately concerned, and which touches society at many vital points, as the history of the time furnishes abundant proof. Hence, it may be said that the organizations of railway employes which have decided to federate, contemplate not only their own welfare, but the prosperity, peace and happiness of society at large. Indeed, it would not be difficult to prove that federation contemplates, in a preëminent degree, the prosperity of the railroad enterprises of the country. So high an authority as Charles Francis Adams sees in the frequent disturbances between railroad companies and their employes the great necessity for doing away with all unnecessary frictions so that strikes may be avoided. Federation, it is believed, will prove "the prevention" for which Mr. Adams has industriously sought. It will bring about arbitration,—regarded by all thinking men as a panacea for strikes. In this spirit the Grand Officers of the Orders we have named, will meet in Chicago on the first Monday in June to establish federation, and that success will attend the effort, we feel a degree of confidence amounting to assurance.

* *

THE April O. R. C. *Monthly*, stung by the merited contempt of "several periodicals that are run in the interests of different classes of railway employes," has had its courage stimulated to publish such portions of E. H. Belknap's address before the Mu-

tual Aid and Benefit Association, March 21, 1888, as it deemed prudent to omit, when, on a former occasion, it mutilated Belknap's mouthings. The *Monthly* has doubtless consulted the officials of the C., B. & Q. and received assurances that should it publish and indorse all of Belknap's rant, no extra demands would be made for conductors to scab for the purpose of getting "nearer the throne;" at any rate, the *Monthly* swallows the Belknap cathartic or emetic, and intimates that it possesses great vitalizing power—as for instance, the following:

"Ah, but," says one, "we do not receive pay enough to do all this for any company on earth." Nothing more true than this have you ever uttered, and no one more to blame than the one who utters it. None to blame but the conductors of America, that this is, alas, so true; some isolated cases have been known where here and there one has gone and asked for more pay. AS WELL BREATHE HIS BREATH ON THE FROSTED PANE OF YOUR WINDOW IN HOPES TO WARM THE WORLD; AS WELL THAT GEN. GRANT HAD APPROACHED, ALONE, THE BATTLEMENTS OF LEE AND JOHNSON, AND SAID: "KIND SIR, PLEASE LAY DOWN YOUR ARMS AND SURRENDER." Would they have done so? Ah, no; but when he approached them with SIXTY THOUSAND UNION SOLDIERS, the bands playing "My Country, 'Tis of Thee," shot, shell and BULLETS SINGING, "Down With the Traitor, Up With the Stars," they SANG ANOTHER TUNE and learned the greatest lesson of their life, that "right is might!"

It will be noted in the foregoing that Belknap doesn't advocate scabbing. He roars like a lion. He tells conductors if they do not get sufficient pay, to go to the officials sixty thousand strong, with banners flying, drums beating, in all the pomp and circumstance of glorious war. No one is to regard Wheaton as a typical leader, cringing, fawning and pleading, but Grant is to be their model. Grant's immortal words, "I propose to move on your works," is to be their motto. Belknap, no longer blatherskite, may not be a Grant, but for the time being he discards the badge of a scab, and dons the robe of a man, and Wheaton says, "if any striker can derive a ray of hope or a spark of comfort therefrom, he is welcome to it." Thanks! Same to yourself.

* *

AT a recent meeting of the B. of R. B. in Boston, Bros. T. H. Haines, C. H. Trenholm and H. C. Chapel, of Boston Lodge, No. 57, of our Order, were received as a committee to solicit the cooperation of the Brakemen in the anti-Pinkerton crusade. The committee was cordially received and assurance was given that the Brakemen would give the movement their hearty support. The subject of federation was also discussed with evident satisfaction to all who were present. The addresses of Bros. Haines, Trenholm and Chapel were logical and convincing and elicited both praise and applause. The meeting was enjoyed all around and expressions of mutual regard and esteem were heard upon every hand.

THE NEW YORK DISPATCH EXPLAINS.

In the April *Magazine*, in an article captioned "The difference is in dollars," we pointed out with such gentleness as the subject merited, the fact that certain expressions of the New York *Dispatch*, whether so designed or not, would, if they had any influence at all, help to create an aristocracy of labor, based upon wages. We quoted the *Dispatch* as saying: "If there is no difference between a fireman and an engineer, why is the latter paid double the amount received by the fireman? The editor's sarcasm is delicious, but the fact remains that an engineer is one degree above a fireman." It was upon this baldness of the *Dispatch* that we commented in the April *Magazine*, and it is these exceedingly stupid utterances that the *Dispatch* tries to explain in its issue of April 7. In its explanation the *Dispatch* says: "In connection with that article (referring to the *Magazine* article, April number, page 340, captioned "The difference is in dollars") it may be said the distinction made by the *Dispatch* between an engineer and fireman, was in degree of skill as workmen, not in character and integrity." That is our idea, and we felicitate the *Dispatch* upon its good sense in frankly adopting it and putting it upon record. In this we have the clean cut declaration of the *Dispatch*, that in "character and integrity," there is no difference between a fireman and an engineer, hence, no matter how much pay an engineer receives, he is not, therefore, "one degree above a fireman." In saying this, the *Dispatch* pays not only a high compliment to its own head and heart, but it does justice to the *Magazine*, which on more than one occasion has voiced such sentiments of justice to workingmen.

In all else that the *Dispatch* has to say upon the subject, we have little inclination to comment, at this time, at least, but the intimation that the *Magazine* does not appreciate the value of skill, cannot be shown by consulting its pages, nor will it be found anywhere in the *Magazine*, that the editor has demanded for firemen wages equal to the amount paid engineers. The greater skill required of the man who manages the throttle, than of the man who handles the scoop, has never been questioned in the *Magazine*, and any intimation of that character is entirely gratuitous, and entirely foreign to this discussion, and since the *Dispatch* has deemed it prudent as well as just to say that an engineer is not "one degree above a fireman in character and integrity," the question of skill can be left to take care of itself. The *Dispatch*, in referring to the editor of the *Magazine*, remarks that "the editor claims that there are no business or social distinctions in life, that one person is as good as another and entitled to equal privileges and emoluments. It is extremely re-

freshing to imagine the editor of the B. of L. F. *Magazine*, conscious of his power as an able and successful journalist, sitting down upon the floor of his sanctum, weeping because the office boy refused to share with him his pleasure and his peanuts." In this the *Dispatch* is not ingenuous. We have never said there "are no business or social distinctions in life," we have never said that "one person is as good as another," nor is it creditable to the *Dispatch*, in trying to explain away its own unfortunate declarations, to flagrantly misrepresent those who enabled it to see its errors. There are business and social distinctions, some of which are eminently just, while others are execrably infamous. In business, there are those who are governed by a high sense of honor, justice and probity, while on the other hand can be found such monsters of depravity as subject the miners of Pennsylvania to conditions so infernally unjust as to make devils blush. In such matters we could devote pages to "business distinctions," every one of which directly or indirectly oppress and defraud laboring men. And there are social distinctions, many of which are based upon such "business distinctions" as we have outlined. There are millionaire robbers, land pirates, stock waterers, food cornerers, trust conspirators and monopoly magnates who affiliate, and who constitute a social aristocracy—and who in their pride and arrogance would regard with a horrorance, a Lincoln splitting rails, a Garfield on a tow-path; a Johnson on a tailor's bench; a Wilson on a shoemaker's bench; a Douglas in a cabinet shop; a Webster on a New England farm; the poor wandering Edison as a telegraph operator, and so on, a mighty army of the world's nobility, who could no more gain admittance to the gilded parlors of America's codfish aristocracy, than a Jumbo could pass through the eye of a needle. The old Apostle, Peter, discovered that "God is no respecter of persons." Why should the editor of the *Dispatch* seek to antagonize Jehovah? The Declaration of Independence declares that "all men are created equal." Why should the *Dispatch* seek to reverse the decree? The editor of the *Dispatch* charges that the editor of the *Magazine* believes that "one person is as good as another and entitled to equal privileges and emoluments." Before the law, under the Constitution, and by virtue of the genius of American institutions, the editor of this *Magazine*, does believe that "one man is as good as another," entitled to "life, liberty and the pursuit of happiness," equal to another; alike entitled to justice, privilege and prerogative, equal to another—to fair pay for a fair day's work—but when the *Dispatch* charges that the editor of this *Magazine* does not distinguish between a thief and an honest man, between ignorance

and capability, between education and illiteracy, between laziness and industry, between noble aspirations and contentment at the bottom round of the ladder, it knows that it is guilty of deliberate mendacity. As for the "office boy" pleasantries, which the *Dispatch* throws in as a clincher we have this to say, that between him and the editor, such relations exist as bear eloquent testimony of mutual respect and interest in each other, and while there is no cause for weeping over "pleasures" or "peanuts" there is no cause for grumbling on account of grievances. The *Dispatch* "having no special axes to grind," can in future afford to be honest in dealing with labor questions and labor organizations. In calling "a spade a spade," it is right, but it should not, for any consideration, gild a spade and then call it a sceptre.

THE difference between a gentleman and a blackguard is immense, as those who have met J. E. Warswick, Master Mechanic, stationed at Montgomery, Alabama, in the employ of the Western Railroad, and Mr. Cecil Gabbett, General Manager of the road, are qualified to testify. Our Vice Grand Master Hannahan, on his recent southern tour, called upon J. E. Warswick, Master Mechanic, to pay his respects, and was introduced to him by a fireman in the employ of the road. Bro. Hannahan called to have a friendly talk with Mr. Warswick on matters pertaining to the interests of firemen, members of our Order. This seemed to enrage Warswick and he at once displayed his vulgar nature by remarking that "white men in the south were not worth a G—d—n." This showed conclusively that Warswick, by instinct and association, is a white man who exactly answers to his estimate, though it may be possible that he is worth "a d—n." This little 2x3 autocrat remarked that "if he wanted a fireman to wipe an engine he's got to do it" and that "firemen had no right to have a grievance." He told Bro. Hannahan they, the firemen, "can't adjust any grievance with me, I'm running this business," and so on for quality. That fellow, manifestly, needs "wiping" more than any engine on his road. To prove him a blackguard it is only required to quote him. He belongs to that class of railroad officials, or more properly "bosses," who, to give conspicuousness to authority, show that they are totally unworthy of authority. The fellow talks like an old plantation overseer, and seems totally oblivious to the fact that his manners render him contemptible. After coming in contact with such a fellow it must be most delightful to meet Mr. Cecil Gabbett, the General Manager of the road, a gentleman of education and refinement, approachable and disposed to be just towards his employés. It is the boorish fellows, like

Warswick, who breed seven-tenths of all the troubles in railway management between employer and employé. They should be "wiped out."

THE C., B. & Q., whose headquarters are at Boston, has made its annual report for 1888, and the showing is as follows:

Gross earnings, \$23,789,167; decrease from last year, \$3,788,910; expenses and taxes, \$18,882,450; increase, \$2,784,546; net earnings, \$4,906,708; decrease, \$6,571,457; total net earnings, adding interests, exchanges and other income, \$5,078,309; total decrease, \$7,260,910; fixed charges, \$5,996,712; increase, \$710,628; dividends \$3,819,578; decrease, \$2,291,486; deficit, \$4,739,980; increase, \$5,680,051; land receipts, \$408,555; decrease, \$158,528; miles operated, 4,917; increase, 224; capital, \$76,393,505; increase, \$3,205; debt, \$99,665,988; increase, \$8,399,282. Miscellaneous income was reduced by reason of the strike on the Hannibal & St. Joe and the Council Bluffs Roads so that it returned no dividend to the Chicago, Burlington & Quincy, while in 1887 they paid \$618,764. After many prosperous years the company has experienced a year of serious reverses. After paying fixed charges, including \$700,000 contributed to sinking funds and dividend 5 per cent. upon the capital stock, the accounts show a deficiency for the year of \$4,331,425, which it has been necessary to take from the accumulated surplus of the company.

Those who have a fancy for such statistics can analyze the foregoing figures at their leisure, and ascertain approximately, what the strike cost the C., B. & Q. It will be noticed that the decrease in the earnings of the road amounted to \$7,260,910. It will be observed that the debt of the company increased \$8,399,281, and that the indebtedness of the company exceeds its capital stock \$22,272,483. This is the miserable bankrupt concern that proposes to inaugurate an insurance department for the benefit of its employés. In a financial point of view the strike on the C. B. & Q. wrecked it. It is a bankrupt road and exists by virtue of methods every one of which establishes the fact that it is a wrecked concern.

A LETTER from a brother, a member of Prairie Lodge, No. 170, Huron, Dakota, under date of March 21st, brings the sad intelligence of the death of the wife of Bro. James Graff, also a member of Prairie Lodge. Mrs. Graff was a victim of that fell disease, consumption, and though all was done that skill and affection could devise, a remedy could not be found, and an affectionate wife and mother, after a long illness, had to obey the summons which sooner or later comes to all. Mrs. Graff leaves a devoted husband and a little daughter, four years of age, to lament their loss, and in their deep affliction have the profound sympathy of all the members of Prairie Lodge and of the Brotherhood. The funeral at Huron was largely attended and appropriate remarks were made by Rev. H. S. Mills, after which the remains were taken to the railroad station to be conveyed to Rochester, Minn., where the last sad rites will be performed and the grave receive its treasure.

DELINQUENTS.

There are constant complaints that members of Subordinate Lodges are not notified by the Collector of their delinquencies. This is not the duty of Collectors. Delinquents are always notified through the columns of the *Magazine*. If members would consult the *Magazine* they would always be in possession of the required information. Besides, the member himself knows when he is delinquent. He knows when he has paid and when he has not paid—hence complaints are not important.

BRO. Henry Angles, of Beaver Lodge, No. 117, London, Ontario, was killed March 1st, 1889, while on an excursion train from Port Stanleys. The poor fellow had a terrible death and a most singular experience. The two engineers for whom he fired previous to the one with whom he was associated, were both killed at his side, Bro. Angles escaping in both instances by jumping. One of the engines from which he escaped went into a canal at Manitow, and the other ran through a freight train on a level crossing at St. Thomas, the engine striking an oil tank, his engineer and many others being killed. And now while on an excursion from Port Stanleys, it was his time to die by jumping, while the engineer, by sticking to his engine, escaped. Few men have such an experience.

The attention of our members is called to an annoying error that occurred in the advertisement of the Matchless Metal Polish Co., in the April number of the *Magazine*. Through an oversight the old copy was used instead of the revised copy, and as a consequence an old advertisement appeared which had done service long ago, and was entirely out of date. The advertisement in this issue is the correct one, and the one which should have appeared in the first place. Members who have entered into competition for the prizes will note that the contest will extend to January 15. The Matchless Metal Polish Co. is building up an immense trade owing entirely to the superior quality of its goods. Every fireman should give their polish a trial.

We read with much satisfaction an editorial article in the April number of the Union Pacific employes *Magazine*, captioned, "Who pays the taxes?" The important question should be kept before the people. In the October number of this *Magazine*, 1886, we discussed the subject under the caption of "Labor and taxation." In that article, among other things, we said:

"One broad, fundamental axiom, that the consumer pays the taxes, settles the question. From it there is no appeal. But it may be said that though the truth of the proposition has reached universal recognition, it is practically denied in thousands of instances to the detriment of workingmen, when they assume to take an active part in public affairs."

"We boldly assume that there is not an enterprise, industrial, mercantile or financial, in which those who launch them forth, do not propose to make labor pay the taxes, and if there is an exception, we shall be glad to chronicle it."

And now comes the Union Pacific employes *Magazine* with its corroborative arguments and illustrations. It says:

"Every man who is not a pauper, pays taxes on all taxables that he and all those he supports, uses. A rent receipt, a receipted bill for goods that a man and his dependents will, or have consumed, is as true an indication that taxes have been paid by him, as the holder of the receipt of the tax collector."

It is high time that such facts were fully comprehended by the workmen of America, and that those who are forever depreciating men who work, assuming that they do not pay taxes, should be compelled to desist from further slanders. Let the debate proceed.

THE New York *World* discusses the Fall River strike of the cotton mill operatives of that city, and says the strikers are "simply asking for a fair share of the benefits of a high tariff," and adds:

We should suppose this would be the expectation and attitude of the working people in all protected industries. The tariff was first advanced beyond the revenue principle upon the theory of "building up infant industries." But now that most of these coddled infants are hoary veterans from fifty to a hundred years old the plea is made that high duties are necessary to enable manufacturers to pay high wages to American workmen.

Very well. We like that. The higher the better. But in 1884 wages in the Fall River mills were cut down. The excuse given was that "Free Trade" men and American industries by professing to give some of them untaxed raw materials and to reduce the duties on others to within some 20 per cent. of the rate prevailing at the beginning of the war. Now that the war duties are secure for four years more it is natural that the operatives should ask for their share of the protection. The stocks of the Fall River Mills are at a premium of from 22 to 150 per cent. They are paying dividends of from 10 to 22½ per cent. Meanwhile the wages of the operatives are but little more for sixty hours work per week than the English wages are for fifty-six hours, though "each American operative," according to Secretary Blaine's report in 1881, "works up as much raw material as two British operatives. Why should not the tariff barons live up to their doctrine and give labor a benefit?"

The cotton mill kings can afford to pay their employes fair wages. This they are not doing, and hence the strike. Men will continue to deplore strikes. We shall have balance sheets showing the losses and gains of strikes, business will be embarrassed by strikes, men and women will suffer because of strikes, but just as long as injustice controls the policy of men who hire workingmen to perform labor, just as long as they are denied fair pay for an honest day's work, just so long will strikes occur. The way to put a stop to strikes is to deal justly with workingmen. Anything else is a shame, a fraud, a delusion, a crime. Workingmen should see this and federate for mutual protection.

GRAND LODGE

This Department is for the exclusive use of the Grand Lodge of the Brotherhood of Locomotive Firemen, and will contain all Notices of Dues and Assessments, and other Official Notices, Reports and Statements emanating from the Grand Lodge. All Lodges and members of the Order should note carefully each month the contents of this Department.

MAY, 1889.

Assessment Notice for May.

OFFICE OF GRAND LODGE, B. OF L. F. }
TERRE HAUTE, IND., May 1, 1889. }

ASSESSMENT No. 3, \$2.00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members who were entitled to all the benefits of the Order, viz.:

CLAIM No. 51. Shepard Hess, of Re-Echo Lodge, No. 195, died of Typhoid Fever, October 2d, 1888.

CLAIM No. 52. Alexander Brown, of Pine City Lodge, No. 81, was killed by Railroad Accident, October 27th, 1888.

CLAIM No. 53. Wm. E. McDaniels, of Bayou City Lodge, No. 146, was killed by Railroad Accident, November 10th, 1888.

CLAIM No. 54. J. W. Walsh, of Sprague Lodge, No. 133, was declared totally disabled by loss of eye sight, November 15th, 1888.

CLAIM No. 55. J. F. Grabbil, of Hercules Lodge, No. 68, died with Pleurisy, November 24th, 1888.

CLAIM No. 56. T. W. Mooney, of Three Branch Lodge, No. 304, died of Pneumonia, January 6th, 1889.

CLAIM No. 57. R. D. Gordon, of St. Lawrence Lodge, No. 15, died of Consumption January 13th, 1889.

CLAIM No. 58. Wm. A. Brubaker, of Union Lodge, No. 133, was killed by a Railroad Accident, January 16th, 1889.

CLAIM No. 59. J. A. Flack, of Union Lodge, No. 133, was killed by Railroad Accident, January 17th, 1889.

CLAIM No. 60. Charles Mikow, of Harbor City Lodge, No. 300, was killed by Railroad Accident, January 22d, 1889.

CLAIM No. 61. J. R. Adams, of Fortune Lodge, No. 120, died with Bright's Disease, March 2d, 1889.

CLAIM No. 62. C. E. Barkman, of Dear Park Lodge, No. 1, was declared totally disabled with Anchylosis of the Arm, January 25th, 1889.

CLAIM No. 63. John E. Holdsworth, of Northern Light Lodge, No. 127, died of Typhoid Fever, January 25th, 1889.

CLAIM No. 64. H. M. Everett, of Comet Lodge, No. 126, was declared totally disabled with Chronic Intestinal Catarrh, January 25th, 1889.

CLAIM No. 65. Charles Poole, of Overland Lodge, No. 123, was declared totally disabled with Paralysis, January 25th, 1889.

CLAIM No. 66. Charles Fidler, of Gold Range Lodge, No. 341, died from the effects of injuries received in Railroad Accident, January 25th, 1889.

CLAIM No. 67. P. W. Fager, of Enterprise Lodge, No. 75, was declared totally disabled with Heart Disease, January 30th, 1889.

CLAIM No. 68. R. E. Alexander, of Delaware Lodge, No. 231, died of Typhoid Fever, February 11th, 1889.

CLAIM No. 69. Wm. Utterbach, of Tried and True Lodge, No. 361, died of Piles, February 12th, 1889.

CLAIM No. 70. Patrick Wall, of Bethesda Lodge, No. 382, was killed by a Railroad Accident, February 19th, 1889.

CLAIM No. 71. Joseph P. Cain of Plain City Lodge, No. 238, was killed by a Gun-shot Wound, February 19th, 1889.

CLAIM No. 72. F. O. Seesholtz, of Provident Lodge, No. 220, was killed by Railroad Accident, March 1st, 1889.

CLAIM No. 73. Harry Angles, of Beaver Lodge, No. 117, died from injuries received in a Railroad Accident, March 1st, 1889.

CLAIM No. 74. J. S. McCurdy, of Mt. Hood Lodge, No. 167, died from the effects of an injury caused by a Fall from an Embankment, March 2nd, 1889.

CLAIM No. 75. Andrew Flynn, of Liberty Lodge, No. 242, was declared totally disabled on account of Amputation of Arm, March 5, 1889.

An Assessment of Two Dollars (\$2.00) has been levied for the payment of the above claims and the Receiver is required to forward said amount for each member, whose name appears on the rolls May 1st, 1889, as provided in Section 52 of the Constitution, said remittance to reach the Grand Lodge not later than May 20th, 1889. Any Lodge failing to make returns as above provided will stand suspended from all the benefits of the Order, as per Section 54 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. & T.

Acknowledgments.

DANVILLE, ILL., March 22, 1889.

To the Brotherhood of Locomotive Firemen:

DEAR SIRS AND BROTHERS:—With feelings of gratitude I wish to acknowledge the receipt of \$1.500 due me on my disability claim. I also wish to return my sincere thanks to the members of Hercules Lodge, No. 83, who took such interest in my welfare.

Fraternally,

THOMAS McDERMOT.

LEADVILLE, COL., March 21, 1889.

Editor Firemen's Magazine:

Yesterday I received a draft for \$1,500—my disability claim—for which accept my thanks to the Brotherhood, also to Lodges Nos. 196, 140 and 59, for their many acts of kindness during my two years of sickness. They showed their liberality, friendship and brother love, which could not be excelled by members of any Order.

Yours fraternally,

E. H. NOBLE.

ROME, N. Y., March 27, 1889.

To the Brotherhood of Locomotive Firemen:

DEAR SIRS AND BROTHERS:—It is with feeling of sincere gratitude that I acknowledge the receipt of a draft for \$1,500, due on my disability claim. My draft was presented to me by our worthy Brother and Receiver, G. B. Walker, of Empire Lodge, No. 212. Wishing that the Brotherhood may prosper in the future as it has in the past, I remain your disabled Brother,

CHARLES H. GRIMES.

NEWARK, O., March 15, 1889.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I desire to return my sincere thanks for the payment of \$1,500, the insurance due me upon the policy of my son, Harry M. Tomlinson. I also wish to thank the officers and members of Taylor Lodge, No. 175, for their kind attention to us and for the respect paid my son after his death. Wishing the noble Brotherhood a prosperous future, I remain,

Yours truly,

MRS. M. E. TOMLINSON.

STREATOR, ILL., March 26, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

DEAR BROTHERS:—Allow me through the columns of the *Magazine*, to express my gratitude toward the Order for a draft of \$1,500, due me as a disability claim. I sincerely thank those who rendered me assistance during my recent illness. May success crown the efforts of the Grand Officers, and may He who watches over us protect the members of the B. of L. F. Is the wish of your disabled brother,

JOHN T. FOLEY.

KANSAS CITY, Mo., April 1, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

DEAR SIRS:—It is with feelings of heartfelt gratitude that I hereby acknowledge the receipt of \$1,500 on the policy of my late husband, John T. McManus, of West End Lodge, No. 18, and I wish to tender my thanks to the members of No. 18, and also to the members of Nos. 74 and 37 for their kindness to me in my bereavement. May God in His mercy deal kindly with you all, and God speed the noble Brotherhood on its many missions of mercy is the wish of

MRS. A. G. MCMANUS.

MONTEZUMA, IND., March 21, 1888.

To the Brotherhood of Locomotive Firemen:

DEAR SIRS AND BROTHERS:—Allow me through the *Magazine*, to return my heartfelt thanks to the officers and members of Eureka Lodge, No. 14, for their kindness and good attention to myself and family during my recent sickness. Also to the officers of the Grand Lodge for the prompt payment by draft for \$1,500.00 due me on my disability claim. Wishing you all good luck and the best of success in all your undertakings, I am

Yours fraternally,

JOHN HORN.

COLLINWOOD, O., April, 5, 1889.

To Miss O'Rourke:

KIND FRIEND: We desire to express to you in the name of Lake Shore Lodge, No. 183, B. of L. F., our heartfelt thanks for the beautiful token of remembrance in the form of a finely embroidered Alter Cloth, received by us at one of our regular meetings. Its warm colors and bright letters reminded us that loving hearts and kind hands are waiting to welcome us home and minister to our wants in time of sickness and suffering. Its clasped hands, an emblem of friendship, makes a fitting place to lay open that book in whose pages of holy writ we are taught to forgive and love even our enemies. Hoping that your life may be as bright as the silver sheen of its letters we remain

Respectfully yours,

H. I. MILLER,
W. F. STOREY,
G. C. REDHEAD.

CATAWISSA, PA., April 4, 1889.

MR. EDITOR:—I beg leave to acknowledge through our valuable *Magazine*, the receipt of a draft for fifteen hundred dollars (\$1,500), the amount due me on my disability claim. Permit me to tender the Brotherhood my sincere thanks and gratitude for the amount. Also allow me to thank Bro. J. Haley, the Collector of our noble Lodge, No. 324, for paying my assessments for the last nine months; success to his future life. I sincerely wish to thank Bro. H. O. Motter, of Lodge No. 174, our delegate to the convention, for the kind assistance he rendered me by presenting my claim. Their kindness will ever be remembered, and may God bless each and every one of us, and may the Brotherhood prosper and be to others as it has truly been to me. With my best wishes for the Order, I remain,

Yours fraternally,

JOHN GETKIN.

Unknown Addresses.

CHARLES H. SWEET—Is requested to correspond with the Secretary of his Lodge.

A. BAKER—Of St. Lawrence Lodge, No. 15, is requested to correspond with his Lodge.

JAMES SHEEHY—Is requested to correspond with his brother, Martin Sheehy, Winslow, A. T.

FRANK BEACH—Is requested to communicate with W. W. Rowe, Secretary of Susquehanna Lodge, No. 71, Oneonta, N. Y.

JESSE D. ROBBINS—Formerly employed on the C. & S. T., is requested to correspond with S. F. McNulty, Secretary of John Hickey Lodge, No. 286, South Kaukauna, Wis.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER.
TERRE HAUTE, IND., April 1, 1889.

To Subordinate Lodges:

SIRS AND BROTHERS: The following is a statement of the Beneficiary Fund, for the month ending March 31, 1889:

PLEASE MENTION THIS MAGAZINE

Key to Alexander's Ready Reference

For Engineers and Firemen, giving the reasons why the instructions given in the *Ready Reference* should be followed.

This book is a *Valuable Accompaniment* to its predecessors, and contains nearly as much information as the *Ready Reference*, and a number of new items. Also a table showing the amount of time required to run from one mile up to one hundred miles.

It is now ready for issue.

The *New Edition of Ready Reference* has also a number of new items treating on Extended Smoke Boxes, Cylinder Lubricator, Broken Cylinder Heads, Broken Set Screws, Defects in Injectors and Pumps, also defects in Air Pumps and how to remedy them. Every item in either book is *easily understood* by any person who can read.

The Book contains a very handy *Time and Speed Table*, showing the amount of time required for running any speed from ten to sixty-five miles per hour and from one-tenth of a mile up to thirty miles. Some of the items have never before appeared in print. Three large diagrams of Engines, one complete diagram of Westinghouse Automatic and Air Brakes, with a full description of them and the manner of handling and repairing them when out of order; also a large diagram with description of Valve Motion accompanies each *Ready Reference*. A careful study and thorough understanding of the principal items of these books will *qualify any good fireman for examination and promotion*. Old Runners say there is *nothing in print as suitable for Locomotive Engineers and Firemen or Round House men working on repairs of Locomotives*. It is the result of forty years actual experience and study.

Price of *Ready Reference*, with Diagrams . . . \$1 00
Price, with Key bound in, and Diagrams . . . 1 50
Price of Key, without Diagrams . . . 50

Amount can be safely sent from any Post Office by Money Order, Postal Note or Registered Letter. Cash must accompany all orders. *No Books sent C. O. D. Address,*

Railroad Square Patent

VENTILATED DINNER PAIL.

BEST PAIL MADE.

We have many testimonials like the following:

ARKANSAS CITY, ARK., January 15, 1889.

Reardon & Ennis:

Dinner pail arrived all O. K., and would say that it is just the boss for engine men and those who take their dinner or lunch to work with them, and will recommend it to all the boys on the line, and hope they will get it from you.

Respectfully

JOSEPH GREGORY, Engine 448.

Size of No. 2 Pail is 9½ in. long by 5½ in. wide by 9½ in. high when locked up

To introduce these Pails until further notice, we will deliver one No. 2 Ventilated Pail, boxed and expressage paid, at any express point in the United States on receipt of P. O. Order for one dollar and fifty cents. Try one.

REARDON & ENNIS,

Sole Manufacturers, Troy, New York.

All who guess must send 50 cents to pay for six months' subscription to *CUMSVY*. Contestants will be entered on a card's subscription and 3 guesses. Your name and address will be entered on our subscription books as soon as received together with any guesses or guesses you may make. When our subscription books show 150,000 subscribers the distribution of cash presents will take place. We do not claim to be philanthropists, but are in business to make money. A publication with a paid-up subscription list of 150,000 will receive at least \$25,000 a year from advertisers who wish to use its columns. As we shall distribute among subscribers the profits from subscriptions only, we are sure the presents will be our profits. We shall immediately expend \$35,000 in this advertisement before the parties, the cash prizes distributed. Names and addresses of winners will be published in the paper, together with pictures (if desired), of the parties making the three best guesses. Should two or more persons guess the correct number, then the one whose guess is first received will be

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the output has increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

Special Announcement to R. R. Firemen!

AN INTERESTING HISTORY OF

Dimmick's Kidney AND Bladder Cure!

Having contracted a kidney difficulty while serving in the army in 1864, I was enabled to serve out my time only through the assistance of our regimental surgeon. Returning home in the fall of 1883, I found my old enemy [the kidney trouble] still clinging to me. I placed myself under the treatment of several successive physicians, who gave me temporary relief, but were unable to effect a permanent cure. I paid large sums of money to the different physicians whom I consulted, and tried all the various remedies which promised relief, but to no avail. I continued my efforts until the spring of 1875, my malady in the meantime increasing to such an extent that on several occasions I became unconscious and was confined to my house for several weeks at a time. I was then induced, through the earnest solicitation of a friend, to consult an old and learned practitioner of Chicago, then temporarily located in Binghamton. This physician gave me a prescription in liquid form, of which I used two bottles. The lameness in my back disappeared and I was relieved of the severe pains I had previously suffered. Having experienced such happy results, and feeling my utter helplessness in case of a recurrence of an attack of a similar nature, I decided, if possible, to purchase the recipe for compounding what is now so favorably known as "Dimmick's Kidney and Bladder Cure." The old physician, who was about removing to the Southwest, after some hesitation, consented to dispose of the recipe to me on payment of a considerable sum of money. About two years after the purchase, while acting in the capacity of a railway engineer, I became affected with a prickling sensation in the face, arms, right side and right leg extending to the knee, followed by numbness, or a partial paralysis. This gradually made such inroads that I practically lost the power of locomotion and had no use of my right arm. I was compelled to relinquish my position as an engineer, ran down physically, and became a mere shadow of my former self. The best medical talent abandoned my case as hopeless, and it was the commonly expressed opinion among my associates and acquaintances that I would soon pay the debt of nature. In my extremity, and not knowing the efficacy of the remedy I had purchased, a relative wrote to the physician from whom it had been obtained, for advice, and received the answer that I had in my possession a recipe that was a specific for that difficulty. I at once commenced taking it, and in 75 hours experienced a sense of grateful relief. I continued its use for about one year, taking in that time fifteen of the large sized bottles. This was two years ago and now I am as well and strong as I ever was and run my engine 110 miles a day. I feel that it has saved my life, and I heartily commend it to my fellow sufferers.

A. D. DIMMICK.

JUNE, 1889.

A REMARKABLE DOCUMENT.

We have before us Report No. 4,147, made by a committee of the House of Representatives, Fiftieth Congress, second session, February 27, 1889, relating to "Labor troubles in Pennsylvania."

The committee appointed by the speaker of the House of Representatives consists of the following members: G. D. Tellman, of South Carolina; W. J. Stone, of Missouri; J. Logan Chapman, of Michigan; John A. Anderson, of Kansas, and A. X. Parker, of New York. The resolution creating the committee and defining its duties, adopted February 2, 1888, is as follows:

Resolved, That a special committee of five of the House of Representatives be appointed to investigate forthwith the extent, causes and effect upon inter-state commerce of the continued failure by the Reading Railroad Company to transport such commerce, and to report to the House, by bill or otherwise, for consideration at any time, such legislation as is necessary to secure to the public the regular and complete execution by a railroad company of its obligations to serve as a common carrier of inter-state

commerce, and to investigate the difficulties existing in the Schuylkill and Lehigh coal regions of Pennsylvania between the corporations mining coal and the miners, and to further investigate all the facts in relation to the mining corporations and individual miners of anthracite coal in connection therewith, and all the facts in relation to the matter, and report the same to the House.

The report makes a volume of 783 closely-printed pages, and to a large extent unravels the mysteries connected with the operations of the Reading Railroad Company in mining and transporting anthracite coal. The report is valuable from a variety of considerations. In the first place, under Congressional authority the country is permitted to know something of the methods practiced by great corporations to increase their wealth, totally regardless of consequences to others. The labor troubles of Pennsylvania exceed those of any other State in the Union. It is in Pennsylvania where labor is the most oppressed and degraded, particularly in the anthracite coal region. In the space we can devote to the subject, it is impossible for us to do more than to refer briefly to the views of the committee, based upon the testimony given by thirty-seven witnesses, including Austin Corbin, President Reading Railroad Company; George B. de Keim, President Reading Coal and Iron Company; A. A. McLeod, General Manager Reading Railroad and Reading Coal and Iron Company; S. B. Whiting, General Superintendent Reading Coal and Iron Company, together with laborers, miners, merchants, operators and men in other

employments, more or less familiar with the outrages committed by the Reading Company.

The committee in making their report arraigns the Reading Railroad Company as a monstrous evil, nor do they see in its operations one redeeming feature. It has by desperate methods obtained control of about one third of all the anthracite coal lands of Pennsylvania, as also of nearly all the routes of transportation of anthracite coal to the markets of the country, until it has earned the sobriquet of the "Reading Devil-fish." The committee charges that "in order to rob the public it has increased its bonded debt to \$160,000,000, and this it has done, as shown by one of its ex-Presidents and directors, Charles E. Smith, by dishonest practices.

This company, as is abundantly shown, which is dishonest and corrupt to the core, which has defrauded the stockholders and robbed the public, whose operations are a mass of felonies and frauds, has under its control about 22,000 persons engaged in mining, and about 15,000 men employed upon its railroads, in all about 37,000 persons representing about 175,000 persons, over whom it seeks to exercise, and to a great extent does exercise, autocratic control.

This "Reading Devil-fish," says the committee, "keeps its miners in debt slavery as so many Mexican peons." They are cheated in the size of cars, they are robbed by "dockage" and "pluck-me stores," and by the refusal of cash with which to trade elsewhere, and are compelled to purchase of the "pluck-me stores" at an increased cost of from "75 to 175" per cent. above other stores, and it is in testimony that by such processes "hard-working, sober miners have toiled for years, or even a lifetime, without being able to draw a single dollar, or but a few dollars, in actual cash." Men are compelled to work without knowing what wages they are to receive until pay day comes, and then must take what is offered.

The committee does not hesitate to affirm that the strikes that have occurred among the miners and the railroad employes of the Reading Company were "deliberately brought about" by the company for considerations, which bear the stamp of unprecedented iniquity. In addition to the poverty

and wretchedness brought about by the Reading Company, the committee charges that "gross political abuses" have been produced. Says the committee: "Tramps are to be seen on every hand; vagabond squads of Italians, Poles and Huns, many of whom cannot speak English, throng the mines to compete with Americans for work," and "competition for employment is so fierce that wages in many occupations are but little above the starvation point." Such creatures in the employment of such corporations, the committee remarks, "are but little better than political as well as industrial slaves."

To keep these employes in subjection the Reading Company employs a small army of what are called "policemen," Corbin admitting that his railroad employed 300 and the Coal and Iron Company 412, making 712 men, all armed, when required, with revolvers and rifles, ready to shoot down men to maintain the supremacy of the corporation. In view of such facts the committee says:

From the cautious and anxious manner in which some of the witnesses testified, and from the bated breath in which they privately disclosed their wrongs, and from the subdued appearance of the population generally, there was a forcible reminder to an intelligent man of the status of affairs in Russia or of other despotisms.

The Reading Railway Company has set itself resolutely at work to down all labor organizations. Its purpose is to thoroughly *Russianize* that portion of the country where it holds undisputed sway over the lives and fortunes of its 22,000 miners and its 15,000 railroad employes and those dependent upon them, and to those who read the report of the Congressional committee it will appear that the work of reducing men to the degraded level of serfs, has made great headway in Pennsylvania under the management of the Reading Railroad Company and the Reading Coal and Iron Company.

The committee refers to the proposition of improving the railroad service of the country by transferring the railroads by "purchase" or by the exercise of "eminent domain" to the National Government to "run them by treating every railroad employe as it does an enlisted soldier in the regular army or sailor in the navy," but concludes that "the million railroad em-

ployés, most of whom are also voters, would hardly sanction that sort of quasi-martial law," and here we introduce some reflections by the committee which will be read with interest by the patrons of the *Magazine*. The committee says:

"As paradoxical as it may seem at first view, the best and surest preventative of a strike on a railroad is *not to punish the men for striking, but to punish the superior officers of the road for goading the men to strike*, especially if the railroad company shall be allowed two days without incurring any penalty to replace any employés who make unreasonable or unjust demands, as provided in the bill herewith submitted by your committee. The employés of a railroad *will not strike unless they are grossly mistreated in some way, by either being underpaid or overworked, or not promoted when deserving it, or by being ignominiously treated, or being discharged without a hearing by some coarse, overbearing, money-making superior, who has no regard for the feelings of the men*. The chief executive officers of every railroad ought to be born leaders of men, who can inspire their subordinates with devotion to the best interests of the road, as a successful general inspires his soldiers to serve heroically.—(Italics ours.—ED. MAGAZINE.)

The foregoing is eminently just, and railroad corporations and the public generally should ponder well the conclusions of the Congressional committee. They place the railroad strikers before the country in a just light, and redeem them from the vile calumny of which they have been for years the victims. The committee further says:

One fruitful source of strikes is the gradation system of classifying conductors and engineers and attaching a difference of pay to each grade without carrying out in good faith the promised promotions and increase of pay. Many railroads require an engineer to serve an apprenticeship of three years before he can be ranked even as second class, and not infrequently they compel him to serve another three years before he can be graded as first-class, yet it is common to make so called second-class engineers, drawing only second-class pay, do first-class duty. So to with conductors. The probationary term for them is usually eight years to be ranked as first-class, still during the most of this apprenticeship they have to do the work of first-class men while only enjoying second-class rank and drawing but second class pay. To save a few dollars, many roads systematically please to have but few first-class engineers or conductors, either by refusing upon one pretext or another to grant earned promotion, or by discharging first-class men, or by treating them so badly that they quit work of their own accord.

It will be borne in mind that this arraignment of railroad corporations is made by a Congressional committee, appointed for the express purpose of investigating labor troubles, and directed to suggest remedies, and this committee reports that "to save a few dollars," railroad corporations "systematically plan to deny their employés justice and fair-dealing, which is a fruitful source of strikes." The committee proceeds with its arraignment as follows:

In addition to the abuses of the gradation system, overwork of the men is another very prolific cause of strikes and accidents on railroads. Probably there is more overwork and less extra pay for it in railroading than in any other occupation. In many of the States during the busy seasons, and often in inclement weather, night, day, and Sunday, too, sometimes witness the tolling of railroad crews, without rest or sleep as long as human endurance can bear it. In most employments eight, ten, or twelve hours a day constitute a day's work, but in railroading a day's labor sometimes means twenty-four hours and whatever additional time the corporation requires; no matter if it be night or Sunday, no more pay is given, and if the tired employé stops to sleep before he is permitted to do so, he is docked a day's wages. A conductor, too, often has to perform the double duty of his position proper and that of baggage-master likewise. In this way accidents and terrible smash-ups are frequently brought about, as fatigue and enforced insomnia blunt the perceptive faculties and impair the memory so that trains are run mechanically, without regard to orders or passing points. Engineers or conductors, or both, have been known to be asleep from exhaustion when fatal collisions have occurred. Of all laborers a locomotive engineer should be the least overworked, because his mind and senses are ever on a strain when up in duty.

Such declarations made under oath by a Congressional committee in a report to Congress, are startling. They are of such significance as to arouse the great body of the people. They should find their way into every newspaper of the land. Overwork and the deplorable consequences likely to result from it, has been a topic which this *Magazine* has more than once discussed. It is a subject which ought to be kept before the people until it is made a felony of aggravated enormity and severely punished. In giving it prominence in their report, the Congressional committee is deserving of the highest commendation. Again the committee says:

Who, that has stood near a railroad when a train dashed by or stopped, has not been deeply impressed with two things: First, the irresistible and tireless power of steam; and second, the blackened, earnest, solemn face of the engineer gleaming with intelligence, courage, and silent consciousness of his awful responsibility, in which the anxious conductor always shares. Human life is too precious for a passenger train to be lightly intrusted to an incompetent, overworked, under-paid, dissatisfied or dissipated engineer or conductor; and a day's labor in the occupation of locomotive engineer or conductor ought to be limited by law to a certain number of hours, if a day's work in any calling should be limited. Hence, if a railroad shall not be permitted to plead a strike of its men as justification for suspending its trains, it will be compelled, in order to prevent them from striking, to work its engineers, conductors and other employés only reasonable hours, to pay fair wages, grant them just promotion, and not to discharge them without a hearing; so that such a law would tend to prevent accidents on railroads by which thousands of lives are lost every year. This would be better for the railroad itself, as well as for its employés and the public, because the damage of a single accident, caused by inexperienced, poorly paid, overworked employés, would often cover the additional expense for a whole

year of engaging enough men, and first-class men, to have prevented the accident. A well-paid, experienced, fairly-treated, and not over-worked man, is always conservative. He is ever on the alert and never loses his head. His practiced ear or trained eye can detect the slightest disorder in a train or approach of danger.

It would be difficult to over-estimate the value of the report under consideration. The only danger is that the facts and conclusions it furnishes will not find their way to the people. The terrible condition of affairs in Pennsylvania are vividly presented, and the committee, as directed, prepared and in the report furnish a bill which, should it become a law, would remedy many of the evils complained of. If workmen are wise enough to federate for their own well-being the time need not be remote when the industries of the country will not mean the demoralization, oppression and degradation of the men whose labor creates the wealth of the world.

EDITORS OF THE LABOR PRESS OF THE COUNTRY IN CONFERENCE.

That the press, as an educator, stands first in the list of educating forces in the United States of America, will not, we believe, be seriously controverted. It is doubtless true that the school and the Church would set up claims of greater power and influence, and in some regards it might be held that their pretensions were entitled to a consideration, and possibly to a favorable verdict. But, we conclude, if the investigation were to be thorough and exhaustive, it would be found, all things considered, that the press would secure a decision in its favor, as being a factor of far more importance in moulding public sentiment than any other that could be named, and this is all the more probable from the fact that the school, the Church and the stage are all to a greater or less extent under the influence of the press, and are compelled to acknowledge its potent sway.

Accepting such statements as susceptible of proof, the question arises, is the press so educating the American people as best to subserve the public welfare? The question, if it could be put to a mass convention of the American people, would doubtless be decided in the affirmative.

We are not disposed to "call the ayes and

nays," nor yet to move a reconsideration of the vote, and yet we do not vote with the majority. It may be said, and we think truthfully, that the religious press, or more properly, the denominational press, helps the churches, the partisan press, its party, the educational press, education, and so on through the list—banking, commerce, transportation, etc. With all of this we have no fault to find, nor are we disposed at this writing to institute invidious comparisons. Fortunately for the country, there is now a Labor press. We happen to be one of those who believe that to a far greater extent than will be readily admitted by many, to the Labor press of the country is to be committed, by far, the larger share of responsibility in shaping the destiny of this Republic.

We would not hesitate, did circumstances require the effort, to offer reasons for our belief in the mission of the Labor press of the country, but what we propose now is to suggest to the editors of the Labor press of the country the importance of holding a conference for the important purpose of deciding upon a policy best calculated to advance the interests of LABOR. The Labor press of the country has one supreme purpose in view, which is the amelioration of the condition of workmen and women, in the best and broadest sense of the word. It is doubtless true that the Labor press, at present, has in view special interests, as presented by the various organizations which it represents, but it requires no argument to demonstrate that all these various interests have a close relationship, and designate them as we may, they are forever, by the force of attraction, seeking to combine, and do in fact combine and constitute one great and overshadowing interest, which now, more than ever before, commands the attention of thoughtful men.

We feel assured that a meeting of the men who control the columns of the Labor press of the country for the discussion of vital questions, for the purpose of knowing each other better, for the exchange of views, of deciding upon attack and what to attack, of defense and what to defend, would lead to results of great benefit. We make the suggestion believing it will be fruitful of good and only good, and shall be glad to know what our esteemed contemporaries think of the matter.

THE POLITICAL CONTROL OF RAILWAYS.

Mr. Appleton Morgan, in the *Popular Science Monthly*, for February, has an eleven page article, captioned, "The Political Control of Railways; is it Confiscation?"

It should be understood that railroad corporations, by paying enormous salaries have been able to subsidize the very best talents the country affords. As a consequence, when the interests of the people and the greed of the railroad corporation conflict, the corporation enters the arena of debate, whether it be in the press, in legislative halls, or in courts, by its representatives, fully armed and equipped to defend it, and in doing this there is frequently exhibited such legerdemain of logic, such jugglery in the statement of facts, such a masterful flow of fume and froth, that the corporation is able to carry its point and perpetuate its rule and ruin policy.

Take, for instance, the inter-state commerce commission, against which Mr. Morgan directs his battering-rams with such violence as he can command; it was about twelve years from the date of the introduction of the first bill, before the present inter-state commerce law was enacted, and all these years, the railroads, without an exception, fought the legislation with all the power they could command. During these years of struggle, between the people and the railroad corporations, there was always present in Washington the representative of the corporations, lawyers, statesmen, capitalists, writers—all of acknowledged ability—who fought the measure in and out of congress, and were able to defeat it, time and again. The railroads were always victorious, though it was easily seen, that in every contest their power was waning, and that the people were destined to triumph and bring the railroads to realize that their power was not supreme. It is this triumph of the people over the corporation that Mr. Morgan so much deplores. He assumes that the people are animated by a desire to destroy railroad property, and that juries, disregarding their oaths, the law and the testimony, take special delight in rendering verdicts that rob the corporation. He says:

But the utmost juries can do toward robbing or crippling railway corporations is a very small

matter compared with this latest movement of political forces, to confiscate—under the pretext of caring for—the interests of the people, of which the laws we are about to glance at are the outcome. Every sovereign State in this Union has constituted a "Board of Railway Commissioners," which is, and must be, political in its character, and so shifting with the politics of the State and of its Executive; and to these boards is relegated the whole procedure of the railway companies, and upon them is made incumbent and peremptory the duty of "regulating" the affairs of the railways. What is, and what must be, the result? The average politician knows fully as little or as much about railway management as he does about photographing the moon or applying the solar spectrum; yet, once upon a board of railway commissioners, he is required to excogitate and frame rules for an industry which not only supplies the financial arteries of a continent, but holds the lives as well as the credits of its citizens dependent upon the click of a telegraph or the angle of a semaphore—an industry which adjusts at once the most volatile and the most ponderous forces of nature to every necessary or luxurious service of our people! And, since thirty-eight boards of these accomplished commissioners were not enough, the General Government has kindly added another—not to regulate or supervise these thirty-eight, but to act in independent chaos to their tergiversations, and to contribute to the general value of their independent conclusions, ordinances, rules, and codes. What must, or rather what must not, be the result, when the country asks, as it appears to be now asking, to be furnished with railway experts and traffic accountants at the polls? When the socialist programme shall be carried out to its full, it is understood that there is to be no inequality between the capitalist and the tramp. This equality, however, need not wait the perfection of that programme. It can be achieved to-day by two extremely simple methods. Either the tramp can go to work, earn money, economize, and become a capitalist, or the capitalist can divide with the tramp. But while the capitalist, for his part, opposes no objection to the first plan, the latter appears to be the only one the tramp will listen to.

It would be difficult to find in current literature a lower estimate than Mr. Morgan forms of the people, of the legislation of the "sovereign states," and of the nation, because in the wisdom of the representatives of the people, "railway commissioners" have been appointed to look after the rights of the people. Mr. Morgan, in his eagerness to make railroad corporations appear immaculate, overleaps prudence and propriety and seriously injures his cause. He ignores fundamental facts, the one vital fact that the corporation is the creature of law, of legislation, and that the "average politician," whose ignorance he so thoroughly disdains, is the very man who made it possible for the railroad corporation to have an existence at all. Mr. Morgan doubtless, admires the "average politician" in the legislature or in congress, voting extraordinary powers to the corporation, but the "average politician," as a member of a "railway commission," exercising his au-

thority to make the railroad subserve in the highest degree, the interests of the whole people, from whom they have derived every right contained in their charters, at once becomes such an ignoramus as to excite Mr. Morgan's derision and contempt. But Mr. Morgan's conclusions do not tally with the conclusions of men who are profoundly interested in railroad operations—for instance Mr. Jay Gould, who is of the opinion that the inter-state commission is a good thing. As late as March 23d, this justly distinguished railroad owner said:

"In regard to the general railroad situation I put great reliance on the recent amendments to the inter-state commerce law. They have greatly strengthened the original law and the year's experience has brought railroad men to a clearer understanding of its practical working. The old pooling agreements were intended merely to make uniform and even rates, and to prevent the vicious rate wars which carried rates down only to be raised too high when peace was declared. Railroad men were forced to see that stable rates alike to all were more profitable, and pooling agreements followed. The stronger lines took care of the weaker ones, and there was less temptation to cut rates, for each road received its agreed percentage of business. The inter-state law will bring about the same result, although it works in favor of the older and stronger lines."

"What will become of the weaker roads?" "They will eventually fall into the hands of the old and strong companies, because they will not dare to violate the amended law, and on even terms with the stronger companies they will hardly be able to secure traffic enough to support them. I want to see the law strictly enforced, and I have no doubt that it will be. The amendment punishing the shipper as well as the railroad official who makes a cut rate is a powerful incentive to obedience to the law. A shipper would hardly dare to accept a rebate, even if it should be offered to him, for the commission has power to send for books and papers, and the merchant would be at the mercy of every clerk in his employ. If the railroad company could conceal the rebate the shipper would find it impossible to do so."

In the foregoing, Mr. Gould utterly demolishes Mr. Morgan, clearly and triumphantly demonstrating, that the law is wise and just, and that the "average politician" knew better than the railroad corporation, what was best for it and the people. Mr. Morgan, it would seem has yet to learn that ours is a government by the people, and not by the corporation, and that neither the "General Government," nor the governments of "thirty-eight states," are ready to surrender their powers to the corporation. This may seem strange to Mr. Morgan, but experience will teach him and others of his school, that the people are everywhere aroused and are asserting their sovereignty. Mr. Morgan will find out in due time that his sneers at the "average politician" will

work no good for the corporation, nor will the corporation be benefited, by dividing the people into two classes, "the capitalist and the tramp." We, as a people, have had quite enough of that sort of literature. There is a species of arrogance in which capitalists may indulge to their heart's content. They can have their charmed circles, their elegant homes, their ten thousand dollar cooks or "chefs," their wines, their purple and fine linen, their poodle dogs and splendid equipages, their servants in livery, "and a' that and a' that," but by the genius of liberty and independence, they must be careful how they put their hands upon the sovereignty of the people. The corporation is not supreme; capital is not king.

Mr. Morgan, throughout his entire article seeks to magnify the corporation, when the verdict is that it is already far too colossal for its own good. This ceaseless glorification of the corporation results in fixing all eyes upon it; under proper surveillance the corporation is well enough—is possibly a blessing, but left to exercise such authority as it may deem wise, it becomes a curse rather than a blessing. Nor are people to be longer misled by the cheap and vulgar demagoguery about the "socialist programme," or the "inequality between the capitalist and the tramp." Such tricks no longer deceive the people. It is old powder and is no longer of service. The corporations have been found guilty of committing wrongs against the people, and the law proposes to put an end to them as often as they are discovered, and the late amendments to the inter-state commerce law make some of the more glaring wrongs felonies. Mr. Morgan will find that his pen, however mighty it has been in the past, cannot longer resist the power of the people to enthroned justice. In all of this, working men ought to see the dawn of a new era, which the people, in spite of the corporation, are proclaiming—for in nothing is it more significant than that the day of the redemption of labor from the curse of corporate greed, draweth nigh, and how soon its sun shall ascend to its noontide glory depends largely upon the organization and federation of working men for their own good and for the welfare of society.

ENFORCED IDLENESS.

Belford's Magazine, for December, 1888, contains an article from the pen of Ethelbert Stewart, captioned, "Statistics of Idleness." The writer's figures are drawn chiefly from reports made by Col. Carroll D. Wright, of the Massachusetts Bureau of Labor, and go back to 1879, but, aside from comparisons, the facts as stated by Col. Wright, derive their chief importance from data obtained in 1885, but which was not published till 1887.

In November, 1879, it was shown that in the State of Massachusetts there were 23,000 persons in "forced idleness," persons who were willing to work, but who could find no employment whatever, and upon that basis the estimate was made that there were in the United States at that time 570,000 persons in "forced idleness." Coming down to 1885, the writer quotes Col. Wright's reports, which show that in that year, there were in the state of Massachusetts, 82,744 persons unemployed for an entire year, an increase of forced idlers in six years of—59,744, or about 260 per cent., or an annual increase of 43 per cent. This being the condition of affairs in Massachusetts, the only state that pretends to give figures, closely approximating correctness, the conclusion is arrived at, that at present, there are in the United States, at least 6,000,000 of persons ordinarily employed, who are from two to five months idle during the year, and thus forced to consume, while seeking work, the little it was possible to save during the time they were employed, and that the number in constant forced idleness, cannot be much under 1,900,000 persons. The writer says:

It is often claimed that labor disturbances, strikes, and lock outs, are responsible for most of the idleness in manufacturing industries. But Col. Wright's report goes into this question, and as a result ascertains that in the manufacturing industries an average suspension of one-fifth of a month (0.20) was caused by repairs, improvements, etc. An average suspension of one-fiftieth of a month (0.02) was caused by "strikes" and "lock outs," while the balance was due to "slack trade." Just how much of the loss of time was due to combinations and trusts, restricting production, so as to control prices, does not appear; but when it is shown that an average idleness of 4.11 months per year, strikes are responsible for but an average of one-fiftieth of one month, or but little over one-half day, it is time for "statesmen" to abandon their stock arguments of "strikes and strikers," and look about for some of the real causes of present conditions.

The writer briefly proceeds to show why there is such a vast amount of enforced idleness

in the country. He says, "doubtless much of it is due to the frantic attempts of combinations to control prices by limiting production." He says, "the combined steel industries of the country pay the Vulcan Steel Works, of St. Louis, \$400,000 to stand idle, thus throwing its workmen out of employ! The Waverly stone ring pays quarries thousands of dollars—in one instance, \$4,500 per year—to do nothing. The salt works along the Kanawa, were bought up by the American Salt Manufacturing Association, and have never employed a man since! The Standard Oil Company buys up competitors and dismantles work. The tack manufacturers buy out a refractory fellow who would not join the pool, and not a wheel has turned since. The Western Lead and Shot Association buys the shot-tower at Dubuque, Iowa, to keep men from working there." Here we have on one side facts showing the creation of vast industrial enterprises giving thousands of men employment, silenced as if by a thunderbolt, or an earthquake, and the employes forced into idleness, at the behest of combinations of capitalists, until, as the estimate shows, 6,000,000 of persons are a large part of their time out of employment, and 1,900,000 in forced idleness the entire year. The 6,000,000 are required to accept any wages that are offered them, and the 1,900,000, are not offered any wages at all, and this stupendous iniquity is perpetrated by capitalists. And while this slaughter of working men is going forward, the very men who are engaged in the nefarious business are doing what they can to multiply laborers from foreign countries for the express purpose of still further degrading labor by reducing wages. The writer says, a Pennsylvania newspaper states: "There were six hundred and forty Bulgarians just from Europe, by way of Castle Garden, marched to the mouth of a coal shaft at Johnstown, yesterday, and halted at the entrance like soldiers. On the opposite side of a close board fence, six hundred and forty of the old miners marched out and were discharged. The new men, great, burley, blank-faced fellows, then marched into the dark hole and took up the task laid down by the malcontents. We doubt if one of the 'new arrivals' knew a

word of English, or how much he was to receive for his labor. What grand opportunities these animals will have to study the beauties of our institutions." There is in New York, says the writer, "a company with a capital of \$50,000, chartered by the state to furnish Italian and Hungarian laborers, in defiance of the laws of congress." The immigration for the first six months of 1888, exceeds that of any year since 1880, and it must follow that a vast per centage of this is either imported under contract, or, what amounts to the same thing, deceived by the lying promises of the agents of those interested in flooding the American labor markets." And reference is made to a circular issued from a New York banking house, stating that "to check the demands of labor for excessive wages, it is necessary to augment the tide of immigration to the United States," and it is shown that the "excessive demands" of American labor has reached the enormous sum of \$1.16 a day. The evil of cheapening labor goes steadily forward. The labor-saving machine is constantly forcing men into idleness. That can't be avoided. The combination curse, by which great enterprises are closed and men sent adrift to swell the ranks of enforced idlers, ought to be removed. The importation of foreign labor, as the New York banking house circular stated, "to check the demands of labor for excessive wages" when average wages are not in excess of \$1.16 a day, ought to cease, and if it were possible to arouse working men to the dangers that confront them, changes would be inaugurated, and if the great body of the people could comprehend the lessons which enforced idleness teach, they would be alarmed. Says the writer, "Rome drew nearer and nearer her end as the army of idle, hungry men increased." Feeding them from her public granaries may have postponed, it could not prevent, her final collapse. Enforced idleness, or the cheapening of men, says a writer, is not the sign of decadence, it is decadence. It is laudable and praiseworthy to make money by just and legitimate means, but it is damnable to *unmake* men in order to make money."

Here, then, is the conclusion of this mat-

ter, that certain parties are engaged in the "damnable" business of *unmaking* men, that they may make money. To unmake men is first to reduce their wages; next, to force them into idleness. To accomplish this "damnable" business, combinations are formed to close shops and factories. This throws men out of work, forces them into idleness. Poverty, hunger, idleness, un-makes man. He is compelled to exchange the cottage for the hovel, and finally he becomes a tramp. He is an unmade man. He drifts into crime, and becomes a felon. The trust closed the industry where he had earned money to support himself and family. This the trust did to stop production and raise prices that capital might have larger dividends, and the same purpose is seen in the efforts to import foreign labor, that what is called the "labor market," or more properly the "slave market" might be overstocked and prices for those who find work, might be reduced to the lowest point to keep soul and body united.

To accomplish this "damnable" business capitalists combine. Laws are violated with impunity. Justice is cloven down. The right is exiled. With millions of freemen out of work wages are reduced, and capital riots in luxury, and fortunes are made in a day. There is one way out of this wilderness; one way to arrest the "damnable" proceeding, and that is for labor to combine; federate, for the purpose of revolutionizing politics, "the science of government," by electing honest men to office; by the repeal of infamous laws and the enactment of righteous laws. If this is not done, there will be trouble in this once happy, "God favored land."

News comes from Naples that a railroad is being constructed between that city and hell, "the hell of Homer." The distance is not given, but we could name a locality where the road needn't be more than a mile or so, but the grade would be pretty steep.

It is stated that last year 2,700 locomotives were built in the United States and Canada, of which Canada built 382.

DOM PEDRO's empire has 5,124 miles of railroads—all things considered that's domfine.

TRUTH AND FICTION.

Mr. George W. Childs, editor of the Philadelphia *Public Ledger*, in a recent issue, has an editorial article captioned "Equality and Sympathy," which contains about equal parts of fact and fiction. The fiction is prominent, undisguised, while the facts are obscured by sophisms and special pleadings totally out of place, and which are made to subserve a purpose at war with common sense ideas of American equality. Mr. Childs starts out as follows:

Many excellent people, in their zeal for equality among men, and in their haste to abolish all class distinctions, overlook the laws of natural attraction and repulsion, which are as immutable in the sphere of humanity as they are in the domain of physical science. These reformers see with righteous indignation the false distinctions made by shallow and scornful people to separate the rich from the poor, the fashionable from the unfashionable, the stylish and expensive household from the plain and unpretending. But they would not only break down these barriers, but all others, and compel men and women to mingle together familiarly in social and domestic life, without regard to congeniality of thought or life, taste or temperament. It is as useless to antagonize a natural law as it is to fight the air. There must be some bond of sympathy, some mutual interest, something in each, that awakens a responsive chord in the other in order that any two persons shall take pleasure in each other's society.

There may be such "reformers" as the *Ledger* designates, but we are not acquainted with them, nor with their written or oral utterances. The fundamental American idea is expressed in the declaration that "all men are created equal," that they have "certain unalienable rights," such as "life, liberty and the pursuit of happiness." The American idea of equality, the real idea, has no reference to what mere flunkies call "equality." If there are those whom the *Ledger* styles "reformers," who are trying to bring about a condition of things in which A, the workingman, shall demand that B, the millionaire, shall exchange visits, dine, dance, and drink together, then such "reformers" are cranks, really idiots. The workingmen of America have a lofty contempt, unmitigated scorn for American codfish aristocracy. They do not belong to the growing army of Fashion's fools. The true reformer is a man who demands that "class distinctions shall not be supported by statute; that there shall be no "class legislation," that there shall be absolute equality before the law, and if the law anywhere under the American flag makes "class dis-

tinction" that that law shall be repealed. The workingmen of America need not be told that a Vanderbilt can dress in "purple and fine linen," that he can have a \$10,000 cook and fare sumptuously every day; he need not be told that when the millionaire travels it is in a palace car decorated with oriental magnificence. He knows that in the gatherings of such peacocks of society, such diamond-decorated dudes and dunces, there is arrogance, pomp and pride, but such things only excite his derision, and he simply demands that such degenerate creatures shall not use their money power, nor any other power, to place laws upon the statute books which in any degree shall detract from their rights and privileges as American citizens. The true reformers of the times, coming down to specialists, do not demand that the families of railway employés, men, women and children, shall "mingle together familiarly in social and domestic life," with the families of railway Presidents, bondholders, etc., the reformation demanded is that such dignitaries shall not use their position and power to degrade employés, that before the law, in every business relation, in every tribunal, the employé shall be recognized as the equal, the peer, of the employer. It is well known that notwithstanding the genius of our government and all of its institutions recognize this sort of equality, that laws have been enacted utterly subversive of it. Infamous laws have been enacted, well calculated to feed the arrogance of wealth, and courts have been debauched to an extent well calculated to create universal alarm. This apprehension of danger is not premature. The reform is not demanded a day too soon, and fortunately for the country, the workingmen of America have taken the matter in hand. They are intensely aroused and are everywhere massing their forces. The workingmen of America are the true reformers of the period. Caring nothing for what millionaires and their satellites call "class distinction," the workingmen of America have determined that such distinction shall not have the sanction of law nor of judicial decisions, and they are massing their strength and their intelligence to inaugurate permanent reforms.

In what we have said there is no appeal to sympathy or sentiment. The day has gone by for workmen to prostrate themselves in the presence of those who seek to make the law subserve class distinctions. The working men are in the majority. The question is, will they unify for their own welfare? Those who are capable of reading the signs of the times will answer in the affirmative. Says the *Ledger*:

The real equality for which we should work is the equality of *opportunity*, the spread of the most favorable conditions of life, the extension of a fair chance to every one who comes into the world. Certainly this is a large work, involving many long and complicated processes, and demanding all the thoughtful wisdom and forceful energy that can be brought to bear upon it; but just as fast as it goes on so fast may we expect to see realized that complete brotherhood of man which we all long for. Whatever tends to promote intelligence, to spread education, to foster habits of industry and economy, to instill principles of justice and integrity, to turn the currents of passionate desire from channels of self-indulgence and vice into those of purity, love and good-will, will also tend to ensure an increasing sympathy and congeniality among our people and to draw them together by the only bonds which can never be broken. Every noble effort of philanthropy and reform, every public measure carried for the public benefit, every private attempt to teach the ignorant, to raise the fallen, to help the unfortunate, to comfort the distressed, to lift men and women to a higher level, is in fact working in the direct line of human brotherhood and true equality.

The fundamental idea of Government in the United States as we have said, is "equality of opportunity," equality in the matter of "life, liberty and the pursuit of happiness." We started right. We made an announcement that thrilled the world. But the declaration, as the Nation has advanced, has become like "dead sea fruit." It tempts the eyes, it delights the ear, but practically, in thousands of instances, life is a burden till it is not worth the living. We are required to contemplate it under the most revolting conditions. Men work and starve because the laws are vicious, because one class is permitted to prey upon another class. In such a condition of things the term "liberty" is one of cruel irony, and the "pursuit of happiness," as fruitless as to seek for a cooling, life-giving spring amidst the sands of Sahara. We are not of those who believe in reforming the world by statute, but obstacles in the way of a fair race for life, liberty and the pursuit of happiness, placed there by law, can be removed by law. Indeed, it does not matter how or why they obstruct the highways of progress.

Eades, by a simple contrivance, removed the bars at the mouth of the Mississippi, and dynamite annihilated the rocks of Hell Gate, and the united votes of workmen in the United States can and will at no distant day expunge from the statute books of the States and of the Nation every unjust law that tends to degrade life, that abridges liberty, and that makes the "pursuit of happiness" a delusion."

The fight is on. It is not a psalm singing crusade. It is the massing of a mighty force demanding fair play. It is the voice of sovereignty demanding that laws shall be just and courts undebauched. The reformation is on. The reformers are millions against the millionaires. The "fatherhood of God" is a fact; the "brotherhood of man" is a fact. They require no statute to establish them. The time may come when all men will recognize and be governed by their sublime teachings. Be this as it may, the demand of the present is to enact righteous laws, beat down idols and shams, monopolies and trusts, set limits to aristocratic insolence and rapacity, and enthrone justice. The signs are auspicious. True reformers are federating. Victories have been achieved, and more are coming. Labor, in all the centuries gone, was never so exalted as in these closing years of the nineteenth century. It has its champions in every forum. Its literature is making its way to the front and is holding its own grandly. Labor is learning its power and is wielding it for the general good.

In the year 1874 Bro. G. H. Page was killed while on duty by the explosion of the boiler of engine 290 on the Erie Railroad. He was the first member of the B. of L. F. for whose death the bells were tolled and the shroud prepared—the first to be buried and mourned by the Brotherhood. His funeral took place at Port Jervis, N. Y., and Bro. J. A. Leach, Past and first Grand Master of the B. of L. F., has furnished the Grand Lodge with a photograph of Bro. Page, which will remain in its archives. Since the death of Bro. Page a great number of our brethren have been called to follow him into "the deep, damp vault," and those who have performed the solemn funeral rites have exclaimed: "How peaceful and how powerful is the grave."

PIN AND PRINCIPLE.

In the far-away southwestern Pacific ocean, lies a group of islands known as Samoa, or the Samoan group. These islands are situated on the line of commerce between the United States and Australia. Some years since, the government of the United States deemed it prudent to enter into negotiations with the government of Samoa, for the establishment of a "coaling station" on one of the islands. Permission was granted and the United States obtained certain rights, which, by the action of German authorities at Samoa, have been placed in peril, and the circumstance has led to much talk about the possibility of war between the United States and Germany. We have stated the case in a nutshell for the purpose of referring to an interview with Admiral Porter, of the United States navy, upon the subject. The views of Admiral Porter are entitled to great weight. He knows all about war, its costs and sacrifices. He does not talk at random. He weighs his words. A war with Germany would require, he thinks, the immediate outlay of at least \$250,000,000 for ships and guns and other munitions of war. As a preliminary step he would have the government purchase all the big guns England and France may have for sale. After all, he thinks, for a time, that Germany, as she has the best navy, would have the best of the fight, but that ultimately the United States would destroy her commerce and sink her navy. Admiral Porter does not think that it would be child's play to have a war with Germany. This much is said to introduce an expression of Admiral Porter worthy of all commendation. After discussing the possible losses and gains of war, he said:

"A pin is worth fighting for if a principle is involved."

In that declaration we find the key note of every song of liberty and independence that was ever sung since God said "Let us make man." There is no slobbering about cost and sacrifice. The question is, is there a principle involved? A principle of right, of justice, of truth, of independence. In that case a "pin is worth fighting for." Is war to be declared at once? Not necessarily. What should precede war? Manifestly,

negotiation, discussion, arbitration. If failure follows, then war. If not war, degradation. But says some weak-kneed, spinelless, white-livered croaker, "You might get defeated, then what?" Simply submit to the inevitable and "pick your flint" and try it again at the first opportunity. The difference between courage and cowardice is as the difference between the truth and a lie. A coward is no more like a courageous man than a Digger Indian is like an arch angel. The courageous man fights, the coward runs or hides.

See you those two houses around which crowds of men, women and children are assembled? Do you ask the reason for such motley gatherings? It is easily told. In the night burglars assailed them. At No. 1, the husband and father, hearing the midnight marauder and murderer rushed to the rescue of his home with such weapons as were at his command, and having saved his home, fell dead on his door-sill, with a bullet in his head.

At No. 2, the dwelling was robbed of its treasures, and at the sound of danger the husband and father took shelter under the bed, and from his covert was dragged forth limp as a dish rag, a poor driveling wretch, whom it would be a compliment to call a cur.

The man of home No. 1, dead, lives, by virtue of courage, in the affectionate memory of wife and children for whom he died, and his heroic devotion to his family becomes the subject for ceaseless laudation, and a monument is built to perpetuate his memory and his courage. His example is inspiring. Old men and young men, matrons and maidens fair, love to recite the story of his devotion and his deeds. The verdict is, "Well done."

The man of home No. 2 is universally scorned. He lives, but it would have been better for him if his cowardice had killed him. His name becomes a synonym of all things pusillanimous, dastardly and poltroonish. The mastiff, the rat terrier, even the vagrant hound that bays the moon is of more value in the world than such a degenerate specimen of humanity.

The question of strikes is constantly up for discussion. Strikes are subjects for statisticians. We are treated to the number in

a year, the number of persons engaged in them is given. We are told how many succeed and how many fail, losses in dollars and cents are stated, but those who supply the statistics never refer to any principle involved. They magnify money and advise workmen not to strike. They advise workmen to work and submit, take what they can get and be silent. They would have workmen see the shadows of gloom gather around their homes without protest, they would have workmen see their pay reduced until every comfort in life is relinquished and destitution sits gaunt and haggard upon their door-steps and hearth-stones, without a murmur; the immortal words of Admiral Porter, that "a pin is worth fighting for if a principle is involved," they would regard as rank treason to the soulless corporations which amass millions by their inhumanities to man.

It is not to be assumed that every strike involves a principle any more than it is to be assumed that every war involves a principle. There have been unwise wars and unnecessary strikes. In such matters it is not difficult to discover the principle if a principle exists, and when found, a courageous man will fight for the principle. A coaling station on a Samoan island is an exceedingly small matter, in itself considered, and thousands have said, "Who would go to war for such a trifle? What nation with a modicum of common sense would spend millions and sacrifice life for what at most is worth but a few thousand dollars?" But that is not the question. Is there a principle involved? If so, a pin is worth fighting for. In a vast majority of strikes a principle is as sharply defined as that involved in the rights of the United States to a coaling station in the Samoan Islands. It was so in the fight on the C., B. & Q., and every man that did battle in that strike, and every man who helped to sustain that strike won imperishable renown. Did the C., B. & Q. win that battle? Yes, just as the British won the battle of Bunker Hill, but they didn't want any more such victories, nor does the C., B. & Q. What was the influence of the Bunker Hill defeat? It taught the colonists that they were equal to British regulars, and this England learned to her sorrow in

the long run; and though Warren and hundreds of his compatriots fell on Bunker Hill, fighting for a principle, their example was a ceaseless inspiration to the handful of colonists, and Bunker Hill, where the colonial militia was defeated, has become one of the sacred mountains of the world. And as certainly as that tides ebb and flow, the wrecked condition of the C., B. & Q. will deter other corporations from engaging in a similar folly, and in this fact the strikers on the C., B. & Q., and all who, with heroic devotion, sustained them, may see, if they will, their defeat (?) expand to a continental victory, and learn to admire the immortal words of Admiral Porter, that "A pin is worth fighting for if a principle is involved."

THE *St. Louis Chronicle* remarks that "the alarming frequency of cases of spontaneous insanity among travelers who arrive at the Union Depot in this city suggests an investigation of the causes that are responsible for this strange fatality. No less than ten persons have become frantically insane at the depot in the past six months, and unless something is done to remove the insane surroundings St. Louis will soon be boycotted by the traveling public, who do not care to go to a depot where they are almost certain to become bereft of their reason." The alarm sounded by the *Chronicle* reads like a canard, and yet, there may be something the matter with the whisky, the sandwiches, or the hard-boiled eggs, dispensed to travelers at the Union Depot.

THE United States exported bread-stuffs, during the year 1888, amounting to \$112,615,876, and in the year 1887, \$158,528,053, a total in two years, of \$271,143,929, and yet, in ten thousand instances working men in the United States went hungry to bed.

President H. B. Ledyard: "I need my Sunday for rest, and I know of no reason why every engineer, conductor, brakeman or other employé of the company does not want the same."

THE Mikado, of Japan, started in to build a palace to cost \$12,000,000, but concluded finally, to cut down estimates to \$3,968,231.

THE CORPORATION INSURANCE DODGE.

Without an attempt to be exact with reference to dates, it may be said that during the past twenty-five years, working men, more than ever before, have been aroused upon questions relating to their personal rights and prerogatives, and as years have elapsed they have thought more earnestly upon such questions, and have acted with ever increasing intelligence and energy. As a result, the country is called upon to contemplate the organization of Labor Unions, and their name is legion. They include almost every trade in every department of the industries of the times. It would give force to what we have to say at this writing were it in our power to name them all, or to give even approximately, the number of their membership.

In railroading we have organizations of engineers, firemen, conductors, brakemen, switchmen, trackmen, telegraph operators, wipers, etc. In architecture we have bricklayers, stone-cutters, carpenters, plasterers, plumbers and hod carriers. In the great order of Knights of Labor there are to be found multiplied thousands of skilled and unskilled workmen. Then we have the cigar makers, printers, telegraph operators, miners, iron workers and so on, until it is found that organization has been the battle cry from the center to the circumference of the great Republic. What of all this mighty mustering of the hosts of labor? What is its significance? What lesson does it teach? What is to be the outcome?

We propound no idle questions. The best thought of the country is now engaged in solving labor problems. Corporations that employ vast numbers of men exhibit intense concern as they are called upon to witness the steady growth of labor organizations, and some of them propose to inflict penalties upon those of their employes who, asserting their personal rights, dare maintain their membership in such organizations.

The methods employed by corporations to gain their ends are various, and some of them specious—the most plausible being a form of parentalism, in which the corporations assume to be profoundly interested in the mental, moral, physical and religious

welfare of their employes. The corporation—and in this connection we refer particularly to the Baltimore & Ohio Railroad corporation—long ago observed that large numbers of its employes were members of labor organizations in which provisions were made for insurance against disability and death. The corporation became aware that these organizations had in view not only a benevolent purpose, but a design to obtain fair, honest wages for their work, that they might provide the comforts and decencies of life for themselves and for their families; that they had "grievance committees" whose duty it was to point out such wrongs as from time to time might occur, to protest against such wrongs, to discuss and arbitrate for the purpose of removing them, and do all things becoming free and independent American citizens in asserting and maintaining their rights. All these things the corporation observed were done by the organization. They are immensely objectionable to the corporation. Independence on the part of the employe is the very thing the corporation opposes. Manifestly, it would not do for the corporation, which is a creature of law, and which under the law claims certain rights and privileges to boldly attempt to inflict penalties upon its employes in violation of the law. It hesitates to assume the role of autocrat and issue its decrees like a czar, but without relaxing its hostility to labor organizations in the least, it proposes by duplicity to overthrow them, and this accomplished it knows full well that it has gained a triumph over its employes which in the very nature of things reduces them to degrading subjection.

To accomplish its purpose the corporation assumes special solicitude for the health, happiness and prosperity of its employes, and in the wealth of its anxiety for their well being establishes a *Compulsory Insurance Bureau*. The employe is required to take out a policy of insurance and to agree that the corporation shall have the privilege to deduct monthly from his wages such amounts as the corporation deems proper to guard him against the ills of life. The corporation supplies the hospital and the doctor in case of sickness or casualty, the priest and undertaker in case of death. The employe is

simply required to work, pay and suffer and remain silent. The corporation has the "drop" on him. Paternalism is now fully inaugurated. The employé, for the sake of employment, has abandoned his labor organization and his manhood, and in so far as it was possible, by agreement, he has sunk himself to the level of a serf. He is no longer free and independent. The individual man has been merged into the live stock or the rolling stock of the corporation. The southern plantation system has been restored. The corporation has taken upon itself to watch over its employés, provide for them, and when the magnates are in council they will refer to these employés, these operatives, as "so many people, who, by Providence have been placed in their custody to be cared for, to be fed and clothed, sheltered and nursed. It is the old-time slang of the "master" when talking of his "slaves." Such a system everlastingly destroys independence. It is as remote from it as heaven is high above hell. It is repulsive to the last degree to every manly instinct. That it can be proposed in the United States and imposed upon American workingmen to any extent whatever is the saddest of all commentaries upon human nature under the enlightening and emancipating influences of our boasted civilization. But it is being done. American citizens, Heaven save the mark! are bending their necks to receive the corporation yoke. They are yielding up their rights as individuals, as citizens, and permitting themselves to be herded like cattle.

The B. & O. corporation says to its employés—submit to the degradation or go without employment. Fortunately there were hosts of men in the employ of the B. & O. corporation who would not submit, some who will never submit to the humiliation. They will not leave their labor organizations, and even independent of any connection with such organization they will forever refuse the paternal (?) care of a corporation. They will be their own men, manage their own affairs without dictation or oversight from anyone. They will give their services for a consideration agreed upon, and that done they will spurn with indignation propositions of guardianship.

THE STRIKE SEQUEL.

Under the caption, "The Strike Sequel," the *National Car and Locomotive Builder* prints the following:

The most unfortunately situated body of men that we know of to-day are the engineers and firemen who, at the order of sinister leaders, left their engines on the Chicago, Burlington & Quincy system thirteen months ago. When the so-called settlement of the strike was effected last January, it was supposed by many of those most directly interested that the greater part of the men would be restored to their old places, but so far none of them have been taken back, and there is now a fierce disposition manifest to put the blame for the failure of the strike upon some one's shoulders. The firemen stood firmly by the engineers with unparalleled fidelity throughout the strike, but their representatives received small courtesy when the engineers determined to declare the strike off. This has aroused animosity and bad feeling, and the men who were responsible for originating and promoting the strike beyond the period of compromise are trying to make out by direct charge or insinuation, that the committee which effected the final settlement were guilty of selling out the strikers. This assertion is in a line with the way the whole business of the striking engine-men has been managed. Every man not blinded by hot-headed prejudice or who was not financially interested in maintaining the struggle, knew the case of the men was hopeless a month after the strike was inaugurated, and the men who did most to keep up the conflict are well aware that nothing of a cause remained to be sold out.

During a recent visit to the West we met quite a number of the strikers, and found many of them talking very bitterly about the treatment they have received from the Brotherhood. There is a scheme on hand among the men to go and form a farming colony in Dakota or Montana. That is a very sorrowful last resort for a mechanical man, and is likely to lead to further disappointment. One of the saddest sights to be seen in Europe after the fall of the first Napoleon was the spectacle of old soldiers of the guard following the plow. An old engineer at the plow is hardly less pathetic or out of place. His railroad training unfits him for the monotonous life of a farmer and invites failure. Many of the best men who took the places of the strikers on the "Q" system were engine-men who had become farmers, and became tired of the eventless calling. The result of the great number of engine-men who have lost their places on the "Q" going into other occupations will long be a menace to the Brotherhood in case of any future strike.

We reproduce the article entire, because we desire our readers to see the most that can be said by a paper, from the first, fully committed to the policy of the C., B. & Q. corporation, and which, so far as we know, never uttered a kindly word for the men who were most outrageously maltreated by that corporation. True, the publication, from which we quote, may deplore consequences and intimate sympathy for the men who sought by heroic means to obtain justice from a purse-proud and soulless corporation, but those who can read between the lines may easily discover illy-concealed gratification that their condition is what it is

as a penalty for defeat in a struggle as righteous as ever inspired men to do battle. Are the men out of work? Are they and their wives and children suffering? Is the future to them bleak and barren of hope? So intimates the *National Car and Locomotive Builder*, and it intimates also, that these are all just penalties for resisting an arrogant corporation, whose ambition it was to de-grade American working men and increase its riches by impoverishing them. Admitting that the C., B. & Q. was victorious to the extent of inflicting dire penalties upon the great body of its honest, hard-working employes; admitting that many of them are out of work and poor, the C., B. & Q. has not increased its wealth by its infamy. It, too, is impoverished. It, too, is driven to the wall. It has seen its millions go glimmering. Its vicious venality is eating like rust and destroying it like cancers. It, too, is paying penalties such as no other corporation invites. It has finally opened war on its scabs. It has issued its decrees, that wages must be cut down, and fearing the inevitable, it is seeking to manacle its scabs by proposing at the very moment of its bankruptcy, to insure its employes against disaster. If misery loves company, God knows, the old employes may say to the C., B. & Q., "honors are easy."

But we write for an entirely different purpose than that of pointing out the financial disabilities of the C., B. & Q.

The men who "left their engines on the C., B. & Q. system," did not do so at the order of "sinister leaders." Their grievance had been of long standing. The men did not want to strike. This, the history of the strike demonstrates beyond all controversy. Like the colonists, prior to the revolution, they wanted justice, it was refused, and for this denial of justice the strike was proclaimed. The men immediately concerned, are, doubtless, many of them, paying severe penalties for their courage, and devotion. From a dollar and cent point of view, it may be said that it would have been better for them to have submitted to wrong and injustice: That is the view the *National Car and Locomotive Builder* takes of the subject. It can see no wrong inflicted by the corporation upon its men. It can see no

justification for the men, who struggled for the right—indeed, it is totally oblivious of such rights. It would have working men accept uncomplainingly and without protest, such conditions as corporations decree, and would see them descend by gradations to irredeemable degradation. The *National Car and Locomotive Builder* has no word of cheer for working men, only congratulations for those who succeed by the power which money confers, in defeating their just demands. If the *National Car and Locomotive Builder* were published in Russia, it would defend the policy of the Czar; in Germany, it would flatter Bismarck and uphold his rule of "iron and blood," but being published in the United States, and satisfied that "thrift follows fawning," it justifies corporation autocracy and bewails the fate of striking working men as does the wolf the fate of the lamb upon which it has dined.

The victory of the C., B. & Q. over its trusted employes, such as it was, is not the first time the right has been cloven down by corporative power, nor do we anticipate it will be the last instance of the kind in the history of the money power in this land of the free. It is not a difficult task to point out defects when defeat occurs, but which if victory is secured are not mentioned. But mistakes of management, incapacity of leaders and the entire brood of dissatisfactions, real or groundless, have nothing to do with the principle at the foundation of the struggle. That lives—and other struggles will come, nor will they cease coming while working men can command a voice to denounce wrong, or an arm to defend the right, and the men who champion justice, victorious or defeated, are public benefactors deserving of the world's applause.

In the express business of Wells, Fargo & Co. there are employed twenty-eight lady agents out of 2,560. Here again the question arises, do Wells, Fargo & Co. pay the women agents as much as they pay men for doing the same work?

Mexico is enterprising in proposing and subsidizing railroads, but when it comes to building, things move slowly or not at all.

OVERWORK.

This *Magazine*, on more than one occasion, as its pages will show, has pointed out the fact that overwork on the part of men in charge of railroad trains, as also train dispatchers and switchmen, created conditions fruitful of peril to life and property. At a Union Meeting of Locomotive Engineers, held in Boston, Mass., a letter from General B. F. Butler was read, in which he said:

"Yours is an employment in which a man can never have relief for a moment while he is doing his daily labor. His eye must always be on his work, his hand always within reach of the throttle or brake, and his thought must be accurate to a moment, guided by the most accurate time-keeper, to prevent collisions and death. This makes a strain on his mind that must tell sooner or later upon the physical or nervous constitution of the engineer, and if the strain is continued too long on any occasion, at any time the tension may overcome the mental power, and his life, and the lives of hundreds, are at the mercy of chance.

These views led me to recommend to the legislature the passage of a law under which this great labor of body and mind should not be imposed upon the engineer for more than ten consecutive hours in any day, except, of course, in case of accident, as one after his day's labor is done works to put out the fire which is burning his neighbor's house. The railroads themselves should see that this would be to their own advantage, for one accident brought about by the overwork of an engineer would pay the wages of many dozens to take his place in overworked hours, so that economy, as well as a pressure of conscience coming from the responsibility for the lives of others, should compel railroad managers to press the passage of such a law."

General Butler shows himself to be a thorough student of men, mentally and physically, and the time is not distant when the legislation to which he refers will be on the statute books of all the states. Many accidents occur which fall within the category of the preventable, and how many of them are occasioned by a too long continued strain upon the mind of engineers, conductors, firemen, brakemen, train dispatchers and others, it may not be easy to tell, but that running trains requires all the faculties of mind and body in vigorous action requires no argument, and that such employes are often overtasked is universally conceded. It may be that a man in robust health can stand the strain for ten hours, but we doubt if such labor should be extended beyond eight hours. It is a question in which the great public has a profound interest, and one which eventually will have more attention than is now given it. The wrecking of trains, as General Butler suggests, is an ex-

pensive business. Locomotives and cars cost money, and sometimes the killed and wounded become a charge upon railroad companies, but no amount of money is a compensation for human life or for men and women crippled for life, and if overwork, as General Butler suggests, leads to such calamities, the public has a vital interest in the subject and will make it felt.

OUR CIVILIZATION.

In a recent number of the *Anchor and Shield*, we find the following:

"Our civilization is advancing, our churches are growing, our missionary operations extending, yet our morals are actually receding, or at a standstill. Not a Northeastern State but immorality, intemperance and crime are increasing much faster than even church membership. This is the testimony of one of the ablest divines in our land; a man who has made a study of the matter, and published the most powerful book of the century."

The foregoing is certainly a gloomy picture as taken at first glance, but a closer inspection relieves it of its otherwise sombrous impressiveness. Relieved of its contradictory expressions, it still bears the stamp of pessimist parentage. Our civilization cannot be "advancing" if, in morals, the nation is at a "stand-still" or "actually receding." It may be true that intemperance and crime are increasing faster than even "church membership," which, to say the least, is a pretty severe criticism on the churches, and invites criticism upon their methods of operation. But any enlightened view of the subject explodes any and every theory seeking to establish the fact that the world is growing worse instead of better.

In the first place, it is not specially surprising that crime is increasing, because it is a fact that population is increasing, but people in their senses do not assert that crime increases in the same ratio as population. From 1870 to 1880 the increase in population in the United States was something over 23 per cent. No one has the hardihood to claim that immorality increased in the same per cent.—nor is it true that intemperance increased in the ratio of population.

There is not the slightest necessity for exaggeration. The naked truth is bad enough. There is too much immorality, too much intemperance, too much crime. It would be difficult to conceive of a time when wicked-

ness would no longer appear in human affairs. But it is not difficult to anticipate a period when there shall be less of it. In this, there need be no taint of vagary. It is clear, practical and logical. Idleness is the parent of crime. Extreme poverty means immorality. Supply the idle with work and crime and immorality will disappear. Are there more workers than work? Reduce the hours of labor and give all a chance. Add to this fair wages and you have introduced a new era. It is practical politics and to this the thought of the country is tending. It must be the outcome, if the nation is to escape calamities, the mere mention of which

is productive of shudders. Statesmen and philanthropists are now profoundly engaged in efforts to solve the problem. It will be solved. The intelligence, honesty and patriotism of the people, will prove equal to the emergency. We are to have wise laws and honest men to administer them. Gilded villainy is to see hard times in the immediate future. Men who live by wrecking, by cornering food, by watering stocks, by forming trusts, by levying tribute upon toil, will be required to change their methods, and if "able divines" feel like writing books calculated to help usher in the new dispensation, they will have readers.

WARFARE.

My hand has lost its cunning and its power,
I can not fight;
My arm hangs helpless, like a wounded flower,
Killed by a blight!
My tendons once of steel, are limp and shrunk—
Each yields and bends;
My iron frame is like the blasted trunk
That lightning rend's!

And where my armour? Is it also gone?
I wake to find
That I am standing here, disarmed, alone—
With youth behind—
And strength, and beauty, and all else that dies,
Locked chill in death.
Gone, like a vision of the night, that flies
At morn's first breath!

What has my warfare brought me? What great gain?
How much renown?
What are my trophies? Where my conquered slain?
And where my crown?
What are my victories, that I should share
The victor's seat?
I fought as one who vainly beats the air,
And gained—defeat!

And this the end is! this the climax grand,
The acme won!
The final downfall of a house of sand,
The last rood run!
And what my profits are, I ask in vain;
For none are shown;
Nothing is left that I count as gain,
Or call my own.

I toyed with shadows, while the sands of time
Rolled swiftly on;
And said not, "This is youth," until its grime
Was past and gone!
And now, in shame before the Head Supreme,
With garment rent,
I crave for grace, that I may yet redeem
The time misspent!

—[*Chamber's Journal*.]

JOSHUA A. LEACH.

"Here the architect
Did not with curious skill a pile erect.
Of carved marble, touch, or porphyry,
But built a house for hospitality."

"Rare are the buttons of a Roman's breeches,
In antiquarian eyes surpassing riches:
Rare is each crack'd, black, rotten, earthen dish,
That held of ancient Rome the flesh and fish."

We write of the founder of the great Brotherhood of Locomotive Firemen, Joshua A. Leach. In doing this, we write history—modern history. Men are living, still in the prime of their manhood who remember the time when the country, with 70,268 miles of railroads and 20,000 locomotive firemen, could not boast of a Locomotive Firemen's Brotherhood, that time was as late as 1873; sixteen years ago. There were at that time not less than 17,000 locomotive engines in operation, every one of which required a

fireman. Each fireman stood alone in his perilous work. There were no brotherhood ties for him; no brotherhood grasp of the hand; no signs of recognition; no fraternal sympathy; no snug harbor of a Lodge room; no place in all the world where firemen could meet for the interchange of thought and feeling; no fund upon which the unfortunate could draw, in time of sickness or other disability; nor was there any provision for the widow and the orphan, when death came by disease or disaster to the husband and father, and shrouded his humble home in gloom.

How fondly the world cherishes the names, when known, of the men who have planned cathedral or triumphal arch, who have sculptured a Venus, or painted a scene of The Last Judgment, and when forgotten,

how industriously they are sought after that they may be rescued from oblivion.

We do not write to underestimate a Phidias, a Michael Angelo, or a Raphael, nor to overestimate the labors of men in the humble walks of life; and yet, we deem it true, that the man, however circumscribed his sphere, however humble his position, however obscure and unknown, who has "built a house for hospitality," stands higher, and eternally higher, than the man who sculptured a *Venus de Medici*, or planned Peter's dome. As an illustration of our theory, Abou Ben Adhem's experience is conclusive:—

"ABOU BEN ADHEM, (may his tribe increase!)
Awoke one night from a deep dream of peace,
And saw within the moonlight in his room,
Making it rich, and like a lily in bloom,
An angel, writing in a book of gold;
Exceeding peace had made Ben Adhem bold,
And to the presence in the room he said,
'What writest thou?' the vision raised its head,
And with a look made of all sweet accord,
Answer'd—The names of those who love the
Lord.'
'And is mine one?' said Abou. 'Nay, not so,'
Replied the Angel. Abou spoke more low,
But cheerily still, and said, 'I pray thee, then,
Write me as one who loves his fellow-men,'
The Angel wrote and vanish'd. The next night
It came again, with a great awakening light,
And show'd the names whom love of God had
bless'd.
And, lo! Ben Adhem's name led all the rest."

Joshua A. Leach, the subject of this sketch, and whose portrait we introduce, is a native-born Irishman, having first seen the light near Nenagh, county of Tipperary, on the 6th day of May, 1842. He possesses, in a marked degree, the generous traits of his countrymen. His nature is eminently sympathetic. Like Abou Ben Adhem, he loves his fellow man and is ready, on all occasions to lend a helping hand, when he sees distress, and it was this noble trait in his character that prompted him to set about the work in the year, 1873, to organize the Brotherhood of Locomotive Firemen. Brother Leach in 1869, when twenty-seven years of age, took the position of fireman on the Erie railroad, and continued in the employment of that road till 1877. Many incidents during this period of eight years impressed him with the great importance of an organization such as was finally established in 1873. During the period between 1869 and 1873, a sad accident occurred, which perhaps more than any other aroused Brother Leach to action. A fellow fireman was killed, leaving a wife totally destitute. The unfortunate man received christian sepulture at the hands of his fellow firemen, and then to provide for the sorrowing widow, Brother Leach sought among his comrades to raise money to send the stricken woman away to her parents. This done, agitation began relating to the organization of the Brotherhood of Locomotive Firemen, the result of which was that on the evening

of December 1st, 1873, at the town of Port Jervis, N. Y., the Brotherhood came into existence—fifteen years and seven months ago—on that ever memorable evening, December 1st, 1873, thirteen locomotive firemen obligated themselves, and launched the Brotherhood to battle against whatever adversities fate might have in store for it. This little band had faith in their fellowmen. They knew they were right, and with dauntless courage, they flung the Brotherhood banner to the breeze and asked for recruits. Deer Park Lodge, No. 1, with a membership of THIRTEEN was the GRAND LODGE. It was the PIONEER LODGE. Grand it was in faith and courage. The Brotherhood required a GRAND MASTER, an executive head, a leader, and the heroic THIRTEEN deeply sensible of the importance of the position, canvassed for the right man. Everything depended upon a wise selection. The Grand Master must be wise, cautious and intrepid. He must be a man of energy and zeal, willing to make sacrifices of time and money; willing to work for the welfare of others and to find his reward in the consciousness of having done something for the amelioration of the conditions of his fellowman. The choice fell upon

JOSHUA A. LEACH.

How well he filled the position in the early days of the Brotherhood, is the theme of ceaseless eulogiums. The Brotherhood is now great, rich, and prosperous—but in its infancy and weakness, disregarded, opposed and condemned, it required men of fidelity and courage to stand by it in evil report and uphold its principles in the fierce storms of opposition it was called upon to resist. This was done by its first Grand Master, Joshua A. Leach, who now, verging upon a veteran of a half century, has a right to contemplate with glowing pride the continental dimensions of a superstructure of which he helped to lay the foundations and superintend its early growth. Brother Leach was Grand Master of the Brotherhood from 1873, when it had one Lodge and thirteen members, to 1876 when it numbered its members by thousands, an advancement of which anyone might feel content.

Since 1877, when Brother Leach severed his connection with the Erie railroad, his lot has been cast in the west where he has been connected with various roads, except about two years when he was Chief of the Fire Department of Nebraska City.

He is now a citizen of Sedalia, Mo., and is in the employ of the Missouri Pacific, in the enjoyment of health and of that proportion of the good things of the world, which usually falls to the lot of a railroad employé. In the bosom of his family, consisting of a wife and two children, the life of Brother Leach flows peacefully along; his unobtrusive

sive home being richly blessed with affection and contentment without which, a palace is a prison.

In his devotion to the interests of the Brotherhood, Brother Leach has always had the ardent and efficient support of his noble wife, who unaided, and with her own hands, made the first set of regalias ever worn by the members of the B. of L. F. She is a splendid woman and still profoundly interested in the welfare of the Order, of which her husband was one of the founders and its first Grand Master.

We have briefly outlined what Brother Joshua A. Leach, in the days of his manhood's prime, accomplished for the Brotherhood of Locomotive Firemen. For the good work performed the great Brotherhood owes Brother Leach a debt of gratitude.

"To the generous mind
The heaviest debt is that of gratitude,
When 'tis not in our power to repay it."

Such were the words of Franklin, but the debt of gratitude which the Brotherhood of Locomotive Firemen owes Joshua A. Leach for his services in laying the foundations of the Order, and for his services as first Grand Master, it can pay—easily and without sacrifice. What shall be the token of the Brotherhood's sense of obligation and thankfulness? In this case, let all speak at once if the question inspires grateful feelings. Shall it be a comfortable home? Why not that? Who will second the motion that Brother Leach, his wife and children, in response to a debt of gratitude paid by the great Brotherhood of which he may be justly said to be the Father, shall be able to say—
"Mid pleasures and palaces though we may
 roam,
Be it ever so humble, there's no place like home."

His own home the gift of a Brotherhood which since its organization, has been a ceaseless benediction to thousands.

FRIENDSHIP.

FRRIENDSHIP to every willing mind
 Opens a heavenly treasure;
There may the sons of sorrow find
 Sources of real pleasure.
See what employment men pursue,
Then you will own my words are true;
Friendship alone unfolds to view
 Sources of real pleasure.

Poor are the joys which fools esteem
 Fading and transitory;
Mirth is as fleeting as a dream
 Or a delusive story;
Luxury leaves a sting behind,
Wounding the body and the mind,
Only in friendship can we find
 Pleasure and solid glory.

Beauty, with all its gaudy shows,
 Is but a painted bubble;
Short is the triumph wit bestows,
 Full of deceit and trouble;
Fame, like a shadow, flies away;
Titles and dignities decay;
Nothing but friendship can display
 Joys that are free from trouble.

Learning, that boasting, glittering thing,
 Scarcely is worth possessing;
Riches, forever on the wing,
 Can not be called a blessing.
Sensual pleasures swell desire,
Just as the fuel feeds the fire;
Friendship can real bliss inspire—
 Bliss that is worth possessing.

Happy the man who has a friend
 Formed by the God of Nature;
Well may he feel and recommend
 Friendship for his Creator;
Then as our hands in friendship join,
So let our social powers combine,
Ruled by a passion most divine,
 Friendship with our Creator.

—Anon

JUNE, 1889.

CAPTAIN ERICSSON.

Perhaps the most noted mechanic of the century, has lately closed his labors on earth, and entered into a rest, which his indomitable spirit did not permit his body to take, for he remained almost as active as ever up to his death in planning and designing improvements in his various lines of invention.

John Ericsson was born in Wermland, Sweden, on July 21, 1803, and as is usual received the rudiments of an education in the public schools, but it seems that at a very early age, he was fully conversant with the use of drawing-instruments in all their branches, and at the age of twelve years he was employed with a corps of Swedish engineers in making surveys for a ship canal. The precocious boy-surveyor had an attendant provided, whose duty it was to place a stool so that he could get his eye to the leveling instruments. At seventeen, we find him an ensign in the Swedish navy, and he rapidly arose to the rank of lieutenant, by his skill in executing maps, which were a marvel of accuracy. The talent thus early developed remained with him through life, for while he devoted much labor to the drawing board, his plans were master pieces of draughtman's skill, and were so readily and clearly understood as to necessitate but little explanation, even in the most complicated machine. When he was but twenty-three, he left Sweden, to introduce his "flame engine" in England, and shortly afterward he resigned his commission, which was accepted after he had been promoted to the rank of captain. From this time up to his death, on the 5th day of March, invention after invention has been brought out, till a mere mention of them would fill more space than we have room for in the limits of this department.

The fact that Capt. Ericsson was the designer and builder of one of the locomotives, which were entered for the famous trial at Ramhill, in 1829, makes his memory revered by railroad men.

At that trial four locomotives were entered and while the award was given to Stephenson's Rocket, much praise was given to the Novelty, as Ericsson had named his locomotive, for the lightness, elegance in finish and speed with which it moved, for it is said to have "shot along at the amazing rate of thirty miles per hour," and while the Novelty failed to take the prize, because she

weighed only two tons and fifteen hundred weight, and did not have traction enough to pull the required load, a reflecting mechanic, an eye witness of the trial, delivered the following opinion of Ericsson and his locomotive, in the *London Times* of October 18th, 1829:

The constructor of the Novelty exhibited far greater engineering knowledge than the constructor of the Rocket. In the first place, when Stephenson presented his locomotive-engine for trial, he depended on chimney draft to support the combustion in the boiler furnaces, while Ericsson, who had theoretically considered the matter, knew that sufficient air could not be supplied by natural draft. He therefore employed a blowing apparatus, which being operated directly by an engine, regulated the combustion to suit the speed of his locomotive-engine. So well was this blowing apparatus proportioned, that while running at the rate of forty miles an hour, the supply of steam seemed to be ample. Fortunately for Stephenson, Timothy Hackworth, the builder of the Sans Pareil, discovered the efficacy of the steam-blast in time to enable the constructor of the Rocket to apply the same before the termination of the competitive trial. Secondly, Ericsson, fully comprehending that durability of the steam-machinery called for absence of jarring motion, placed his engine-frame on four flexible carriage springs. Nor did he overlook the fact that the power of the engines must be applied in such direction as not to interfere with the free vertical action of the springs. Consequently, he resorted to such a combination that the connecting-rods operated in a horizontal direction. And by employing bell-cranks, he dispensed with connecting-rod guides, thereby obviating the thrust and heating inseparable from their employment, unless constantly lubricated. He avoided, at the same time, the use of horizontal cylinders, so strongly objected to by most engineers of that period. Stephenson, on the other hand, employed cylinders placed at an angle of about 45°, in consequence of which fully two-thirds of the power of his engines lifted and depressed the carriage at each stroke. The resulting unavoidable tilting motion was aggravated by the necessary right-angular position of the driving-cranks, causing one side of the carriage to be lifted up while the other side was being depressed. The consequent violent rocking of the Rocket during the competitive trial was observed by all, and admitted to be a defect which called for some effectual remedy.

It would appear from this, that some of the most important parts of locomotive building were embodied in Ericsson's Novelty, and that while Stephenson carried off the prize, and has received the credit of it ever since, the Rocket would have been a failure, if Stephenson had adhered to his original idea of an unaided draft, while Ericsson, with his good judgment, had a forced draft introduced in the Novelty. How much the British punacity, and aversion to acknowledge anything good that emanates from foreign sources, had to do with the award of the prize, we are too far removed by time to tell.

In 1839 Ericsson came to this country, and built the Princeton in 1841. She is said to have been the first naval vessel that had her machinery below the water line, and thus out of reach of hostile shot. The years, from '41 to '61, were filled with inventions, but the most noted achievement,

and one which has endeared him to the people of this country, was the construction and arming of the Monitor, whose battle with the Merrimac, and tragic fate after having achieved her victory, and fulfilled her mission, has become history, but reads more like a romance of old, when knights clothed in armor, met in the field of battle, to die for love or honor. But the toils, trials and triumphs of this life are over, and after labor, comes rest to the weary. *

A MOTHER'S LOVE.

As we grow in years we can realize that the present is not all a life of happiness and contentment. Who ever lived a life of perfect happiness? I conjecture not one, and yet, in youth, we picture the future as one of unalloyed bliss. Time sconcs dispels the delusion, and our air castles vanish. Still, it may be for the best. Who knows? We are taught in the school of experience, but it must be our own experience—that of others the great majority will not heed, and it is lamentably true that even our own knowledge, gained in trials and privations, is too often disregarded or forgotten.

It is a sad reflection that among the many instances of young men's disregard of the lessons of experience, that of forgetfulness of home and home influences, all too often darken the record, and still more strange is it that a mother's love ceases to exert that restraining and guiding power, without which the dangers that beset the young man's pathway, are multiplied fourfold. When a mother's love is forgotten, when folly or vicious associates eradicate from memory the affectionate words of a mother, the young man is far gone on the road to ruin. This is no weak sentimentality, it is no freak of fancy, but rather a truth, and on all the highways of life may be seen wrecked characters, hopes and ambitions. Sad and mournful testimonials that the victims of misfortune disregarded a mother's love and a mother's advice.

If there are those so unfortunate as to have never known a mother's love, whose memories cherish no sweet tones of a mother's gentle voice, upon whose lips and cheek a mother's kiss was never impressed, for such persons God knows there should be pity and sympathy. Of such I do not write, but rather of those who have known the rich blessing of a mother's love and care and ceaseless solicitude, who remember her tearful eye and affectionate farewell at parting, and who know that they are never forgotten, and that at the old home, in the old arm chair, when time is whitening locks and furrowing cheeks, there is one waiting to see her boy once more, waiting to hear of his success, and knowing the temptations that beset his pathway, praying that he may

be equal to every trial and come off more than conqueror in every conflict. And yet, there are hundreds, ay! thousands of young men who forget these things and permit themselves to be swept along by influences which they know, if they would reflect, will finally overwhelm them in shame and degradation. But even when the calamity comes to her unfortunate boy, the mother loves him still. She would fly to him if she could. She would shield him from every attack, nurse him amidst scenes of vice and squalor, go with him to prison or to death.

Is it not strange, is it not passing strange that the wandering boy should forget a mother's love? Oh, there is a father's love, a brother's, a sister's love, but above them all, brighter than all, is the love of a mother. It changes never. Others may grow cold and neglectful, a mother—never. It is said "Death claims all seasons for his own," so does a mother's love. It is said that "Death loves a shining mark," but a mother's love is intensified by misfortune, and the "prodigal son," by some mysterious influence, obtains the larger share. Willis sang:

"My mother's voice! how often creep
Its accents on my lonely hours!
Like healing sent on wings of sleep,
Or dew to the unconscious flower.
I can forget her melting prayer
While leaping pulses madly fly,
But in the still unbroken air
Her gentle tone comes stealing by—
And years, and sin, and folly flee,
And leave me at my mother's knee."

The son who treats his mother reverently, whatever may betide him, has one source of exquisite happiness, and if the tidings of her death come to him when far away, or, if he is permitted to be present when death sets his signet upon her brow, and can realize that he has prized her love above rubies and that he has been guided by her advice, he possesses a treasure, compared with which, the world's honors and riches become insignificant. Show me a man who dishonors father and mother and I want no higher proof that he is destitute of manhood, but, on the other hand, show me a man who has performed every filial duty to his parents, and I will show you one of nature's noblemen.
A Fireman.

It is stated that thirteen switchmen, on the Chicago & Rock Island, recently struck because the company hired non-union men. Before striking they should have tried to initiate the non-union switchmen into their great and growing Order. It is also stated that on the Union Pacific, at Denver, twenty-six switchmen struck and that their places were filled in six hours. Such things will occur while workmen remain ignorant of the benefits resulting from organization.

ALL MAY HAVE AN EDUCATION.

Having perused a good many well-written articles, giving reasons for the ignorance of many of our young men, I will, with your permission, briefly state some of my views upon the subject. Fortunately, most, if not all of our different labor organizations are working with untiring zeal to influence at least some of our representatives in legislatures to pass compulsory education laws, to have children from six to fourteen years of age attend school, so that they may have at least an elementary education, and should this point be gained, it will be seen that the rising generation will be greatly benefitted.

It is not enough for a young fireman to become proficient in the management of his iron horse, he should strive to know at least a little of something else, something outside of handling a scoop or the throttle. A good many may ask, "How can that be done?" If they should say, "I can neither read nor write," and contend that they have had few, or no advantages at all, I should say, when you are not employed, when you have leisure, just have a little pride and begin with a spelling book, next a reader, and learn the rudiments, and I will bet 10,000 rusty continental nails, that in a short time you will want books and newspapers to read, and

when you are able to read you will be in the line of educational advancement. To-day, as little of a scholar as I am, I would not exchange the little I know for Jay Gould's gold. There is no good reason why young men of the present should be illiterate. The excuses offered for ignorance I consider bosh. Whoever desires knowledge may obtain it. I will state that thousands of my countrymen have come to America without being able to understand the difference between yes and no in the English language, but by dint of study and reading, have mastered the language and are as proficient in it as some native born college graduates. This is what perseverance can accomplish. I do not flatter myself, nor do I wish to be flattered for the little learning I have acquired, but I am aiming to show that all young men who desire it may have a good education. They have only to set a right value upon time and opportunities and be determined to learn.

I most sincerely hope and trust that the time is near at hand when every man and woman will be sufficiently educated to know and understand that any Congressman who regards "labor" as a commodity, is not qualified to represent them.

John Vollmar.

For the Magazine.

RAILROAD HYMN.

GOD bless the railroad men!
Be Thou their portion when
All others flee.
In every trying hour,
Uphold them by Thy power;
On them in mercy shower
Thy grace so free.

When lurid lightnings flash,
And pealing thunders crash,
Extend thy arm;
When storm-clouds, like a pall,
Are overspreading all
The skies, and torrents fall,
Keep them from harm.

Let christian hearts grow strong,
And join in prayer and song
For these, the brave,
Whose hearts have long been tried,
And who, with manly pride,
Have braved the fitful tide—
Life's swelling wave.

O Thou, to whom are dear
The souls of men, now hear
The prayer we raise;
And out upon the rail,
From hearts that never quail,
O may Thy name prevail
In songs of praise.

Geo. W. Hall.

STANBERRY, MO.

Mechanical

Letters and Papers pertaining to Locomotive running, firing and management and other topics of interest to locomotive engineers and firemen are solicited for this department.

Correspondents are required in all cases to give their real names, not for publication necessarily, but as a guarantee of good faith.

Communications should be plainly written on one side of the paper only, and as brief as possible. No matter should be introduced for illustration or otherwise that does not have a bearing, directly or remotely upon topics of a mechanical character.

Contributions to this department should reach the Editor not later than the eighth day of each month to insure publication in the next ensuing number, and should be addressed to
MECHANICAL DEPARTMENT,

Locomotive Firemen's Magazine,
TERRE HAUTE IND.

JUNE, 1889.

MR. EDITOR:—Having followed out some of the lines of thought suggested by the contributions of different writers, I shall at this time indulge in a few generalities and try to get abreast of the current topics claiming attention.

In reading the pages of the Mechanical Department, one is frequently struck by some account of a personal experience, which, at first thought, seems greatly at variance with his own similar experience; and, while I admit that personal experience is the greatest of all teachers, I am inclined to believe that such experience is worth much more to the person directly involved than to any third party to whom it may be related. The reason of this is that there are many minute details connected with every occurrence that we fail to give the prominence they deserve. For instance, some months ago, a writer signing himself "Dirigo," stated that in nearly three years running he had never found an engine that he could not pump "just as he wanted to."

Now this statement, at first, seemed to me almost a boast; since it indicates an experience so vastly different from my own. But when I stopped to reflect it occurred to me that perhaps "Dirigo" might have run a single engine during the whole time; and that an engine having a reliable pump, or that he might have handled several different engines all of one pattern and build and all having reliable pumps of sufficient capacity to supply the required amount of water under all conditions, his seemingly high sounding statement loses a good deal of its boastful ring.

I had been running much less than three years when I struck an engine that no

earthly, mortal man, who walks on the ground and wears overclothes in lieu of wings, could pump "just as he wanted to," that is if he was one of those fastidious fellows who always insist on having at least a little moist steam over the crown sheet if he could not have real water.

The explanation is, that the pump would not supply the boiler under all conditions and this led to a style of pumping that would not pass in the columns of the *Magazine* as scientific because I had to put the water into her, going down hill, that I could not get into her going up.

If I was required to state a rule for feeding a boiler I should have to say, supply to the boiler just the quantity of water that she is generating into steam. But all rules have their exceptions, and to detect these exceptions to rules applied to the running and management of locomotives requires that extensive and varied experience which is the successful engineer's stock in trade. In a word, the exceptions are much more difficult to master than the rules.

Before leaving this water supply question allow me to relate a very little of my experience. I was once placed in charge of an eight-wheel engine of very good proportions, at least as regards boiler and fire-box. My fireman had been on the engine for some time and knew every bolt and nut about her better than I did, and to do him justice I will say that he could no doubt have discounted me in handling the engine at the time I took her. The engine was a fair, but not a free, steamer and was not very bad on fuel. Her boiler was fed by a Sellers injector of good range and I could set it to supply her or a little less just as I wished. I found that when I kept the water up to a given level "John" had to work hard and watch her as close as a cat does a mouse, and that every once in a while she would get away from him. So I adopted the plan of watching my opportunity and filling her up as full as I could and still have dry steam and then setting the injector so that she would lose a little water between stations. The road was hilly and we often had to work her hard into stations where, unless I had room for a little water in the boiler we had a good deal of popping off. If we did not have the blowing off we had a very light fire to pull out on or lots of black smoke around town. Thus I fell into the habit of filling her up at stations and on down grades, always keeping the fire bright and even using the blower lightly sometimes. Some men have a "mortal dread" of hearing a blower work. I do not if I know it is working on a good fire and the door shut.

In running as above we always had steam when we most needed it, "John" had a much easier time and we got over the road

with less fuel than we could with a fixed water line.

Now don't all ask to fire for me at once because I tried to make it as easy as I could for "John." He was always ready to accommodate me in the same way.

I remember of reading some time since "Vulcan's" directions as to how many gauges of water to carry in a boiler. This without knowing the dimensions and style of boiler seems to me very vague. If I were asked how much water to carry in a boiler I should say every drop she will hold and work dry steam; and that point will be found a good deal below that at which she will throw it out of the stack; and no one can tell just how high this point is until he has run the particular engine in question. Since "Eccentric" has given me, with others, the distinction of "noted expert," I cannot find it in my heart to refuse his request. And to comply with it only requires me to state that his own solution is correct. That is to say, that a single piston having the same number of square inches of surface as two pistons each $10\frac{1}{2}$ inches in diameter, would have to be a little over 14 inches in diameter. The two pistons $10\frac{1}{2}$ inches in diameter would have an area of a little over 173.18 square inches, while the area of a piston 21 inches in diameter would have an area of 346.36 square inches, provided I have made no mistakes in the computation.

If "Eccentric" only knew what a time I had "grubbing up" the "square root" that has long been buried and unused in the writer's receptacle for information, I am sure he would take off the "noted expert" from my title.

"T. Godfrey" asks for the "first rule in railroading?" The first one with which I am acquainted is that "the safety of passengers and trains is of the first importance." I have one of my own, however, that covers the same ground and perhaps a little more: "Look out for other peoples' carelessness as carefully as you do for your own."

"Ink Bottle" wants to know, "Does an engine suck black smoke in the cylinder when it is shut off running down grade?" I have given my views on this problem before but I now desire to ask Mr. Bottle where would the smoke go to after it got in the cylinder?

I will not attempt to deny that I read "E. S's" and "Vulcan's" account of the "grief" they have passed through but I hope that the boys who have helped to build some of the new lines of road up in the Northwest will not take up the subject; for a single truthful account if half told would fill the whole *Magazine*.

I find on examination of my last month's article that some of the reference letters do

not appear in the cuts, also that in the sixth line of the first column of page 403, *it is* should read *is it*. An on page 402, first column and tenth line would read as I thought it if the word "proposition" was followed by the phrase "is appropriate." With these corrections I will close.

A. H. Tucker.

SEDALIA, Mo., April 8, 1889.

MR. EDITOR:—Below I give a rule for finding the horse-power of a locomotive, which I find in Roper's Hand-Book of the Locomotive:

"Multiply the area of the piston by the pressure per square inch, which should be taken as two-thirds the boiler pressure; multiply this product by the number of revolutions per minute; multiply this by twice the length of stroke in feet or inches, (if the stroke is in inches, they must be divided by 12). Multiply this product by two and divide by 33,000; the result will be the horse power of the locomotive."

If Mr. Evans will step into my engine room, before I start the fire in the morning, I can show him that there is a vacuum more or less perfect. With two and a half gauges of water in the boiler, I open the bottom gauge, but no water runs out, but instead, you can hear the air bubbling as it goes in and up through the water to the top of it. Turn the drain-cock on the water-glass, and you can see the air bubbles as they go up; now open the top gauge and you hear the air rush in and soon you have water running out of both glass and bottom gauge-cock, too.

Mr. Evans left out a part of the practical part in his illustrations, that is, he never gave the air a chance to get out as when we run an engine or locomotive the steam and air pass out, and after they have done their work, escape to the atmosphere, so when the water that was so highly expanded into steam has contracted again to its former bulk, there is a space that is not fully occupied by either water or air. Hoping my meaning is plain and that I am welcome, I will close and may come again.

Wilson Dungan.

MR. EDITOR:—The *May Magazine* is at hand, and Bro. A. H. Tucker's article is a clear illustration of Bro. Tucker's character, for it may take some time to get him aroused to the fighting point, but when once fairly entered he fights with a grim determination which will not permit defeat, no matter how great the odds against him. When he attacks the "hammer-blow" championed as it is by Mr. Lockwood, he shows his courage in entering a field from which others have retired disgusted at not having a foe willing to stand up to any point, but keeping up a running fight for years. As Bro. Tucker

states the case so plainly and covers the ground so fully, it is to be hoped that we may be able to have the question fairly settled, but some of the points made by Bro. Tucker have been used before and failed to force conviction, and they may fail again. It is very difficult to imagine how Mr. Lockwood can advocate the "hammer-blow" after carefully considering the point, that, as Mr. Lockwood himself claims, the bottom of the wheel comes to a rest. Any body in rapid motion, and brought to a state of rest as gradually as the counterbalance is, cannot by any means convey a blow like a hammer in full swing brought to a sudden stop by striking an object in direct line with its movement. If such blows were struck no bridge or trestle in the country could stand the shock, nor could we find a rail strong enough to bear the "hammering" it receives on a heavy traffic line like a Mr. Lockwood's favorite Penn. I have recently taken the trouble to walk over a number of miles of main line track, and to look for the effect which "hammer-blows" make, but my research was in vain. I found a few abrasions, generally near stations, caused, as may easily be proven, by the slipping of the drivers in starting out, and I also found places where the rails were depressed, but as this was only at the joints of the rails, it is to be presumed that this is not to be attributed to the counterbalance, but to the action of the wheel in jumping the gap between the rails, which is usually left to provide for their expansion. Section men assured me that it is more work to keep up the joints than all other points, and if Mr. Lockwood could only prove that the counterbalance exerted its force at this point he would have something to hang his "hammer-blow theory" on.

William Gore is discussing the brick arch with "E. S." but as I have never fired a locomotive with such an arch I cannot say anything about the matter, but I must express my admiration for the "old timer" who delights to renew his youth by recalling railroad incidents of over a score of years ago, when many of us were still in our infancy; indeed, the date of Bro. Gore's first railroading anti-dates the birth of the vast majority of our readers. That a man of at least sixty years, and not in active service for nearly twenty years, takes interest enough in the rising generation of firemen to give them the benefit of his experience, is a commendable act, and an indication that Bro. Gore is not growing old in heart.

"Eccentric" asks for information on area of pistons, which has been supplied several times in these columns, and if the boys took as good care of their old *Magazines* as they deserve, there would be no necessity for asking "or answering these questions. To satisfy Eccentric" and his companions I to explain the rules governing these

calculations once more. In the first place, a circle gains in both directions by an increase of diameter, just as a square of a given length and width gains in both directions by increasing its side measurement. For instance, we will take a square, fig. 1, and another square, fig. 2. Let fig. 1 be one

inch square, and fig. 2 be two inches square.

Now it may appear to some that twice one is two, but it is not so in squaring any given size square, for while $1 \times 1 = 1$ so $2 \times 2 = 4$; therefore, any square twice as large on its sides as another given square, will contain four times as much surface, and this rule holds equally true of circles. Coming down now to "Eccentric's" problem: Let the larger circle below, fig. 3, represent a circle

twenty-one inches in diameter, and each of the small ones represent a circle ten and

one-half inches in diameter, and it shows at a glance that the larger one is more than twice as large as the small; in fact, the moon-shaped pieces remaining on each side of the small circle contains enough surface to make two more complete ten and one-half inch diameter circles. Now the rule for calculating the area of all circles is this: Multiply the diameter by itself and the product by the decimal figure .7854, pointing off four figures on the right of the last product, and calling it square feet or inches as the diameter may be given. To apply it to "Eccentric's problem":

We call $10\frac{1}{2}$ inches,	
by itself	10.5 inches ; multiply it 10.5 and we have

	525
	1050

multiplied by	110.25 110 25-100 in., this
	.7854

	44100
	55125
	88200
	77175

gives us	86.590350 83 inches and
nearly 6-10.	
A	21 inch circle multiplied
by itself	21

	21
	42

equals	441 square inches, which
multiplied by	.7854

	1764
	2205
	3528
	3087

gives us 346.3614 a little over 346 square inches, which is just four times 86.590350 square inches, as was shown to be contained in the $10\frac{1}{2}$ inch circle. The rule above given, and worked with the decimal .7854, is true for all circles, be they ever so large or small.

"Ink Bottle" asks: "Does an engine suck black smoke in (into?) the cylinder when it is shut off rolling down hill, unless it is reversed?" This question has been pretty freely answered in the negative by a number of correspondents within the last few months, and leaves nothing more to be said on the subject.

"Brick Arch" says we are not running Master Mechanics or roads. Well, Bro. "B. A.," I know we are not, or things would be different in many particulars, I imagine, but whether the changes would be for the better time only could tell, and God only

knows who will be M. M's. or running roads in twenty years from now. I have ever tried to learn all I could about firing and getting the best possible amount of work at the least expenditure of money for supplies, but I very soon found that our efforts in that direction could be badly hampered by our M. M's. in not so equipping their locomotives as to have them comply with the laws of combustion, or by our engineers in not so using the means placed in their hands as to second our efforts in behalf of economy, and this led me to think what ought to be done by others to help us. I had occasion to try the short cut-off and full throttle, and find it good a rule, but of course, it has its exceptions, like all other rules. When by means of a too short a cut-off we secure too much lead, and thus too much compression, we may be better off by not working so close, but I cannot admit that "B. A." uses good argument when he wishes to save the valve-seat at the admitted expense of fuel. Facing the valve every six months might cost five dollars, and by cutting off close for six months a thousand dollars has been saved by actual experiment. Which is best for economy, save \$5 or \$1,000?

Having had considerable experience with cooled boilers, I can fully agree with "B. A." in his reply to "S. I." but in regard to "L. H. E's." query, we differ, as "B. A." will see that I have given "L. H. E." an answer by assuming a given speed in addition to the dimensions given.

Mr. Lockwood gives us a humorous dog and bear story, by which I conclude that Mr. Lockwood is not quite sure who is ahead now, and as he evidently wants some points so that he may take his bearings, I will, by his special request, explain that I was simply quoting Mr. Lockwood's own words on "not two times nothing," but "four times something," and that the point between "nothing" and "something" was so very fine that I failed to see it. In order to more fully qualify myself to answer in regard to the varied forces of a driver, I close watched a pair of 5 ft. 8 in. drivers as we were speeding along at a mile in a minute gait, and comparing them with the slower freight drivers. I noticed, first, a centrifugal force which would make the wheel fly into pieces if it were not for the strength of its material or the tire holding it; therefore, as long as the wheel is strong enough, the centrifugal force is of no account. Second, the tangential force is closely allied to the centrifugal force, and no part of a wheel can strike off at a tangent unless it becomes separated from the rest; then, of course it would continue its movement in a line with its tangent until the laws of gravity brought it to a stop. Third, the hammering. I noticed a little hammering, but as it came about thirty feet apart, instead of

seventeen feet as it would by the circumference of the drivers, I was forced to believe that the jar was the result of the jump from one rail to the other across the expansion space, and not in any manner due to the counterbalance, for that seemed to be reluctant to come down fast, and just when about to strike it seemed to review its conduct and hold back, in fact, come to a stop, and then, as if ashamed of its action, commenced a retrograde movement. Fourth, some swaying; oh, yes, we swayed considerable in rounding curves, but that certainly did not result from the running gear, but was simply the result of the extreme speed. Fifth, the gyrating forces; certainly, they were there, for if they were not the wheels would not turn. The sixth and seventh actions in the list, weewahing and nosing around, I think ought to be combined, and in all my experience I never found more than one locomotive that had this peculiar movement, and even she would run miles without showing it, but at particular speeds and places she would nose around for awhile but leave it again. If our fast locomotives were to nose around for each revolution of the counterbalance they would have to wriggle rather rapidly, but I saw no signs of it either at twenty, thirty, forty or sixty miles per hour. Eighthly, we have the rocking motion. O, we rock a good deal, but not with the steadiness which would be required if the rocking motion was the result of the counterbalance, but whenever a low joint was struck she would naturally lean to that side, because on the other side the wheels would be on the center of the rail, as the rails are all laid so as to have joints opposite to centers. Of course leaning one way at one joint, and again the other way at another joint, may make the engine rock, but not by reason of her inherent faults, but by the uneven track. Several years ago I had a ride over a railroad along the Missouri river bottoms, and had I not been forewarned before reaching this bad spot I would have been thrown from my seat in the cab, for she rocked as bad as a ship in a gale, yet I did not think of blaming the counterbalance for it. Ninth, we have a rolling motion. Now, this is a motion which Mr. Lockwood very seldom mentions, but it is apparently a combination of rotation and translation, expressed in one comprehensive word, and more fully expresses the motion of a wheel on the rail than any other term. I have now endeavored to give my ideas of the meaning of those forces which Mr. Lockwood claims are to be found in the drivers, and have admitted the existence of some and denied the existence of others, which do not prove themselves, and will now await the further development of Mr. Lockwood's ideas.

Jim Dooley ventures to inquire why the

"hammer-blow" would not strike upward, and truly he has some show of reason for it, for according to all the usually accepted ideas on the movement of a wheel, the counterbalance moves so fast when going over the wheel that it would be more reasonable to place its destructive point up than down. While "Jim" appears to have some good points, yet in locating the fulcrum in the box, he has a moving fulcrum with resistance on the rail, and power between, thus having a queer mechanical combination of lever points. I see that "Jim" objects to a consideration of intricate questions for fear of forgetting some of the immediate duties. Well, if the "boys" can not take in more than one idea at a time they had best quit railroading at once, because a man with only one idea would be sure to be so situated at some time as to endanger life and property, because while shunning one danger he would involve himself in others. We have been discussing matters on locomotive management which may be deemed above the fireman's station, not only because some of our members are engineers, but to call attention to the fact that the consumption of fuel and the steaming of locomotives is not altogether dependent on the firemen, for if a fireman is not properly assisted by judicious management from the engineer, he will not be able to show a good record. If "Jim's" locomotive will not steam with a well burned heap of ten tons per day, I think the fault does not rest on the fireman or his fire, but on some other source, and it may be hard to cure. "Misery loves company," and "Jim" would like some of the "Elevated boys" to come down South and try their hands at shoveling ten tons per day. I suppose the L boys don't have to come unless they want to. Hope "Jim" will get to Galveston where he can have a good wash on the beach after each trip.

Friend Rauch's trip on that Swinerton locomotive does away with several objections I had to the wheel. In the first place I thought it would clatter and jar, but I find that by drawing a plan of the facets on a reduced scale that an inch flat deviates so little from the curve as to be hardly perceptible. Another thing was, that I supposed the action of the wheel would be to abrade the corner where two facets join, and thus tend to round them up, or perhaps to combine two or three in one facet. As described by Mr. Rauch it must certainly be an improvement, worthy of further trial and development.

"Sandy" makes his bow, and all hope to hear from him again, for as he appears to appreciate the Mechanical Department we hope he will be one of its workers in the future.

Wm. Gore gives some of his experience in removing plugs from a boiler to clean scale out of leg, and says "the flow of water

ceased entirely." I used to have a locomotive boiler to wash, and the handiest way I could devise was to fill it by a plug at the bottom of back boiler head. I used to insert the wood nozzle of our hose in that and fill above the top gauge cock, opening the whistle valve to let all air out that would go. I would then shut off the water, close the whistle, and pull the hose out. At first the water would rush out very strong, but in a little while its force would die out, and the plug could easily be inserted. I never let it run long enough to have it cease running entirely, nor did I think it would ever reach such a point, for in other smaller vessels I have found that air will ascend through the water in bubbles, and as a quantity of air is admitted an equal quantity of water will be discharged. I would, therefore, like to know whether Bro. Gore really meant to say "entirely" or only "sufficiently" to enter the plug."

Several more communications that deserve attention must lay over until some future time, for I fear I am encroaching space which might be used to better advantage than to chronicle the ideas of
Fulcan.

MARION, IOWA, April 1, 1889.

EDITOR MAGAZINE:—L. H. Evans asks how to compute the volume of steam, which may be made from any given volume of water, and how many degrees of heat it would require to make the change?

Forney, in his writings on the forces of air and steam, says: At the pressure of the atmosphere (15 pounds), each cubic inch of water will make 1,610 cubic inches of steam. At double that pressure, or 30 pounds absolute pressure, it will make a little more than half as much, or 838 cubic inches; at four times, or 60 pounds absolute pressure, 437 cubic inches, or a little more than a fourth as much as at the pressure of the atmosphere. The boiling point of water becomes higher as the pressure increases, and therefore the temperature of the steam, produced at such pressure, is also higher than at lower pressures; and as all gases are expanded by heat, therefore the volume of steam at the higher pressure is somewhat greater than in inverse proportion to its pressure, on account of its being somewhat expanded by the high temperature. To make this plain, if we take a cubic inch of water and convert it into steam of atmospheric pressure, its volume will be 1,610 times that of the water, and its temperature about 212 degrees. If we convert this quantity of water into steam with a pressure double that of the atmosphere, the volume of the steam will be 838 times that of the water and its temperature will be 250.4 degrees. If the volume of the steam were exactly inversely proportional to the pres-

sure the cubic inch of water at double the atmospheric pressure would make only 805 cubic inches of steam; but as the boiling point at that pressure is 38.4 degrees higher, the steam is expanded 33 cubic inches by the increase of its heat, due to the higher boiling point. Now, if we refer to a table on the properties of steam, to be found in Colburn's Treatise on the locomotive, we find that one cubic foot of steam of 100 pounds absolute pressure, contains as follows: Pressure above the atmosphere 85.3 pounds; sensible temperature in Fahrenheit, 327.9 degrees; total heat above zero, Fahrenheit, 1,213.4 degrees; weight, .2307 pounds; relative volume of the steam compared with the water from which it was raised, 270. So we find that 1 pound of water at a temperature of zero requires 1213.4 units of heat to convert it into steam of 100 pounds absolute pressure. But as steam is usually generated from water at a temperature of about 60 degrees, we deduct that much from 1213.4 which gives us 1153.4 units of heat in 1 pound of steam of 100 pounds absolute pressure generated from 1 pound of water at a temperature of 60 degrees.

L. H. E. also wants to know whether the formation of steam is caused by a physical or a chemical change in the water? To form ideas on the subject we had better find out what steam is. Steam is water changed into gas by means of heat. There are two kinds, called saturated, and superheated steam. Saturated steam is in contact with water, if it is separated from the water it may be heated to a higher temperature, it is then called superheated steam.

Now, if anything is changed from a solid into a gaseous state, I fancy there must be a chemical change and we find that water converted into steam is changed from the solid state into gas. With regard to the physical or natural change of the water into steam, we find that the boiling point depends upon a variety of causes, such as the purity of the water, and the pressure on its surface. Boiling which takes place at 212 degrees under the ordinary atmospheric pressure, on high elevations this takes place at a much lower temperature, because the air is lighter than it is on the low lands. The pressure of steam escaping from water boiling in any open vessel is exactly equal to the pressure of the atmosphere in which it is boiled. On the low lands the pressure is 15 pounds, and the boiling point, 212 degrees, but if we ascend higher where the pressure is only 10 pounds per square inch, boiling will commence at a temperature of 193.3 degrees and the pressure of the steam which escapes will be the same as that of the atmosphere, 10 pounds. If we descend below the surface of the earth where the pressure of the atmosphere equaled 20

pounds per square inch, boiling would not commence until the water was heated to 228 degrees and the pressure of the escaping steam would be 20 pounds.

I wish the readers of the *Magazine* to understand that I do not claim that my ideas on this subject are correct. I think that the water undergoes a chemical change by being converted from a solid into a gaseous state. I also think that it undergoes a physical or natural change, although the time that the change takes place depends upon a variety of circumstances which I have endeavored to point out. F. T.

PHILADELPHIA, Pa., April 20, 1889.

MR. EDITOR:—In replying to Mr. Lewis H. Evans' inquiries on page 314 of the *April Magazine*, I would say first that "to find the horse-power of a locomotive having 140 pounds of steam pressure with 18x24 inch cylinders," leaves the problem incomplete. In order to finish the question, Mr. "Evans" should have given the size of the drivers and also a certain speed per hour. There are four different kinds of horse-power, viz.: indicated, nominal, actual and dynamical horse-power.

What I shall try to describe is actual horse-power, the rule for calculating which is: Multiply the area of the cylinder in inches, by the pressure per square inch in the cylinder; multiply this product by the number of revolutions per minute; this again by twice the length of the stroke in feet, and then the product by two and finally divide by 33,000. (It is not necessary to define the term horse-power as it has been done in the *Magazine* at different times in the past.) For example: What is the horse-power of a locomotive whose cylinders are 19x24 inches, divides 4 feet 6 inches, running at the rate of 20 miles per hour?

Area of cylinder	283.5 inches
Maximum pressure in cylinder .	80 lbs.
Stroke, 2 feet, twice	4 feet
Number of revolutions per minute	121
$283.5 \times 80 \times 4 \times 124 \times 2 = 681.6 \text{ horse-power.}$	
33,000	

Now, those who have Mr. Sinclair's work on the locomotive will find this rule verified on page 350, by an entirely different example illustrating this rule. The maximum pressure is supposed to be as near as possible two-thirds of the boiler pressure, but the indicator only can give the correct amount of pressure.

Second.—How to compute the volume of steam which may be made from any given volume of water, and how many degrees of heat it would require in making the change I do not fully understand, but I will give three headings—may be they will throw some light upon the subject and again it may be some one else will be able to answer

where I am not. First.—To ascertain the number of cubic inches of water at any given temperature that must be mixed with a cubic foot of steam to reduce the mixture to any required temperature. Second.—To ascertain the quantity of steam required to raise a given quantity of water to any given temperature. Third.—To find the greatest quantity of water required for steam. Any of these three I can answer and they may be what the gentleman would like to know; otherwise the problem will be difficult to solve.

Third.—Whether the formation of steam is caused by a physical change, or a chemical change, in the water, and what is a physical and a chemical change is the third query. From what I can learn the formation is caused by a chemical change in the water. For instance, "many bodies, when their original constitution is altered, either by the abstraction of some of their component parts, or by the addition of other substances not before in combination with them, evolve heat while the change is taking place. In such cases the heat is said to be due to chemical action. We apply the term chemical action to those operations, whatever they may be, by which the form, solidity, color, taste, smell, and action of substances become changed, so that new bodies, with quite different properties, are formed from the old." "A familiar illustration of the manner in which heat is evolved by chemical action is to be found in the experiment of pouring cold water upon quick lime. The water and the lime combine together, and in so doing, liberate a great amount of heat, sufficient to set fire to combustible substances." "Heat is always evolved when a fluid is transformed into a solid, and is always absorbed when a solid is made to assume a fluid condition." "As water is changed from its liquid form when it is taken up by quick lime, therefore heat is given off." The heat produced by the various forms of combustion is the result of chemical action." The definition of the "physical," according to "Webster," given under four headings as "from nature; to bring forth; produce, etc., appears to my view to throw no light, whatever, upon the subject. As the water boils and the particles of steam arise and expand, a new body is formed called steam, with the aid of heat. When the heat is taken away this body relaxes and again returns partially into its former natural order; hence I think by the foregoing statements that the action of water formed into steam by the aid of heat is a chemical change.

The next time I write I will give some questions to be handled, but I will await the reception which this article meets with before venturing any further.

A Philadelphian.

EAST SAGINAW, MICH., April 12, 1889.

MR. EDITOR:—I notice in this month's *Magazine* that "Seeking Information" defines steam according to "Webster," as "the elastic air formed from fluid, into which water is converted when heated to the boiling point." From his reasoning one would suppose that after water is once formed into steam (or air, as he calls it) it cannot be reconverted into its former state. I think he is wrong, and with your permission I will try to prove it.

I find steam defined as "The elastic fluid into which water is converted by the continued application of heat." Again, "Water is composed of two gases; hydrogen, 89 parts, and oxygen 11 parts, by weight." And "Air is composed of nitrogen and oxygen; in the proportion of 77 parts of oxygen, by weight, to 23 parts of nitrogen." "Roper's" books are my authority for these statements.

We see at once that it would be impossible to convert water into air, for in the water we have only one of the gases that air consists of.

"Steam might be said to be the result of a combination of water with a certain amount of heat, and the expansive force of steam arises from the absence of cohesion between and among the particles of water."

"Steam cannot mix with air while its pressure exceeds that of the atmosphere."

"In a cylinder once filled with steam of a pressure of fifteen pounds to the square inch, all air is excluded."

"Now, as the existence of the steam depends on its temperature, by abstracting that temperature the steam will then return to water. Water, while passing into steam, suffers a great enlargement of volume; a cubic inch of water evaporated at a temperature of 212 degrees swells into 1700 cubic inches of steam. It follows, therefore, that if a closed vessel containing 1700 cubic inches of such steam be exposed to cold sufficient to take from the steam all its latent heat the steam will be reconverted into water and will shrink into its original dimensions and leave the remainder of the vessel a vacuum."

Lewis H. Evans wants a rule to find the horse-power of a locomotive. In estimating the power of a locomotive the term horse-power is not generally used, as the difference between a stationary engine and a locomotive is such that while the stationary engine raises its load, or overcomes any directly opposing resistance with an effect due to its capacity of cylinder, the load of a locomotive is drawn and its resistance must be adapted to the simple adhesion of the engine to the rail. The power of the locomotive is measured in the moving force at the tread of the tires, and is called the tractive force, and is equivalent to a load the locomotive could

raise out of a pit, by means of a rope passing over a pulley and attached to the circumference of the tire of one of the driving wheels.

The rule to find the horse-power is this: Multiply the area of the piston by the pressure per square inch (which should be taken as two thirds of the boiler pressure); multiply this product by the number of revolutions per minute; multiply this by twice the length of the stroke in feet, (or in inches; if in inches, the product must be divided by 12) multiply this product by 2 and divide by 33,000, and the result will be the horse-power of the locomotive.

For example a 19-inch cylinder, 24-inch stroke, 54-inch driver, running at the rate of 20 miles per hour. Area of piston would be 283.5 square inches; boiler pressure 130, pressure in cylinder 80 pounds.

$$\frac{283.5 \times 80 \times 4 \times 124 \times 2}{33,000} = 681.6 \text{ horse-power.}$$

33,000.

S. V. 286.

EAST SAGINAW, MICH., April 3, 1889.

MR. EDITOR:—I would like to say a few words to "Seeking Information" through the *Magazine*. So to the point.

"Steam can not mix with air, while its pressure exceeds that of the atmosphere, and it is this property, with that which makes the condition of a body dependent on its temperature, that explains the condensing property of steam."

"In a cylinder once filled with steam of a pressure of fifteen pounds to the square inch all air excluded."

"Water when heated to 212 degrees is converted into steam of 1,700 times its original bulk."

We suppose that we have a cylinder containing 1,700 square inches and put one cubic inch of water in it. By heating this water to 212 degree as stated above we fill the whole cylinder with steam. Now if this cylinder is immersed in cold water the steam will assume the state due to its reduced temperature or become water. What will you do with the 1,699 cubic inches of space before occupied by the steam, and where do you get the air to fill the cylinder?

"Seeking Information" says: "Water changes to steam under an atmospheric pressure of 212 degrees and to ice at 32 degrees." I only know of one thing that will produce steam, and that is heat and not pressure, and when you once have water converted into steam you may bring all the pressure to bear on the steam that you please and as long as the 212 degrees of heat are contained in that steam it will remain steam.

As this is my first effort (and very little of it in my own ideas, as you may see),

I am yours,

E. Sag.

MR. EDITOR.—Concerning the pleasant and encouraging experience of Wm. Gore in cleaning out the leg of the fire-box, I think the occurrence not very puzzling, nor do I think Mr. G. attributed his aid to the proper source. I have never noticed such a circumstance in connection with water in the boiler, but I have seen something quite similar in connection with a cider barrel. I have seen a new barrel filled with cider and tightly bunged. After being put in place on the rack I have seen the end bung knocked out and a pitcher held expectantly under to catch the cider. After a little spurt and dribble the cider would cease to flow. Was it owing to a vacuum in the barrel? If so, how did the vacuum get there, for the barrel full up to the bung with cider? Anyway, we could set the cider flowing again by simply starting the top bung, or by boring a very small gimlet hole in the top of the barrel.

I attribute this phenomenon as described above, and that given by Mr. G., to the pressure of the atmosphere, and that "Nature abhors a vacuum." When we pour water from a jug we notice a gurgling sound which tells us plainly that the air must get into the jug as the liquid runs out. When the throttle of Mr. G.'s engine was opened the air did not rush in to fill a vacuum, it simply went in as the water ran out; it took the place of the water. The water did not cease to flow when the throttle was closed because a vacuum was already in the boiler, but because, under the circumstances, nature refused to form a vacuum. That is, the water could not run out and leave nothing in its place. Mr. Gore speaks of "letting air in on top again." No doubt he "let out a dash of water" more than once during the cleaning process, and each time supposed "vacuum" was doing the work. If the vacuum idea was all right in the first place, the first time opening the throttle would settle that part of it for that time; the vacuum, if one existed, would fill instantaneously. Under the circumstances, there could not possibly be a second or a third vacuum formed in the boiler, and yet the water acted the same way each time. So the true solution of the question is that the water could not flow from the boiler and leave nothing behind; that the air could not get into the boiler through the plug-holes; hence the flow of water would practically cease until the air was by some means admitted into the boiler to take its place.

That some boilers under certain conditions will partially fill themselves with water from the tender while the engines are standing in their stalls is, on first sight, a rather startling fact. After one considers the matter carefully, however, the fact is not so startling and unaccountable as it is curious, and is only another demonstration of the immuta-

ble laws of nature. I think we convey a wrong impression when we say that boilers fill themselves under such circumstances by "sucking" the water from the tender.

When a boiler is absolutely air tight, which is, indeed, very seldom, and is brought from the road into the house and allowed to cool off, there is without doubt, a tendency to form a vacuum within the boiler as the steam is condensed. But the force which causes the water to flow into the boiler is not any suction from within, but is a force acting from without. It is the simple pressure of the atmosphere upon the surface of the water in the tender.

We seldom notice what a tremendous pressure the atmosphere exerts until our particular attention is called to the fact. Let me describe a little experiment which I have seen performed in school. We were told, to begin with, that the atmosphere, if left free to act, pressed equally in all directions—upward, downward and sidewise. Next a glass jar having an area of 20 square inches and a strength to resist a pressure of 175 lbs., was placed over the exhaust tube of an air-pump. The professor pumped vigorously a few moments, "pumping off the upward pressure," as he expressed it, until finally the jar split into several pieces. Now notice that upon this jar the air pressed with a weight of 300 lbs., upward, downward and sidewise. But as soon as the equalizing force of the upward pressure was removed so that the downward pressure exceeded it 175 lbs., the jar could not resist the pressure of the atmosphere to force itself in from above. But it was not suction that broke the jar. Just so within the boiler. While the outward pressure equals the inward pressure there is no tendency to change; but let the outward pressure grow less than the inward pressure, then the air will either force itself in to equalize that pressure or else force something else in ahead of it in its stead. Anyway, to say that nothing, of which a vacuum is, sucks something, is entirely wrong.

In reply to Mr. Lockwood, who calls my attention to a statement concerning the excellence of the present American standard locomotive, I would repeat that declaration more forcibly, if possible, than before.

"The present American locomotive may fairly be considered an established criterion of excellence. It is characterized by accuracy and beauty of workmanship and strength, combined with flexibility and adaptability to many difficult conditions of service—an adaptability that has given it the precedence where such conditions have to be met."

If this is not so let Mr. Lockwood inform us where we will find a style of locomotive that will excel the American locomotive in doing the work required of an American

locomotive. Or, if he pleases, and for want of something better, to describe his ideal locomotive. There are many superintendents of motive power, and railway managers, and even firemen, too, who are looking hungrily for something better than that which they have.

That our locomotives are not perfect we all know; but we can all believe that they will be made more nearly perfect in the course of time, and all the more so because such men as Wm. Lockwood are working at the problem.

Will some one explain all about working steam "expansively?" Will some one, also, please inform me how to calculate the load a locomotive can haul on a level track, at a given speed, and with a given boiler pressure? Use your own locomotive as an example.

Lewis H. Evans.

Queries and Answers.

MR. EDITOR:—If there is one writer for the Mechanical Department above all others that I especially like, it is Mr. A. H. Tucker, and it is for just such qualities as he himself has stated he possesses, *May Magazine*, page 401, "But those who know me best, know how hard it is for me to listen to statements, the correctness of which I disbelieve, without entering some form of protest. These, I am sure, will be willing to give me a hearing, even at this late day." It is for just such mechanical issues as these, and their discussion and final determination, that I understand the Mechanical Department was created, and until some great underlying mechanical principles of the locomotive are satisfactorily determined I trust "some form of protest" will be continued.

Query 1. Mr. Tucker says in *March 1889, Magazine*, page 218: "A surface has length and breadth, but no thickness." This may be a truth, if it is, I do not understand it. In my article on "Not Two Times Nothing, but Four Times Something," December, 1888, *Magazine*, page 893, I stated that a point above nothing, the bottom, had commenced a movement, etc., etc. Now, to make this clear, take the thinnest tissue paper and placing a driver upon it, the paper is in contact with the rail on its lower side, and the driver upon its upper; it is this upper side which has commenced a movement, the lower point being at rest, the top of the wheel must move four times as fast as this immeasurable, unseen and inconceivable "something above nothing," and that without regard to speed or diameter. It is this fact that makes locomotion a possibility, and a locomotive possible. When she is standing still she may be a locomotive in name, but I should say she was a *stationary engine*, with two engines, one on each side; block her clear of the rail, work her and she is a sta-

tionary engine; put her on the rail, work her drivers and she acquires locomotion.

This sheet of paper has some thickness, How it can exist without it and yet have length and breadth passes my comprehension. Won't Mr. Tucker please explain and illustrate?

On another point Mr. Tucker desires information, and to make it plain, as I understand it and at the risk of some repetition to enable me to ask a question, I will ask you to reintroduce four figures heretofore used by me.

Fig. 1.

Fig. 1.—In this position the piston head is moving *through* the cylinder with the connecting-rod *pulling* downward to cross-head, and the cross-head towards it.

Fig. 2.

Fig. 2.—In this position the cylinder is moving *over* the piston and the cross-head *away* from it, and the connecting-rod *pushing* from cross-head to rail, in the line towards the earth, which rocks the smoke stack.

Fig. 3.

Fig. 4.

In Figs. 3 and 4, we have her on the forward and backward centres. In these two positions the piston has reached the limit of its stroke and must therefore come to a full stop and reverse itself. Won't

Mr. Tucker tell us how it can be done without all the reciprocating and rotating parts in combination coming to a full stop together, and also the wheel to which they are attached also coming to a stop on backward and forward centers?

In Fig. 1, Mr. Tucker will find the center of the counter-balance in contact with the rail, and the point in contact with the rail at rest; this has come down by gravity from the top to rest and is now about reversing its movement with the maximum of leverage and power, to again return by lifting force to the top. If I have a "rotating trip-hammer" of three hundred (300) pounds, counter-balance, coming in contact with the rail at rest, at each revolution, at the time of its greatest power and leverage; will Mr. Tucker tell us why it is not like a hammer blow? Again, in Fig. 2, when the counter-balance is at its highest elevation and greatest speed, and reversing its motion from upward to downward, will it not, by centrifugal force lift, raise, or ease the driver from the rail, making loss of proper traction, and, by reaction make a flat place on the tire and axle? In degree only, as in the first instance, the tire and axle meet the resistance of the counter-balance on the rail, its center being at rest.

From the ability shown by Mr. Tucker in these columns. I am satisfied the company he is with has a valuable man, and that the best investment of money they could make would be to allow the experiments which I am about to suggest, be made in their shops, and in his presence.

First, balance a pulley, say three feet in diameter, by the very best system of *standing balance*, keeping in mind the fact that a *standing balance* is not a *running balance*; having placed that on the pulley shaft, we have the *center an imaginary line* through the shaft, and the axis the lower half box on which it rests. Now leave off the upper cap and speed it by a series of cone pulleys, until centrifugal lift causes the shaft to lift from the box. Keep exact data of all this; it will be interesting for future reference. Now make the *standing balance* at one point one-half pound out of balance, and leaving cap of box off, take speed up to limit, then put cap on and tell me, when you get 200 revolutions a minute, what happens, but beep back out of the way and look out; this is lesson No. 1.

Second, Take any locomotive in the shops, block her drivers up and tell me how many revolutions you get. Of course wood-blocking in her cellar boxes would be her axis of motion, and her *center of motion* would be an imaginary line through the center of the driving axle, as she does not and cannot rest on an "*imaginary line*;" she rests on the *blocking* and that is her *axis of motion*. When she jumps the blocking give me her speed and the company's rule for counter-balancing, and amount of it. So far we have been

dealing with rotation only, i. e., top and bottom moving at the same speed.

Third. This is the still unsettled proposition which I hope to see speedily solved, the hammer-blow of a locomotive's driving-wheels, and I need not repeat here what I have so fully illustrated and described so many times in this Mechanical Department. You have to do with this daily in your work, and you can experiment when running at any and all times. I will only repeat here enough to emphasize this article. On the rail the driver has the same for its *fulcrum*, it cannot have the center because that is an imaginary line through the center of the axle, and that would only be a support in imagination. When ten tons rests on one driving wheel, the axle-box is only a support and guide in which the axle revolves. The wheel now combines varying speeds, from "something above nothing" to the top, where it is four times the speed of that "something," while the point in contact with rail is the *fulcrum* and *is at rest*. In this condition we have a combination of *rotation* and *translation*, which makes locomotion and the locomotive possible.

In further answer to Mr. Tucker the dynamometer to which he refers is the same as the one to which he alludes. It is true the speed of translation is absent from the test; it cannot be measured on the rail, but the test will give it under the best possible circumstances, and it can never be less. The Dudley dynograph car will be used to give the exact condition of any track, and after these tests have been once made, then it can approximately be determined for any track. Very full data with illustrations was given in June, 1887, *Magazine*, pages 339 and 342. I ask the attention of the Brotherhood to the eminent gentlemen named therein as having reached these conclusions. A former committee of the Franklin Institute reached no results, and a world's committee of twenty-two scientists, at the World's Convention of Electrical Appliances, class XI, could reach no conclusion, although giving the matter much attention in committee. The subject was closely allied to their investigation as to the best balance steam engine for electrical purposes. Won't Mr. Tucker tell us when the engines are on back and forward centers, Figs. 3 and 4, if the speed of the train is fifty miles per hour, if crank-pin parallel, and connecting rods, etc., etc., are not carried forward at the same speed? If Mr. Tucker will get any skilled rider of a bicycle, one who understands the principle of its action, to hold a pointed rod in contact and alongside the floor and move the top, he will admit that the point is the "true axis of motion." Again, if Mr. Tucker will make inquiry, he will find that in even the very best of our railways the trestle work and bridges are matters of the greatest concern.

and when he says, "the frequency and manner of making repairs and renewals," is a strong point in the direction for which I am contending. As to coupling-pins and pulling-bars referred to, I did not say the pins came off the P. R. R., but they were used in express passenger service where a mile a minute is made, over much of the distance on a first-class track—one of the best in the country. Mr. T. must know that service like this and "freight service" are two vastly different things.

Again, says Mr. T.: "But it mystifies me when I try to distinguish any change in these conditions by substituting another pin and connections for the counter-weight. I believe it to be a well-settled point in mechanics that you cannot balance rotating and reciprocating parts in combination (crank-pin, parallel-rod, etc., etc., etc.) with rotating weight at varying speeds, or (the counter-balance) at any speed; when it is *guessed at* as the best for any given speed, say ten miles an hour, where would it be at sixty? Mr. Cloud says the blow is increased forty-four per cent. in an increase of speed of ten miles per hour, i. e. fifty to sixty. I undertake to say that substantially a perfect balance is obtained at *all speeds* by the Shaw locomotive, and by the application of correct mechanical principles. By a single valve operating two steam cylinders acting upon two pistons, cross-heads, connecting and parallel rods, and double crank-pins, equal distance from the center of the axle, moving in opposite directions to each other; here we have each rotating and reciprocating part balanced by an equal part, and this is "correct mechanics." When the lower connecting-rod is down as a *pusher*, the upper is acting at the same time as a *puller*, and all are *pulling* and *pushing* downwards together, the two are acting together as *one*, as shown in Figs. 1 and 2, where their action is separate and they are acting as two. Again, when, as in Fig. 1, the piston is moving through the cylinder, and Fig. 2 is moving *over* it, they are simultaneously moving *through* and *over* the cylinder, each column of steam controlled by a single valve, and each by *equal pressure* and *elasticity* controlling the other. The forces of two columns of steam acting as described, equalize and adjust themselves to the change of fulcrum on the rail, and the varying speeds in the wheel, i. e. each in twenty-four inches of stroke are just twelve inches from the center, the lower one at lower limit moving at twenty-five miles an hour, the center at fifty, the upper limit seventy-five; in this the pressure of steam moving the mass all in one direction, there is no backward movement, and cannot be unless momentum overcomes steam pressure, and this is not at all likely to occur.

This article has greatly overrun my expectations in length, when I began to answer

Mr. Tucker's very loud and very long call for me in May, 1889, *Magazine*. I am answering it from an advance copy, the cuts not having been inserted; when the May number comes to hand with them, I may answer further.

William E. Lockwood.

LOCH AERIE, April 26, 1889.

High Rates of Speed.

Within the last year, on five different occasions, it has come to our knowledge that locomotives running at high speeds have severely injured the rails and track of five different roads. This was the result, not in every case of over-counterbalance, but rather of the attempt to counterbalance the inertia in a horizontal direction, of the reciprocating parts. These actual facts take the action of locomotive counterbalances on rails and bridges out of the field of mere speculation. To show what may be the effect of these counterbalances at high speeds, we may state that in two cases of the five just mentioned the rails were bent vertically to such an extent as to render the track impassable at high speeds for over two miles in length, and in one case the wheel rose so far from the track in its upward gyration as to crush the wheel-guard and running-board. We have called attention to the necessity for giving much care to this subject before in these columns, and we wish to again urge all engineers who are interested in this subject, either from choice or because of their responsible connection with railroad corporations, to offer something, either in the way of design or suggestion, which will reduce the evil which already exists in the best designs, and allow locomotives to be driven at the high speeds of the immediate future without endangering the permanent way. We are not offering this as a result of speculation, hypothesis or incomplete theory, but rather as facts which are so obstinate and pertinent that two railroad companies have decided to order the removal of all that portion of the counterbalance in locomotive driving wheels which is intended to counteract the inertia of the reciprocating parts. In order to assist obtaining information for certain engineers of the highest standing, we propound the following question to our readers, with the hope that they will consider it a personal inquiry, directed particularly to themselves, and, as such, give it their best attention. Is it *necessary* to add to a locomotive driving wheel counterbalance an additional weight to resist the inertia of the reciprocating parts, and thereby reduce the motions of a locomotive known as nosing, lurching and galloping?

Is it not overstating the case to assert that the destructive influences should work both ways—in one direction, to injure the road-bed, and in the other, the wheel-guard and running board? If the effect is so disastrous downward natural laws would say it could not be so bad upward, and if the tendency is to make the wheel fly into the air it ought to be easy on the rail.

Our exchange, the *Railroad Gazette*, from which we clip the above, is generally good authority on matters of this kind, but sometimes things become mixed up, and it is hard to get them out of the tangle again. But perhaps the old proverb that "It's a poor rule that only works one way," may have been applied in this case.

It may perhaps be well to ponder the question propounded at the close of the article above and see what we can make of it.

Speed and Service of Locomotives.

Unprecedented Trip of a Locomotive Engine.

BUFFALO, April 1. The new engine, A. G. Darwin, of the Strong Locomotive Company, completed to-night one of the most unprecedented trips in the history of locomotive engineering, running the entire distance from Jersey City to Buffalo on the Erie road, a distance of 423 miles, with the regular day express, which left New York at 9 o'clock this morning. The engine, which is known among railroad men as the "Missing Link," came into town with a train of nine cars at 10:56 P. M. three minutes ahead of time. The train was hauled over the steep grades of the Eastern Delaware, Susquehanna, and Buffalo divisions of the Erie by the "Darwin," where four of the ordinary Erie engines are usually employed to carry the same trains.

George McKee, the engineer, was in charge of the "Missing Link" all the way through. The record made by the "Darwin" has only been excelled by the engine which carried the Jarrett theatrical troupe on a train of three cars, in 1875, on their trip to the Pacific coast on the Pennsylvania road from Jersey City to Pittsburgh, a distance of 444 miles.

On the special car attached to the train to-day were W. F. Tainter, treasurer of the Strong Locomotive Company; George S. Strong, the inventor of the engine; F. W. Dean, mechanical engineer in charge of the test; S. W. Baldwin, of the Pennsylvania Steel Company; C. M. Meadenhall, of the Pennsylvania Railroad Company; George M. Bond, of the Pratt & Whitney Manufacturing Company, Hartford, and representatives of the New York press.

A Locomotive that Easily Runs 423 Miles Without "Resting."

The engine A. G. Darwin of the Strong Locomotive Company glided into the Erie depot at Jersey City last night at 10:55 o'clock. She had just completed a straight run of 423 miles with the regular day express, train No. 8, behind her. Engineer George McKee, who has held the throttle for the last two days, during the great test which the Darwin has had, climbed out of the cab with a sigh of relief. The engine had made the round trip from Jersey City to Buffalo and back, with a heavy express each way, a distance of 846 miles, without a single mishap—a trip that has not been paralleled in the history of railroading. Ordinarily a locomotive is relieved by another after a run not much exceeding 100 miles. Its fire box must be cleaned, and it needs "rest" in other respects. The engine has several advantages over the ordinary locomotive, which its inventor, Mr. George S. Strong, thinks will revolutionize the fast express business all over the country.

One of the original features of the engine is the introduction of two fire boxes instead of one, which, it is said, gives greater steam generating power, and on long runs allows the cleaning of one box while the other is still in use. The valve gear is also different from the old style. Double valves are used instead of single ones. The engine weighs sixty-eight tons exclusive of the tender, which weighs forty when full of coal.

The Darwin, or the "Missing Link," as the railroad men call her, left Jersey City at 9:20 o'clock Monday morning bound for Buffalo to test her endurance, a run never before attempted. A special car carried railroad men who were interested in the experiment. The arrival of the engine ahead of time with its load in Buffalo on Monday night was chronicled in yesterday's *Sun*, but the return trip yesterday up heavy grades and with a heavier train was considered by the railroad experts on board as even a greater feat. On Monday the train was delayed near Callicoon by a disabled freight train twenty minutes, but by the time Binghamton was reached this lost time had been picked up.

Yesterday morning the Darwin left Buffalo at 9:15 o'clock in a driving snow storm with nine cars attached. She had had a good night's rest

after doing the work of four ordinary engines on the day before. When Hornellsville was reached three other cars were added to the train, but the Darwin didn't flinch. Five of her cars were heavy Pullmans. Even with this load several miles were made at a mile-a-minute gait. At Elmira two cars were dropped, and for the rest of the trip nine cars made up the train, which went over the curves and grades of the Delaware division on time at every stop. At each station all the available inhabitants of the town gathered around the Darwin in admiring crowds. The news of the run had been heralded from town to town, and every railroad man cheered the crew as the train whizzed by. The biggest grade on the road is from Susquehanna to Summit, a distance of eight miles, sixty feet to the mile. Two fresh engines usually take the train up the hill, but the "Missing Link" had no trouble in doing the work alone.

Soft coal was burned the entire trip, but the combustion chamber attached to the fire boxes did away with the cinders and soot, which are the accompaniments of the ordinary railroad journey when that kind of coal is used. Twenty-two tons were consumed by the engine, which is one-third to one-half less than the total amount burned by the four regular engines used on this run. Inventor Strong was well satisfied with the two days' work of his locomotive. He believes, though, that the Darwin will accomplish feats even more startling on some of the long runs of the Atchison, Topeka and Santa Fé, where she is to go ultimately.

The Recent Performances of the Strong Locomotive.

In our last issue we gave an account of the runs made by the locomotive "A. G. Darwin," on the Erie road, from Jersey City to Buffalo and back. The run was 422 miles each way. Going west it was made in thirteen hours, an average of 32.5 miles per hour. The time in motion, however, was 10 h. 9 m., giving a speed of 39.5 miles per hour. This was with a train of between 300 and 400 tons weight, including the engine (the number of cars hauled varied), with some long grades and a slippery rail. The eastward run was made the following day in eleven hours actual running time. This train was also the regular express train, and weighed about 375 tons. These runs are very remarkable in themselves and would be most creditable to any locomotive, and when it is remembered that they were made by an engine of a new type and one quite lately put in service, they reflect great credit upon its designers.

From time to time various patented as well as unpatented locomotives of peculiar design have been offered for trial, and the number of them that have sunk into oblivion after far less trials than those in which the Strong type of locomotive has proved itself worthy of consideration, can best be appreciated by a perusal of the files of the *Railroad Gazette* wherein they were described as produced. Locomotive designers are inclined to their peculiar notions regarding new styles of locomotives, and if all opinions were alike there would be but little progress. Therefore, it must be expected, when a radically new design of any portion of railroad equipment is presented, be it locomotive or anything else, that there will be a wide difference of opinion regarding it. The Strong locomotive is an innovation, and we may say a radical innovation, and one which will, to a greater or less extent, change or solidify the conviction of many locomotive designers, particularly regarding the possibilities of locomotive design. For years we have gone along with what is essentially the same type of railroad motor. The principles of its construction and its design have become so stereotyped that little or no really original thought is needed to produce the general plan of our American engine, but this cannot always continue, and, in substantiation of it, we call attention to the fact that at the present time we have presented to us two types of locomotives for trial on American railroads, both of which are in many respects new.

One of these locomotives, the Strong, has been designed with reference to the needs of American service, and, so far in actual trial, has given promise of fulfilling those demands to an extent which was scarcely believed when the general characteristics of the locomotive were first made public. The other, the Webb compound, was designed to meet the requirements of English service, and in that service has proved itself to be, so far as economical operation and high speed are concerned, a success without a doubt. In American service of the severest kind, which means heavy through express trains, she will probably find a class of work with which she is unable to cope—not because there is anything wrong with the principles of her construction, but rather for the reason that she was never intended for such service. Within the limits of her operation, the compound will undoubtedly prove to be a very economical locomotive. Between these locomotives it is not necessary that any choice should be made. Each may have advantages not enjoyed by the other, and a locomotive might be built embodying the good features of both.

The Strong type of locomotive represents what is the most successful attempt yet made to remove the two worst defects of the American locomotive. These defects are insufficient grate area and fire box heating surface, and an inferior steam regulation in the cylinders. The compound locomotive is not intended to remove these difficulties, but to increase the economy of operation by increasing the expansion of the steam. There is, then, no point of conflict in purpose or design in these engines. The compound principle, if found to be desirable for American service, can be as readily adapted to locomotives like the "Darwin" in addition to its other advantageous features as to any other locomotive. The improvements embodied in the compound locomotive do not obviate the necessity for, or conflict with, the improvements represented by the "Darwin," even when all are incorporated in the same design. All await the trials of the compound locomotive with great interest; meanwhile the Strong type is in actual service, showing in a practical way to the general observer its points of advantage, which are perceivable in daily use, and the recent favorable report of the operation of this new locomotive lead one to believe the design to be worthy of a fair and impartial trial in the severest American railroad operation. In economy, it has, in the rough and every-day trials, shown itself to be worthy of attention and investigation, and while such trials are not safe to accept as conclusive evidence, yet they indicate a possibility that in a series of scientific and accurate tests this new type of locomotive will show a gratifying increase in economy both in steam and fuel over the average American express engine.

It must be conceded that such economy is to be expected from a locomotive which has immense grate area and heating surfaces, the very essentials of economical fuel consumption, and which also has separate exhaust and steam valves which can be so constructed as to enable the regulation of steam to approach the ideal. Locomotive designers may hope to obtain information soon from the trials of this locomotive which will enable them to determine more satisfactorily than ever before the effect of large heating surfaces, large grate, and a near approach to theoretical steam regulation, upon the economical operation of locomotive engines.

The performances above alluded to are certainly remarkable, but they are not by any means the first instances on record that such distances have been run by a locomotive without a rest, for a similar feat was accomplished some years ago, when a locomotive ran 434 miles with a theatrical train. We have also heard that the officials of the

Erie propose to try to do the same with one of their best engines, and, of course, the result of this trial will be awaited with some degree of impatience and curiosity by the railroad people.

The new English compound locomotive, recently imported by the Pennsylvania, is also on its trial before the railroad people, but according to the description, which Editor Hill, of the *Locomotive Engineer*, gives in the April number of his paper, it would seem that it has a number of features which would militate against its favorable reception and adoption, while the economy claimed for it by using the steam twice is not yet fully demonstrated. Another point is that each pair of drivers is at liberty to turn without regard to the other pair, as there are no connecting rods, hence the low pressure and one of the high pressure pistons might be on the centres at the same time, and when in this position the locomotive would have to move by the power from one pin on one wheel only. But let us not judge too hastily but give our cousins over the water a fair chance to "limber her up," and then maybe some day we'll breakfast in New York, dine in Chicago, take tea in Denver, and wake up next morning in San Francisco.

Patents About to Expire.

Relating to expiring railroad patents, which become public property during May. Furnished by F. B. Brock, Patent Attorney, Washington, D. C.

- Car coupling, E. Lane.
- Car seat, Philips and Coleman.
- Lifting jack, Smart & Smart, jr.
- Supply tender with fuel, H. C. Land.
- Tie, E. J. Fenn.
- Printing telegraph, T. A. Edison, eight patents.
- Railway car, A. V. Ryder.
- Dumping car, J. C. & F. A. Wiswell.
- Coupling and Buffer, A. Stevens.
- Spring, J. J. Fields.
- Coupling, C. L. Horack.
- Bolt Holder for Rails, D. C. Baker.
- Railway, J. H. Connelly.
- Coupling, J. E. Marenness.
- Printing telegraph, J. E. Smith.
- Tunneling machine, A. W. Von Schmidt.
- Turn table for changing car trucks, Newberry, Dean & McMillan.
- Turn table for pivot bridge, A. Bonzano.
- Pneumatic brake and starter, C. A. Haskins.
- Car body, R. L. Ormsettler.
- Coupling, W. W. Pitman.
- Spring, H. N. Eggleston.
- Air brake, C. Fogelberg.
- Car axle box, C. A. Haskins.
- Chalking locomotive wheel, N. Schner.
- Brake, S. E. Harrison.

ASHLAND, Wis., April 12, 1886.

MR. EDITOR:—I will give you my theory of figuring out the horse-power of an engine in a short way, as I saw the question how to do it asked on page 314 of April *Magazine*. I ran stationary engines for eighteen years, part of the time in large institutions, but for the last five years I have been out of the business.

With an average steam pressure of 100 lbs. to the square inch, and 100 revolutions per minute, all you need do is to multiply the diameter of the cylinder in inches by the length of the stroke, also in inches, and divide the product by four and the result will be the number of horse-power, very nearly correct.

For instance a 6 inch cylinder multiplied by a 6-inch stroke is 36, and this 36 divided by 4, yields 9 as the horse-power.

Most all runners have but a common school education, and that is the case with me, but I have the practice, and can do a piece of work much quicker and better than I could tell or write about it and I suppose many of our brothers are chips from the same blocks.

R. Cunningham.

MR. EDITOR:—I would like to ask the brothers who are discussing the fulcrum of a locomotive, if the surface of the rail does not hold the same relation to a driving-wheel that the face of a belt does to a pulley? Is the face of the belt the fulcrum of a pulley? If not, why should the rail be the fulcrum of a locomotive driving-wheel? Is not the rail performing functions equivalent to those performed by an exceedingly stiff belt? Suppose you jack up a locomotive and put a pulley on the driving-wheels over which a wire rope is engaged and driven to pull street cars. Would the power of the locomotive be changed and would the fulcrum be in the wire rope or in the center of the driving-wheels.

Those who doubt that a vacuum is formed in a tight boiler when the steam goes down should try the following little experiment which will prove a good object lesson in natural science. Take a thin glass flask made to stand extreme changes of temperature which can be bought from most druggists. Put two or three ounces of water in it and hold it over a lamp till it boils. After it has boiled long enough for the steam to expel the air above the water, cork the flask tight and remove it from the flame. Then dip a sponge in cold water and apply it to the upper part of the flask. The water in the flask will then begin to boil again owing to a vacuum being formed on its surface. The sponge condenses the steam and causes the vacuum. In a boiler a vacuum is caused more slowly as the steam goes

down, but no less surely. Perhaps, a more striking way to illustrate the forming of a vacuum by condensing the steam is to take a pretty large tin flask and treat it in the same way as the glass flask. If it is of thin tin the sides will collapse through the pressure of the atmosphere. *Sam Rarus.*

Railroad Notes.

It is stated that cars will be running upon the new Pennsylvania, Poughkeepsie & Boston Railroad by the first of next month.

The force of men on the construction of the Pennsylvania, Poughkeepsie and New England Road at Portland, Pa., has been largely increased, and the work will be pushed forward with more vigor. The wooden bridge across the Delaware is being removed and an iron structure will take its place. Work on the road through New Jersey is also being pushed. The company is anxious to have the road between Slatington and Deckertown, N. J., open for travel this summer.

The Pennsylvania, Poughkeepsie & Boston Railroad Company, now building that portion of its line from the Delaware River at Columbia, across Warren and Sussex counties, N. J., to a connection with the Pine Island branch of the Erie at Pine Island, is already making preparations to start a milk train on or before May 1. That portion of the line between Pine Island and Augusta, twenty-two miles, is being rapidly pushed to completion, with track partially laid and engines and cars on the ground. It is proposed for the present to transfer the milk from the new road to the New York, Susquehanna & Western Road at Deckertown, but when the new road is completed the milk will go forward from Pine Island by the Erie Road. The officers of the new road have designated fifteen milk stations on the New York and New Jersey sections of its line as follows: Wilcox's, Liberty Corners and Milton in Orange county, and Pochuck, Deckertown, Lewisburg, Roy's, Pelletstown, Armstrong's, Frankfort, Northrup's, Augusta, Killbridge, Baleville and Swartswood in Sussex and Warren counties. The new road runs through a fine dairy region, and will add a large quota to New York's milk supply.

The Boston *Journal* prints the details of another railroad scheme, for which New York capitalists have succeeded in securing financial backing. There has long been much talk about a line between Hartford and Worcester, furnishing New England with direct communication with the coal region of Pennsylvania, via the Pennsylvania, Lehigh, Lackawanna and Erie roads. About the 1st of June the men who have invested so many millions in the Poughkeepsie bridge scheme will open this new road. The city of Worcester, soon to reach a population of 100,000, is one of the most progressive east of the Hudson River, and a very large consumer of coal, an article which will form the leading traffic of the Poughkeepsie bridge route. Then again, Worcester furnishes rail connection to other important consumers of coal, and that over roads that will welcome business with a new and independent connection with the coal fields. It is claimed that the distance between Worcester and Hartford can be reduced some fifteen miles in comparison with the old way, via Springfield. The Hartford and Worcester project seems to have revived the scheme to open a new route between Worcester and Boston. In fact, President Gilman advertises for contracts to build, as soon as the surveys are completed, about twenty miles of the new line from Worcester to Boston. Maps and plans will be ready for inspection on May 1.

The Rogers Locomotive Works, of Patterson, N. J., have delivered a 30-ton 14x24 locomotive to the East Louisiana road.

WOMAN'S DEPARTMENT

EDITED BY IDA A. HARPER.

All Correspondence pertaining to this Department should be directed to

MRS. IDA A. HARPER,
TERRE HAUTE, IND.

JUNE, 1889.

THE MEN'S CENTENNIAL.

At the time of this writing, the first of May, the newspapers are overflowing with accounts of the one hundredth anniversary of the first Presidential inauguration. If these descriptions served no other purpose they would be valuable because of their historical information. The hundreds of thousands who have read them with interest from day to day, have received such lessons in the early history of the United States as they would never otherwise have found time to learn. The orations at New York, Chicago and other points were pronounced by the most distinguished and talented men of the nation and the occasion was one to arouse the patriotism of every citizen. We feel a pardonable pride that we live in a country which, in every sense of the word, is the greatest the world has ever known. It should be the object of all men and women to prove themselves worthy of this honor. The man or woman, who, by word or deed, would attempt to destroy this government or to undermine the principles upon which it is founded should be met with universal contempt and censure, and should receive the severest penalty permitted by the laws.

In reading these magnificent addresses, which described so eloquently the advantages of universal freedom and impressed in such glowing terms the fact that every man is a sovereign and has a voice in the government, I exclaimed mentally, again and again, "Can it be possible these experienced speakers do not know that there are twenty million intelligent, law-abiding citizens in the United States who are as totally disfranchised as were those early colonists that threw overboard the tea and defied the king and fought in the revolution? Does any one suppose that if on April 30, one hundred years after the inauguration of our first President, there had been under our government twenty million disfranchised men, the speakers would have maintained a dead silence on this point? No! Every speech would have rung with the outrage, and these men would have their ballots if it should be necessary to call out the army to secure them."

This is only another illustration of the fact that it is impossible for one class to speak for another, each class must represent itself if it is to be fairly represented. Realizing this a large number of prominent women, through Mrs. Isabella Beecher Hooker, the worthy sister of Henry Ward Beecher, petitioned the managers of the Centennial to give women some place on the programme or the committees, or to grant them some recognition. Their petition was absolutely refused. From the beginning to the end of the festivities the women of the country were ignored, with the one exception that their ball dresses were described. We have many grand women, distinguished for their services during the war, for their literary ability, for their work in temperance and the various reforms, women who are the peer of every man who spoke, and yet through all the splendid Centennial exercises they were unrepresented, even though requesting a place, howsoever humble it might be.

Would this have been the case if every woman in the country counted for a vote? The Centennial was not a political affair, but women were ignored because it is customary to ignore them. Disfranchisement always means degradation. When women are voters they will be a power that no body of men will dare to offend. The possession of the ballot will change the entire status of woman, giving her authority, dignity and advantages immeasurably in advance of those she now possesses. Our posterity, who will celebrate the next Centennial, will be scarcely able to imagine a time when all women were disfranchised. Universal suffrage rapidly approaches, but it will not be finally and fully obtained without an effort on the part of women. This is right. Men waded through blood to obtain this sacred privilege. We better appreciate and more wisely use what we have worked to obtain. In whatever way her opportunities will permit, by voice or pen, by persuasion or argument, by bringing good lecturers into the community or getting subscribers for equal suffrage papers, or distributing suitable literature, every earnest, intelligent, conscientious woman should labor to secure this right for herself and her children. Her daughters need it as a matter of self-protection for all their varied interests, and the ballot in the hands of mothers, wives, sisters and daughters will save countless thousands of men and boys who can never be saved under the present loosely-made and badly executed laws.

In the *Magazine* for April, on page 306, appeared a poem entitled "The Narrow Gauge," which was published in the *Woman's Department* about a year ago, signed Alice O. Darling. Explanations are in order.

B. A. T. in the Brotherhood Department of the May *Magazine* writes a very nice and sensible letter on the subject "Is Marriage a Failure?" It is really refreshing to read such sentiments in contrast with the hackneyed complaint of the young man of the period that he "cannot afford to get married." The truth is he does not want to give up his own extravagant habits. It is equally true, however, that he must find a girl who is willing to practice a careful economy. It is useless to try to accumulate where one does all the economizing. It is too frequently the case that this gives to the other only so much more to spend. Married life requires a great deal of self-denial by both husband and wife, not alone in regard to financial matters but in habit, desire, speech and all that goes to make up daily life. And yet it is a sacrifice which, practiced in the same degree by both, yields richest returns of prosperity, contentment and happiness.

THERE is never a month that we do not publish a letter or two with a mental protest, and only because we do not wish to offend the writer. This has been especially the case with some of the replies to a certain gentleman whose own writings are especially open to criticism. If he needs a drubbing, of which there is not much doubt, we beg of our correspondents to administer it in a respectable manner. Some of the letters received in this relation have been really compromising to the dignity of the Woman's Department, to say nothing of that of the writers themselves.

SOME of the wives and sweethearts seem very much worried because the husbands and lovers wave their handkerchiefs as their train flies by and throw kisses to the girls along the road. We should say this flirting at long range and a mile a minute is the very safest kind. If the sisters have nothing worse than this to complain of let them thank their good luck and hold their peace.

UNLESS our correspondents pay some attention to our oft-repeated requests to make their letters brief we shall be compelled to decline them. A column in the Woman's Department contains about 600 words. Owing to the press of matter it seems hardly fair to give more space than this to one person. It is possible to express yourself quite fully in 600 words. Please try it and see.

In a letter received a short time ago the writer adds a post script saying: "Mrs. Editor, please don't put one of your foot-notes at the bottom of this letter, taking all the wind out of my sails and spoiling everything I have said." The request was so funny that we complied with it and didn't make a word of comment.

IN connection with this subject and in answer to many inquiries, this seems a suitable place to say that Mrs. Rachel Foster Avery, the Secretary of the National Woman Suffrage Association, Philadelphia, Pa., will furnish any applicant with the names of the state officers of her own state and from them she can obtain any desired information regarding lecturers, &c. The *Woman's Journal*, No. 3 Park street, Boston, Mass., will send a package of "Suffrage Leaflets," for ten cents. In addition to this, which is one of the best papers published, may be mentioned the *Woman's Tribune*, Beatrice, Neb., and *Woman's News*, Springfield, O.

BLOOMINGTON, ILL., March 6, 1889.

To *Woman's Department*:

Your *Magazine* at hand and contents noted While I am waiting for my fireman to come to his supper, I will write a few lines in regard to our boys. I noticed a piece about our Secretary and Collector. I think him a very nice man and also the Master, Mr. Joe Turpin; he is a fine young man, sober and upright and just the man to set a good example for others. The only fault I find with him is this, he don't think enough of matrimonial matters; he is all for himself. But then he is a first rate fellow for all that.

And another thing I noticed was about railroad boys flirting. 'Tis true they may have a wife or sweetheart at home, but when they are out on the road they are always looking out for fun. If there were not so many giddy and frivolous girls along the road there wouldn't be so much flirting done. When a girl flirts at railroad boys they flirt back, of course; they think it no harm, but I really don't believe in blaming a railroad man for everything that is done. I had a lady friend once say to me she wouldn't marry a railroad man for they were all "tough." If it were not for the brave railroad boys we would have a poor country. How many a poor man leaves his family and goes out on his train and does his duty, to be brought back a mangled corpse, never more to see loving faces or hear gentle voices that he has left behind. So don't blame the railroad boys. I hear my husband's footsteps coming so will leave you with a hearty God bless the railroad boys.

A Fireman's Wife.

For *Woman's Department*.

GOD'S CHARGE.

Be thou strong and of good courage,
Let thine heart be undismayed,
For around thee, to protect thee,
Heavenly hosts are now arrayed.

Onward, upward be thy journey
Toward the land that God hath given,
Christ doth now prepare thy mansion
In His father's house in heaven.

Let thine eyes look straight before thee,
Turn not to the left or right,
Keep truth's banner floating o'er thee,
And eternal life in sight.

—Max Martin.

For Woman's Department:

THE MAGAZINE.

I hail with pleasure every month,
The *Firemen's Magazine*;
Its clean, bright cover corresponds
To the reading found within.

Its varied subjects suit all tastes,
Grave, wholesome truths for studious minds,
And what more entertaining
Than its ample store of wit and rhymes.

Justice and candor mark each page,
Maintaining right, opposing wrong;
With words of praise for those that toll,
Which spurs them often to press on.

"Go forth in triumph, worthy book,
But few are thy compeers.
As in the past, thy prospects prove
More bright with fleeting years."

A cultured man its chief must be,
Honored by all his fellow men,
Naught but a master hand could wield
With so much power, his mighty pen.

May wisdom and discretion guide
His intellectual brain
To loftier thoughts, until at last,
Perfection's height is gained.

—Mrs. C. S. Miller.

FORT WORTH, TEXAS, April 2, 1889.

To Woman's Department:

You all might have known that the letter in the March number of the *Magazine* was from me, because I did not sign my name, as I believe I am the most careless one among you, the letter describing "Clarendon," I mean. Well, I have turned over a new leaf and will try to do better. Fort Worth is a pretty, little town of some 35,000 population, full of push and energy. Her people are given up to be the most enterprising and progressive of any place in the state, I believe. Spring has already opened here and the peach flowers have gone to join the things that were. Every thing is green and beautiful, there are some lovely yards here as I know you all will acknowledge when you come to visit the Spring Palace, which I suppose you will do in June, or at least I saw in the paper that everybody was coming. They will have a grand korporama and I know that you will enjoy our nice country. Fort Worth is the railroad center of the state. We have eleven roads running out from here and it is the home of a great many railroaders. The firemen have an organization here and are highly esteemed by all. The B. of L. E. and B. R. B. also have organizations. I have met a great many of them and find them universally well bred and respected, but I am getting somewhat like Mrs. Harper, I think they get more compliments than they repay and so I've "struck."

Shandy Maguire you have given yourself away. No "benedict" could write so well as you do of "Is Marriage a Failure;" if you were over the fence, you would not be so bold to display your sour grapes, and Lily McFadden may be happy yet as she does not seem to think it a "failure," by any means.

There are a great many nice people here, and I like the place better than any where that I have lived before; there are so many strangers that

one is often imposed upon, and only three days ago some one, pretending to be myself, canvassed the town taking subscriptions to a paper in Dallas, they said to be edited by "Irene." While I know this was a compliment in a way to what little glory I have gained as a correspondent for several leading papers, I wish all my friends to know that it was not me and that I do not intend to edit a paper, so I hope that no one will be imposed upon.

While writing I must acknowledge the receipt of the photo of little "Howard Debs Seiby," on the attainment of his first year. Dear, little, dimpled, rosy Howard, if your life could always be as bright and beautiful as your laughing eyes now are, the guardian angels would have no cause to watch over you.

The same mail brings me word that way out in Dakota, "Irene" has another namesake. May the bright angel of peace and love watch over this dear, little girl, and shield her from all harm, and grant little Irene all the brightest, most precious blessings that this life contains.

Some one wrote me that a Lodge at Stanberry, Mo., had been christened "Irene," in honor of myself, but as I have never seen the name in the *Magazine* I suppose it was a mistake, and I'm sure an honest one, too.

The B. of L. E. held a ball at Temple, recently, that was most delightful and well attended.

The President of W. C. T. U., of this place, Mrs. John Berquest, a most accomplished, beloved and useful woman, left us recently for her new home in Missouri. Her husband was a worthy member of the B. of L. E. *Irene.*

ST. LOUIS, MO., March 21, 1889.

To Woman's Department:

On the evening of the 25th of January, Peace Lodge, No. 109, gave their sixth annual ball, which was quite a success, and they also received a handsome gift from Harmony Lodge, L. S. B. of L. E. The members have always been very kind to the Ladies' Society and we wished to return their kindness by presenting to them a banner, as they did not have one. So about ten o'clock the ladies all marched upon the stage. The crowd gathered around, eager to know what was going on. The sisters then presented the banner, which surprised them very much. The banner is of three colors, red white and blue. On the front is the name, number, and when it was organized, and also a diagram of an engine in the center about a foot long. On the back is the motto in large gilt letters. We presented it with our very best wishes for the future prosperity of the Order.

I speak of it as I suppose the members forgot to mention it or perhaps they did not appreciate it enough to mention it, but the ladies would all be pleased, very much, if they said something about it themselves, but then I will not say any more about it, perhaps they all had other things to attend to. May their prospects ever be as bright and their hearts be just as true as the colors of their banner—red, white and blue—is the wish of a friend. *A Fireman's Sister.*

For Woman's Department.

TO SHANDY MAGUIRE.

[Written in reply to Shandy Maguire's poem,
"Is Marriage a Failure?" in April *Magazine*]

If marriage is a failure why did you embark
Out on the matrimonial sea of life?
Why not remained a bachelor and gone on your
"lark."

Instead of taking a wife?
Indeed, 'tis a weakness of most of your sex,
To enter the marriage state,
For then you have a wife, nursery maid and serv-
vant in one,
Whose shortcomings to your friends you can
relate.

Is marriage a failure? If so it must be
On the part of Mrs. Maguire;
And the wife of your bosom has the deep sym-
pathy
Of the fair sex who have to stand "fire" from
the
Point of your pen; you call us a fraud and say
that we "paint."

You tell of our "numberless tricks so alluring"—
But, Shandy, I'd ask if the men are all saints?
Are they faultless, requiring no abjuring?

'Tis true the young ladies wear frizzes and bangs,
Dress neatly in becoming array,
But what of the "make-up" of the fashionable
dude,

Who can be seen on our streets every day?
Who chews filthy tobacco and smokes cigarettes—
Says the "ladies are only a sham"—
Parts his hair in the middle, wears eye-glasses too,
Then expects us to call him a *man*.

Next comes the male "masher" of an uncertain
age,

With his smirks and his smiles so enticing,
He can tell you more tales than Solomon's ghost,
Many of which would be more surprising.
He may be a widower, or he may have a wife,
Who will live to mourn o'er her sad fate—
Lord, pity the poor woman when once tied for
life,

With such an artful deceiver for a mate.

When the baby arrives "papa" usually contrives
A scheme that doth work very well—
When the little one "squalls," for the mother he
calls,

Taen rushes away pell-mell;
His exit once made, and knowing the tricks of
his sex,

He will soon have an errand to town.
His poor nerves, are unstrung, he "can't stand
the noise"—

But his overworked wife! she can stand it the
year 'round.

And if you reply to this poem of mine,
In your answer I would ask you to mention
Where some of the men spend so much of their
time;

Is the lodge room the place of detention
As many assert? Or are they "corralled,"
Willing votaries, where wine flows most freely?
Where the dice-box and cards hold their victims
in thrall—

Where money is squandered so lavishly?

And now, my friend Shandy, don't vote marriage
a failure,

With all of its outs and its ins;
When your friends circle 'round at the tap of the
gavel,

Vote in favor of Mrs. Maguire and the "twins;"
These verses I've written in behalf of the ladies—
Who are of my own sex, as you know,
Unquestionably you will read them, then con-
sign us to Hades,

Then off on a "mash" you will go.

—Mrs. Nettie Bloom.

WEST OAKLAND, CAL., April 10, 1889.

AIMS IN LIFE.

Life is as a canvas which is continually rolling
out before us, and on which we have the privilege
of portraying our characters. And as we are cre-
ated it is left to our own option and consciences
to write just such a character as we choose.
God in the formation of man, created him as we
are told, in his own image; supplied him with
intellectual and reasoning faculties, and gave
him a judgment by which to judge for himself of
His created beings; sent him out to battle with
the world and its elements, and to build up such
a character as he could by his actions and aims
construct, and to portray it on the rolling canvas
which illumines up before our gaze. There are a
great many persons who spring into being,
breathe the breath of existence, crawl sluggishly
along the pathway of life, who do not even raise
one arm to paint their character on the screen
before them, and who at last drop off from the
awful precipice of time, and are heard of no more
forever. While others spring into existence who
are surrounded by favorable circumstances and
are full of hope to accomplish something in the
world, and commence with trembling hand and
dizzy brain to write good their characters. But
ere long they become discouraged, grow weary
in the attempt to write longer, drop the recording
pencil from their grasp and leave a character be-
hind them that may live for a little while, then
is gone to be forgotten. But there is another
class who may live in the same generation and
age as the others, who are with pencil in hand,
writing such a character as will be forever re-
membered, and serve as a living panorama for
the mighty host that is following them on to the
grave.

Oh how few they are who portray such charac-
ters as these—characters that will be cherished
from generation to generation around the hearth-
stone of every household, be admired by the
great men of the age, be transported from sea to
sea and from nation to nation, to be read and
studied by the wondering people, and to be
spoken with reverence even by the little children,
who will nurse them more carefully as they grow
up to manhood. It is apparent to the eye of the
close observer, that these exponents of greatness
have, by divine inspiration, made radiant the
pathway, in which they have beckoned us to
follow. And we ask ourselves the question, shall
we not resolve to write such a character as will
coincide with them in the fullest extent of their
strength and nobility. There are many different
occupations in life in which we have the oppor-
tunity presented to us whereby we may try our
skill in performing the duties that are necessary
to become such an individual.

There are many different forms of life we will
have to conform to in order that we may procure
those qualities that are indispensable in the for-
mation of such a character. There are a great
many more temptations we will have to crush,
before we become pure enough and feel capable
for such an elevation.

But there is one quality that is always neces-

sary and in every vocation of life, which can be relied on as one of the principal elements of the foundation of such an one. We will never have to deviate from its course or leave it alone to run out after other things, which we may think will build a more firm basis for us to begin with. The quality we have reference to is what we call, **RIGHT, or TRUTH and JUSTICE.**

In order to carry out our point more strongly we will refer you to several examples, where persons have deviated from its course and are lost—lost forever. I expect there is no one but that has heard of the famous infidel, Thomas Paine. He was a strong opposer to the truth, Bible and religion. He died cursing his creator and is now burning in that pit where there is eternal torment and suffering. Another one is Voltaire. He, too, was a disbeliever in religion. He did not believe there was a God and Savior above. He also was an opposer to things that were right and just, and went abroad proclaiming the same. And for his reward he can now almost be heard crackling in the flames of perdition, and his groans threaten to rend the earth beneath our feet. [This is a mistake, it is Natural Gas.—Ed.] Another one was Francis Newport. He was favored with good religion and literary acquirements, and was a man of good sense, until he began listening to the voice of his associates who converted him into a raging infidel. And on his death bed, he cursed his maker, cursed man and himself and everything that pertains to right. And his spirit took its flight to the infernal regions of outer darkness, to be tormented forever.

Now, what kind of characters did these men leave behind them in the world? Do their characters belong to that class which will be looked upon by men with praise, and thanks, that such men lived in the world and left characters behind that would be well to copy after? No, they belong to that class which people will look upon with scorn and indignation, as they pass from generation to generation and children will point at them and exclaim, "There is the character of a man that was opposed to right, and left the world in sorrow and woe.

Now we will present to you a few examples of persons who lived and acted right, truth and religion. Our first one will be Robert Boyle, who was an eminent philosopher of the seventeenth century, and to whom we are indebted for the discovery of some of the elements of the earth and air. He was a true professor of religion, as was shown by his actions and aims in life, and his desire to do good to all mankind. He never deviated from the course of right, to seek out its antagonist, wrong. But he was a faithful servant in the good cause in which he was engaged, and his greatest efforts were to induce men to refrain from sinning more. He was loved by all his fellowmen and great sorrow was produced when he came to pass from this to Heaven above. In his dying hour he thanked the Lord for having mercy upon his soul and he passed into a gentle sleep from which to wake no more, while

his spirit takes its flight and ascends far above the skies where it enters the golden gate to sit upon the throne of God, and sing the song of Moses and his Lamb. Our next is John Howard, who was well known throughout the world for his good principles and especially by the patients of the hospitals, and convicts of prison cells, for his unrestrained kindness, unto them by speaking words that cheered their souls and made them rejoice. He, too, was a worthy approver of right and just, and he went abroad in the world exhorting men to do good. When he had fought the good fight, and the time had come for him to pass to heaven above he sweetly fell asleep in the arms of Jesus, and was carried home to heaven.

Our next is the Christian Martyrs who endured torture at the stake, suffered the head to be severed from the body, their bones broken into pieces, in order that this element, **RIGHT**, should live. They are now encircling the throne of God in heaven, all, are playing upon the golden harps of His angels, singing with sweet voices the psalms of David, and will continue while God continues to reign. These have left characters behind them that will be cherished forever.

We have now presented to you a few of the different aims which men make in life, and you can readily perceive the one you would prefer. Being right, from the lowest beggar up to a seat in the Congress of the U. S. is one of the noblest principles of humanity. But it is seldom we meet such persons as these. How few they are; would to God they were many. Then our sinful government, which is so disgraced by its wickedness, would be converted into a paradise of glory, of which we could truly boast as being a moral guide to the old world. If we would always make our aims at right, morality and religion, who could estimate the difference there would be in our government, in twenty-five or thirty years? Everything of a wicked, nature would be banished from our land, all would be peaceful and joyful, every man would care for his neighbor as for himself, we would enjoy each other's society more freely, and sweet communion nearly equal to that which the angels have in heaven, would entertain us, and the years would roll away pleasantly and delightfully.

But there is one thing which we must mark, that when we find a man is right in whatsoever position we wish to place him, he will leave a character behind which will live while the human race continues in existence, then it will be inscribed in the book of life by the recording angels of heaven to be shown to those who failed to perform their duty.

Audry.

[This letter is from a new contributor who has some very good ideas, but we would like to know how she obtained such accurate information regarding the fate of the various persons mentioned in her letter.—Ed.]

He who will not reason is a knave.
He who dare not reason is a slave.
He who must not reason is a fool.
He who cannot reason is a fool.

JUNE, 1889.

BOSTON, MASS., March 26, 1889.

Editor Firemen's Magazine:

In regard to the proposed departure in our last convention, I would say that it is a very good thing to remember that the B. of L. E. has had plenty of time and opportunities to rectify the mistakes that have been made had it been so inclined. In regarding the members of the B. of L. F. as being unfit to become members of, and to represent the B. of L. E. at its conventions, it is hardly possible that it could always have been hasty legislation, near the close, because at the next meeting the delegates could have rectified the mistake; so you can see that it is not hastiness, but a bad case of the majority representing their convictions by voting to sustain the laws and all the reason that they give is, that "you cannot serve two masters at once." If they take that stand, surely the corporations must be badly served, but that is all the excuse they give. This hasty legislation at the close, makes me weary. Our members must remember that in rendering justice to others, that we should render justice to ourselves, but we have not been doing so. We have been doing ourselves a great injustice, for we have expected to have changed laws that are as unrevocable as those of the Medes and Persians, we have been waiting, expecting to have others remedy that which we can remedy ourselves. We should remember that old adage that says, "When you want anything done well, do it yourself." Now, a certain door has been locked against some of our members, but let it stay locked, and we can make use of our own doors that stand wide open to all on the foot-board, keeping no man out that is deserving, because he is a member of other organizations, extending to him the privilege that is guaranteed to all in this free country, that is to say, the right to use his own best judgment without dictation from any organization, whereby he will lose the privilege he now enjoys. It is like some cruel order that would compel us to leave our homes where we have lived all our lives, where we have learned to love and respect those with whom we have come in contact, a home that contains memories that naught but death can efface; to leave all this and go and live among strangers when we could perform our duty just as well where we are if it were not for the cruel order. Will you do that from which your every thought rebels, or will you stay with those who taught you your first lessons?

And another thing that I have had my attention called to, is the fact that some of the members of the B. of L. E. are giving advice to young firemen who have asked in regard to joining the B. of L. F. They are told that it does not amount

to much, and clinch the advice by saying that it is money thrown away, because, when you get to running you will have to leave the B. of L. F. to join the B. of L. E. as, of course, you will." What do you think, brothers, will they have to leave? Will they have to lose all they have paid in the B. of L. F.? What do you think of the wise heads that figure out facts like these? Where will your Brotherhood be if the firemen take that advice? Just think a moment. Do you think there is the slightest chance of a change in certain laws? We must be "chumps" if we do. As I said in my last letter, the only way to do justice to our engineers who are asserting their manhood by staying with us, is to add that sacred word of nine letters, viz: "Engineers," to our Brotherhood, and don't you think for one instant that the press will break or the type pit because we add that sacred word in conjunction with that of firemen. Brothers, the sacredness of that word is all bosh. The spell is broken. The glamour that surrounded it has fled. I wonder where it went. Shall we continue on our bended knees, pleading and supplicating for justice from that graven image, that idol of organized selfishness, when we have but to get up and ask for what we want to receive it? Do we want remarks made that "the firemen are like poodle dogs, following at the heels of the engineers ready for their beck and call, taking whatever the engineers may think is good for them regardless of the firemen's wishes?" Is not this a pretty state of affairs to find ourselves in? Who is to blame for it and what are you going to do about it? Are we going to let them whistle to us and we answer, or are we going to attend to our own affairs and build up our Order whose very foundation stones are crumbling by insidious attacks? Ask your Grand Officers if the ratio of the applicants have not fallen off much more so than that of the B. of L. E.? The time has come brothers, to choose and define our position, and say whether or not we will be the tail to anybody's dog, or determine to have a dog of our own—bark, bite and tail. Come, let us hear from the rest of our grand Brotherhood in regard to the proposed addition to our name and remember that we are perfectly capable of adjusting our own affairs without help from outside parties. Now, let me explain to you something that will be useful to us all, which is, that in founding an organization successfully, it must first have a good cause to exist, (we have that cause.) Then we must have a constitution to govern it without flaws, for philosophy teaches us that the slightest flaw allowed to exist will ruin the whole structure, so when we find a flaw we must promptly apply the remedy. Our constitution has been promptly amended when flaws were discovered, so far, and that is what has made our Brotherhood so successful in the past. But now our ranks are slowly decreasing, so there must be a flaw somewhere, and I think I have found it, and also the remedy. Now, apply it promptly and our Order will go on as before.

Now, brothers, I hope you will awake to the

true sense of our position, and let us work as we have in days gone by, every man at his post and stay there until we are safe in harbor. I think that is enough for you all to consider for a while, so I will subscribe myself,

Charles H. Trenholm.

PADUCAH, KY., April 8, 1889.

Editor Firemen's Magazine:

Will it be in good taste for me to say that through the kindness of J. H. Long, your Agent here, I have been permitted to read your *Locomotive Firemen's Magazine* for some months past. I honestly consider it a credit to the craft. Of course, many of the articles bearing upon matters incidental to locomotive workings are beyond my powers of judgment, but thirty-five years experience as a messenger and agent in the express service, have familiarized me with much of the duties of the craft, where faithful performance of their duties makes our calling safe and pleasant.

The literary portion of your pages is good, very good. The "Narrow Gauge," in April is worthy of reading and reading again, and often shall we, who look toward the other shore, be able to rejoice that we can pay our fare and have a sure transportation to the heavenly land.

One of the greatest desires of my old age is to see the advancement of the working classes of our country mentally, peculiarly and spiritually:

Oh! Master of our common weal, before Thee we appear;

Rebuke the love of money that breeds such evil here,

And teach the haughty autocrats, in characters of fire,

That every honest laborer is worthy of his hire.

For man's deep passion will not rest in quietude and peace,

Except the Juggernaut of wealth its cruel march shall cease,

Beneath whose wheels the living poor are crushed into the mire,

While blood, and brains, and life itself, baptize the golden tire.

We say, God speed the prayers of the workmen of our land,

Whose little ones are fed by bread from out a grimy hand;

For honest toil demands its own, and must not be denied,

Or men will hear the breakers roar, and meet the swelling tide.

A. H. Nunemacher.

TACOMA, W. T., April 12, 1889.

Editor Firemen's Magazine:

The stand the *Magazine* has taken in regard to concessions to the B. of L. E. meets the approval of every fireman I have talked with. I think your suggestion of changing the name of our Order from Brotherhood of Locomotive Firemen to that of Brotherhood of Locomotive Engine-men would be adopted if submitted to a vote. The settlement with the scab route gives anything but satisfaction to engineers and firemen. This is the sentiment of the west. Then, as to the obnoxious laws of the B. of L. E., if the western membership had their way, the laws

would be repealed. But it is the same with the B. of L. E. as it is with the O. R. C. and politics, the greatest strength is east of the Missouri. The day is coming when there will be a split in the B. of L. E. as is the case with the O. R. C. In 1883, when the Northern Pacific was building, we were running 200 miles for \$400 and wanted a little help. Then the engineers sent us word "We are satisfied, we have no kick—what are your troubles to us?" A man cannot live for the same amount in this far West, as answers the demand in the East. It is very poor feed which a man gets for 25 cents a meal in Tacoma. If you want a square meal, "It will cost all the way from 50 cents to \$1.00. Then there is your room, neither landlady nor landlord speak of less than \$10.00 per month for a decent room. There is one other question and that is the scab route beneficiary system. Scabby Stone and his colleagues could not down the Brotherhoods by perfidy, but they think they can do it by \$60,000 blood-money for beneficiary purposes. Where is the money to come from? It must be from the same place they got their \$1,000,000. If a man can show me when a laborer was ever the beneficiary of any corporation, I would be thankful, for I have failed to find an instance of the kind, and I have tried both continents. The Brotherhoods should keep on the alert, as the scab route is not the only one to try to own their serfs. There are others in the field. Better put the lock on the stable door before the horse is stolen. There is on most western roads what is called an "hospital fund." It is nothing more or less than downright robbery. I would rather go on the county than to most of these slaughter pens. Dumb brutes get better treatment in most places than is bestowed on a man in a railroad hospital.

Cum Tuse.

MEMPHIS, TENN., April 28, 1889.

Editor Firemen's Magazine:

The ball given by No. 206, was a grand success, socially and financially. The attendance numbered between 400 and 500 people, and everything passed off in splendid style. At each dance announced, the floor was crowded, and everyone seemed to enjoy himself. We had the finest hall and the best band in the city, and we had guests from Springfield, Mo., Cincinnati, O., Amory, Miss., and Illinois was represented by both ladies and gentlemen. Dancing commenced at 9 o'clock P. M., and continued until 3:30 in the morning, and even at that hour, there were many who seemed reluctant to give up the enjoyment. The attendance was not confined to railroad people, but business men of all classes and some of the best people of the city were with us. A number of ladies told me they had felt a "little backward" about coming, as they had "always supposed railroad men were a rough set," but they were glad to say their "opinions had changed" and that "in the future a railroad man would stand high in their estimation."

Fraternally,

Chas. A. Crane.

SOME MORE COGITATIONS.

BY SWITCH.

MR. EDITOR:—I have read what you've had to say of the B. of R. C.

And am delighted with the progress the Brotherhood is making.

The time has fully come, that's the way it looks to me,

For just that sort of manly Brotherhood undertaking.

I see that Col. Howard

Is a man, and not a coward.

A man in active sympathy with men on train and track,

And you can bet your bottom dollar

I throw up my cap and holler,

'Rah, for the B. L. F. that's at Col. Howard's back.

MR. EDITOR:—On the road where I am firing we have a number of "runners"

Who are B. of L. F. engineers, and who swear

They're going to stick,

You can bet your pile on that, for all of them are "stunners,"

And they haven't forgotten when they handled scoop and plek.

Every once in a while,

An engineer with gall and gulle,

Tries in various ways to make them apostatize,

But you ought to see 'em bounce 'em,

And lustily denounce 'em,

Something after the style, "Get away, d—n your eyes."

MR. EDITOR:—I see you've made a proposition to bring about a change,

In the name of our Order, and I hope you will succeed,

For I think that succe's will seriously derange The autocratic B. L. E., the self-constituted royal breed.

Every firemen I've met,

Says "That's it, you bet,"

And they're glad to know that our *Magazine*, When "it makes ready" and takes aim

Always bags the game,

And they say "that's what's the matter with our Gene."

MR. EDITOR:—They say we're losing members, owing to the fight

We had on the "Q." just to help the engineers.

Shouldn't wonder if 'tis true, some men easily take fright,

And go bellowing around like a herd of Texas steers,

But the thousands who stand

Are the men who have the sand,

The men who can be trusted in the battle and the storm,

They're soldiers and sailors,

Not ninth of men, tailors,

And that's a fact, Mr. Editor, as sure as you are born.

AIR LINE JUNCTION, April 10, 1889.

Editor Firemen's Magazine:

As we read the *Magazine* from beginning to end, finding different points discussed in it every month, I would ask for a short space for a few expressions.

The Mechanical Department is well represented and in it I find some very interesting and instructive articles. Federation is argued to a considerable extent, but not to a decisive end. It seems plausible that there might be some method by which different orders might federate as far as they feel disposed. During the Colonial period confederation was the order of the day and finally led to the formation of free government. Now, we have a plain case where "History repeats itself."

We have noticed articles solicitous for subscribers for the *Magazine*. Would it not be a capital idea for every brother firemen to take it upon himself to obtain one subscriber for same, which could be done without much exertion and would increase its circulation immensely.

The portion of the *Magazine* devoted to criticisms upon the B. of L. E.'s action toward the B. of L. F. is undoubtedly well-intended, but to rectify past doings is impossible. "Let the dead past bury its dead." The B. of L. F. might show its appreciation of the B. of L. E.'s action in some way which would be unnoticed outside of labor organizations. The aim and object of organizing a *Firemen's Order* was for the purpose of uniting that class of workmen and elevating their social, moral and intellectual standing; which, necessarily will promote their general welfare. No person can become a member of said Order unless he has served as a locomotive fireman at least one year. But, if afterwards, he takes up any other vocation, he may retain his membership with the Firemen's Order. Consequently, the Order has members that are following other pursuits. If any man has become an engineer and feels so much superior in his mind to that of a fireman, that he must withdraw from an HONORED Order because its name contains the word *firemen*; he might well withdraw for no organization is benefitted by a bigot. To change its present name to that of Locomotive Engine-men and have a classification of insurance would undoubtedly have a tendency to obtain a membership largely composed of engineers. The B. of L. F. knows very well that its welfare lies within itself and not in those on the right hand side. To have the minority of membership of firemen, in actual service as such, means the controlling influence will be against them. The prosperity of the B. of L. F. is assured only by the Order being controlled by men on the left side. One should say naught against "the right hand, for if it offend thee, cut it off and cast it from thee." The left hand, as a class, are constantly cultivating a spirit of harmony between themselves and their employers, and are steadily working their way to the front. Agitation of a serious nature with other organizations has a tendency to bring about adversity. A quiet course adopted by the firemen will prove to be the best and will prove to be the best and will bring success and respect upon their order.

Hoping all are not impatient, I remain,

Faternally yours,

A. S. Meade.

[The suggestions of Bro. Meade in the foregoing letter indicates thoughtfulness and a desire to promote the welfare of the Order and as such, are entitled to special consideration. With a little exertion every member of the Brotherhood could obtain a subscriber to the *Magazine*, and thereby contribute immensely. We hope Bro. Meade's suggestion will result in giving us a large increase of subscribers. "Confederation" is no longer discussed from *why* and *wherefore* stand-

points. *Why* organizations should federate is well understood, *how* is still under discussion. But where there is a will there is a way, and the way will be found. There are doubtless some things relating to the welfare of the Order that should be kept from the outside world, but there is a limit to such prudence and patience. At San Francisco the B. of L. E. stabbed the B. of L. F. It was a fratricidal stab. With the wound agap the B. of L. F. went to New Orleans and quietly protested against the unbrotherly act, and as a response to its pleadings received another and a still more malicious wound. All of this was borne quietly, patiently. Then came the C., B. & Q. strike. The B. of L. E. wanted the assistance of the B. of L. F. Forgetting wounds, insults, ostracism, every ungenerous word and deed, the B. of L. F. responded with a fidelity to old-time friendship, than which there is not a more heroic illustration on record. It won universal applause. After this came Richmond and here again in defiance of promises and professions the B. of L. E., in the presence of the Grand officers of the B. of L. F., more than duplicated every insult that had been previously offered. Open, above board, were the insults offered, far and wide were they heralded, and still there are those who would advise the B. of L. F. to be quiet; and still there are firemen, members of the Brotherhood, who accept the insufferable humiliation, and on their bellies crawl into the B. of L. E.

The name of our Brotherhood should be changed, simply because its present title is not sufficiently significant. It is a brotherhood of enginemen. There is something in a name. In legislative proceedings the title of a bill must express its purpose, not less nor more, simply the facts. "Enginemen" for the name of our Brotherhood does this, nothing more, nothing less, and is therefore worthy of consideration.—ED. MAGAZINE.]

STANBERRY, Mo., April 29, 1889.

Editor Firemen's Magazine:

It has long been my desire, owing to the interest I have felt in the B. of L. F., to say a few words more directly to the Brotherhood men, than through articles in verse; for many are apt to think, and justly too, that a person writes poetry for popularity or praise. But I hope some day to be able to convince the readers of the *Magazine* that this is not the case, although I know of no other periodical that could give a wider circulation.

The whole history of my contributing to the columns of the *Magazine* is about this: The first article of my writing, "Death of an Engineer," appearing in the February number of 1888, was written for a part of my school work, and given to one of the "Boys of '56" by request, for publication. A short time after that, I re-

ceived a very encouraging letter from the editor, requesting me to contribute as my time would permit.

This I have done; and in doing so, I have felt a growing interest in all railroad men, especially in this Order, and the kind letters from my unseen friend, Eugene V. Debs, have always been a source of great satisfaction and encouragement to me; for my capacity is not so great but it requires some labor to prepare even the simple lines that have appeared above my name, and in thinking over this matter, I was led to write a few lines which I would like to appear in this number, as a "Railroad Hymn." This will make my fourteenth article in these columns, and, now, I want to make a very strange request, and that is this:

As many as have ever read any of my productions, and have been interested to the amount of one cent, will you just take a postal card and write me few words, only to let me know whether the readers have as much interest in me as I have in them? It would do me good, and do you good. Why, out of 25,000 Brotherhood men, there ought to be responses enough to fill my box full. Please grant so simple a request, and I shall endeavor to do better work in the future.

With a heartfelt interest in you all, and wishing you all a speedy rise to the "throttle," I remain

Your friend,
Geo. W. Hall.

MILWAUKEE, WIS., April 20, 1889.

Editor Firemen's Magazine:

I write for the purpose of cheering up the boys of Guiding Star Lodge, No. 130, as the members do not seem to be anxious to appear in print. For this reason, Mr. Editor, I ask for a little of your valuable space for the purpose of letting the readers of the *Magazine* hear from us.

Bro. Thomas Clarey has been made happy by the arrival of a sweet ten pound angel girl at his home. All the boys congratulate him. In some countries, China, for instance, boy babies are preferred, but, Bro. Clarey is not a pagan. Since the arrival of the baby Bro. C. says he can cut the fog better of nights on the Short Line, and Bro. Taylor remarks that he can cross his coal in the 232 on the Northern Division, and that it don't bother him in the least. Bro. Thomas Duyer is learning the Northern Division and says he knows where Horicon West is Good boy, Tom. Brother Tony Foote, is still on deck of the 678 of nights, and Bro. Geo. Behm, says the 687 is the belle of the Lacrosse Division, and she is always on time. Keep her hot, George. Brother Eddie Cody says the 293 never slips a turn and is always on time, provided she is not late—Eddie. Bro. James Duyer is still with the 728, and says he turns a very clever wheel. Bro. Schmutler is handling scoop No. 5 on the 242 of nights and Bro. Kuehn makes him wipe her off, but Bro. S. says let the day man, who fires her, wipe her off. Bro. Bazine Fall is still with the 534 and says she is a bill, you bet, and several other brothers we could mention, are doing well.

Yours,
Z.

FARGO, DAK., April 18, 1889.

Editor Magazine:

The April number of the *Magazine* is at hand, and the article titled "The Brotherhood of Locomotive Enginemen," read with pleasure. It has always seemed to me that the title "Locomotive Firemen," somehow, expressed a limit, a kind of narrowness, inconsistent with the principles, policy and teachings of our Order. I endorse the suggestion of the Editor, not as a fireman anxious to pose as something I am not; not as an engineer, ashamed of the old name that I fired under and which, since crossing over to the other side I have got too high toned, and aristocratic for, but as a member of the Order, who has a belief in the fitness of things, and has the welfare of the Order at heart. Mr. Editor, I concede the right to every man to make what changes in his affairs he thinks necessary, or his best interests demand; but when I am compelled to get up at nearly every meeting and read the requests of our oldest members, not for honorable withdrawal, but for something that partakes of the nature of a convict's discharge from a State prison; something to show that he has severed all connection with an Order, which, judging from the stand taken against it, must be disreputable; something to show that he is again fit to associate with the self-constituted aristocracy of the American railway service; then I say that it is time to do something, to take some stand, to be men among men. I would suggest that the Grand Officers get up a special clearance for the benefit of those sufferers, something like that which the Board of Health gave me to get out of Atlanta on. It ought to read about as follows:

"This is to certify that Mr. ———, has severed all connection with the B. of L. F., and to the best of my knowledge and belief, he has not been in any infected Lodge room, or other suspected locality for ten days."

A card like the above would do for the men who allow themselves to be driven out of the Order that made them what they are, and the "final" card could be reserved for such as go out voluntarily, or, for reasons beyond their control. If the engineers in the B. of L. F. would stay where they are, they would display more manhood and dignity and at the October convention the B. of L. E. would change their policy as a matter of necessity. As is the case with every fireman, I some day hope to be an engineer, the interests of engineers are my interests. If the engineers on our system were in trouble to-morrow, I would do all in my power to assist them, in the capacity of engineers, but towards the B. of L. E. I am afraid I would favor a policy of strict neutrality.

Again, I say, I endorse the change suggested as an improvement, and as a partial remedy for the wrongs quoted above. The suggestion in regard to insurance is also a good one. I find that a number of firemen carry outside insurance that costs more than ours does, and by having the additional \$1,500 voluntarily I think it would be

taken advantage of by a great number of those now in the Order, even those who only receive the pay accorded those who handle the scoop. I hope to see this matter taken up and discussed; and as it is a long way off to the next convention, why not settle it as the other matters we have had on hand of late were. With best wishes I remain

Fraternally yours,

Eugene McAuliffe.

CORNICANA, TEXAS, April 15, 1889.

Editor Firemen's Magazine:

As I never have seen Magnolia Lodge, No. 226, represented in the *Magazine*, I will break the spell and see if more of the boys won't try their hand. We have a good Lodge, with thirty members in good standing and several applications for membership. As far as I have heard the boys express themselves, one and all indorse the way the *Magazine* is throwing not shot into the B. of L. E. I am sure that we have licked the blarney stone held out to us by the B. of L. E., as long as is consistent on the part of men. I think it would be wise in the firemen in the future to let the B. of L. E. hoe their own row, without any assistance on the part of the firemen whatever. Let the engineers get into trouble and hollow to the firemen for help and they will flock to the rescue like crows around a carrion. There are some fair-minded men among the B. of L. E., but they are like "Old Dog Tray," they have got into bad company. I will tell you how we are treated on the H. & T. C. road. Let an engineer lay off and the engine is put in the ring, and the fireman has the privilege to lay off or quit, but let the fireman lay off and they send out an extra man. What is sauce for the goose should be sauce for the gander. I don't suppose our M. M. has ever thought that a fireman's family is as dear to him as that wonderful engineer's.

Dick.

SAN ANTONIO, April 8, 1889.

Editor Firemen's Magazine:

In looking over the April *Magazine*, I was very much interested in what it has to say about the Brotherhood of Locomotive Enginemen, I agree with the *Magazine*—That the B. of L. F. has a far greater sweep than the name implies, and I think in the near future it will have a far greater sweep than it has at present. Almost every day, I hear of some B. L. F. engineer that says he can run an engine just as successfully with a Firemen's pin on, as he can with an Engineer's. Now the only objection I can see to the "Brotherhood of Locomotive Enginemen" is that it will look too much like the Brotherhood of Locomotive Engineers, monograms, pins, charms, etc., and I would not like for the Engineers to get it into their heads that the B. of L. F. was trying to imitate them.

Yours fraternally,

B. L. F.

[The name "Brotherhood of Locomotive Enginemen," simply tel's the truth and while doing no one injustice does simply justice to our Brotherhood.—ED. MAGAZINE.]

Changing the Name of the Brotherhood.

RAT PORTAGE, May 6, 1889.

MR. EDITOR:—With regard to changing the name of our Order, I am directly against it. I do not think the time has arrived for such a change. I believe there should be a Brotherhood of Locomotive Firemen and a Brotherhood of Locomotive Engineers through all time. While I don't believe in the "one degree better" idea that we hear and read so much about, I believe that should we change the name of our Order and allow the B. L. E. to die a natural death, laws would be enacted that the poorest paid firemen could not abide by, and they would become non-Brotherhood men. I am sorry to have to state that I have noticed a tendency on the part of some of our brothers to legislate without any regard for the poorly paid portion of our membership. We should not forget that if we force a poor brother out of our Order, he will discontinue to aid the cause of labor. I believe there are other means to compel the B. L. E. to change its selfish policy and repeal its obnoxious laws. If any fireman who is promoted, or if seventy-five per cent of them remain out of the B. L. E. it will soon change its obnoxious laws. I write from experience, for there are running out of this station twenty-one engineers, and five only are B. L. E. men. All kinds of arguments have been advanced to induce our members to join the B. L. E. We are frequently asked such question as the following: "Can you afford to allow the B. L. E. to go down? Must we send our charter out of the country?" But the B. of L. F. don't waver, and I think the B. L. E. charters will all leave the country before our men will succumb. Our answer has always been, "If the B. L. E. is organized for federation, and for the elevation of the calling of a locomotive engineer, then we recognize our right to uphold and support it, provided that we may do so without sacrificing our manhood. Let the obnoxious laws in the B. L. E. constitution be repealed at their next convention, and I think such men as those who have the courage to remain out of the B. L. E. are intending to join that Order when the way is made clear, but if at their next convention they do not remove those obnoxious laws, I say then will be time to advocate the change of the name of our Order. We must not forget that the present decade has been, so far, one of boodles, corruption and selfishness and that the B. L. E. comes in for its share of the evil selfishness there can be no doubt, but we are living in an age of intelligence and are surrounded by men who love right better than wrong, and I believe that the men who will compose the next B. L. E. convention will see the necessity of removing from their constitution all laws that are not in the best interests of the common cause of labor and that conflict with the current ideas of that priceless treasure—Liberty.

Chas. Unwin.

[There seems to be a very general misapprehension of the facts which led to the suggestion of changing the name of our Brotherhood.

It should be understood by every one that by a change of name no *existing condition* is changed. The proposition is simply to *suit the name to conditions*—not to change them.

The name of our Brotherhood, as it stands, is The Brotherhood of Locomotive Firemen. But in its membership is included Locomotive Engineers. This condition has existed from the first. An engineer is not a fireman. By changing the name to that of "Locomotive Engineers," to "Locomotive Firemen and Engineers," or "Locomotive Men," we have a name that suits conditions but does not change them. The new name expresses a fact—at present the name is something less than a fact. It will be wise to bear in mind the character of our membership. If promoted firemen choose to remain in the parent Brotherhood, as thousands of them have in the past, and as thousands of them will in the future, what more just and prudent than to have the name of the Brotherhood express the character of its membership. Such a change instead of increasing embarrassments and complications eliminates them. In this discussion we simply are mindful of the good that will accrue to our Order, without reference to any other Order.—ED. MAGAZINE.]

HOISINGTON, KAN., May 5, 1889.

Editor Firemen's Magazine:

Please permit me space to inform the readers of the *Magazine* that Long Division Lodge, No. 397, although just in her infancy, is full grown in business principles. We held our first annual ball on May 1st, which was in every sense of the word a success. The Hall was beautifully decorated. In each of the corners was one of the words of our motto, Protection, Charity, Sobriety and Industry worked with evergreen, and behind each was a signal lamp, showing two colors, which had a beautiful effect. On the west end were the words B. of L. F., 397, Welcome. The stars and stripes were displayed around the entire circumference of the hall, while a beautiful painting of our motto and two engines ornamented the north side, and small pictures were hung in all convenient places. The hall was beautifully illuminated by a headlight, which our worthy foreman, C. M. Taylor, kindly permitted us to use.

The following introduction committee did all in their power to secure partners for strangers, viz.: E. H. Heath, G. M. Bagley, H. P. Arnold, F. J. Parnell, M. N. Scroggin, and with W. B. Scroggin, A. C. Schaffer, C. C. Waller, E. E. Brown and F. M. Rainey as floor managers the best of order was maintained. J. C. Bolsell, of Div. 13 B. of L. E., acted as door-keeper. The supper at the new Typer House was equal to a banquet, the Great Bend Orchestra furnished excellent music, and everybody enjoyed themselves.

Will close by saying that the boys of 397 feel justly proud over their first attempt at an annual ball.

No. 397.

TRUTH IN RHYME.

My boys, I am not a fanatic,
I don't believe all that I'm told.
I preach and I practice emphatic
Some maxims more precious than gold;
The best and the truest of any,
You'll find if you'll heed what I write,
Is, boys, do not squander a penny
In grog shops by day or by night.

Neither touch, taste, nor handle the poison,
Retail'd 'mid the glare of the bar;
It will cloud up your mental horizon,
And leave on your conscience a scar.
At night when carousing you're scorn'g
Life's ills, like a kug on his throne,
But, boys, your poor heads in the morning
Will feel as if rubbed with a stone.

I've read the productions of Genius,
Extolling the virtues of wine;
And how, in the arms of some Venus,
A fellow can freely recline;
Remember, Remorse is denoting
Each drink and besotted embrace,
And, boys, the next day she'll be gloating
On haggardness stamped on each face.

Experience tells me 'tis better
Stronger drinks of all kinds to eschew,
And never my senses to fether
With stuff which my enemies brew;
God knows we must toil late and early
Away from misfortune to steer,
But "into the soup" we'll jump fairly,
If fouled by some schooners of beer.

We've headaches and heartaches in plenty
The twenty-four hours of each day;
The pleasure are certainly scanty
We find in our miserly pay;
But, boys, we have hope for an anchor,
So long as temptation we shun,
And don't for intoxicants hanker,
To stuff us with maudlin fun.
Shandy Maguire.

BOONE, IA., May 5, 1889.

Editor Firemen's Magazine:

I do not remember to have seen any communication in the *Magazine* relating to this section of the country, so, with your permission, I will endeavor to give Connecting Link Lodge No. 25 a hearing, and will give expression to some thoughts on questions now being agitated.

Here we have a Lodge of boys as good as could well be gathered together anywhere. Bro. A. Storke is at the helm, a guarantee of good management. There has been a decided interest felt upon the subject of the odious laws enacted by the B. of L. E., and I think this matter has been put in the proper form for them to see their mistake long ere this, and from personal observation, I have yet to hear of the first instance of an engineer offering any argument favoring the present laws of the B. of L. E. Is this not evidence to us that they will see it all? It does not necessarily follow that because a man has arrived at the period of promotion, that he is intellectually any wiser than the man at his side with scoop and pick in hand, except that he may have more practical experience in handling a locomotive. Now, then, "if this be all the difference" in the two men, cannot we rest our tempers until they have had an opportunity of righting their wrongs, which will undoubtedly occur at a

date not more remote than their next convention. And I say, in the familiar old slang, "give them a rest."

The firemen, without the coöperation of the engineers, are in a manner powerless, and *vice versa*. Our engineers and firemen are on the best of terms, individually, but are on fighting terms, organically, but we are now willing to await developments and hope for the best. As for myself, I am satisfied to let the present B. of L. E. remain in force, and work for an advance in our intellectual fields, and may we all be able to see in the near future the emblems of a Brotherhood of Locomotive Enginemen. But I would have this contain the enginemen on the "right" as well as on the "left" side, as I see no reason why the two individuals could not meet in the same hall, under the same ruling, and thereby make the greatest combination of any organization in existence.

As to the failure of marriage—not so in my case, as my home is well supplied with "kids," and of course music takes smoke.

Heavy Weight.

LOS ANGELES, CAL., May 3, 1889.

Editor Firemen's Magazine:

Seeing so many Lodges sending in cheering reports of prosperity and good work, permit me to say something for San Diego Lodge, No. 90. Bro. Hannahan's visit here accomplished the best possible results, and now our members feel greatly encouraged. Bro. Hannahan should make his visits more frequent, as he is held in the highest esteem by the members of No. 90.

Our Lodge is in good working order, and the road can now boast of only eight non-Brotherhood firemen, and three have in their applications, and the others will fall into line as soon as they have the required age. For the last five meetings we have had a candidate for initiation. The members of No. 90 desire to thank the members of No. 97 for notifying them of Bro. Hannahan's presence in the city, especially those who could not attend their own Lodge meeting.

We would like to know why Bro. Fletcher run Bro. Tinplepaugh off his engine for the pillow business, and what Bro. Hannahan thought the pillow was made for? We would like to know why Brothers Redden, Burt, Carter and McNalley always have such pressing engagements on Sunday nights when there is a meeting of the Lodge? What makes Bro. Boss so timid since his rise?

Now, Mr. Editor, a word upon the subject of federation. The members of No. 90 are in for federation, first last and always; in fact, it is the only lever with which the working man can hope to move the monopoly capitalist, and it is the only salvation for the working man in the future who has to earn his daily bread and hopes to retain respectability and his manhood.—So give us federation, and if the "Eagle Eyes" don't want to come in, let them stay out, and we will live just the same.

Yours for the B. of L. E.,

Quill.

Change in the Name of the Brotherhood.

ELMIRA, N. Y., May 19, 1889.

MR. EDITOR:—In reading my *Magazine* of the month of May, I read a number of communications discussing the subject of a new name for our Brotherhood. The writers of those articles seem to think it would be very nice, but do they look around and see how much trouble they are liable to make?

In the first place, what occasion is there for a change of name? The B. of L. F. has had quite a number of engineers within its ranks for several years, and they have been very well satisfied.

Undoubtedly, when they joined the B. of L. F. they were firing; they thought then it was a pretty good organization, and the name was suitable; but now, when the organization is much better, they begin to think the name is not big enough for them, simply because they have been promoted. Do you think for a moment that the members of the B. of L. E. would be pleased to have you appropriate their name for your own use? You must admit they would be offended and would have good reason to be. Men who are offended soon become spiteful (just as we are at present towards the B. of L. E. on account of those laws and because they did not see fit to federate with us), and some firemen know how inconvenient it is to work with an engineer who feels that way. I do for one.

To those of you who have traveled to any extent, and received favor after favor from engineers, through your brother firemen, how pleasant it would be to know that such would be the case no longer, and if a brother came along who wanted a ride you would be compelled to say that "your engineer would not carry him."

Of course, I know there are a few roads where firemen can get transportation from their Superintendents, but such is the exception rather than the rule.

I will admit that it is hard to submit to the obnoxious rules in the B. of L. E., and no one feels it more than myself, for I consider it an open insult to every promoted fireman, but how much better are you going to make matters by adding fuel to the already burning fire.

I would ask what are firemen going to gain by having trouble with the B. of L. E.? Some claim that the B. of L. E. thinks itself above the B. of L. F. Possibly it is so, but that is what ails the young engineer also. He thinks the name B. of L. F. is not good enough for him. He wants some more added, and after he gets it (if he does) and there are fifteen or twenty engineers in a Lodge, they will want to run things to suit them, and the firemen will want to do likewise, and then there will be trouble that will be ruinous to both.

It is with regret that I read any article in our *Magazine* that leads in any way toward making hard feelings with any railroad organization except the O. R. C., for none of us can accomplish very much alone.

Our Brotherhood wants federation. Then let

us do nothing that will interfere with the accomplishment of that purpose.

If the name should be changed, and then the B. of L. E. should repeal the obnoxious laws, those who wanted the change would join the B. of L. E., for it is evident the reason they want the new name is on account of those laws.

When they are stricken out I will join the B. of L. E. and still retain my membership in the B. of L. F., for I consider the proper place for an engineer is in the B. of L. E., for reasons that some of our Delegates to the Atlanta Convention found out. They had heard that one of the roads running into that city were hiring engineers, and desiring to locate there, they made application for a job, showing good letters of recommendation, but were informed that they did not need any more engineers at present. The next day two B. of L. E. engineers came along and were put right to work.

Of course, I do not claim that the B. of L. E. can assure you a job by belonging to their Brotherhood, but I do say that your chances for a situation are seventy-five per cent. better by belonging than if you do not.

In regard to those laws, I am satisfied they will be stricken out at the next Convention of the B. of L. E., as I have heard a number of old and influential engineers express that opinion, and I sincerely hope that the name of our noble Brotherhood shall remain as it is until after that convention, at least.

This is my first attempt at writing for the *Magazine*, and if it does not reach the waste basket I will be tempted to write again.

Yours Fraternally,

Let Well Enough Alone.

[In the foregoing communication appear a number of statements and intimations which require brief notice. The intimation that the suggestion to change the name of the Brotherhood came from any engineer who is a member of it ought not to have been made, because it is not the fact. The suggestion was made by the editor of the *Magazine* and upon his own individual responsibility.

Again, the suggestions so far made exhibit neither a purpose nor a desire to appropriate the name of the B. of L. E.—the suggestion of "Locomotive Men," which we regard as extremely applicable and felicitous—avoids similarity, and should provoke no ungenerous criticisms.

Just what penalties, in the way of refusing free rides on an engine, engineers could inflict upon the members of the Brotherhood we have no means of knowing, but we are not specially alarmed by such intimations. The danger of over-crowding our Lodges with engineers, promoted firemen, is not such as to create alarm. The Brotherhood at present has thousands of such members, and the number will increase, but so far their presence in the Lodge room has not been a menace to harmony nor to the

welfare of the Order. As for the benefits to be derived, in the way of obtaining employment, by being a member of the B. of L. E., it may be more or less than is claimed, but it should be the ambition of the members of our Brotherhood, to make its recommendations stand as high in the estimation of railroad officials as those of any other order. And we think that has been long since accomplished.]—ED. MAGAZINE.

PITTSBURGH, PA., May 1, 1889.

MR. EDITOR:—Perusing the *Magazine* for April, I find it so full of news, and of questions open to debate, that it is impossible to forego making some remarks upon several topics. Brothers, don't think hard of me, for what I have to say comes from the bottom of my heart, and from experience, for which I dearly paid. In the article of Bro. Pickenscoop we find the cost of our Brotherhood, which is well done and true. If other Brothers had done likewise, instead of so much kicking, they could have convinced themselves that the cost did not amount to much after all. Our Brother also states in the same article that he had heard that some of our members had quit on account of the C., B. & Q. I didn't hear it, I know it. Yes, it is too true, and a shame for a good many of them. Of course there are excuses that should be considered, but they are few. Among those that I know of, and I think the same state of affairs existed elsewhere during the continuance of the strike, we had men in our Order who had money laid aside but who would not draw on it, and men who made day for day, and had money for most anything else, excepting the support of the noble Brothers on the "Q.," whom he was in duty bound to support. We had men who were out of employment and unable to pay, who were carried by their Lodge as long as there was any money in the treasury who had to be dropped when actual necessity demanded it. I also see it mentioned that a good many will come back to our ranks after the battle is over in order to be numbered among the heroes of the war of 1888. Men, who have been married to their little dollars, kept them in their pockets, salted them down for their own selfish future use, or blowed them in for their own enjoyment, sooner than let them go to our Brothers who entered into a struggle against an unprincipled monopoly, fought for their rights, held aloft the banner of our Brotherhood, acted unselfishly and preserved their manhood and honor. Brothers, I ask you to-day, are you going to take them in again? Are you going to give them the second chance to violate their obligations and perjure their souls? Can you honestly call them Brothers? I say no, and so must every other member who has the welfare of our Order at heart and tries to make it an assembly of men and not of things. I do not wish a hair hurt on any one's head, and I like to see justice done to all, but when you come to a case that needs white-washing turn a deaf ear to it, as it is not worthy of considera-

tion. My opinion is that 'that kind' of men are a curse to any order they join. If they get tired of one they appear in another, and since we have them out, let them stay out, and by so doing will strengthen our Order, so that the severest tempest cannot shake it. I belonged to an order in 1886 which had a good many members of the kind I have been speaking of. A strike was ordered. I was out twenty-one weeks, sunk \$275, every cent I had, ran \$65 in debt, got black-listed for two years, and drew \$4.50 during the whole strike. Mention is made, time and again, about members making little wages during the strike on the "Q." My wages amounted to \$23.25 for months, as I was idle for three months. I had to run in debt to keep up, but kept up my assessments and dues. Our columns at present are filled with B. of L. E. and B. of L. F. talk and federation. I know there has been a screw loose some place, but don't cry over spilt milk. If the B. of L. E. don't suit us, let them paddle their own canoe, and we will do the same. If they don't want to federate, we can and will get there without them. We have lots of friends among them, who help to promote our welfare, and for their sakes we must overlook things. Let us get down to solid work now on federation, as the question has been discussed enough.

Fraternally,

F. J. Thomer.

CARROLL, IOWA, May 2, 1889.

Editor Firemen's Magazine:

I thought I would write a few lines to let you know that Marvin Hughitt Lodge, No. 132, is alive yet and prospering finely considering the dull times. Several of the brothers have been set back to firing who were set up last fall. I am firing out of Carroll at present, and don't have much of a chance to attend my Lodge, but my thoughts are there, all the same. What a grand organization, working for the interests of so many noble fellows—Knights of the Scoop. I hope very much to see, in the near future, the name changed to B. of L. E. & F. or Engine men. I like to read the Mechanical Department of the *Magazine*. I can say this much for it—I am in favor of full throttle and short cut-off generally. Much depends on the engine and how she carries her water. I find the most trouble in keeping an even amount of steam is in the pumping, and I think one of the most essential things, is to learn to pump an engine right. As this is my first and probably will be my last, for some time, at any rate, I will close.

Yours fraternally,

Charles Stitt.

PITTSBURGH, PA., May 6, 1889.

MR. EDITOR:—Having just purchased a bill of goods from J. S. Townsend, Jeweler, for Iron City and Holbrook Lodges, I would like to recommend the firm to all Brothers who are in need of anything in their line as a reliable and satisfaction-giving firm.

Yours fraternally,

F. J. Thomer.

Reading Orders to Firemen and Brakemen.

SOMERSET, KY., May 2, 1889.

MR. EDITOR:—Reasons well founded have taught me the good of being civil with firemen and brakemen. I have been told by B. L. E. brothers that the two orders would not get along if consolidated. Now, let me ask, why not? Some engineers step up on the right side and look over at the firemen somewhat after the manner a bull would look at a bastard calf. If an engineer puts his orders down in his vest pocket and says "get her hot," the fireman sometimes ventures around and says, "What orders have you?" I have heard them say to the fireman, "The time card is our orders," and sometimes look out of the window and laugh and make no reply. Sometimes, I have heard them say to firemen, "I will look ahead for you; tend to your business."

Such a state of affairs is very unsafe, to say nothing of the unpleasant feeling produced. I have been running an engine long enough to be a B. L. E., according to their constitution. My motto is, when I step on my engine, to say to the fireman and head brakeman, "Our orders read as follows; or, if they have time, I hand them my orders and say, "Do you understand it?" When answered, I say "How do they read?" If answered correctly, I add "Be sure, and never forget."

Now, my reason for being so particular is this: No man is so perfect that he will not forget sometimes. I know men who put their orders down for safe keeping, and away they would go and presently they would be disturbed by an engine before them, when away goes life and property.

Brother engineers, don't try to keep such secrets as meet and pass orders to yourselves. Tell the boys what kind of orders you have, and then, if any mistake is made on your part, the fireman and brakeman are also to blame. But, on the contrary, if you will adopt my rule, you will not meet with such disasters.

Mr. Editor, if you think this advice good, you may print it in your *Magazine*.

Respectfully,

K. F.

[We give the foregoing communication space in the *Magazine* with great satisfaction. The advice is timely and important, and should be acted upon by every engineer. That engineers can be found to treat their firemen in the oppressive way pointed out by K. F. is most strange, and not only strange, but dangerous. It is an exhibition of the frailty of human nature that excites pity and contempt, in about equal proportions.—Ed.]

ONEONTA, N. Y. May 7, 1889.

Editor Firemen's Magazine:

Now, don't faint, but hang on to your hat. Here is from Susquehanna Lodge, No. 71. She is still on the track, in good running order, and on schedule time. You will think it rather slow, as not one of her boys have entered into the debate concerning the usage the B. of L. F. has received

at the hands of the B. of L. E. There are B. of L. E. men here who think that the B. of L. F. are not used right. I fire for a B. of L. E. man and he is as white a man as ever pulled a throttle. He uses me as well as he could a brother. We were discussing the B. of L. E. and B. of L. F. trouble, and I made the remark that suggestions had been made by brothers of sister Lodges, that the B. of L. F. be changed to B. of L. Enginemen, and that there would be B. of L. E. men that would join our Order. He said that perhaps we would have nothing to do with them. In reply I said that they would find a hand of welcome extended by their old mother Lodge. Am I not right? He said if he could do it he would have the two orders as one, designated as above, and then be very strict as to who were allowed in the Order. He was looking over our May number, and said it was the best one he had seen. There was sound talk in it. I like the tone of Brother Trenholm's letter. It is to the point. No haggling the subject. There is no use of playing cat's paw any longer. We have material, let us build an Order for men who believe in equality as long as it is a man who courts the respect of his fellow men. Now let us hear from all in regard to the changing the B. of L. F. to the B. of L. Enginemen. Remember this, brothers, as long as we live up to our motto we will come out on top. As I am not much of a literary, I will side-track for this time.

Chub.

POPLAR BLUFF, Mo., May 13, 1889.

Editor Firemen's Magazine:

Pocahontas Lodge, No. 292, thought we would let you know that we were still alive. We are rather late in corresponding with you, but better late than never. Our Lodge is young and small yet, but will be larger as it grows. We have only opened up our Lodge since March, 1889, with thirteen members as follows: C. N. Kidd, Master; J. R. Phelps, Receiver; F. H. Richards, Secretary and Collector; Wm. A. Granneman, Magazine Agent; J. C. Vandyke, Thos. Tucker, M. C. Andrews, Chas. H. Spurlock, P. W. Humphrey, Chas. Edwards, C. A. Dearington, Geo. Webster, J. T. Grogan. We have a very nice little city, situated on the banks of the Black River and a very prosperous and thriving city it is, with stove factories and plenty of good timber. We have plenty of good fishing and rowing. The St. L. & I. M. runs through here with three divisions, the Cairo, Arkansas and Missouri division, making this point a terminal for all trains. There are churches of all denominations and Poplar Bluff has everything looking very prosperous and bright before her. We will keep you posted in the future to show that that we are alive and wide awake. Before closing, I will mention that Bro. Wm. A. Granneman, Magazine Agent, Lodge No. 292, is the happy father of a 11 pound baby, sent down from the skies, April 10th. Bro. Will comes to work smiling and we conclude the little stranger is a boy and will yet be a fireman. Lodge 292.

ST. THOMAS, ONT., Apr. 9, 1889.

Editor Firemen's Magazine:

Please publish the following run made with engine 400 on the M. C. R. R. of C. S. Division from St. Clair Junction to Windsor, with four coaches of Dr. Webb's special. This run of 106 $\frac{1}{2}$ miles was made in 108 minutes; allowing five minutes for taking water and oiling up, leaves 103 minutes or an average rate of speed of 62 $\frac{1}{2}$ miles per hour. The different rates of speed were according to road. In passing through Essex Centre and in going over a railroad crossing between Maldstone Cross and Round House the speed was reduced to 10 miles per hour. The following was taken from the Dispatcher's train sheet:

Left.	A. M.	Dis- tance.	Miles per Hour.
St. Clair Junction	8:16		
Taylor	8:44	26.1	62 $\frac{1}{2}$
Highgate	8:49	4.7	56 $\frac{1}{2}$
Ridgetown	8:53	5.6	84
Harwich	8:58	5.9	70 $\frac{1}{2}$
Fargo, Arrived	9:02	5	75
Departed	9:07		
Charing Cross	9:11	2.4	86
Buxton	9:17	6.2	62
Fletcher	9:21	4.1	61 $\frac{1}{2}$
Filbury	9:28	6.6	56 $\frac{1}{2}$
Comber	9:34	6.6	66
Ruscombe	9:38	5	75
Woodslee	9:41	3.9	78
Essex Center	9:48	5.6	48
Maldstone Cross	9:53	4.5	54
Round House	10:03	10.1	60 $\frac{1}{2}$
Windsor	10:04	1.3	88
Total	10:08	106.8	

The above run was made by Engineer George Upper and Fireman Thomas Fitzgerald on April 7th.

By allowing space to the above you will greatly oblige
Railroader.

ASHTABULA, O., April 8, 1889.

Editor Firemen's Magazine:

Though Western Reserve Lodge, No. 248, has never been heard from in the *Magazine* that I know of, it is, nevertheless, a prosperous and growing Lodge composed of firemen and young engineers from the J & F branch of the Lake Shore R. R. and the P. Y. & A. branch of the Pennsylvania R. R. Some two or three years ago the Lake Shore management got out a list of supplies for switching engines, not allowing them cushions or arm rests. Our representative to the General Board of Adjustment of L. S. & M. S. brought the matter up at a recent meeting with the Lake Shore Management and as a result we have a new list of tools, etc., for switch engines which includes these articles so necessary to the comfort of the men operating them.

The greatest social event of the season was the grand social party given by the B. of L. F. February 28th.

Bowman and McAfee's famous orchestra of Cleveland Ohio, furnished the music. It was said to be the largest gathering of the kind ever

seen in Ashtabula, over 250 couples being present.

Our worthy Master, Wm. Rose, acted as master of ceremonies and assisted by the various committees all doing their best, succeeded in making it a grand success socially as well as financially.

The net proceeds were over \$100. which will be used by the Lodge in purchasing regalia.

Thursday evening, April 4th, was occasion of a pleasant surprise to the B. of L. F. here, given by the ladies, wives, mothers and sisters of the members. After an hour or more spent in social chat and listening to the instrumental music of the Big Four, the ladies brought out and presented the Lodge, a large and elegant Bible and a beautiful Altar scarf which was suitably inscribed with name and number of the Lodge, and emblems of the Order, by a lady artist of Ashtabula,

We were then invited to the large ante-room where the ladies had a bountiful supply of supper.

I am sure the sentiment of every B. L. F. boy's heart in our Lodge is, "God bless the ladies."

W. E. B

NEEDLES, CAL., April 15, 1889.

Editor Firemen's Magazine:

Having never seen anything from Silver Mountain Lodge I will see whether this finds that place under the editor's desk that every beginner so much dreads. We have a little Lodge down here that we are all proud of. We have thirty-five members and a good many outstanding applications. The boys have all been running so hard that meetings have not been as regular as could be desired, but when we do get together we have good, live meetings. A plan that we follow here, is to choose a subject and have a debate, which we think is a good practice. If all Lodges would try and make their meetings interesting they would always have a good attendance. Bro. Riggs returned lately from the East with Mrs. Riggs. Fred came around and bought the cigars. Success to you, Mr. and Mrs. R., is the writer's earnest wish. We have to record the departure of Bro. Thos. Finnerty, who has gone to Chicago. Look out, Bro. Finnerty, old bachelors are very susceptible to the fair sex. Bro. Frank Hutt has been promoted to hostler at Barstow. Bro. Leutzinger, our handsome Secretary, and our worthy Master, Diffenbaugh, are hostling at The Needles. Bros. Buggeln and Kohn are hostling at Peach Springs. Bro. Lasher is running the Goat at Peach Springs. Bros. Spencer and McCabe are running the Goat at Needles. Bro. Lawless has been promoted to the right side and is doing good work. Bro. Brown is running an engine for the Rio Grande Mining Co. and Bro. Sauer is firing for him. Bro. Ferguson is laid up with a broken leg, received in a wreck on the mountain. Bro. Smith, our Receiver, and handy man, is around with a sore thumb, a case of blood poisoning, but it is getting better and he will be around all right in a week or so. Bro. Rogers is on a trip East for the good of his health. Well, I had better close for this time.

Yours fraternally,

R. H. Batrd.

SOMERVILLE, MASS., May 6, 1889.

Editor of the Firemen's Magazine:

When we have altered our name, I hope that it will read "Brotherhood of Locomotive Firemen and Engineers," instead of "Brotherhood of Enginemen," for that name seems to refer us to things as they are now, and seems to me very bare, and not near so suggestive of each other's individuality. What we want is a name that is uniting in name as well as purpose. Let us have the double header by all means. And 'another matter, Brothers, that we must consider well, it is to have a man at the head of our new Order that has the courage and ability, and last, but not least, the POWER to carry on a strike successfully, for we want no more schools for educating scabs—no more C. B. & Q. failures for us. That road can man any system with scabs. That was what that strike was for, was it not? The policy that caused the C. B. & Q. men to be so unmercifully beaten is suicidal, it is more than that, it is a gross, unjustified crime. That strike could have been made one of the most successful labor events of the century, and what was the reasons it was not so?

Brothers, you and our officers and the members and officers of the Railroad Brotherhoods should remember that with the permission to strike ends conservatism. No Order that permits a strike can be conservative and be successful in carrying it on. When we see ourselves getting the worst of it, stop every wheel in the country. Have laws in your Ritual to the effect that scabs must walk to fill our positions, a good long walk, too. Who is it that is so afraid of being called radical that they will allow their men to be beaten? We are so very conservative, you know, that it really would not do, you know. Yes, we do know; we know that it is this rotten policy that deprived the C. B. & Q. men of their positions. We know the policy too well that has placed such a large number of competent engineers and firemen on the country, and it was not on the C. B. & Q. that this policy commenced. Come back with me to the Boston & Maine strike, and you will find this same selfish policy and the same results, without there being a lesson learned for future use. What premium was given the scabs that filled the strikers' places? Why, they were taken into the B. of L. E. and given the full rights that the B. & M. strikers fought for. A little later came the P. & R. strike, and the same policy was carried out, and carried the strikers out of their positions, too. The P. & R. scabs soon saw the need of organizing, and did not ask the B. of L. E. to give them the privileges enjoyed by their brothers on the B. & M., or they would have been, most likely, B. of L. E. men. (If they were, what effect would it have had on the C. B. & Q. strike?)—but these men joined the K. of L. At the time of the Missouri Pacific K. of L. strike a press dispatch was sent throughout this land to the effect that P. M. Arthur had made a blundering speech, denouncing the K. of L., and the result of this policy was to make enemies of

that powerful organization, and when the P. & R. K. of L. strike was on, who filled the Engineers' places? We know who filled them, and so does the B. of L. E., to the sorrow of the C. B. & Q. strikers. We have had enough of strikes for principle; enough of being beaten. Now, when we strike again, let us vary the monotony by striking to win, and win in short order. We must prepare for battle while our opponents are looking for the battle-ground, as they are at present so engaged. We want no more of the policy that antagonizes every fellow-labor Order. We want the opposite to take place. Federation is what we want and must have to be successful in the future. We want no more lonely strikes, and we will not support them either, for the sooner they die, the sooner strikers will have their places again. This letting the opposing side have the advantage, just at the time that you have them under your thumb, is getting too rich for our blood. Follow up every advantage; let no point escape you, and your efforts will be crowned with success.

I hope the Brothers will give this their earnest thought, and see where the existing evils are and promptly remedy them.

I remain yours faithfully in the B. of L. F.,
Charles H. L'renholm.

DENNISON, TEXAS, May 5, 1889.

MR. EDITOR:—On April 22nd was given a ball under the direction of Capt. John Farley and D. H. Tobin, at Ransford's Hall, and although the hall was large and commodious, it was filled to its utmost. The ball proved to be a grand success, everybody enjoying themselves immensely. After dancing until about 11 o'clock, an intermission was given and all repaired to a hall on Main street, where a sumptuous supper and an ice cream and strawberry festival had been prepared by the ladies of the members of Red River Lodge No. 8, the proceeds of which was given to No. 8 to buy regalia for the Lodge, and for which the members of No. 8 extend a vote of thanks and best wishes to the ladies for the interest taken in the welfare of our Order.

After supper, those who wished returned to the ball room and tripped the light fantastic until the wee sma' hours of morn.
Fast Mail.

BURLINGTON, IOWA, May 5, 1889.

MR. EDITOR:—We have the pleasure of announcing to the readers of the *Magazine* the marriage of Bro. Louis F. Buthel, of Herald Lodge, No. 161, Burlington, Ia., to Miss Emma Dailinger, of Nauvoo, Ill. The happy event occurred at Burlington on April 25th at 9 o'clock P. M. The ceremony was performed by Rev. J. C. McClintock, pastor of the First Presbyterian church. The bride is a daughter of Charles Dailinger, of Nauvoo, Ill. She is also a member of the First Presbyterian church of this city. The groom has been in the employ of the B. & W. and B. & N. W. Railroads for the past five years. The members of Herald Lodge tendered them hearty congratulation and may God speed them on their journey in life.
W. A. F.

JOLLY OLD EMMONDS AND BONEY BOOZE OF 333.

In the P. R. R. oil house, just under the hill
Lives jolly old Emmonds, a musical mill,
Who all day long makes a terrible din,
Playing "Pop Goes the Weasel" on his old
violin.

Now jolly old Emmonds always looks neat,
But he's bent up on the bottom where people
have feet,
And his nose, like a strawberry racy, always is
red,
'Tis a snuffer by daylight and a trumpet in bed.

Now jolly old Emmonds, he never feels blue,
And that's just the reason he's called the Zulu,
In public or private he's always the same,
But if ordered at night, he's sure to be lame.

Now this wonderful man a partner must choose:
He did, 'twas the handsome and gallant Sam
Booze.
His choice I have heard turned out woefully sad,
For Samuel, the first day, ate a 60-pound shad.

Old Boozey and Emmonds make a very fine
team;
Sam keeps on the squirt till she's all out of
steam.
Poor Emmonds he curses and socks on the
blower,
And vows and declares that he'll "bale in no
more."

Now Emmonds and Booze to Bristol did cruise,
You can believe it or not, just as you choose,
She had two tons of air and four pounds of steam,
And old Emmonds thought he was freezing ice
cream.

Sam Boozey has a portable quadrant and lever,
Which jump, thump and bump like a man in a
fever,
It's the most wonderful piece of machinery upon
her,
And has only two notches, one in each corner.

Now jolly old Emmonds is wondrous wise,
He expects 1225 to keep hot on steel ties,
And when Senator Boozey tells him to ladle it in,
Says Samuel, "I'd rather saw on my old violin."

Now, jolly old Emmonds has two great black
eyes,
And when he's out strolling, he walks on the
ties,
Until one foggy morning, Bill Rianhard he seen,
And he came near being planted in "old Ever-
green."

Now Emmonds and Boozey cannot live away,
The nippers of death will cut their life cords
some day,
And down in the cold ground we'll tumble them
in,
Poor Boozey and Emmonds and the old violin.

When Boozey first read this he sent up a shout,
And promised the author a twenty round bout,
But the author's a scrapper and was not afraid,
And Boozey sneaked off to see Forepaugh's pa-
rade.

Ex. N. A.

HAMILTON ONT., April 15, 1889.

Editor Firemen's Magazine:

A friend handed me a copy of April *Magazine*
and as it has been some time since I have seen
one, I was astonished at the progress your Order
has made. It seems but a short time since I was
a charter member of Endeavor Lodge No. 267, also

its first Secretary, and now I see enrolled in your
Magazine the name of Marias Des Cygne Lodge
No. 400. I have laid down the pick and scope but
still am proud of the fact that I was once a fire-
man and a member of the B. of L. F. I have just
finished reading your piece "Personal vs. Princi-
ple" and must say that you are taking a manly
stand in the matter. A stand that cannot be
assailed from any point by any fair-minded man,
be he a member of the B. of L. F. or B. of L. E. I
consider myself in a favorable position to form
an impartial judgment, as I am not a member
of either Order. I also endorse your sentiments
in the piece entitled "Brotherhood of Locomotive
Enginemen." It always was a riddle to me why
the Order was called the B. of L. F. when there
were so many engineers and hostlers among its
members. I think the title you propose is the
right thing in the right place and I consider this
the right time to do it. I hope the boys will stand
to their colors like men and not allow themselves
to be insulted by the engineers.

I have risen to a higher position in life than
that of a fireman but I believe that the training
I got when serving in that capacity has been the
means of fitting me for the position of responsi-
bility I now fill.

I have also heard of your proposed federation
and think it is a good scheme. I believe the
engineers stood in their own light when they re-
jected it.

Hoping for space for my letter, I close trusting
that I may one day welcome you to our city to
meet in Convention. Assuring you that I would
do all in my power to assist you in passing leis-
ure moments in a pleasant way, I am

Truly yours,

Geo. H. Evans.

PUEBLO, COL., May 20, 1889.

Editor Firemen's Magazine:

I do not remember, during the past two years
of having noticed any communication in the
Magazine from Royal Gorge Lodge, No. 59. Let
me say the Lodge is alive but inactive. A good
many of the boys have joined the B. of L. E. I
can't blame them very much, because the engi-
neers on the Denver & Rio Grande system have
a contract with the company and can get what
they ask for. With one exception business is
very dull on this road. Eight young engineers
were set back to firing, but that did not satisfy
the engineers, they wanted six more set back
but their request was not granted, and the fire-
men are told that all the rights they have is to
quit if they don't like it. I want federation,
that means justice, and I want to see the name
of the Order changed to "Brotherhood of Loco-
motive Firemen and Engineers." My education
is not great and there are members of No. 59,
who could write more interesting letters than
myself, and I hope that they will be induced to
try their hand. God speed federation and the
Brotherhood is the wish of

Fraternally yours,

Ex-Engineer Set Back.

ROCHESTER, N. Y., April 5, 1889.

Editor Firemen's Magazine:

You will see by this that I am still on deck; I did not know but my last "effort" had met an untimely death and hastily buried in your waste basket. However, here I am, and plenty to say too. Others will have to judge whether it amounts to anything or not. I will try and tell you of the B. of L. F. boys again. To begin, Bro. Kellogg has quit the scoop and gone to work with the contractors on the Lincoln Park and Charlotte, Railway, so he says; but it is my private opinion that "Bob." has gone after more bull frogs. Bro. Luttringer is decidedly "put out" about the four-finger racket. He says, "if he knew who wrote that article, he would write him up in great shape." "Gus" puts a planket on the "40" now if he hears that Finch is going to handle her. Never mind, "Dutch," we will not need any engines or blankets by and by; it will be warm enough without them. Bro. Benedict says "he don't mind having Finch put it on, but does object to his rubbing it in." Our country member, Bro. H. Hardy, has got the Warsaw switch engine to fire. Herman, we are glad of it, but what are you going to do about putting in your "pertaters," and who will drive the cow home? Have you worked out your road tax yet, Herm? Bro. Roth has the way freight Rochester lay over now. They say that girl at Ashford is very lonesome Sunday nights now, Charlie. Bro. Daggett is soon to drop back on way freight, "by thunder." Bros. Wright and Woods are on the rounds. Bro. Hake is on passenger yet. Bro. Geo. Ainsworth is, "honest injun," all the man through. Has any one heard from G. A. White and Lewis Mansfield? Bro. Finch has been laid up with a sprained ankle, but is on duty again and is spreading grief among the boys whose nice clean engines have to lay over at N. K., nights. We have lost our R. F. E., he has sought green fields and pastures new. He was a first-class man for the position but would get blood in his eye once in a while, and then Oh! Doctor! but the air would be blue. We have a fine man for Master Mechanic at Lincoln Park shops. J. F. B. is his signature. He is as white as they make him. I see one of your correspondents asks why it is that the fireman is obliged to clean his engine on arrival at terminal points, or end of trip, while the engineer, conductor and trainmen, can step off their train or engine and go home or elsewhere, and find their coaches or engines O. K. when ready to go on duty again. Mr. Editor and readers, I would like to know the reason also, when the fireman arrives at the end of his trip, and when his engine is put in the house, he has to get out his scouring stuff and shine her up to please the eye of his superiors or else catch — for it. If perchance his engine lays in twenty-four hours, when he comes to take her out on the next trip, he will find the brass, cab, etc., all smoked and gassed up, and unless he goes at her and cleans her up again, for if the Master Mechanic, Road Foreman of Engineers or engineer sees her dirty, he will get a turning over and perhaps fifteen days' lay off

into the bargain. But do they ever ask who does the damage; hardly ever. It is usually put on to the fire-boy. But they will keep some ignorant laborer whom they may have around the house to take care of these engines, and the chances are ten to one, that he ought to be handling the pick and shovel in some ditch, instead of having a chance to undo what it has cost the fireman many a hard hour's work to accomplish. And why should not some of the men who are dodging around the engines to keep out of sight of the foreman, be put to work cleaning the dirt, that nine times out of ten, is caused by the carelessness or ignorance of men to whom this same foreman gives the care of these engines. Do they require the trainmen to clean their own coaches? I guess not, they hire men for that purpose. Do they ask the knight of the throttle to scour brass. Oh, no. But he usually expects the fireman to put in a ring of packing or oil around for him, while he struts around with a spick and span suit of overalls on, that have never had enough dirt on them to make them fade with hard washing, and tells the "boys" about the fast runs he has made, which by the way, he could not have done, if he did not have a good fireman. Of course, readers, there are some who are not like this, some who think as much of their fireman as they do of the conductor or a brother engineer; but there are enough of the class I speak of to make it unpleasant for the fireman whose luck it may be to fire for them. I almost forgot to mention that our Master, E. Pruyn, celebrated his crystal wedding a short time since, and gave the B. of L. F. boys all an "invite." Those who went, say that "Master Pruyn and wife were fully equal to the task of entertaining their guests," and that all enjoyed themselves. We all wish Master Pruyn and wife, a long and happy life.

Mr. Editor, maybe I shall wear out my welcome, and if you see signs of anything of the kind, please notify me, and I will desist. I still sign myself

One of Them.

—♦—
EAST SAGINAW, MICH., Apr. 13, 1889.

MR. EDITOR:—I heartily endorse the stand the *Magazine* has taken in regard to the treatment the firemen have received at the hands of the B. of L. E. I am glad to see that the *Magazine* has back bone enough to resent such insults. When the news came that the "Q." strike was off I said to my engineer that if the firemen ever helped the engineers again I was done with them. He wanted to know if I blamed them all for the misdeeds of a few. I heard some of the boys say that the *Magazine* is too plain in the publication of its opinions. For myself I am sorry to see men so weak that they will not resent an insult. When the B. of L. E. said that no member of the B. of F. could belong to them it was an insult to every honorable member of the B. of L. F. I will now close, for I cannot find words to do justice to my feelings, but I have read so much that I felt that I must say something or "blow up." Hoping that the boys will all stay with the ship,

I remain,

A B. of L. F.

The Bursted Boiler.

MR. EDITOR:—I notice in reading the *Magazine*, that a good many of the boys write poetry, and this makes me believe that you will print a few verses that I send to you at this time. I have read the lines to several of the boys and they say the verses are good enough to print, and that they have seen some a long ways worse than mine. I don't boast of much education but making verses comes natural to me and I have made a good many on different subjects, most always though, about something that happens to somebody, such as getting married, or death or some accident. I don't hardly ever write any thing about love, or flowers and such things, though I can, but I leave such things to the girls. I have written some about my engine, old 288, but this time my subject is as you will see, the bursting of a boiler, and if you will publish them, Mr. Editor, I will try it again some time when I get off something fresh:

Old 40 had turned a merry wheel,
The M. M. had given her a turning over,
And you bet your Jewsharp I did feel
As proud as any pig in clover.

I scoured her brass, till I could see,
My face, just like a looking glass,
And the M. M. said that she
Was as pretty as any lass—

The engineer was Dandy Jim,
A man the M. M. said was a screamer,
He said old 40 was in trim
And that I was just the man to steam her.

I felt as proud as proud could be,
I knew old 40, and could trust her,
With lots of pressure, but I'll be
Darned, if I thought that I could bust her—

Boiler. But I did, otherwise the steam,
Just then, the M. M. said was the question,
But he said it could be seen
That some how, there was too much combustion.

The fuel was that bituminous sort,
Inflammable as giant powder,
It made old 40 roar and snort,
And I noticed she snorted louder.

At every turn, still Dandy Jim,
Was an engineer that could be trusted,
And now when I look at him,
Just like the boiler, he is busted.

As for my self, I'm in my bed,
With a hundred tons of pain I'm loaded,
Wondering why I am not dead,
And why the darned old thing exploded.

Side Track.

NEW YORK CITY, May 5th, 1889.

Editor *Firemen's Magazine*:

As a constant reader of the *Magazine*, and a member of our Brotherhood, I am always interested in everything that is for our welfare, and I have never been more so than I am at present in the proposed changing of our name. It is one of the most important questions we have ever had before us, one upon which every member should give his opinion without delay, for I agree with "X. Y. Z." in the May *Magazine* that there is no time to lose, and the sooner it is done

the better it will be. I think it is the strongest most sensible, as well as the most needed change we have ever been called upon to make, and it should not be delayed any longer than is absolutely necessary for delays are always dangerous. I think it can be settled much more satisfactorily by a lodge vote than it can be in any other way and it will prove that we have a backbone of our own, and that we can and will take care of ourselves and that we depend upon no one but ourselves. Put our Brotherhood under a name that will signify what it really is, and I can see nothing but success in the future. I have been talking this to the boys for the past month and they are all in favor of it, and I hope to see more of them come to the front and help it along.

I remain yours for success,

Ellwood D. 149.

LONDON, ONT., May 14, 1889.

MR. EDITOR:—In the May number of our *Magazine*, I notice the account I sent of Bro. H. Angle's death was entirely misconstrued. He was killed March 21st, while firing the through express, No. 54, between Windsor and Niagara Falls at a place called Saint George, where the engine threw a driving-wheel tire on approaching a bridge and he jumped to save himself, but the speed at which they were running resulted in such injuries to him that he died from the effects thereof. The word Maniton should have been Merriton, and it was not on the excursion that he was killed, but that was a previous instance where his mate was killed.

Faternally yours,

Geo. Black.

FARGO, DAK., May 10, 1889.

MR. EDITOR:—On the 5th inst. at 9:20 A. M., Pacific Express No. 1 and east bound freight No. 18, collided on the Dakota Division of the Northern Pacific Railway. The accident happened half a mile east of Crystal Springs, and was caused by the dispatcher giving the freight train orders to meet No. 1 at Windsor, twenty miles east. The Express had no orders to meet any freight and was on time. At the time of the accident, the passenger train was running about forty and the freight twenty-five miles per hour. Both engine crews jumped as they had no warning, the trains meeting in the bottom of a deep sag on a sharp curve. Engineer W. A. Boss, of the passenger, was injured fatally, dying in four hours; mail agent Slattery died on the way to Jamestown; fireman H. L. Keller, of 197 was severely bruised and will be some time recovering; fireman Kellum and engineer Beall, of the freight, sustained severe injuries also. The ladies on the passenger train bravely assisted the wounded even to tearing up their skirts to bandage the torn and bruised limbs of the unfortunates. The crash was something terrible. The freight engine, a 50 ton mogul, standing in a perpendicular position on her boiler-head. This is the first fatal accident for the Dakota Division in over two years.

Fargo.

ONEONTA, NEW YORK, May 6, 1889.

Personals.

Editor of the Firemen's Magazine:

The non-appearance of items relating to Susquehanna Lodge, No. 71, prompts me to write a few lines for the *Magazine*. We are getting along fine with Bro. Robison at the helm. He is not with us very often of late, owing to his having been changed to a passenger run, where he keeps the "203" hot and shining. Bro. Rowe can not be beat for a Secretary, if he is small.

But to the point; I think, as do most of the members of No. 71, that there should be a change in the name of the Order—make it The Brotherhood of Locomotive Enginemen, have a Fireman's Department and an Engineer's Department. If this can be brought about, it will help to promote our Order, as well as show other people that we can get along without them as well as they can without us. I have been running two years and over. I have been asked repeatedly, "Why don't you join the B. of L. E.?" I would as soon think of turning my mother out of doors as of joining the B. of L. E. with their present Constitution and By-Laws in force, for I feel that the B. of L. E. has made me what I am, and I shall never withdraw from it so long as I can earn money enough to pay my dues.

I would like to hear the opinions of more of the Brothers on this subject.

Yours fraternally, H. A. W.

COLORADO CITY, April 22, 1889.

Editor Firemen's Magazine:

I think it is about time to stop talking and act a little—get right down to business. We might take the action of the Brotherhood of Railway Conductors for an example. Why not change the name of our Brotherhood to that of Locomotive Enginemen. That would be right. We are losing good men who have families who have no love for the B. of L. E., but who have taken into their heads that they cannot be engineers unless they join that Order. I wish we had a few more like Brother Frank Walton. We must either pick up the gauntlet and compel them to swallow it, or die in the attempt. Brothers, which shall it be?

Wm. Michie.

Amusements.

Magnet Lodge, No. 227, B. of L. E., gave a splendid ball at Binghampton, April 24, which the Binghampton, N. Y. *Republican* refers to as follows:

The ball of the Firemen's Brotherhood at Firemen's Hall on Wednesday evening was numerously attended by members of the Brotherhood from the neighboring Lodges. It was one of the most successful and pleasant social events of the season and reflected the highest credit upon the young gentlemen in charge.

Brothers were in attendance from Lodges Nos. 228, 223, 242 and 71, as also from other Lodges and every one had a good time and went away delighted with the entertainment. Magnet Lodge is wide awake, and when the members try it again, as they will at no distant day, they promise their guests a still more enjoyable time.

WHAT has become of pretty Joe Farrell?

HANK RANDALL is the fly engineer on the I., D. & W. Passes every thing at Racoon.

BILLY LINDEMANN has quite forgotten old friends since he has made so many new ones among the fair sex.

CHARLIE N. ZEPP, of No. 14, does not care to go to California again, as he has taken the right hand side once more on the Bee line.

Vice-Grand Master Hannahan is requested to return the gray mule that has mysteriously disappeared at San Antonio, Tex., since his visit to that city. A word to the wise is assumed to be sufficient.

WM. J. MILLER, the popular Collector of Federation Lodge, No. 122, was wedded on April 18th, to Miss Maggie Gill, an estimable young lady of Flora, Ill. His many friends unite in wishing Bro. and Mrs. Miller a long and happy life together.

It would have afforded us great pleasure to have attended the crystal wedding of Bro. E. E. Pruyn and wife, which took place April 23d, at their residence in Rochester, N. Y. Bro. Pruyn is Secretary of Rochester Lodge, No. 90, and having lived to celebrate his crystal wedding, we hope the happy couple may live to celebrate their golden wedding.

A MESSAGE from Bro. J. J. Hannahan informs us that Bro. Jack Dodge, of San Diego Lodge, No. 90, has been elected Treasurer of that city by an overwhelming majority. Bro. Dodge is popular because those who know him have confidence in his integrity, and because he is every inch a man. The *Magazine* felicitates him upon his continued good fortune.

It is exceedingly pleasant for the *Magazine* to make mention of the fact that on May 22, Bro. Henry H. Burrus, led to the altar, Miss Dora Galbraith, daughter of Mr. and Mrs. M. A. Galbraith, of Honey Grove, Texas, and the *Magazine* most cordially wishes the bride and groom a delightful voyage on seas matrimonial, with every conceivable felicity that a union of hearts vouchsafes to mortals.

The industrial classes of Chillicothe, Mo., wanted a representative in the council of that important city, and wisely selected our esteemed friend and fellow workman, A. H. Tucker, and what is better, elected him by the largest vote received by any candidate on the ticket. Bro. Tucker is eminently qualified for the position and his triumphant election speaks volumes for the intelligence of the working men of Chillicothe.

The members of Enterprise Lodge No. 75 desire through the columns of the *Magazine* to extend their most sincere congratulations to two of their brothers, Charles W. Reeves and R. E. Williams, who have fallen victims to the wiles of Cupid. They have lately been united in the bonds of matrimony to two of Pennsylvania's fairest daughters. The boys desire to return thanks to Bro. Reeves for the cigars, but they are patiently waiting the same favors from Bro. Williams.

H. W. HALL, member of J. B. Maynard Lodge, No. 193, an old-time member, thoroughly imbued with the brotherhood spirit, has, for the present, abandoned the foot-board, and accepted the general state agency for the Magnar Publishing Co., Callard & Pope, and the Central Manufacturing Co., with headquarters at Spokane Falls, Washington Territory. The *Magazine* wishes Bro. Hall the largest possible measure of success in his new departure. He merits the realization of his most sanguine expectations.

Correspondence must in all cases be brief and to the point.

Subscriptions must begin with the January, April, July or October number and expire with the year.

Changes of Address of subscribers should be reported to us promptly to insure the safe delivery of the book.

Subscribers failing to receive their Magazine will please notify us, giving name and location of Agent to whom they subscribed.

Matter for Publication should be written on one side of the paper only, in a clear, legible hand, and all letters relating to the Magazine should be directed to

LOCOMOTIVE FIREMEN'S MAGAZINE,
TERRE HAUTE, INDIANA.

JUNE, 1889.

IOWA, for purposes of taxation, assesses the railroad property of the state at \$43,556,156, of which \$43,269,608 is upon railroads proper, and \$286,538 is upon sleeping and dining cars.

A MAN in Finland, who owned some land, bequeathed it to the devil. It is the law in some countries that the father is the rightful heir of the child.

MISS JENNIE FLOOD, daughter of Bonanza Flood, is now said to be the richest woman in the world, and she is only 25 years of age. There hasn't been such a Flood, since Noah built the ark.

A FELLOW by the name of Chas. Weir, claiming to be a member of "Self Help Lodge, No. 80," Aurora, Ill., is traveling about the country. He is not a member of the Order, and is therefore an imposter, deserving of no consideration whatever.

MR. S. W. ROGERS, managing editor of the Denver *Patriot*, who fought the C., B. & Q., feeling justly indignant over the report that he "sold out to the 'Q.," takes occasion in the issue of the *Patriot* of March 16, to effectually stamp the life out of the malicious slander. It ought not to be heard of again.

THE *Frog* gives its experience in trying to exchange with the O. R. C. *Monthly*. The editor of the *Monthly*, Mr. Wheaton, thought he might like the *Frog* if he could only see a number of the publication. This frankness bothered the *Frog* not a little, owing to the fact that at the time the *Frog* articles were appearing in the *Monthly*, and were "commented upon at length by the editor."

S. E. WILKINSON, Esq., Grand Master of the Brotherhood of Railroad Brakemen, paid us a friendly visit in the early part of May. Bro. Wilkinson spoke cheerily of the outlook. He says the B. of R. B. is steadily moving forward and that it is in a most excellent condition. Such words coming from the chief executive of our sister organization afford us the greatest satisfaction.

It is stated that "the *Western Historical Magazine* has secured a fine photograph of W. R. McKeen, the pioneer railroad man and banker of the West, and it will appear in a lithograph in the coming publication, along with a sketch of his life." A well written sketch of Mr. McKeen's life will be a valuable contribution to history, and one which railroad men, without regard to position, will delight to read.

It affords us pleasure to acknowledge the compliment of a visit from J. A. Hall, Esq., Grand Organizer of the Switchmen's Mutual Aid Association. The local Lodge was reviewed by the Grand Organizer and good work was accomplished. We found Bro. Hall an advanced thinker on the subject of federation of which he is a pronounced advocate. The Grand Organizer had only words of good cheer to speak of the Switchmen's Association.

AMONG our correspondents who write for our own, or the eye of the public, we are glad to number Lewis Gleason, Esq., an engineer on the A., T. & S. F. He surveys the field of labor in a way that detects the ills which confront the wage-workers of the land, and measures, as with line and plumb, the obstacles in the way of advancement. His letters are incentives to study and we are always interested in the views he takes of things particular, or in general.

WE had the pleasure, a short time ago, of a call from Mr. W. D. Robinson, first Grand Chief of the B. of L. E., now residing at Vincennes, Ind. Few men are better posted upon labor subjects. He has watched the growth of labor organizations for more than a quarter of a century, and with rare intelligence, comprehends their mission. Mr. Robinson is an unqualified advocate of federation, and believes it to be in the line of solving some of the most serious problems that have confronted railroad employes. Mr. Robinson is now a candidate for a consular appointment, and should he succeed, as the *Magazine* hopes will be the case, he will reflect honor upon the office. He will be found capable, industrious and conscientious. We are glad to know the consular outlook is flattering.

It affords us pleasure to state that Chas. Conlick, Esq., agent Fidelity and Casualty, has his headquarters at Chattanooga, Tenn., where he will attend to all who want insurance against accidents. Mr. Conlick is a member of Division No. 372, B. of L. E., and a gentleman whom it is a pleasure to know in business or social circles. He deals in straight goods and has the confidence of all who have transactions with him.

* *

ACCORDING to the Chicago *Knights of Labor* the order in that city is in a bad way. It says: "There was a bare organization of the Knights of Labor left when Wheat struck the town; there is scarcely anything left now." This man Wheat appears to be the chief cause of the trouble and is terribly denounced, and Mr. Powderly is advised "that his friends in Chicago are assassinating him." It is unpleasant to read such things. We would greatly prefer to be advised that the great order of Knights of Labor is harmonious and prosperous.

* *

We are in receipt of information from a brother, member of Long Division Lodge, 397, Hoisington, Kansas, to the effect that the ball given by the Lodge, May 7th, was a splendid success, and it is most gratifying to know that the ladies are taking an interest in the welfare of the Lodge; as an evidence of this, the wives and sisters of the members of 397, presented the Lodge with a beautiful charter frame and a Bible. Such things are eloquent of devotion and most fortunate is a Lodge that has enlisted the work and sympathies of the ladies in its welfare. We congratulate 397 on its good fortune.

* *

It goes the rounds that "when the Prince of Wales and his wife wish to go to the theatre, notice is given to the manager, who prepares his largest box, or knocks two boxes into one for the royal party, and sets aside another box for their suite. If the boxes have already been sold, the persons purchasing are informed that they are wanted for royalty, and are requested to call and get their money back. Half a dozen programmes are printed on colored satin, a lot of bouquets are purchased for the ladies, and an immense amount of scarlet is used in decorating the house. The manager receives the party personally. The rising of the curtain is delayed until the royal party is seated and the orchestra plays "God Save the Queen." At intervals during the performance refreshments are sent up to the royal box. All this is at the expense of the management." That reads as if the "divine right to rule" idea, is deeply rooted in "old England," and, as there are now, two heirs to the throne on hand, business is likely to continue at the old stand indefinitely.

We are glad to know that our esteemed friend, A. W. Killmer, member of Division 25, B. of L. E., of Terre Haute, now located at Buffalo, N. Y., is meeting with success, in applying the Killmer metallic packing, for marine and locomotive engines. The packing answers every demand, is of unquestioned merit, and is destined, we are confident, to go into universal use. Mr. Killmer's numerous friends in Terre Haute, will be glad to know that his business prospects are good, and will wish him the success his genius and energy merits.

* *

THE employes on the Wabash Western, have received a circular from Auditor Hunt, of the system, in which that official remarks, that "any employé of this office known to be in the habit of frequenting pool-rooms, playing poker, or gambling in any of its forms, or in the habit of borrowing money at high rates of interest, or dealing in any way, shape or manner with the men who are engaged in this business, will be dismissed from the service, whatever his rank or capabilities may be." Certainly, that means business, and every thing appears *hunky dory* except the interest item; a poor fellow might have to pay a "high rate of interest" though he were a deacon in a church.

* *

In discussing rights and wrongs, as from time to time duty demands, we have always felt assured of the generous approval of the membership of the B. of L. E. In this we have not been disappointed. Our brethren have stood by us with a unanimity worthy of the highest commendation. But it is our good fortune to be assured that the course pursued by the *Magazine* is approved and applauded by engineers, members of the B. of L. E., and their words of cheer are in the highest degree encouraging, for they are reminders of the maxim that "Truth is might and will prevail." As an instance of this, we have from Florida, a letter from an engineer, a member of the B. of L. E., as follows:

"Find enclosed P. O. order for \$1.00 to pay for the *Firemen's Journal (Magazine)* for year 1889. I think it is a good one and well worth the money. Hope you will have all success possible and stand up for your rights. Yours truly, _____"

Such expressions contain a world of meaning. They come from practical men, and courageous men, who have convictions and dare express them. They are loyal to the right and will not keep silent when a wrong is being perpetrated.

Such letters should inspire the membership of the B. of L. E. to extend the circulation of the *Magazine*. They have but to show it to men of thought to obtain subscribers by the hundred.

THE BROTHERHOOD OF RAILWAY CONDUCTORS.

There were numerous reasons for the organization of the Brotherhood of Railway Conductors, the more important of which should have the widest possible publication. The organization of any large body of workers in any of the great industrial enterprises of the period, is a movement of such significance as to attract wide attention, and it should be borne in mind that this notice, this heedfulness is not confined to employes and employers. It extends far beyond such boundaries. The politician, the statesman, the banker, the political economist and the philanthropist, are all students of labor organizations, and their solicitude increases as the work of organization proceeds. No more healthful sign of progress could appear. It demonstrates beyond all controversy that a new element has made its appearance, and that the discussion of social, governmental, industrial and financial problems are to be forced out of the old ruts, that new highways of thought and progress have been and are being *blazed* over and mapped out; that old formulas are to be investigated and new ones introduced, and that wrongs and shams, however antiquated, have got to go.

It has been well understood for a good while that the great army of Railway Conductors of the United States were living on a plane vastly below that which their intelligence and services entitled them to occupy—that they were not exerting that healthful influence in the great family of wage-workers which their fellow-toilers believed was their due, and the organization of the Brotherhood of Railway Conductors proposes to remedy such accepted incongruities, such manifest mistakes and absurdities.

On the Pacific coast Railway Conductors were utterly powerless to protect their rights and interests. They felt that they had no organization to which they could appeal for help in times of trouble, and this led them into consultation for the purpose of devising some way for relief. For a man to be a member of an organization which he finds out is in alliance with his enemy, must of necessity arouse feelings of the deepest indignation. To ask for bread and be given a stone, to ask for a fish and be given a scorpion, and that, too, from his own Brotherhood, is enough to absolve a man from all allegiance, and to prefer the pangs and penalties of idleness rather than admit himself a member of such an organization.

To introduce a policy of self-respect, to elevate railway conductors to the influence and dignity which belongs to their responsible vocation, was the inspiring motive of the manly men who organized, last Novem-

ber, at Los Angeles, California, the Brotherhood of Railway Conductors. It has met with unprecedented success. It has been moving on an ascending grade from the first day of its existence. It is firmly established. Its Grand Chief is not a visionary. He indulges in no utopian theories. A practical railroad man from away back, he knows the rights of Conductors, and is observant of the wrongs to which they are subjected. He does not favor strikes. He favors arbitration with railroad corporations, but he believes, as does every other workingman who has self-respect, in upholding the right, of defending employes against all encroachments upon their prerogatives. Such estimates of the purposes of the Brotherhood of Railway Conductors are predicated upon a personal interview with Col. G. W. Howard himself, the Grand Chief Conductor of the Order.

The first annual convention of the Brotherhood of Railway Conductors will be held at Los Angeles, Cal., on the third Monday of September, 1889, at which time the Order will adopt an Insurance plan, which it is believed will meet with approval.

The membership of the B. of L. F. should do all in their power to promote the welfare of the B. of R. C. Its aims and purposes are the same as those which they advocate and which they are pledged to maintain. The B. of R. C. favors federation and unity, for the purpose of defending and maintaining the right.

The charge has been made that the B. of R. C. is made up from material rejected by another organization. This is not only puerile, but pusillanimous. The members of the B. of R. C. are the peers of the members of any other organization in the land. We know whereof we speak. We know them, have met them, and we know they are, in all regards, the equals of the most advanced advocates of the principles of right and justice. We do not hesitate to express great and abiding confidence in Col. Howard, the Grand Chief of the Brotherhood. Young, active and intelligent, full of vigor and aggressiveness, he is preeminently qualified for the responsible position he occupies. He has the unqualified confidence of his associates and of all who know him. Practical and methodical, painstaking and persevering, he is built upon plans renowned for going and for staying qualities. He will win. The Brotherhood of Railway Conductors has come grandly to the front, and has come to remain. The *Magazine* wishes it uninterrupted success.

A. W. CARR is representing himself as a member of Lodge No. 81. He has been expelled and is imposing on the credulity of the Order. He has some receipts, the dates of which he has altered, to show his standing. Look out for him.

NEW INTER-STATE COMMERCE LAW.

The *Washington Post*, in a recent issue contains the following;

Inter-state commerce has come to be a serious thing. The amendments adopted in the last hours of Congress make it possible to imprison as well as fine any official of a railroad who violates the laws in regard to discrimination in rates and charges. Under-billing also falls in the same category of prisonable offenses. Railroad managers are reading the law with a good deal of concern. They have paid the light fines hitherto imposed without hesitation and gone on violating the law systematically. The complainant against unjust charges now has a new weapon and is really alarming. There is a sort of commercial conscience which justifies the violation of law and the payment of a fine, but prison bars and damp cell walls have the terrors of disgrace for such offenders that nothing else can have.

Such legislation as the *Post* refers to, directed against railroad officials, is well calculated to make men, at all thoughtful, not a little despondent. The men who control the great railroad enterprises of the land, rank high in the social circles, rich, cultured and influential, it is never hinted that they belong to the law-breaking, the law-defying class, and yet, Congress found it necessary to suspend above them and over them, such penalties as felons pay, to accomplish the ends of justice. We take no pleasure in chronicling such facts as the *Post* brings into view. We should much rather it had been said of those who control the great railroad interests of the country that they were men of such inflexible integrity, that their transactions with the public were so unquestionably just, as to require no criminal statute in their case, but it appears that such is not the estimate of Congress, and hence, the penalty of imprisonment in certain cases. Working men are not likely to forget, when oppression has forced them to strike for justice a hue and cry has gone forth that the employes were "law breakers" and now the verdict of the nation's representatives is that severe penalties must be imposed to make certain railroad officials law-abiding citizens. Compensations are slow in coming, but the mills of the Gods grind on, and justice gets there after a while.

We acknowledge the receipt of a copy of a photograph, 8x10 size, handsomely framed, from the Queen City Portrait Company, of Sedalia, Mo., of which Messrs. Coe & Myers are proprietors. The photograph is of Bro. J. A. Leach, founder and first Grand Master of the Brotherhood of Locomotive Firemen, and is a beautiful work of art which does great credit to the gentlemen named, and ample justice to Bro. Leach. The art of photography is making rapid strides in the direction of excellence and all who can afford it, (and nearly every one has the financial ability) should secure a picture of the veteran, Bro. Leach, as they are most valued souvenirs. That this is true we sub-

join for the information of our readers, Messrs. Coe & Myers' price-list, which will, we think, be ample inducement.

PRICE-LIST:

Cabinets, per dozen \$ 3 00
Cabinets, single, by mail 30

INK AND CRAYON.

Ink and crayon, 8x10, G. frame \$ 4 50
Ink and crayon, 10x12, G. frame 6 00
Ink and crayon, 11x14, G. frame 9 00
Ink and crayon, 14x17, gold frame, 5 inch 14 00
Ink and crayon, 16x20, gold frame, 5 inch 16 00
Ink and crayon, 18x22, gold frame, 5 inch 18 00
Ink and crayon, 20x24, gold frame, 5 inch 22 00

PHOTO'S FRAMED.

8x10, gilt frame \$ 2 50
11x14, gilt frame 4 50
14x17, gilt frame 6 50

* * *

The Junction City *Tribune* furnishes an interesting report of the Union meeting at Parsons, Kan., April 10, under the auspices of Great Western Lodge, No. 24, B. of L. F. Speaking of the members of No. 24, the *Tribune* says:

The "boys," as genial and manly men as ever graced any order, on the said evening fulfilled their pledge, made on a previous occasion, in a truly pleasant manner, which was heartily appreciated by all their friends.

Pleasant reference is made to the decorations of the Opera House where the public meeting was held, and the address of Grand Master Sargent has the following generous notice:

The address of Grand Master F. P. Sargent, was very pleasant and instructive and carried with it the sympathy of his hearers. He gave special attention to the objects, necessities, and achievements of the Order, dwelling particularly upon the great advance made by firemen socially. He noticed the happy homes graced by the presence of the members of No. 24, as he had visited them in this city, in a very happy manner, but presented the picture in not too strong a light, as those who know the "boys" best can gladly attest.

Miss Mamie Pierce, whose recitation captivated the audience, is handsomely complimented, and in referring to the address of the first Grand Master of the Brotherhood, we find the following appreciative notice.

The address of Joshua Leech, the founder of the Order of B. of L. F., was well received, and showed that beneath the coat of one to whom educational advantages had been denied there throbs a kindly heart that awoke to the cry of humanity and brotherhood, not only to sympathize but to act. His good sense directed the tender impulses of his great nature, to the founding of a brotherhood that has already spent millions in charity, and made glad the heart of many sorrowing widows, mothers, and orphans. In the presence of such a work mere education—the result of surroundings—may well take off its hat and do obeisance. The heart of sympathy speaking, even in ungrammatical sentences, carries with a force that is thoroughly felt, where even glowing rhetorics falls as tinkling brass.

The boys of No. 24 have a good friend in the Junction City *Tribune* and its generous notice of the their meeting should not be forgotten, but on the contrary, remembered and rewarded.

WM. O'HERRON.

We desire, in a special way, to acknowledge the courtesies extended to the Grand Officers of the B. of L. F. during their recent visit to Parsons, Kansas, by Wm. O'Herron, Esq., General Master Mechanic of the M., K. & T. In saying this, the Grand Officers are fully aware that the urbanity of Wm. O'Herron, was not more a compliment to them than to the great Brotherhood, which in some measure for the time being they represent. Mr. O'Herron is a railroad man from the ground up, and having himself been a locomotive fireman, has not forgotten it, and therefore knows what is due his employes, and is prompt to accord them their rights and every proper privilege.

In a pleasant conversation with Mr. O'Herron, he said to us: "When I became General Master Mechanic of this road, I determined that a grievance should never go to the higher officials of the road. When complaints are made, I make it my business to investigate them. As a result, harmony exists and the men work for the prosperity of the road."

In this brief sentence is condensed a thousand carloads of wisdom. If every road in the country could be managed as Mr. O'Herron manages the M., K. & T., there would never be another strike. Harmony between employer and employe would prevail. Fair, honest treatment is all that is required by the great majority of railroad employes. This fact Mr. O'Herron comprehends, and as a consequence, things are lovely on the M., K. & T.

* *

In a previous number of the *Magazine*, we copied from the *St. Louis Globe-Democrat* a paragraph, relating to views, said to be entertained by Rev. Wilbur Crafts, on Sunday work, where-upon our esteemed contemporary, the *American Journal of Railway Appliances* takes the *Magazine* to task as follows;

We are surprised that our esteemed contemporary, which is usually so ready to defend the cause of the laboring man, and is doing such noble work in the interest of a special class of railroad employes, should have given publicity, without comment or rebuke, to an article so full of misstatements, and so hostile to a movement that has for its prime object the moral and physical good of all laboring classes, and especially that of railroad men. The movement for Sunday rest is one, we believe, that all railroad and labor papers should support.

This *Magazine* is on record with regard to over work, whether on Sunday or any other day of the week. The paragraph in question was sailing under its own proper flag and the G.-D., should have received the attention which the *Journal* bestowed upon the *Magazine*. We are not in the habit of commenting upon every selection we make from our "esteemed contemporaries." We seek to give the proper credit, permitting our readers to form their own conclusions. We intended

no injustice to Rev. Mr. Crafts, nor to the *American Sabbath Union*, which he represents. The G.-D., says Mr. Crafts "represents those who desire to christianize the constitution." This the *Journal* denies, and remarks that the constitution "is already christianized." The trouble seems to be to arrive at some understanding as to what the term "christianize" means, much less, evidently than some persons believe and much more than some others admit, and for the nonce we let the matter rest.

* *

The book of John A. Hall Esq., Grand Organizer of the S. M. A. A., on the "Q" strike is meeting with a steady and increasing demand. Grand Organizer Hall was a Yard Master in the service of the "Q" at the time the strike was inaugurated and was in position to survey the situation in all its details and hence his work is sought by all who desire a concise and accurate history of that historic conflict. The price is one dollar and orders should be directed to Room 77, Commerce Building, 14 and 16 Pacific Ave., Chicago Ill.

* *

The O. R. C. *Monthly*, for April, makes the assertion that the Brotherhood of Railway Conductors levied an assessment of \$8.00 on its members during the month of March. Grand Chief Conductor Howard, of the B. of R. C., pronounces the assertion of the O. R. C. *Monthly* false, and made for the purpose of injuring the B. of R. C. He says no assessment was levied in March, and that no assessment will be levied during the year. The O. R. C. *Monthly* undoubtedly feels sore over the rapid strides the B. of R. C. is making towards supremacy, but it ought to know, that mendacity will not prove a remedy for the misfortune of decrepitude and decay.

* *

We have received from John T. Wilson Esq., Secretary of the Railway Order of Trackmen of the United States, a copy of the constitution and by-law of the Order, which was established August 15th., 1887, at Demopolis, Ala. President Wilson in his annual address, August 15, 1888, said, "our order is based on benevolence and charity, making provisions for those who are unable to provide for themselves; administering to widows and orphans who are destitute of the actual necessities of life, and it at the same time proposes a school fund, that children who otherwise would be neglected, may be educated." These are noble objects and the *Magazine* wishes this new order of railroad employes the largest measure of success. It has been organized since August 1887, and is destined to become an organization of great benefit to members.

THE MINNEAPOLIS STRIKE.

Mr. Tom Lowry is the head man of a street car system of railroads in Minneapolis. Early in the month of April he concluded, as a means of increasing his profits, to reduce the pay of his employes. It is a favorite method. It is simple. Suppose a man in Mr. Lowry's position employs 500 men at an average of \$1.50 a day. He wants more spending money. He concludes to drop wages 25 cents a day. That nets him \$125 a day, which for 365 days gives him the snug sum of \$45,625. He takes \$91.25 from each man, and that sum taken from a workman means suffering. We don't say that was the amount which Mr. Lowry proposed taking from his employes, nor do we pretend to state the average wages. We simply suppose amounts for illustration. When men are receiving no more than will support them comfortably, it is a crime against humanity to reduce their wages—and the crime is all the more flagrant and monstrous if the necessity for such reduction of wages is created by watered stock, bogus bonds or other fraudulent evidences of investment upon which men seek to pay interest by deductions from the earnings of workmen.

To reflective men, the situation becomes all the more aggravated when men like Mr. Lowry assert that workmen can be found in large numbers who will accept starvation wages, and such other degrading bondages as employes may impose, even to signing away their rights as citizens, and thus become the cattle of the corporation. Of this, there are sad illustrations all over the country. Mr. Lowry required his men not only to accept a reduction of wages, but to sign an agreement not to belong to a labor organization. When men will not strike against such propositions, when they will accept such terms, and wear the brand of any self-constituted despot—they are as irredeemably gone as were the first Congo negroes in the grasp of their Portuguese masters. The workmen of Minneapolis revolted—they struck—they rebelled—they stood up and stood out for their rights, and for this they are deserving of monuments—for, when the spirit of resistance can no longer be aroused against such infernalism, then, no matter what may be the material advancement of our despot-cursed land, the genius of liberty and independence no longer walks with its people. They are as dead to every ennobling aspiration as an Egyptian mummy, and embalmed in their own cowardice, may desire to build monuments to perpetuate the names of their masters, or pyramid mausoleums for their carcasses.

The Mayor of Minneapolis issued a proclamation, one of those high-sounding pronouncements peculiar to Mexico or Cuba, and the Board of Trade, where bulls and

bears gamble in grain, applauded the Mayor's Russian recipe for wrongs inflicted upon those who dare resent oppression. But the *Minneapolis Tribune*—may its shadow never grow less, and may its tribe increase—was not awed into silence by such displays of loyalty to Lowry, and facts were stated right along. The police force was indefinitely increased, that clubs might be trumps, and soldiers, armed with instruments of death, were threatened, that a flagrant injustice might be perpetrated with success. In all of this workingmen who are not blind may see, not only events that have come, but the darker shadows of other events that are looming up in the distance. The great question which events is submitting to the workmen of the United States is, Will they federate for their own protection? If they will, the future has fruitions in store for them; if they will not, then more legibly than the skeleton finger wrote the doom of Nebuchadnezzar, their own is written by the iron pen of despots who are not the less despicable because they make long prayers and shout hallelujah every time they see an American eagle or any other bird armed with beak and claws. They are usually very patriotic men and go off half cocked when they see the stars and stripes fluttering in the breeze, but they believe the stars are for themselves and the stripes for the workmen they have enslaved.

.

THE *Railway News-Reporter*, published at Omaha, remarks that "many times since the Burlington strike was declared off, we have heard expressed that the backbone of the Brotherhood of Locomotive Engineers and Firemen was broken. For the benefit of our many readers who may believe otherwise, the statement is made that the backbone in question was not even bent. The two Brotherhoods are stronger to-day than ever before; and if there is a railroad manager in this country who believes otherwise he is certainly hugging a delusion and a snare." The *News Reporter* states the fact, though it is true that the "Burlington strike cost the Brotherhoods the loss of many members. In this connection, it should be said of many who dropped out, that their abandonment of their Order casts no shadow upon their manhood. Circumstances were more powerful than convictions, but while pecuniary embarrassments determined, for a time, their action, they are still in principle Brotherhood men. But there is another class who lacked courage, conscience and conviction, calm sea sailors, dress parade soldiers. They went out and the Brotherhoods are stronger for their going. Their places have been a hundred times filled already by men whom the Brotherhoods can trust and put on guard.

MANLINESS VS. MEANNESS.

There is such a thing as manliness. Lexicographers define the term. It means "possessing the attributes of a man, especially boldness and courage; dignity; bravery." It is derived from the English word "manly." "Manliness," "manly," "manfulness," have the same meaning. They are the synonyms of bravery, courage, heroism, firmness, resolution, nobleness—of all qualities becoming a man.

"What of meanness?" It is the same as "mean," "meanly." It is the opposite of manliness. Meanness "is a want of excellence," it is "baseness," it is low mindedness.

Those who have a fondness for such things can extend the investigation. The foregoing sufficiently explains the terms for the purpose we have in view.

It is difficult to portray manliness, and quite as arduous a task to describe meanness. Manliness is human exaltation. Meanness is human degradation. Manliness is resplendent with all things commendable. Meanness is without one redeeming quality. And thus we might proceed in showing the inherent differences between manliness and meanness, the former universally applauded and the latter as unlimitably condemned and stigmatized.

In the every-day affairs of life manliness and meanness are encountered. There are degrees of manliness; the same is true of meanness, but manliness is always on the ascending grade and expands as opportunities offer; meanness is always on the down grade, and becomes more repulsive as occasion favors its development.

What form of meanness has to a greater extent aroused the indignation of railroad employes than the blacklisting iniquity? Who has ever sufficiently scourged those vile creatures who seek by bulldozing, by intimidation of any description, to compel workmen to do that which is repugnant to their sense of manliness, or accept the penalties of idleness? Do not railroad employes know of bosses, dressed in a little brief authority, who are so ineffably mean as to avail themselves of every opportunity to eliminate from work every element of cheerfulness, and make, to the extent of their power, life a burden? Have not locomotive engineers, in many cases had grievances growing out of such wrongs as we have named? Answers to the questions are interwoven in the history of the B. of L. E. from the date of its existence. And now, comes the question, do members of the B. of L. E. practice such wrongs upon the B. of L. F. We are loth to believe it. But we are receiving letters continually which make the charge. What is the character of the shameful wrongs thus complained of? The facts should be known, because they are

destitute of manliness. For instance, a fireman, a member of the B. of L. F., is promoted to the position of engineer. In numerous instances, the day he steps to the right hand side, the work of proselyting begins. The young engineer is told that if he will abandon the B. of L. F., apostatize, turn traitor to his parent Brotherhood, disrobe himself of manliness, of self-respect, of independence, he can be taken into the B. of L. E. "free of charge." Great God! To make a member of the B. of L. F. turn apostate, to commit moral suicide—his cupiditv is appealed to, he is offered an insufferable insult to his manliness. An effort is made to debauch his courage and convictions with a paltry sum of money, a few dollars, less than the "thirty pieces of silver" for which Judas Iscariot betrayed Christ. In offering such a consideration to a member of the B. of L. F., they virtually say to him: "You are without courage. You are destitute of manliness. You are such a devout worshipper of a dollar, or a dime, that you can be induced to sacrifice your honor for the privilege of entering the B. of L. E. as a mendicant, as a creature of charity." This is just what such an offer means, it is an honest interpretation of its meaning. Are there members of the B. of L. F. who can be caught with such bait?

In addition to this the charge is made that certain roundhouse foremen, where engineers remain loyal to their *parent Brotherhood*, to their *foster mother*, seek by various methods to hamper them, bulldoze and intimidate them; and the same charge is made against certain Master Mechanics. We know of no remedy for such meanness. There are diseases for which the only remedy is a miracle and meanness belongs to the catalogue. A mean man is worse than a leper, and the man who throws obstacles in the way of a workingman, who makes his pathway more laborious, no matter who he is, what may be his position, or where he is found, he is a moral monstrosity, and should be shunned.

But what of it all? This. Members of the B. of L. F., who succumb to such treatment, who have not the *courage*, the *pluck*, the *sand*, to stand and withstand such overtures and intimidations, are wanting in manliness. When members of the B. of L. F. can be driven by threats or intimidation from the Order, or can be coaxed or wheedled to do that which is repugnant to every manly instinct, and thus abandon their Brotherhood and all of its grand traditions—this *Magazine* wants them to go. We want to get down to rock bottom. We want to know our men—know who of them have *sand* in their craw. We want to know who will stand by our Brotherhood flag however fierce the battle—who will keep step to our drum-beat of progress.

We write this that the entire Brotherhood

may know some of the ordeals through which some of their brethren are called to pass. We write in no plaintive mood. We extol manliness and we scorn meanness. We admire courage and have an unmitigated contempt for cowardice. The flight of the weak, the spineless, the white-livered and chicken-hearted never hurt an advancing army. Victories are gained by veterans. If there are members of the B. of L. F. who can be frightened into submission, who can be swerved from the luminous pathways of honor, self respect and independence, whose hearts can be driven into their boots and their souls to take refuge behind their kid-neys, this *Magazine* will neither weep nor wear mourning when they go. It will turn to the true men of the Brotherhood, and in the future, as in the past, march on to victory.

* *

It was announced, April 24th, that on May 1st the Vanderbilt system of roads, east of Chicago, would "abandon a great proportion of their Sunday freight trains." Previously the number of Sunday passenger trains had been curtailed, by "giving up excursions and various other ways." In an interview with Mr. Chauncey M. Depew, President of the New York Central, we find the following:

It is not possible, of course, for us to stop all Sunday freights. There are certain kinds of freights which must be moved. We can not let perishable goods rot on the road; cattle and other live stock must be cared for and forwarded, and certain market trains cannot be abandoned. If some of our trains did not get to this city on Monday morning, there would be a famine here; that is, you know, a famine in some things. We expect to reduce the number of men employed in the Sunday traffic by from 33½ to 50 per cent."

"Are the reasons for this action religious or economical, or both?"

"Almost purely religious, although we do expect that it will improve the morale of the men and give them more time at home. The latter is, however, going to be a difficult matter to fix, that is, to arrange so that freight-crews will be at home at the end of Saturday's run."

"Are you in favor of the change, and who also besides Mr. Vanderbilt wanted it?"

"I am in favor of it, and so were nearly all the Presidents. The most serious trouble is to arrange it. We can't refuse to receive freight from connecting roads, nor can we afford to lose one day's business in the week—that would ruin us."

"But the men will have to lose one-seventh of their income, will they not? Are not freight-crews paid by the run?"

"Yes, they are so paid, and of course they will lose just so much money; but the men have repeatedly said that they did not want to work on Sundays. Now we will take them at their word. Perhaps they may not like it. I have known such cases. They clamor for a theory, but they realize a condition."

There are a few things in the foregoing worthy of note. The reason for abandoning Sunday freight trains is said to be "almost purely religious," but, owing to the necessities of transportation, only from 33 to 50 per cent, of employes will be benefited—say 45 per cent, that is to say, if there are

10,000 men employed, 4,500 would be idle on Sunday, and 5,500 employed—as a result the "almost purely religious" sentiment is more than counterbalanced by the purely financial sentiment. Again, Mr. Depew thinks it will be a difficult matter to fix, to arrange so that freight-crews will be at home at the end of Saturday's run, hence, the expectation that the "abandonment of a great proportion of the Sunday freight trains" will improve the morale of the men and give them more time at home," will be defeated. Suppose of the 4,500 men laid off on Sunday, one-half, 2,250, are away from home on Sundays, in that case, only 2,250 would be morally and religiously benefited—and of the supposed 10,000 employes, 7,750 would derive no benefit from the "almost purely religious arrangement"—the 2,250 men would simply lose their wages.

Again, it seems, from Mr. Depew's statement, that the men had said that they did not want to work on Sundays. He takes some of them "at their word." He thinks they may not like the arrangement. He has known of such cases. But the men having clamored "for a theory" he will give them an opportunity to "realize a condition." Mr. Depew broadly intimates that his men are not practical. Theory is speculative, conjectural—it may be right or it may be wrong, beneficial or injurious. Mr. Depew is not a theorist. He says "we can't afford to lose one day's business in the week—that would ruin us." The men who do not work, lose one day's work in a week, ruin or no ruin, and thousands of them on the Vanderbilt roads will lose the day, under the Sunday arrangement, away from home, subjected to expenses, and drawing no pay. It may be the best that can be done, but we are of the opinion that it is not "almost purely religious," and that it involves conditions which will make men abandon their "theory."

•

JOHN A. HILL, ESQ., Editor of the *Locomotive Engineer*, the best paper of its class published in the United States, being on a Western tour of inspection of shops of Western railroads, took Terre Haute in his route, and was for several days in our beautiful city. His sojourn here afforded us a number of opportunities to enjoy his society and to hear his views upon a variety of important topics now up for discussion, and which are awakening solicitude in railroad circles and in which employes take a lively interest. The *Locomotive Engineer*, under Editor Hill's management, has already achieved marked success, and is steadily advancing in prosperity and influence. We wish its growth may realize every expectation. Brother Hill is always thrice welcome to our sanctum.

THE UNION MEETING AT PARSONS, KANSAS.

Parsons, Kansas, is a beautiful city in the southwestern section of the state, of about 8,000 inhabitants, and justly celebrated for the thrift, intelligence and morality of its people. It was the good fortune of the writer hereof, in company with Grand Master F. P. Sargent, to be the guest of Great Western Lodge, No. 24, B. of L. F., April 10th, the occasion being the holding of a grand union meeting under the auspices of No. 24.

The weather was superb. The vernal season had come, and sun and shower, in old-time alliance, had well advanced in decorating mother earth in holiday attire. From the first we fell in love with Parsons, and the more we saw of its people, the more we heard them talk, the more we observed their thrift and enterprise, the stronger became our attachment to the place. It is a city well supplied with everything to make life enjoyable, and besides, is blest with far more than an average share of common sense, the one thing needful for a city as well as for an individual.

Great Western Lodge, No. 24, B. of L. F., is a banner Lodge. It is a model Lodge. It has many noble and distinguished characteristics. In the first place, absolute harmony prevails among the membership and a perfect understanding between the members and the officials of the M., K. & T., brings into prominence the fact that where there is a will there is a way to make fair weather between employer and employé. The credit of the members of No. 24, stands high in Parsons. There are no dead beats among them. They neither chew, smoke nor drink. We should say that No. 24 had reduced vice to its minimum, and elevated virtue to its maximum influence. The men own their own houses. They are citizens in the best sense of the term. In Parsons, the purposes of the Brotherhood of Locomotive Firemen have developed in the largest degree the purposes for which it was organized. The members of 24 stand high in the esteem of merchants and bankers, who do not hesitate to speak of them in terms of unqualified praise. The members of No. 24 remind one of a family where each is devotedly attached to all and anxious to help one another, where jealousies and envies are exiled, and where the success of one, affords pleasure to all. The General Master Mechanic of the M., K. & T., said to us that he had "the best class of men in the country, and was proud of them." The *Magazine* felicitates the Master Mechanic, and congratulates the boys upon their good fortune. A leading banker remarked: "We are all proud of the Brotherhood of Locomotive Firemen. Its members are among our very best citizens, and in this community no man requires a higher certificate of good charac-

ter than to be a member of your Brotherhood"—and this was the splendid verdict of all the business men of the city we had the pleasure of meeting.

On Wednesday afternoon, a secret session of the membership was held, and in the evening there was a public meeting at the Opera House. The following was the programme of exercises:

Only a Fireman Killed—Song	Firemen's Glee Club
Address	Frank P. Sargent
Home Circle Overture	Prof. Chaffee's Orchestra
Abigail Beeker—Recitation	Miss Manile Pierce
Let Me Dream While Life Shall Linger	Firemen's Glee Club
Address	Joshua Leach
Drifting with the Tide	Fireman's Glee Club
Only a Switchman's Story—Recitation	Miss Anna Smith
Marabella Waitzes	Prof. Chaffee's Orchestra
Address	Eugene V. Debs
Midnight Fire Alarm	Firemen's Glee Club

The audience at the Opera House was large, and was made up of the very best people of Parsons. The programme was carried out to the letter, and the music, recitations and addresses, were received with appreciative applause. The address by Grand Master Sargent was one of the happiest of his life, brimful of thought and pertinent suggestions, doing great credit to himself and to the Brotherhood, of which he is the chief officer.

The Opera House was tastefully and elaborately decorated, a full sized locomotive was on the stage, fully equipped with head-light and bell for which the Lodge was indebted to the courtesy of the Master Mechanic, Mr. O'Herron.

Past and First Grand Master of the B. of L. F., Joshua Leach, known as "Pap Leach" among the boys, gave a history of the origin and early struggles of the Brotherhood, which was listened to with great interest.

General Superintendent Frey, and Master Mechanic O'Herron, are types of nature's noblemen, and there is not a fireman on the M., K. & T., who in any sort of a fight, would not make their cause his own. In the generosity of officials of the road, it was placed at the disposal of the Grand officers, who attended the meeting at Parsons, and a pleasant excursion into the Indian territory would have been made, if time had permitted. The hospitalities of the people of Parsons were boundless, and every table in the beautiful city was set for the guests of Lodge No. 24. The *Magazine* wishes the largest possible measure of success for the M., K. & T., whose Master Mechanic says, "no grievance of his men shall ever find way to the ears of the higher officials of the road."

An unusual amount of correspondence has been received this month, much of which, for the lack of space, we are unable to publish.

INSURANCE UNDER THE REGIME OF THE BROTHERHOOD OF LOCOMOTIVE MEN.

In the April *Magazine* we suggested for the consideration of the membership of the B. of L. F. the propriety of a change in the name of our Order, and said:

The title is defective, because it is not sufficiently, nor justly comprehensive. It is less than the facts require. Let us see. Who are members of the Brotherhood of Locomotive Firemen? 1st, firemen; 2d, hostlers; 3d, engineers. A hostler is not a fireman, nor yet an engineer. An engineer is not a fireman, and yet, the membership of the Order includes them all. Hence, the *Magazine* is fully warranted in saying the name of our Brotherhood conveys a meaning far less than is warranted by the callings of its membership.

The suggestion has met with hearty approval. We have received hundreds of letters, from every section of the vast jurisdiction of the Brotherhood, commending a change of name. Instead of the name of "Brotherhood of Locomotive Enginemen," the suggestion of "Brotherhood of Locomotive Firemen and Engineers" has been made as better suited to meet conditions. In the May *Magazine* a Brother writes as follows:

MR. EDITOR:—Noting your suggestion in regard to change of name of B. of L. F., permit me to say that you are doubtless aware that on many roads, the "Engineers" as you call them, or those who manage the engine are called "Enginemen" and those who manage the fire "Firemen." Your new title of "Locomotive Enginemen" would still have a restricted meaning. You know how fond I am of the Locomotive idea, and I suggest the name of "Locomotive Men."

It occurs to us that the name, "Brotherhood of Locomotive Men," meets the want and fills the bill, and we have adopted it in the caption of this article. But the question is still open, and we invite the further expression of views upon the subject.

In this article we discuss the Insurance question to meet exigencies when the change of name is adopted.

The present Insurance system of the B. of L. F. is conceded on every hand to be the most practical, the least expensive and the safest that can be derived—in a word, it is so near perfection that it is no longer a subject for discussion in the Lodges or in the conventions of the Order. Under our system, every member of the Brotherhood is insured. He has a policy of \$1,500 which costs him not exceeding \$16.00 a year, less than five cents a day—a cost so small that should he pay the amount for fifty years, and then die, his heirs would be the gainer by \$700.

Under the *regime* of the new name of the Brotherhood, membership would be composed, as at present, of Firemen and Engineers, and the question that arises is, how to arrange the Insurance system of the Order to meet requirements. To our mind this is not only practicable, but simple. The matter can be easily and satisfactorily disposed of. No new machinery is requir-

ed; no complications need be introduced. Engineers receive more pay than firemen, and are, therefore, in a position to carry a larger amount of insurance. In this regard, insurance is consequent upon wages. To express the idea in figures, we will say, the average pay of a fireman is \$50 a month, and that of an engineer \$100 a month. Manifestly an engineer can afford to carry insurance double the amount of a fireman. If a fireman takes out *one* policy for \$1,500, an engineer can take out *two* policies of \$1,500 each, amounting to \$3,000. If a fireman is annually assessed \$16 for his *one* policy, the engineer is assessed \$32 a year for his *two* policies, and that is all there is of it. You pay in proportion to the amount of the insurance. While every member has *one* policy for \$1,500, taking two policies remains *optional*. It is a, b, c work all the way through—simple, efficient, solid.

But there is still another feature, and an important one, to be discussed, one which relates to the welfare of the membership of the Order, and which, we think, will have weight and challenge consideration.

It is needless to say that the employment of railroad men is subject to change. It often occurs that engineers are relieved from their command of the throttle and are set back to the position of fireman. It is just here that the insurance plan we have suggested, without the slightest derangement of the system, works like a charm for his benefit.

While working as an engineer and receiving \$100 a month, he could carry two policies of \$1,500 each—\$3,000, and pay the assessments, amounting to \$32 a year. But, having been thrust back to the position of fireman, at \$50 a month, he finds the expense of carrying *two* policies too heavy for his changed financial condition—what then? Why he simply has *one* of his policies for \$1,500 *cancelled*, and thereafter pays assessments upon *one* policy of \$1,500. He does not surrender all—he is still protected to the amount of \$1,500.

Again, fortune smiles, and the engineer goes back to the throttle, and is again in receipt of \$100 a month. He now takes out *another* policy, and is again insured to the amount of \$3,000. In all of this adjustment of insurance to conditions, there are no complications, neither *red tape* nor circumlocution, simplicity marks and distinguishes every movement, and the welfare of the Brother is never lost sight of.

With the change of name to express the true *status* of our Brotherhood, the insurance plan we have suggested in this article, meets every requirement. It is convincing as well as convenient. It is fair, just, honorable and reasonable. It meets exigencies and will redound to the strength and prosperity of the Brotherhood of Locomotive Men.

RETROSPECTIVE, PERSPECTIVE AND RE-SPECTIVE.

In the May *Journal* of the Brotherhood of Locomotive Engineers, page 397, appears a communication dated at Pittsburg, and signed J. J. Clark, which is, from one or two considerations, worthy of notice.

Mr. Clark takes our correspondent, H. J. Fackenthall, to task for an article over his signature, which appeared in the *Firemen's Magazine* of February last, captioned "My Opinions." Mr. Clark refers to the article in question, as follows:

"In the first place, the *Magazine* is not exactly the official organ of the B. of L. E., no matter how ably it is conducted, and in the second place, such articles when viewed from the standpoint of common sense, are unworthy of publication; and further, such article does not show sufficient respect for the conclusions of the representatives of the B. of L. E. in convention assembled, nor does said article reflect the opinions of any sensible engineer, taken as a whole nor does it correctly state the position or future prospects of the B. of L. E. for the information of the intelligent readers of the *Magazine*."

Mr. Fackenthall is a locomotive engineer, a member of the B. of L. E., and was a delegate to the Richmond convention—a representative of his Division. Manifestly, his "opinions" ought to have some weight. Mr. Clark says, "viewed from a standpoint of common sense," they are "unworthy of publication." In this, we differ with Mr. Clark. We think Mr. Fackenthall's opinions, from a practical, common sense standpoint, are specially worthy of consideration. We give a few extracts. Mr. Fackenthall said:

In the first place, we, as representatives of the B. of L. E., at Richmond, failed to realize the fact that we are living in a progressive age, an age in which all manner of business enterprises are being pushed forward with a vigor and energy hitherto unknown. The great tidal waves of progress rush along with resistless power, requiring capabilities of a high order, if men would escape wreck and ruin.

All who attended the Richmond convention know that a very fair and perfectly safe plan of cooperation was carefully drawn up and offered to that grand body, and that it was flatly rejected. But a moment's reflection will convince those open to conviction, that revolutions force themselves upon the people, and now, mark the prediction, cooperation will come, whether we want it or not, and the grand mistake lies in not meeting necessity half way at Richmond, and by our action, trying to postpone the inevitable, to have it forced upon us in perhaps a less desirable form than was offered.

And yet that obnoxious law which compels a man to withdraw from the B. of L. E., to become a member of the B. of L. E., and which is destined to destroy the Brotherhood of Locomotive Engineers, was not sufficiently arbitrary in the estimation of the Richmond convention to be repealed. You may doubt that such a law will destroy the B. of L. E., but if you will study the lessons of physical vitality, you will find that the blood, which is the vitalizing agent of your physical body, becomes impoverished and fails to fulfill its purpose unless sufficient nourishment is given to it, and just so it will be with the B. of L. E. Any law that prevents the infu-

sion of young blood into our ranks is destructive to the system of our Brotherhood. That law is a deadly poison and its only antidote is repeal.

I am not a member of the B. of L. E., nor was I ever a member of that Order, but my acquaintance with the men satisfies me that the B. of L. E. is composed of men whose intelligence and character, wit and wisdom, would add greatly to the efficiency of the B. of L. E. if only this arbitrary and detestable element was true to its convictions and had the moral courage to repeal that law and bring members of the B. of L. E. in where they belong; and it is my opinion we will have to do it, or, in time, be called upon to rue the mistake.

In the foregoing extracts Mr. Fackenthall says that which would be no discredit to any publication in the land. Mr. Clark, nevertheless, deplores the misfortune of labor organizations "in having men who are so far behind the times and so dull in perception as to be guilty of writing such stuff."

We are in full accord with Mr. Clark, when he says the strike has not injured the B. of L. E. A strike, for a righteous cause, ought never, in any sense, to be an injury to the men who engage in it. To battle for the right never did and never will be a stigma upon the soldier, no matter what the outcome may be. The firemen on the C., B. & Q. who stood by the engineers in the fierce strife of the memorable strike, though offensively treated by an organization in whose interest they made a thousand sacrifices, are not dishonored thereby. Loyal and courageous, they did not disgrace their Brotherhood, nor their manhood.

But Mr. Clark puts forth some theories, that, to say the least, are curiosities. He does not wield a vigorous pen. Evidently, Mr. Clark makes the best showing possible against federation. And we are anxious that the readers of the *Magazine* shall be entirely familiar with his conclusions. For instance, he says:

"We are told that federation is the scheme by which workmen can get their demands granted, and the advocates of the plan tell us that we can compel employers to grant requests, if we adopt federation. Well, I hope we will not be driven to adopt such a measure, nor that we will be obliged to compel our employers to deal rightly with us in the future. We ought not adopt the principles of coercion, but rather strive to adopt the rule of 'doing unto others as we would have them do unto us.'"

Does the foregoing twaddle contain an idea worth a pea or a pin? Have engineers been making unjust and unreasonable demands upon employers? Have they not always been in favor of concession, and arbitration? Hasn't the strike, which is "coercion," always been the last resort? And when that came, was it not for the purpose of "compelling employers to deal justly? Why, now, this gabble, this wish-wash about "coercion," "being driven," and "obliged to compel," etc., in discussing a means whereby work-

ingmen may be able to secure just wages and honorable and fair treatment? Says Mr. Clark, "Let us aim to have our differences settled by square, honest dealing in a candid, true, Christian manner." Hasn't that been the motto of engineers from the first? Isn't it the weakest of flummery to say "let us try," when the Brotherhoods have always tried to avoid strikes? Such stuff is simply balderdash when applied to labor problems. And in nothing more than in the platitude about the "Christian manner" of obtaining honest pay for honest work. To show how Mr. Clark gets things mixed, and how much he stands in need of learning, after getting off his nonsense about "coercion" and compelling employers to act in a "true Christian manner," he says:

"How often do we notice employers who close their eyes to the rights of their employes, and forget that workmen are their fellow creatures, with feelings, aspirations and wants to be satisfied, and that usually they are susceptible to fair treatment."

What would Mr. Clark advise engineers to do when they are confronted with such employers? men who "close their eyes to the rights of their employes." Is Mr. Clark in favor of "coercion" in such cases, as a last resort? Would he "compel" such men to open their eyes and deal justly? If so, would not federation help in such a righteous cause? And here is more of it. He says: "It is the *entire absence of Christian dealing in this Christian country that we have to complain of as workmen—an entire absence of consideration for our position and needs, and the lack of fellow-feeling for us by those who control the avenues of existence.* Now, look at that picture, painted by Mr. Clark in such dark colors (we have italicised a few words to bring out the beauties of the painting), and then read Mr. Clark's protest against "coercion," and being "driven" to adopt federation, and to "compel our employers," etc.

For weakness, contradictions and insipidities, Mr. Clark is entitled to the blue ribbon, and this, *Magazine* is entirely willing for him to wear it until in a "Christian manner," "Christian dealing" in this "Christian country" ushers in the millenium.

Down goes wages on the "Q," owing to the demoralized condition of its business. The *Chicago Evening News* of recent date contains the following:

The Chicago, Burlington & Quincy road is and has been doing a poor business and a reduction in expenses all along the line is contemplated.

The cuts will come in the way of a reduction in the wages of employes. "The road has done a very poor business for some months," said a "Q" official to-day, "and it will be necessary to exercise the strictest economy at all points. What reductions are contemplated and where they will strike I cannot say. Business has been

dull and rates so low that the receipts have fallen off terribly. The Inter-state Commerce association has agreed to maintain rates, but they are now so low that that will do no particular good. Corn, too, is very low, and we are moving scarcely any of it."

"April 1 the hours of the shop men at Galesburg, 500 in number, will be reduced from ten to eight, with a proportionate cut in wages. The shops are overcrowded now, and we can get along very nicely with less repairing."

"Will not the reduction extend to other branches of the line and to the Chicago offices?" "Perhaps. I cannot state precisely what is contemplated, but it is in the nature of a reduction of expenses all around."

A nother official said that the reduction would strike the clerks and other employes of the road who did not belong to the unions. The "Q," he said, didn't care to have any more trouble with its union employes, and their wages would be maintained wherever possible.

"How about the salaries of the general officers of the road?"

"They will not be touched."

The C., B. & Q. has already lost millions. It has not only lost money, but it has lost business, character and credit. It is a stench in the nostrils of all honorable men. It is as scabby as a leper. To regain its lost prestige, to help it to pay dividends, interest, etc., it is compelled to reduce the pay of its scabs all along the line, and the reduction of wages will quite likely be more than its scabs can stand, for even a scab can be degraded to a kicking condition. It is this decrepit concern that proposes a "Relief and Insurance Association" for the benefit of its employes. The stupendous impudence of the thing could be equaled only by a proposition by wolves to form a relief association for lambs—or of foxes, to protect chickens and geese.

LABOR ORGANIZATIONS OF TEXAS IN CONVENTION.

A meeting of the delegates of Trade Unions and Knights of Labor was recently held in Dallas, Texas, the objects of which are fully set forth as follows:

WHEREAS, The necessity for unity of action among wageworkers has been fully demonstrated and we believe such unity of action can be best accomplished by an organization composed of delegates chosen by the various trade and labor organizations of the state; therefore,

Resolved, That we, the representatives of the various trade and labor organizations of Dallas, do hereby call a State Convention of all labor organizations and trade unions of Texas to convene in Dallas, July 3, 1889, for the purpose of perfecting a state organization, to further the eight-hour movement, and do whatever else the Convention may, in its wisdom, deem to be for the best interests of the wageworkers of Texas.

Such movements on the part of the workmen of Texas, mean business with a big B. They mean federation for the good of all. Such meetings should be held in every state and territory to further the eight-hour movement—a movement that has for its purpose the amelioration of the condition of workmen. We hope to hear that the Dallas Convention in July more than meets expectations.

HOWARD VS. WHEATON.

The Lafayette, Ind., *Courier*, of April 22d, contains the following:

There was held in this city yesterday, quietly and without flourish of trumpets a meeting, the result of which has been awaited with interest by railroad men from one end of the United States to the other. Star City Division, No. 137, of the Order of Railway Conductors, considered charges preferred by C. S. Wheaton, of Cedar Rapids, Iowa, Grand Chief Commander of the Order of Railway Conductors, against George W. Howard, Grand Chief Commander of the Brotherhood of Railway Conductors. Mr. Howard was the former well-known train dispatcher of the L., N. A. & C. railway, and at present residing at Los Angeles, Cal., where he is located as Chief Commander of the Brotherhood of Railway Conductors, and to which Order he is devoting his full time. The charges made by Mr. Wheaton are that Mr. Howard had violated his obligation in being a member of the Brotherhood of Railway Conductors, and that he was pushing the interests of the latter organization to break down the Order of Railway Conductors. Mr. Wheaton was not present in person, but sent as his representative Deputy Grand Chief Conductor J. W. B. Johnstone, of Cedar Rapids, Iowa. There were present in addition about thirty prominent representative of the Order from all parts of the United States. The charges made against Mr. Howard were discussed at length and a vote being taken he was acquitted by an almost unanimous vote. Mr. Howard came here from Los Angeles, expressly to answer the charges, and the result of the trial can not but be highly gratifying to his many friends everywhere.

We give the *Courier's* item in full because the increasing hosts of friends of Col. Howard, will be delighted to know that the scalp of the Grand Chief of the Brotherhood of Railway Conductors is not dangling from the belt of the Grand Chief of the Order of Railway Conductors. It is not the first time in the world's history, that envy and jealousy have brought their victims disagreeable consequences. It has been written that

"A wild Tartar, when he spies,
A man that vallant, hand-some wise,
If he can kill him thinks to inherit
His wit, his beauty, and his spirit."

Some such an idea probably inspired Mr. Wheaton to bring charges against Col. Howard. One class of people, learn only in the school of experience, and we are inclined to the opinion that Mr. Wheaton will for a time be content with the important lesson he has learned.

* *

WE have received the *Switchmen's Journal* for May, which comes to us on the third anniversary of its embarkation on the tempestuous seas of journalism, in a beautiful new cover, designed and engraved for it, having as frontispiece the yard of the Illinois Central Railroad at Chicago. It is very pretty, and shows that the *Journal* in art, as well as in articles, is keeping abreast of the demands of the times. Three years ago the S. M. A. A. had six Lodges; it now has eighty-four and is steadily increasing in numbers, power and influence. It affords us pleasure to make such statements and to wish the *Journal*, and the Order of which it is the organ, continued success.

CRUCIAL TESTS.

The Easton, Pa., *Daily Argus*, of April 18, prints the following:

There has been much excited comment and wild speculation at Reading over several matters in connection with the Philadelphia & Reading railroad company. The first thing to attract attention was the alternative given to an engineer to leave the Brotherhood or give up his engine. He chose to stick to the Brotherhood, and he was paid in full and his engine given to another engineer.

The second topic was the order issued by Reading officials that no fireman who belongs to the Brotherhood of Locomotive Fireman shall be placed in the line of promotion.

The *Magazine* applauds to the echo the engineer, who gave up his engine rather than his manhood, since, if he had abandoned his Brotherhood, he would have sunk himself to infinite depths of degradation. The information published by the *Argus* we are satisfied is correct.

* *

It takes a really great man to appreciate assistance and acknowledge the worth of others. To do this publicly adds dignity to the recognition and merits universal approval. A case in point is found in a "special notice" issued by the Manhattan Railway Company on the 3d day of May, as follows:

To Officers and Employees:

My warmest congratulations are hereby extended for the skill and care displayed in handling the unparalleled number of passengers during the "Centennial days," thereby excelling all your former achievements; this having been accomplished without accident.

LINES.	April 29.	April 30.	May 1.	TOTAL.
Second Avenue.	121,684	110,389	110,101	342,174
Third Avenue.	191,170	349,516	320,762	861,448
Sixth Avenue.	264,573	312,628	270,065	847,266
Ninth Avenue.	86,768	63,188	51,673	301,629
	764,195	835,721	756,201	2,356,117

F. K. HAIN, Manager.

The sum totals are astonishing. That 2,356,117 persons should have been transported on the elevated railways of New York in three days reads like some romance, and that this should be done "without accident," is still more wonderful: No higher testimony of efficiency could be furnished, and labor, skill and fidelity, if not amply rewarded by the Manhattan Railway Company would constitute a case of inordinate cupidity without a parallel in the world's history.

* *

ELSEWHERE in the *Magazine* appears the advertisement of the *Denver Patriot*, a paper devoted to the cause of organized labor, and under the editorial management of L. W. Rogers, of the B. of R. B., than whom few writers of the times wield a more vigorous pen. The *Denver Patriot* is worthy of the most liberal patronage, and the *Magazine* wishes for the enterprise a measure of success that will meet the most sanguine expectations of its publishers.

GEORGE GODING.

We are in receipt of a circular issued by Self Help Lodge, No. 80, signed by Frank Boomer, Hugo Paffenrath, and Wm. Mitchell, Committee, asking the members of the Brotherhood to contribute the whole or a part of the sum of \$500, the fine assessed against Bro. George Goding, recently convicted of participating in dynamite plots against the "Q" roads. The circular is issued by the Lodge of which Bro. Goding is the Master, and it speaks of him in the highest terms. It says: "This brother worked faithfully and honorably, with love and pride for our noble Brotherhood for long years. His whole devotion and time has been given to our cause, and he is above reproach, of good morals and intelligence, and is loved and respected by all who know him. This brother has been selected by the "Q" road as one of the victims in their infamous dynamite cases, and was convicted by the instrumentality of the Pinkertons, to pay a fine of \$500."

The readers of the *Magazine*, in the foregoing have Bro. Goding's case, as set forth by the brethren of his Lodge. At this distance from the scene, we have no means of arriving at conclusions, save the estimate of the men who are the daily associates of Bro. Goding, and are familiar with all the facts. They say Bro. Goding is the victim of a conspiracy to rob him of his good name, to take his hard earned property, and would have as quickly taken his liberty and his life.

Not long since the Rev. J. M. Caldwell, a Chicago clergyman who has lived in Chicago for fifteen years, preached the funeral sermon of Newton Watt, convicted of wrongdoing by professional detectives and sent to prison where he died. In the sermon Rev. Mr. Caldwell among other things said:

"Although it was true that he was convicted, many of the ablest lawyers in Chicago were astonished at the verdict. Not only because of the well-known character of the young man, but because of the notoriously bad character of the principal witnesses. Those who knew him all his life and his associates on the railroad believed him innocent, notwithstanding the unanimity of the jury. These friends united with his relative in raising hundreds of dollars in his defense and to pay for obtaining a new hearing and to have the matter brought to the attention of Gov. Oglesby. * * *

If I am rightly informed, and I think I am, his principal accusers were professional criminals and professional detectives. * * *

When I say Newton Watt was convicted on the testimony of professional criminals and professional detectives I use the same terms. The one is synonymous of the other. * * *

"It is never right to do wrong. I would not lie to an insane person. These professional detectives lie to catch a person, as they say. They live a lie, and are a lie, and will tell a lie to carry a point, and few men possessed of their reason and who will look at the thing in its right light but will believe that they will swear to a lie to carry their point. It is on their ability and willingness to live and tell a lie that they carry

on their profession. Don't you know that they will swear to that same lie as quickly as they would live it and tell it? * * *

It was right for the railway to offer the \$10,000 reward for the arrest of the murderer and robber; but they made a mistake in permitting the detectives, these professional men, to have the privilege of fastening the crime on any one in order to secure that money. You can see at once how such men could put you or me or any one behind the bars, and even on the scaffold, when such methods and such men are allowed to manipulate evidence.

We introduce the courageous sayings of a distinguished clergyman of Chicago, touching a case not dissimilar to that which enabled the "Q" to convict George Goding. The Brotherhood of Locomotive Firemen is not a dynamite organization. It upholds no form of lawlessness. It seeks to obtain its rights by honorable methods, but it has no confidence in verdicts secured by the testimony of Pinkerton detectives. They are an aggregated lie, a walking pestilence. They are what Rev. Mr. Caldwell says they are, and when a verdict is obtained by such testimony, it is always safe to believe the condemned man is the victim of perjury, professional infamy. Self Help Lodge believes that Bro. Goding has been a victim of this Pinkerton infernalism. Our personal knowledge of Bro. Goding makes us believe that he never contemplated the commission of any crime whatever, and that he is the victim of zeal exerted for the welfare of men who were nobly struggling to secure justice at the hands of a soulless corporation, a zeal which doubtless obscured all suspicion that he was surrounded by a gang of professional liars, who would damn their own miserable souls, by perjury, a thousand times a day for pay. By all means we hope the members of the Brotherhood will respond promptly, and nobly to help Bro. Goding in this hour of his need, and enable him to pass the ordeal, and save his wife and children from the clutches of the law.

[Since the foregoing was put in type we have been advised by Bro. Goding that the court has modified the charge against him from conspiracy to misdemeanor and reduced his fine from five hundred dollars (\$500.00) to one hundred dollars (\$100.00). We have no doubt the full amount of the fine, as reduced, will have been fully contributed by the several lodges long before this issue of the *Magazine* is delivered to our readers.—EDITOR *MAGAZINE*.] * *

DURING the month of April, we had the pleasure of a brief visit from Col. Howard, Grand Chief of the B. of R. C. He was the guest of the Grand Lodge B. of L. F., and the visit enabled us to know his views upon all current topics relating to railway employes. He impressed us as a close student of labor problems, and thoroughly equipped for the work before him.

"BEAUTIFUL GALL."

In the *Firemen's Magazine* for May, page 439, we find the following:

IN MEMORIAM.

[Lines in memory of John F. Crude, who was killed in a railroad accident near Lusk, Wyoming, on the F. E. & M. V. railroad. Deceased was a member of Smoky Hill Division, No. 141, B. of L. E., at Ellis, Kansas. Written by the fireman's brother, W. H. D.]

Following this is the poem which was written by the editor of this paper on the death of Geo. T. Mosley, published in the *Engineer's Journal* more than a year ago, and afterward copied and commented on by the *Firemen's Magazine*. We haven't the faintest idea who W. H. D. is, but we know pretty nearly what he is, but we are too modest to say it. He must have known when he claimed that poem that he was telling a falsehood and that he was stealing at the same time.

If he had stolen the poem as it was we might have forgiven him, but we never can forgive him for murdering it the way he did. In the first place he tries to make "heather" rhyme with "road," and he fails, of course. Why, a man with good sense and a soul full of poetry couldn't do that, and here we find a man trying it who hasn't sense enough to melt tallow. We shall republish the poem in our next issue, and if "W. H. D." will send us his address we will mail him a copy free.—*Frog*, May 1, 1889.

The editor of the *Frog*, Cy Warman, Esq., is entitled to be heard upon the subject he refers to, and he is not half as indignant as the case would justify. As a matter of course, we feel the point of Bro. Warman's lance and have no disposition to screen the *Magazine* from such censure as should be justly applied. The poor, miserable, driveling cuss, who copied and mutilated Mr. Warman's poem and palmed it off on the *Magazine*, will doubtless chuckle when he sees this notice of his theft. We do not pretend to derive consolation from the fact that the *Magazine* is not the only publication that is occasionally victimized by W. H. D.'s, still it is a fact which may be stated at such times, as misery desires company. As the *Magazine* is destitute of a poet editor, it has been the more easy to impose upon it stolen verses, but in the future, investigations will be a little more critical, and though we may not escape entirely the pusillanimous plagiarist, we shall hope to occasionally mash his muse.

* *

THE *Railway Service Gazette* of April 11, says:

Readers of the *Gazette* will notice that the issue of this week falls something below the usual standard of excellence we endeavor to maintain. We are inaugurating some radical improvements in the printing of the *Gazette*, and this work has claimed a considerable portion of the care usually given to the editorial department of the paper. In a little while we shall be able to present our readers with a paper greatly improved in every way.

This thing of "going on to perfection," is a St. Paul idea, which the *Gazette* seems to have taken for its text, and the meaning of which it comprehends. This *Magazine* notices its progressive strides, and feels assured that it will get there.

L. R. HEFFNER.

The readers of the *Magazine* will be glad to know that Bro. L. R. Heffner, member of Federation Lodge, No. 122, Pana, Ill., now located at Tacoma, Washington Territory, is running an engine and doing well.

It will be remembered that during the strike on the C., B. & Q., a conductor by the name of John Logston, pulled a revolver on Bro. Heffner, but before he could shoot, Bro. Heffner, in self defense, struck him with a club. At the time Logston was half drunk, and in about eight days died from the effects of the blow or from some other cause. At any rate, Bro. Heffner was indicted, and the trial came off in April, resulting in an acquittal by the jury in twenty minutes. The evidence that Bro. Heffner acted in self defense was convincing and overwhelming. The verdict was a righteous one, and the many friends of Bro. Heffner throughout the country will congratulate him upon his acquittal. The altercation which led to the unfortunate result occurred at Beardstown, Ill., where Lodge No. 122, was then located.

Fortunately for Bro. Heffner, two brakemen were with Logston at the time of the altercation, and their testimony vindicated his act. It was in self defense and therefore justifiable by all laws, human and divine.

* *

THE *Railway Conductors' Monthly* reproduces from the *Elmira Gazette* an article on the ubiquitous spotter, in which a story is told of the woes of a conductor near whose person the aforesaid "ubiquitous spotter" was always to be found. The conductor, who doubtless expected to be on the "top round of the ladder" in the sweet by and bye, or "near the throne," had a singular experience, in three chapters.

Chap. 1. "Say," said the man, "does this train go to Buffalo?" "You can bet your neck it does, if some one don't steal the engine." Reported by the spotter. "Laid off ten days."

Chap. 2. "Charge ten dollars?" "Change nothing. I've just been laid off ten days, and I can't change my shirt." The man asking for the change—a spotter—reported. "Laid off thirty days."

Chap. 3. "Passenger wants to know if he could stop off at Susquehanna?" Conductor wrote on a pad, "You can if engineer don't forget to stop the train. Excuse my writing, but this blamed company don't allow an employé to talk on his train while on duty." Reported by spotter. "Laid off indefinitely."

Conductor, now a brakeman, sent down the ladder several rounds, and removed from "the throne" about fifty miles. That conductor probably cries out in his sleep. "Oh! Ah! See!"

THE FREIGHT CAR SERVICE.

The May number of *Scribner's Magazine*, contains a well written and highly interesting paper on the freight car service of the railroads of the country, by Theodore Voorhees, Esq., Assistant General Superintendent of the New York Central Railroad. Mr. Voorhees starts out with showing the wanderings of a freight car, which starting from Indianapolis, December 14, 1886, was not at home again until April 17, 1888, having in the meantime traveled thousands of miles. This car nomadism grows out of conditions explained by Mr. Voorhees as follows:

In the early periods of railways in this country, when they were built chiefly to promote local interests, and the movement of either freight or passengers over long distances was a comparatively small portion of the traffic, it was customary for all roads to do their business in their own cars, transferring any freight destined to a station on a connecting road at the junction or point of interchange of the two roads. While this system had the advantage of keeping at home the equipment of each road, it resulted in a very slow movement of the freight. As the volume of traffic grew, and the interchange of commodities between distant points increased, this slow movement became more and more vexatious. Soon the railway companies found it necessary to allow their cars to run through to the destination of the freight without transfer, or they would be deprived of the business by more enterprising rivals. So that to-day a very large proportion of the freight business of the country is done without transfer; the same car taking the load from the initial point direct to destination. The result of this is, however, that a considerable share of all the business of any railway is done in cars belonging to other companies, for which mileage has to be paid; while, in turn, the cars of any one company may be scattered all over the country from Maine to California, Winnipeg to Mexico.

Mr. Voorhees' paper, to the general reader, cannot fail of being specially interesting and instructive, as it will enable him in some measure, to comprehend the *modus operandi* of railroads in moving their freight cars, which now number in the United States not less than 1,250,000. Necessarily, the Car Accountant's Department is one of great importance, and with regard to what a Railway Superintendent has to do, Mr. Voorhees says:

The Superintendent of a railway in this country who has, let us say, three hundred miles of road in his charge, has perhaps as great a variety of occupation, and as many different questions of importance depending upon his decision, as any other business or professional man in the community. Fully one-half of his time will be spent out of doors looking after the physical condition of his track, masonry, bridges, stations, buildings of all kinds. Concerning the repair or renewal of each he will have to pass judgment. He must know intimately every foot of his track, and in cases of emergency or accident, know just what resources he can depend upon, and how to make them most immediately useful. He will visit the shops and round-houses frequently, and will know the construction and daily condition of every locomotive, every passenger and baggage car. He will consult with his Master Mechanic, and often will decide which car or engine shall and which shall not be taken in for repair, etc. He has to plan and organize the work of every

yard, every station. He must know the duties of each employé on his pay-rolls, and instruct all new men, or see that it is properly done. He must keep incessant and vigilant watch on the movement of all trains, noting the slightest variation from the schedules which he has prepared, and looking carefully into the causes therefor, so as to avoid its recurrence. The first thing in the morning he is greeted with a report giving the situation of business on the road, the events of the night, movement of trains, and location and volume of freight to be handled. The last thing at night he gets a final report of the location and movement of important trains; and never closes his eyes without thinking that perhaps the telephone will ring and call him before dawn. During the day in his office he has reports to make out, requisitions to approve, a varied correspondence, not always agreeable, to answer.

The article in question, is elaborately illustrated by Herbert Denman, H. C. Edwards, H. D. Nichols, V. Perard, W. C. Fiten, and others, which, adds interest to the text. *Scribner's Magazine*, by its numerous articles on railroads and railroading has earned an enviable position in the esteem of the vast army of railroad men, from the intelligent employé to the most important official.

* *

THE *Switchmen's Journal* for April, says:

"With this number ends the third year of the existence of the *Switchmen's Journal*. It is gratifying to know that three ago the *Journal* started on its career of preaching the objects and aims of the Switchmen's Mutual Aid Association with a constituency of but a few hundred and but six Lodges of the Order in existence, while now our readers run away into the thousands, and seventy-seven good, substantial Lodges are engaged in teaching and upholding the great objects of our Association."

This *Magazine*, most cordially felicitates the *Switchmen's Journal* upon its splendid success and the Association upon its rapid and substantial growth. The *Journal* has been, from the first, bold, aggressive, and yet prudent in its championship of the Order of which it is the organ and is deserving of the popularity and influence it has achieved. We most heartily wish the *Journal* and the Order of which it is the official organ, a continuous and a still larger success.

* *

WE have received No. 1, Vol. 1, of the *National Economist*, published at Washington, D. C. The editor says the *Economist* is not, nor will it ever attempt to be a showy publication that catches the eye, tickles the senses or panders to the popular tastes and prejudices," on the contrary, "to perform its work it will of necessity be a plain, sober, solid home journal, dealing with the serious and vital problems of the age and submitting measures and policies to the crucial test of analytical dissection under the calcium light of historical experience, statistical deduction, and logical reasoning." There is a wide and inviting field for the work the *Economist* proposes to perform and this *Magazine* wishes it success from the start.

PATRICK McATAMNEY.

The New York *Herald* of April 18th, says:

He was a railroad switchman in greasy overalls. There was nothing remarkable about him as he stood at his post in the Pennsylvania depot in Jersey City yesterday—an ordinary, grimy workman, the bread-winner of a wife and seven children.

A ten year-old child stood in the track. Within a few feet of him was a moving train. Death was certain unless some hand snatched the child away.

Without a moment's hesitation Patrick McAtamney leaped forward and pushed the little one out of danger. Then the train rolled on and the headless corpse of the brave switchman was found.

There is no heroism nobler than this; no highertype of manhood or martyrdom. Probably the switchman never had any idea that he was a hero. It was a plain duty he saw before him. His mind was made up at once. One fierce bound, a quick thrust at the child, a sudden thought of home, wife and the babies. Then the sound of crunching bones, a dying shriek, a spray of blood, and it was all over.

The rarest marbles of Carrara are not too pure for the monument of this heroic man.

A New York dispatch of April 17th, says of the brave man:

He was standing in the door of his little house about 9:30 o'clock waiting for a single car to be backed by an engine on a side track. Just as the car reached him a little 10 year-old boy, who had been picking coals from an ash heap near-by, stepped on the track immediately in front of the car. McAtamney saw him, and, jumping to the track, pushed the boy violently from it. The next instant, however, the car struck the man, instantly killing him. The engineer of the train, ignorant that he had run over a man, went on, while a horrified group of employes gathered quickly about the remains. They were conveyed to the station, and the dead man's family were notified. The boy whose life had been saved hurried away before his name could be learned. McAtamney had been in the employ of the Pennsylvania Railroad for over twenty years.

Little can be added to the foregoing. Patrick McAtamney is spoken of as "a hero clad in the brown greasy overalls, checked jumper and cap of a switchman," and yet, who of all the richly costumed and bejeweled thousands, stands, or will ever stand a thousandth part as high in the book of God's remembrance as Patrick McAtamney? But he is a dead hero. How long will his heroic act be remembered? Will it bring any reward except words of generous praise? Simply words. Patrick McAtamney, an Irishman, was 42 years old and had a wife and a family of seven children. What will be done for the widow and orphans? The great Pennsylvania road is fabulously rich. 'Tis said that corporations have no souls. If the Pennsylvania Railroad corporation does not promptly rescue the family of Patrick McAtamney from want, there will be one more witness that the charge, that corporations are soulless, is true.

The number of streets in London is now upwards of 28,000, and new ones are added at the rate of 300 per year.

THE B. L. E. *Monthly Journal* for May, 1889, on page 338, contains an editorial article entitled "How Locomotive Engines Take Water Without Stopping." On page 6 of the N. Y. *Despatch*, of November 18th, 1888, appears the same article, which was originally written by the editor of this column. The writer feels highly flattered that his description has been deemed worthy of a square steal by a high railroad authority like the B. L. E. *Monthly*.

The B. L. E. *Monthly* must not, however, do it again, or gore may be shed. The distinguished editor, in making the transfer, might at least have done so in an accurate manner. The gentleman referred to was Mr. Charles "Lynch," not "Linch," as our esteemed contemporary has it.—*New York Despatch*.

We have read of grand larceny and petty larceny, but what kind of larceny the B. L. E. *Journal* was guilty of we should be at a loss to determine were it not for the fertile brain of the *Despatch* man, who calls it a "square steal"—hence, "square larceny." We readily imagine the delight experienced by the *Despatch* man, in discovering that anything he had written was worthy of stealing, and that he should feel "highly flattered" by the "square steal" is quite natural. But what can be said in extenuation of the theft? The "distinguished editor" referred to must have been suffering from an attack of kleptomania, which utterly destroys all idea of value and prompts its victim to steal to gratify a morbid impulse. At such times the kleptomaniac would steal from the *Despatch* as quickly as from a paper containing something worth stealing. But, since the *Despatch* man "feels highly flattered," we see no reason for "gore."

A FEARFUL collision was reported on the Inter-Colonial Railroad near Rimouski, Que., on the night of March 19, between a passenger train and a special freight train. It was the worst, as regards loss of life, that has taken place on the line. It took place while the trains were rounding a curve, north of Rimouski, and is attributed to the non-observance of orders by the down special, which, having lost time through sticking in the snow, should have stopped and sent out signals. The engine driver, Whitney, was found hanging in the debris by one foot, his left leg cut in two, his head smashed to jelly, and a board stuck into his spine. Fireman Fohey had part of his back torn out, and was almost unrecognizable. Whitney was a son of the Locomotive Superintendent of the line and lived in Moncton. Conductor Horace Michand and Firemen Levesque and Fohey lived at Riviere du Loup, to which place their bodies were forwarded.

Texas Siftings:—Mrs. Peterby—"Why did you bow so politely to that common-looking man?"

Judge Peterby—"He has got a brother who lives in Indianapolis and who knows Harrison personally."

LODGE ROBBERIES.

The thief and the liar are twin monstrosities. True, they are not all alike unnatural and hideous. The sneak-thief who steals chickens hasn't the colossal proportions of the thief Ives, the Young Napoleon of finance. The caricature of humanity who establishes the reputation of liar on general principles is not to be classed with the slanderer, the perjured villain whose lying blights like a desert wind. The embezzler is not as frightful to behold as the burglar and highway robber, the land-pirate and the sea-pirate, but they all belong to the same family—are actuated by the same motives—but probably, all things considered, the meanest thief the world has known or ever will know is the one who will rob a brotherhood of workingmen. He belongs to that tribe of thieves who wreck savings banks and rob widows and orphans. He belongs, though of a lower grade, to that class of jackal thieves who, under cover of darkness, rob graveyards of corpses and sell them for "stiffs." There is nothing emotional or spasmodic in such stealing. It is cool, calculating villainy. It is Judas Iscariotism. It is a combination of thief and traitor, and this kind of scoundrelism is all too frequently exhibited in the financial affairs of Lodges of the Brotherhood of Locomotive Firemen. Certain individuals are elected as custodians of money paid in by members of the Lodge. It is part of their hard earnings. It is paid in for the noble purpose of guarding against penury when misfortune overtakes them, a contribution paid in the hope if death overtakes them there will be something for wife and helpless children. Such payments of money are in a sense sacred, and a man who would steal the money so contributed is depraved body and soul to a degree to defy exaggeration, and yet such vile reprobates get into the Brotherhood and manage to become Receivers and Collectors of Lodges, and by stealing the funds wreck the Lodge. In such cases what is to be done? Little can be done after the money is stolen. Possibly the thieving wretch could be sent to prison, but that does not restore the lost cash, and members, who are the victims of the rascality, lose heart and surrender their charter. But there is a remedy, but what is better, there is a preventive. All that is required is for the Trustees of a Lodge to do their whole duty—promptly, regularly, thoroughly. There should be no timidity about the business. At stated times, as provided by law, *open and examine the books.* See that the funds of the Lodge are safe and that accounts are correct. If the custodian of the funds hesitates let the action be all the more prompt and vigorous. Safety and salvation is in such action and nowhere else. An honest custodian of funds of the Lodge will invite such investigation. He likes it. If an error ex-

ists no one is more anxious than he to find it and correct it. Only the rascal will hesitate, the man who has already stolen a part and contemplates stealing the remainder as soon as possible. We say, for such things there is but one remedy, one prevention, and that is for the Trustees of the Lodge to fearlessly and promptly do their duty. We know whereof we speak, and in all seriousness we ask the proper officials of subordinate Lodges to attend to this matter. There has been too much neglect. Let the future be characterized by vigilance.

ALL who desire a photograph of the father and first Grand Master of our Brotherhood, Joshua Leach, can be accommodated by applying to Messrs. *Coe & Myers, Photographers, Sedalia, Mo.*, whose price list appears elsewhere in our columns. Messrs. C. & M. are first-class artists and guarantee satisfaction. Every member of our Order should have a photo of Bro. Leach in the parlor of his home.

IN all cases of expulsions and withdrawals, the report must be made by the Secretary of the Lodge, in the prescribed form, and unless this is done, the reports cannot be recognized by the Grand Lodge. The proper forms have been prepared and should be used in all cases. To disregard such provisions involves endless confusion. In all such matters the proper form *must* be used, and the report *must* come from the Secretary of the Lodge.

THE majority of our railroad managers seem to unite in the resolve that spotters shall go. While there are yet some officials who seem to believe that the spotter is a necessity on the railroad, such believers are becoming fewer each day. We trust that the time is near when that contemptible whelp, the spotter, shall be forever banished.—*Railway News-Reporter.*

And in that "trust" we most heartily join. To designate a "spotter" as a "contemptible whelp" is altogether too complimentary, but considering the imperfection of our vocabulary, it will have to answer for the present.

THE AMERICAN WATCH CLUB CO.

[From Daily News, Denver, Colo., April 4th, 1889.]

The Hampden watch movements are receiving a great many compliments from the railroad boys. Mr. C. S. Grant, of the Denver & Rio Grande, who received his watch three months ago, says that it has not varied a second in that length of time as compared with the official time received daily. A new club is being organized again this week. Remember, these watches are only \$38 for Dueber 14-karat gold filled, payable \$1 per week. Five hundred persons who have already received their watches can be given as references. Call at office of the company, room 7, new Tritch block, over Joslin's.

A. KANOUSE, Manager.

GRAND LODGE

This Department is for the exclusive use of the Grand Lodge of the Brotherhood of Locomotive Firemen, and will contain all Notices of Dues and Assessments, and other Official Notices, Reports and Statements emanating from the Grand Lodge. All Lodges and members of the Order should note carefully each month the contents of this Department.

JUNE, 1889.

Assessment Notice for June.

OFFICE OF GRAND LODGE, B. OF L. F. }
TERRE HAUTE, IND., June 1, 1889. }

ASSESSMENT No. 4, \$2.00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members who were entitled to all the benefits of the Order, viz.:

CLAIM No. 76. Elmer E. Line, of Perseverance Lodge, No. 98, died of Typhoid Pneumonia, Dec. 10th, 1888.

CLAIM No. 77. Charles A. J. H. Miller, of Bee Hive Lodge, No. 179, died of Consumption, Jan. 29th, 1889.

CLAIM No. 78. Henry Leeshel, of Eclipse Lodge, No. 107, was killed by Fracture of Skull, Feb. 17th, 1889.

CLAIM No. 79. W. L. Clark, of J. K. Glibreath Lodge, No. 264, died of Mountain Fever March 3d, 1889.

CLAIM No. 80. M. F. Prescott, of Central Ohio Lodge, No. 299, died of Hepatization of Lungs, March 12th, 1889.

CLAIM No. 81. James Bracken, of Dominion Lodge, No. 67, died from injuries received by Bursting of Boiler, March 11th, 1889.

CLAIM No. 82. H. S. Whitney, of No. 144, was killed by Railroad Accident, March 19th, 1889.

CLAIM No. 83. H. C. Schwerdman, of Good Will Lodge, No. 52, died of Pneumonia, March 20th, 1889.

CLAIM No. 84. H. W. Champion, of Welcome Lodge, No. 72, died of Typhoid Fever, March 24th, 1889.

CLAIM No. 85. E. M. Swartz, of Altoona Lodge, No. 387, died of Perocarditis, March 25th, 1889.

CLAIM No. 86. George R. Knecht, of R. H. Wilbur Lodge, No. 384, was killed by a Falling Building, March 26th, 1889.

CLAIM No. 87. L. B. Chamblin, of Anchor Lodge, No. 54, was killed by Engine Turning Over, March 29th, 1889.

CLAIM No. 88. John C. Mahoney, of Peace Lodge, No. 109, was killed by Engine Turning Over, April 9th, 1889.

CLAIM No. 89. O. W. Foster, of Ohio River Lodge, No. 291, died of Apoplexy, April 11th, 1889.

CLAIM No. 90. Charles J. Machin, of Scioto Lodge, No. 202, died of Pneumonia, April 13th, 1889.

CLAIM No. 91. William North, of Mount Ouray Lodge, No. 140, was killed by Engine Turning Over, April 19th, 1889.

CLAIM No. 92. M. S. Hewes, of Tippecanoe Lodge, No. 36, was killed by Railroad Accident, April 20th, 1889.

CLAIM No. 93. A. G. Irwin, of Granite State Lodge, No. 306, died of Cancer, April 21st, 1889.

CLAIM No. 94. W. F. Thayer, of J. H. Selby Lodge, No. 243, was declared totally disabled, by Loss of Leg, April 29th, 1889.

CLAIM No. 95. John H. Battell, of Long Doubler Lodge, No. 334, was killed by being Run Over by Cars, May 1st, 1889.

An Assessment of Two Dollars (\$2.00) has been levied for the payment of the above claims and the Receiver is required to forward said amount for each member, whose name appears on the rolls June 1st 1889, as provided in Section 52 of the Constitution, said remittance to reach the Grand Lodge not later than June 20th, 1889. Any Lodge failing to make returns as above provided will stand suspended from all the benefits of the Order, as per Section 54 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. & T.

Acknowledgments.

RAT PORTAGE, ONT., April 9, 1889.

To Miss May Simmons:

KIND FRIEND:—I am instructed to address you on behalf of the Officers and members of Unwin Lodge, No. 305, B. of L. F., in order to express our sincere thanks for the beautiful motto that you so kindly presented to our Lodge. We are gratified to receive this token of friendship from one who is as universally respected as yourself, and trust that the members of the B. of L. F. may so live that you may never regret the interest you have manifested in their behalf. Hoping that the time may soon come when we can in a measure return the compliment, I remain,

Yours respectfully,

CHARLES UNWIN.

ROCKBURN, QUEBEC, April 9, 1889.

To Mr. John Mills:

DEAR SIR:—I thank you for your promptness in sending the \$1,500 payment of insurance policy of my son, A. S. Craik. Enclosed please find the receipt, signed and witnessed as you requested.

Yours sincerely,
MRS JOHN CRAIK.

LIVINGSTON, MONTANA, April 5, 1889.

To the Officers and Members of Custer Lodge, No. 191:

DEAR SIR:—We desire to return heartfelt thanks to you all who so kindly assisted us in the hour of sorrow and affliction in the loss of our beloved little boy, Wilbur. Also for the beautiful floral offerings received from you and friends. May God bless and protect you all, is the wish of

MR. AND MRS. J. L. JAMES.

HAMILTON, ONTARIO, April 15, 1889.

To the Officers and Members of the B. of L. F.:

DEAR SIR:—I hereby acknowledge the receipt of my disability claim by draft for \$1,500. I also desire to tender thanks to the members of Pacific Lodge, No. 173, for their kindness and unflinching attention to me while at the hospital. Wishing you all good luck and prosperity, I remain,

Yours fraternally,
WM. FIELD.

PHILADELPHIA, April 22, 1889.

To the Officers and Members of Enterprise Lodge No. 73 B. of L. F.:

GENTLEMEN:—I hereby return my sincere thanks for the payment of a draft for \$1,500. I also wish to thank the officers and members of Enterprise Lodge No. 75 for their kind attention to us, and for the respect paid my husband after his death. Wishing the noble Brotherhood a prosperous future, I remain,

Yours respectfully,
MRS. BELLA B. KIRK.

WORCESTER, MASS., May 7, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

DEAR SIR:—It is with feelings of much gratitude that I acknowledge the payment of my disability claim, by draft, for \$1,500, from Bro. C. A. Smith, Receiver of Bay State Lodge No. 73. I also tender my thanks to the officers and members of Bay State Lodge for their kindness and attention to me during my prolonged illness. Hoping the Brotherhood may prosper in the future as it has in the past, I remain yours fraternally,

JOHN C. OPDIKE.

WILLIAMSBURG, May 5, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen, and Members of River View Lodge No. 330:

DEAR SIR:—With feelings of gratitude I wish to acknowledge the receipt of \$1,500 due me on my disability claim. I also wish to return my sincere thanks to the members of River View Lodge No. 330, who took such great interest in my welfare, and I hope and trust that God will always hold a protecting hand and care over you all. With the best wishes of your disabled brother, I remain fraternally yours,

JOSEPH O'LOUGHLIN.

BUTLERVILLE, IOWA, May 4, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

DEAR SIR:—I herewith acknowledge the receipt of a draft for \$1,500 through John H. Howell, Receiver of Marvin Hughitt Lodge No. 132, due me on my disability claim. In accepting it allow me to return my heartfelt thanks to Eugene V. Debs for so kindly answering all my correspondence and to the brothers of Marvin Hughitt Lodge No. 132 for so kindly aiding me in my affliction. May God bless the order that it may ever prosper is the sincere wish of a disabled brother.

D. L. HARTSELL.

WILMINGTON, DELAWARE, March 24, 1889.

To Delaware Lodge, No. 231, B. of L. F.:

GENTLEMEN:—Please accept through me the sincere and heartfelt thanks of myself and family for the kindness and respect shown to my dear son, R. E. Lee Alexander, and also for the beautiful floral tribute presented by you, and believe me, your kindness will ever be held in grateful remembrance by his bereaved and sorrowing family, and also through you I would thank the road managers for their kindness extended to us at the time of his funeral.

Respectfully,
HIS MOTHER.

INDIANAPOLIS, INDIANA, April 26, 1889.

To the Officers and Members of the B. of L. F.:

DEAR SIR:—I hereby acknowledge receipt of draft for \$1,500 due me on my disability claim. Allow me in accepting it to return my sincere thanks to all the members of No. 29, and especially its present officers. Also to members of Division Nos. 131, 229 and 117, the last of which I am a member, for their many pleasant calls and encouragement during my fourteen months' sickness, which, I can assure you, did me more good than a "tank of medicine," and kept that terribly unpleasant feeling the "blues," which any sick person is subject to, away from our pleasant home. Also to Bro. F. P. Sargent for his prompt answer to all communications. With best wishes for the bright prospect of our noble child of which I feel proud to be enrolled as an honorary member, I remain,

Yours fraternally,
J. A. DUNN.

Unknown Addresses.

ALFRED OPITZ—Is requested to correspond with Lodge No. 90, San Bernardino, Cal.

J. PATTERSON is requested to correspond with the officers of Nickle Plate Lodge, No. 337.

FRANK EDGET, engineer; any one knowing his address will please notify the Master of Unwin Lodge, No. 335.

PATRICK RUSSELL—When last heard from he was firing out of Denver, Col., on the Union Pacific. He will hear something to his advantage if he will write to box 173, Bonner Springs, Kansas.

MAURICE LEAHY, when last heard from, was firing on the C. B. & N. out of St. Paul, Minn. Anyone having information of his whereabouts will please correspond with John W. Leathers, No. 2824, Bernard Avenue, St. Louis, Mo.

THEO. BRINKMAN, when last heard from, was on the Illinois Central railroad. His relatives are extremely anxious to hear from him. Anyone knowing his whereabouts will please make it known to Geo. Schaefer, No. 377 South Ionia street, Grand Rapids Mich.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER, }
TERRE HAUTE, IND., May 1, 1889. }

To Subordinate Lodges:

MRS AND BROTHERS: The following is a statement of the Beneficiary Fund, for the month ending April 30, 1889:

Key to Alexander's Ready Reference

For Engineers and Firemen, giving the reasons why the instructions given in the *Ready Reference* should be followed.

This book is a *Valuable Accompaniment* to its predecessors, and contains nearly as much information as the *Ready Reference*, and a number of new items. Also a table showing the amount of time required to run from one mile up to one hundred miles.

It is now ready for issue.

The *New Edition of Ready Reference* has also a number of new items treating on Extended Smoke Boxes, Cylinder Lubricator, Broken Cylinder Heads, Broken Set Screws, Defects in Injectors and Pumps, also defects in Air Pumps and how to remedy them. Every item in either book is easily understood by any person who can read.

The Book contains a very handy *Time and Speed Table*, showing the amount of time required for running any speed from ten to sixty-five miles per hour and from one-tenth of a mile up to thirty miles. Some of the items have never before appeared in print. Three large diagrams of Engines, one complete diagram of Westinghouse Automatic and Air Brakes, with a full description of them and the manner of handling and repairing them when out of order; also a large diagram with description of Valve Motion accompanies each *Ready Reference*. A careful study and thorough understanding of the principal items of these books will qualify any good fireman for examination and promotion. Old Runners say there is nothing in print as suitable for Locomotive Engineers and Firemen or Round House men working on repairs of Locomotives. It is the result of forty years actual experience and study.

Price of *Ready Reference*, with Diagrams . . . \$1 00

Price, with Key bound in, and Diagrams . . . 1 50

Price of Key, without Diagrams . . . 50

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London-England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the output has increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

AN INTERESTING HISTORY OF

Dimmick's Kidney AND Bladder Cure!

Having contracted a kidney difficulty while serving in the army in 1864, I was enabled to serve out my time only through the assistance of our regimental surgeon. Returning home in the fall of 1865, I found my old enemy [the kidney trouble] still clinging to me. I placed myself under the treatment of several successive physicians, who gave me temporary relief, but were unable to effect a permanent cure. I paid large sums of money to the different physicians whom I consulted, and tried all the various remedies which promised relief, but to no avail. I continued my efforts until the spring of 1875, my malady in the meantime increasing to such an extent that on several occasions I became unconscious and was confined to my house for several weeks at a time. I was then induced, through the earnest solicitation of a friend, to consult an old and learned practitioner of Chicago, then temporarily located in Birmingham. This physician gave me a prescription in liquid form, of which I used two bottles. The lameness in my back disappeared and I was relieved of the severe pains I had previously suffered. Having experienced such happy results, and feeling my utter helplessness in case of a recurrence of an attack of a similar nature, I decided, if possible, to purchase the recipe for compounding what is now so favorably known as "Dimmick's Kidney and Bladder Cure." The old physician, who was about removing to the Southwest, after some hesitation, consented to dispose of the recipe to me on payment of a considerable sum of money. About two years after the purchase, while acting in the capacity of a railway engineer, I became affected with a prickling sensation in the face, arms, right side and right leg extending to the knee, followed by numbness, or a partial paralysis. This gradually made such inroads that I practically lost the power of locomotion and had no use of my right arm. I was compelled to relinquish my position as an engineer, ran down physically, and became a mere shadow of my former self. The best medical talent abandoned my case as hopeless, and it was the commonly expressed opinion among my associates and acquaintances that I would soon pay the debt of nature. In my extremity, and not knowing the efficacy of the remedy I had purchased, a relative wrote to the physician from whom it had been obtained, for advice, and received the answer that I had in my possession a recipe that was a specific for that difficulty. I at once commenced taking it, and in 75 hours experienced a sense of grateful relief. I continued its use for about one year, taking in that time fifteen of the large sized bottles. This was two years ago and now I am as well and strong as I ever was and run my engine 110 miles a day. I feel that it has saved my life, and I heartily commend it to my fellow sufferers.

A. D. DIMMICK.

JULY, 1889.

THE READING RAILROAD AND MANAGEMENT.

The officials of the Reading railroad have determined, so far as it lies in their power, to overthrow labor organizations. In the course of this article we shall introduce a letter containing the following declaration, made by the Vice President and General Manager of the road:

"Our policy is now, and will hereafter be, that in making promotions and employing new men, the man who does not belong to a labor organization will have the preference over the one who does."

That settles the question. The decree has gone forth. The penalties for being a member of a labor organization are, first, no employment; and second, if in the employment of the road, no promotion.

This autocratic decree concerns locomotive firemen, members of the Brotherhood. Not only those who are, or who have been, em-

ployés on the Reading, but of the entire membership of the Order, and of all orders of railroad employés; at least, those who regard themselves as workingmen.

Under such circumstances, every consideration demands that firemen, members of the Brotherhood, and all organizations of railroad employés, should have correct information concerning the Reading and its management. Fortunately, this is within easy reach, and as it comes from a report of a Congressional committee, is of unquestioned authority.

According to the testimony, the Philadelphia & Reading Railroad Company and the Philadelphia & Reading Coal and Iron Company, are one corporation; the railroad company owning all the stock in the iron and coal company, the latter helping the former, and *vice versa*, to swindle the public, stockholders and workingmen when opportunities offer, and the chief concern of the officers of the twin monstrosities is manifested in creating opportunities for swindling right and left, all the time. The two corporations are engaged in mining coal, and in the transportation of coal, other freights and passengers. To show the magnitude of their enterprises, it is in the testimony that the Reading railroad has 1,700 miles of track, and employs from 13,000 to 15,000 hands, of whom from 7,000 to 8,000 are employed in transporting trains.

These two corporations own and control

95,000 acres of anthracite coal lands, and when all their mines are in operation, employ about 21,000 men. It is seen, therefore, that in railroading and mining, the two corporations employ 36,000 men and boys.

It is not required to write of two corporations, since the two are practically one—the Reading. This Reading railroad was at one time the best paying railroad property in the country, paying dividends ranging from 10 to 20 per cent. This magnificent property finally fell into the hands of robbers, pirates; men who feared neither God nor man; men who saw an opportunity, or opportunities for gigantic schemes of knavery, and they at once set about the work of spoliation and plunder. The Reading, representing an investment of \$40,000,000, was soon loaded down with debts amounting to from \$160,000,000 to \$200,000,000, and in 1881 was declared bankrupt and went into the hands of a receiver. It got out of this condition for a time, but was again declared bankrupt in 1885, and was again placed in the hands of a receiver. To get out a second time it resorted to methods bearing the impress of rascality, such as was practiced by Ives, “the young Napoleon of finance,” and is now being operated by men who are known as sharks; men who have no more conscience than hungry wolves. They are men who make war upon their associates in business, rob indiscriminately rich and poor, until it is in proof, that men who owned stock in the concern were glad to get 22½ cents on the dollar. So monstrous and unblushing had become the villainies of the Reading, that Congress was compelled to appoint a commission to investigate its methods, and if possible, devise ways and means to arrest its career of outrages, which the commission say were adopted “in order to rob the public.”

This is the corporation that is making war upon the Brotherhood of Locomotive Firemen and upon all labor organizations. This is the corporation which, to obscure its rascalities, makes “crooked” reports, as was repeatedly proven before the Congressional Commission. It was charged with “dishonesty,” with the suppression of the truth, and this was done that it might swindle stockholders. Glaring falsehoods involving mil-

lions, were officially put forth to mislead the public, that colossal depravity might escape rebuke.

These statements are made, that Brotherhood firemen, and all orders of railroad employes, and all organized workmen, may have an approximately correct idea of a corporation which proposes to annihilate labor organizations.

The Congressional Committee says that “there are many suspicious facts; in truth, almost satisfactory internal evidence, that the authorities of the Reading road deliberately brought about the strike of 1887, both among its miners and among its railway employes.” It *deliberately* produced a reign of terror. It *deliberately* brought about idleness, want, poverty, privation and wretchedness that defies exaggeration, that it might advance the price of coal, and finally compel its employes to submit to such terms as it might propose, or starve. And among the terms proposed is for men operating its railroad trains to abandon their organizations.

That this was the purpose of the officials of the Reading road, information came to the knowledge of the Grand Lodge B. of L. F., by letters received from members of the Brotherhood in the employ of the road.

In so far as the Brotherhood of Locomotive Firemen was concerned, it was not known that any disagreement had ever occurred that should warrant the officers of the road in making war upon the members of the Brotherhood. On the contrary, it was the conviction of the Grand officers of the B. of L. F., that rumors to that effect were premature and not founded in fact. To remove such matters from the field of conjecture, F. P. Sargent, Grand Master of the B. of L. F., addressed a letter to A. A. McLeod, Vice President and General Manager of the Reading, upon the subject, of which the following is a copy:

GRAND LODGE, BROTHERHOOD OF }
LOCOMOTIVE FIREMEN, }
TERRE HAUTE, IND., April 17, 1889. }

A. A. McLeod, Vice President and General Manager Philadelphia & Reading R. R.:

MY DEAR SIR:—I have been advised that the management of the Reading Railroad Company have informed the firemen in their service that they must withdraw from the Brotherhood of Locomotive Firemen or sever their connection with the company.

I am not prepared to believe this report, and, from my acquaintance with the management,

cannot believe that it is their wish to compel men to act against their own interests or contrary to their own desires, so long as they are faithful servants of the company and work to its interest.

Not being aware of any time, that the organization for which, I am, in a measure, responsible, has antagonized the Reading Company, I take the liberty of writing to you for information that I know will be positive and reliable.

Trusting that I shall be favored with an early reply, I am,

Yours very truly,

F. P. SARGENT,
Grand Master.

Grand Master Sargent received the following reply to his letter of April 17:

PHILADELPHIA & READING RAILROAD CO.,
VICE PRESIDENT & GEN'L MANAGER'S OFFICE,
PHILADELPHIA, April 26, 1889.

Mr. F. P. Sargent, Grand Master, Brotherhood of Locomotive Firemen, Terre Haute, Ind.:

SIR:—I am in receipt of your letter of the 17th instant, stating that you have been advised that the management of the Reading Railroad Company have informed the firemen in its service that they must withdraw from the Brotherhood of Locomotive Firemen, or sever their connection with the company.

In reply, I have to say, that in view of the action taken by Labor Organizations during the last few years, we consider the Firemen's Brotherhood an organization which would, in an emergency, undertake to enforce its views upon a corporation by compelling its members as a body, regardless of their individual interests and wishes, to abandon their duties without notice, and leave their employers and the public's business to its fate.

We believe in absolute freedom on the part of the men to work for whom they please, and for such wages as are satisfactory to them. An employé has the right to terminate his connection with the company when his employment does not suit him. On the other hand, this company has always exercised the right, and will continue to do so, without dictation from anybody, to employ such men as it believes will render it and the public good service.

Our policy is now, and will hereafter be, that in making promotions and employing new men, the man who does not belong to a labor organization will have the preference over the one who does—a policy we are compelled to adopt to enable us to perform our duties to the public as common carriers, as well as for the protection of those of our employés who choose to remain independent, and to hold themselves aloof from all organizations.

Respectfully yours,

A. A. McLEOD,
Vice President and General Manager.

The letter of Vice President McLeod tells the story. It sharply defines the policy of the Reading road towards labor organizations; it is a policy of annihilation. A labor organization man can never have employment on the Reading railroad, and if one is now in the employ of that road, he can never hope for promotion. This man, McLeod, has discovered that Locomotive firemen, in case of an emergency, would act as their judgment and convictions might dictate; that even on the Reading, they would be men, independent men, knowing their rights and daring to maintain them, and that class of men Mr. McLeod don't

propose to employ. If any of them are in his employ, and will not surrender their manhood, they must step down and out. If members of the Brotherhood will cower under his lash and crawl at his feet, like Poles and Huns and Dagos, they can remain. The issue is squarely made, and men can contemplate it at their leisure.

About the time and immediately subsequent to the correspondence between Grand Master Sargent and Vice President McLeod, we were in the receipt of letters from members of the Brotherhood employed on the Reading, stating that Mr. M. F. Bonzano, superintendent of the Bround Brook Division of the Reading road, had stated that the hostile attitude of the officers of the road, or, perhaps more properly, his own feelings of hostility to Locomotive firemen, members of the Brotherhood, was owing to the fact that the *Firemen's Magazine* had made offensive allusions to himself. Knowing that the *Magazine* had never alluded to Mr. Bonzano disrespectfully, either as an individual or as an official, we took occasion to address him a note, of which the following is a copy:

GRAND LODGE BROTHERHOOD OF
LOCOMOTIVE FIREMEN.

TERRE HAUTE, IND., April 29, 1889.

M. F. Bonzano, Esq., Superintendent P. & N. Y. Division P. & R. Railroad, Philadelphia, Pa.:

DEAR SIR:—The Grand Lodge of the Brotherhood of Locomotive Firemen is in receipt of information, the authenticity of which is not doubted, and yet, it is of such extraordinary character as to warrant, in simple justice to you, that final conclusions as to matters involved, should be postponed until you could have an opportunity for explanation, denial or confirmation.

The information referred to, places you in hostile attitude to members of the Brotherhood of Locomotive Firemen employed on the Bound Brook Division of the Reading railroad, of which you are the superintendent, because you take exceptions to certain utterances of the *Locomotive Firemen's Magazine*, of which I am the editor. The information is to the effect that you take exceptions to certain allusions to you personally.

I do not write this to you in any apologetic spirit, but to say, that I do not remember to have written of you either in a defamatory nor in a depreciating manner, nor has the charge been verified by calling my attention to any instances of the kind. This being true, I fail to see wherein or wherefore, you should seek to justify any severity of discipline toward members of our Order by an assertion, direct or implied, that the *Firemen's Magazine* has treated you either unjustly or rudely as an individual or official. But if it were possible for you to sustain such a charge, if the *Magazine* had assailed you, the members of our Brotherhood under your jurisdiction could in no wise be justly held responsible for utterances any more than yourself; hence the information, that you propose to hold them responsible for unfounded errors charged against the *Firemen's Magazine*, is most extraordinary, and even were the charges true, the men upon

whom you propose to inflict serious penalties, would be absolutely innocent of having any knowledge of them, or of being participants in any sense.

The information is that you propose a policy of non-promotion of members of our Order as long as they maintain their connection with it. This would be an assertion of authority so repugnant to the rights and privileges of American citizenship that I am loth to believe that you will resort to its exercise, and certainly not for what you deem an offense, and for which, did it really exist, you must know they are in no wise responsible.

I write to place myself in direct communication with you, and shall be greatly obliged if you will reply to this communication at your earliest convenience.

I am very respectfully, your obedient servant,
EUGENE V. DEBS,
Editor Firemen's Magazine.

It will be observed that we disclaimed having written of Bonzano disrespectfully. The charge was without foundation and false, and yet, he had made it repeatedly to Brotherhood firemen to justify his hostility towards them. In fact, Bonzano had no authority at all to institute a policy. He could simply do as he was ordered, but, like many other subordinates, he could obey orders in a gentlemanly manner, or like a bully. Being totally unable to substantiate any charge against the *Magazine*, he replied to our note of April 29th as follows:

PHILADELPHIA & READING RAILROAD CO.
NORTH PENN. AND BOUND BROOK DIV.,
GERMANTOWN & NORRISTOWN BRANCH,
PHILADELPHIA, May 4, 1889.

Mr. Eugene V. Debs, Terre Haute, Ind. :

DEAR SIR:—I beg to acknowledge receipt of your letter of the 29th ultimo in reference to certain information which you say the Grand Lodge of the Brotherhood of Locomotive Firemen is in receipt of.

I think that I can best answer your letter by enclosing you a copy of a letter addressed to Mr. F. P. Sargent, Grand Master of your organization, by Mr. A. A. McLeod, Vice President and General Manager of this Company.

It gives me much pleasure to inform you that I concur with Mr. McLeod in his views.

Yours truly,

M. F. BONZANO,
Superintendent.

The letter of A. A. McLeod to which Bonzano refers, is the one which follows the letter of Grand Master Sargent.

Knowing full well, from information in our possession that Bonzano must be nothing more than a swaggering catiff, one of those creatures suited by nature and associations, instinct and education for a subordinate position in a corporation saturated with perfidy, we addressed him a note in reply to his letter of May 4th, of which the following is a copy:

GRAND LODGE, BROTHERHOOD OF
LOCOMOTIVE FIREMEN,
TERRE HAUTE, IND., May 17, 1889.

*M. F. Bonzano, Esq., Sup't., P. & N. Div. P. & R. R.
R., Philadelphia, Pa. :*

DEAR SIR:—I acknowledge the receipt of your favor of the 4th inst., and note particularly the absence of the information, which my letter to you of the 29th ult., respectfully solicited.

I informed you that the Grand Lodge of the Brotherhood of Locomotive Firemen was in receipt of information, that you had threatened men in your employment with severe penalties, because of improper allusions to you in the *Firemen's Magazine* of which I am the editor. I wrote you for an "explanation, denial or confirmation" of the charge of such a threat based upon any improper reference to you personally or officially. You decline answering. As no allusion to you of an improper character had ever appeared in the *Firemen's Magazine*, I am left to conclude that in the absence of justifiable cause for improper treatment of firemen, members of the Brotherhood of Locomotive Firemen, in your employ, you trumped up the charge about the *Firemen's Magazine*; in other words, you made a false charge. To justify a proposed policy totally unworthy of the industrial enterprise you represent. You proposed to punish men in your employ for a wrong charged against another, and for which, had the charge been true instead of deliberately false, they could have been in no wise responsible.

Unable to reply directly to my letter, afraid to deny the charge made against you because of its truthfulness, and too cowardly to make honorable reparation, you skulk behind a superior and send me a copy of a letter written by Mr. A. A. McLeod, Vice President of your road, to Mr. F. P. Sargent, Grand Master of the Firemen's Brotherhood, which proves beyond controversy, that your charge against the *Magazine* was knowingly and flagrantly mendacious, and that the policy of the officials of your Road, is to make open, direct and vindictive war upon the Brotherhood of Locomotive Firemen and organized labor.

The report of the Congressional Committee which investigated the Reading Railroad has placed before the country the condition of the road which you in part represent. That report makes your road and the men who control its affairs, a monumental fraud; an organization of villainy; a monstrous mass of corruption; a stench in the nostrils of all honest men. That such a mass of agglomerated knavery, of nefarious practices generally, should make war upon workmen, is as natural as that a fox should steal a goose, a wolf a lamb, or, that a professional cracksmen would demolish a safe to appropriate its contents; and that you should be in the employ of such a road, would seem to be in the line of the fitness of things.

The report to which I have referred furnishes abundant data relating to what your road has accomplished in debasing, degrading and swindling workmen. In such directions it has been as successful as it has been in defrauding its stockholders and in robbing widows and orphans. It has Russlanized the Anthracite coal regions and made a portion of the proud old state of Pennsylvania an accursed portion of God's footstool. It has created poverty, squalor, starvation, rags, filth and crime, where prosperity, happiness and contentment should have had a secure abiding place, and that you should be a part of the machinery to bring about such conditions, seems to be as proper as that a cobra or an asp should have fangs.

That you would have played a conspicuous part in the time of the Spanish Inquisition I do not doubt. That you would have been nimble with the thumbcrew, rack and wheel is evident; even now you are willing to see men in enforced idleness who have the manhood to spit upon your decree to abandon their Brotherhood organization.

There are men who will cower under your lash, crawl on their reptilian bellies and lick your boots, that they may live the abject things they are. Never, in old plantation days, did the descendants of Congo savages exhibit greater degeneracy. Your Poles, Hungarians and Italians, and—God save the mark—your Americans, who cringe in your presence, constitute to-day a picture of abasement such as it would be difficult to duplicate any where within the boundaries of Christendom.

I desire to assure you that the *Firemen's Magazine* will not hesitate with such ability as it can command, to give the Reading Railroad and its managers such prominence as they merit. And should it suit your pleasure again to refer to the utterances of the *Magazine*, it will be my purpose to have it contain such information regarding the Reading and its officials as will relieve you and your associates from the necessity of making false statements as an excuse for the exercise of despotic authority.

Respectfully,

EUGENE V. DEBS.

Manifestly, Bonzano is entitled to little consideration, and it is possible that we have given him undue prominence. He is not the Reading dog, but he does a deal of barking for the kennel. It was this Bonzano who repeatedly charged that the *Magazine* had attacked him, and who intimidated that firemen, members of the Brotherhood, must be the victims of vicarious punishment for our temerity.

It is not surprising that members of the Brotherhood should feel no little anxiety on account of the outlook and write to us upon the subject. In this connection we introduce two letters, written to members of the Brotherhood in reply to letters reciting Bonzano's threats, and very clearly intimating that they were getting ready to acknowledge his authority. We introduce these letters chiefly for the purpose of showing the views the *Magazine* takes of such matters as called them forth. We were told that Bonzano threatened to discharge men because they belong to a Brotherhood; that he would not promote firemen to be engineers who maintained their allegiance to their organization, and that firemen were getting ready to yield obedience to Bonzano's bull-doing method. For prudential reasons we do not publish the letters calling forth replies, and for the same reasons we suppress the names of the firemen addressed:

GRAND LODGE, BROTHERHOOD OF }
LOCOMOTIVE FIREMEN, }
TERRE HAUTE, IND., May 1st, 1889. }

MY DEAR SIR AND BROTHER—I have yours of April 19th, and assure you that contents are particularly noted.

There are periods in every man's life when his courage, his manhood, his independence, his self-respect, everything that constitutes him a man, is put to the test. It is the supreme mo-

ment of his life. It rarely comes but once in a lifetime, but it comes in different forms. It has, I conclude, from the way you write, come to you and to members of your Lodge.

On the one side is the imperious dictator, Bonzano. He possesses a little brief authority over employes of the Bound Brook Division of the Reading road, he has, metaphorically, a whip in his hand. On the other side stand the members of the Brotherhood of Locomotive Firemen. Look at Bonzano, and then take a survey of the great Brotherhood to which you belong. Its membership has been composed of sturdy American citizens, men who knew their rights and dared maintain them—that has been my view of them. They joined the B. of L. F. because they wanted to join it—because it was their right to do so; a right guaranteed not only by constitution and statute, but by the genius of American institutions, and because a man is himself a sovereign citizen, endowed with unalienable rights, with which, when any other man interferes, ought to be resisted, and if necessary to the death.

What does Bonzano propose? He tells you and your comrades that you must get down and out of your Brotherhood, or you shall not be promoted. This narrows down the fight to a point, and my God! what a point it is; on the one hand the dazzling prize of the throttle, and on the other, degradation so deep that a cannon ball would not reach bottom in a century. Can Bonzano drive you and the members of your lodge to accept his terms? Can you disrobe yourselves for a consideration? As a matter of course, I can not answer—you must. Were it me—had I the privilege of deciding such a case for myself and for my wife, it would be done in the twinkling of an eye. I would not be a slave; I would not bend. No, no! fetters should be welded on me. No, no! by all the sacred traditions of progress that have marked the advance of working men from oppression to independence, I would not yield one single right nor prerogative that belongs to me as a man. But every man must decide for himself. Your lodge can disband—can surrender its charter—can obey the behests of Bonzano, or it can meet its courage, its manliness, the spirit that has animated men to stand and to withstand, and teach Bonzano that he is not dealing with Dagos or Hungarians, but with men—Americans, who still possess the spirit of '76, without which corporations and monopolies, trusts and syndicates will count their men as the owner of a Texas ranch counts his cattle, even if they do not brand them.

I have written to Bonzano, and shall write him again if he does not respond to my first letter. I am anxious to hear from him.

You seem to think the condition of your Lodge is critical. I fully comprehend the situation, but were it worse an hundred fold than you represent, the stars should fall before I would submit to the lash of Bonzano.

Fraternally yours,

EUGENE V. DEBS, G. S. & T.

In the foregoing letter, it will be observed, as in the one that follows, that we refer particularly to Bonzano, who had sought to impress upon the firemen that he was the fellow who held in his hand their destiny, instead of being the creature who, by the direction of superiors, wielded the lash or operated the guillotine. The following letter, as well as the foregoing, serves to show our estimate of the Reading executioner:

GRAND LODGE, BROTHERHOOD OF }
LOCOMOTIVE FIREMEN, }
TERRE HAUTE, IND., May 4, 1889. }

MY DEAR SIR AND BROTHER:—Your favor of the 1st inst., is at hand and contents particularly

noted. Your statement of Mr. Bonzano's estimate of myself is of no particular consequence, except as he may be able to impress his views upon those whom he expects to degrade by processes which any man who is capable of appreciating liberty and independence ought to resent.

At this distance I can only judge of Mr. Bonzano by his acts and utterances. I have no personal acquaintance with him. Men of his style are usually pretty good judges of men. They have little else to do but to study character, and when they step forth for the purpose of degrading their employes, with a sandwich in one hand and a whip in the other, it is because they have concluded that one or the other, or both together, will bring about the desired result.

I note that Mr. Bonzano compliments the firemen upon his division by saying they "are gentlemen." A gentleman is a man of honor, of courage, of high self-respect, who, under no conceivable circumstances, will permit any other man to make a degrading proposition to him without quick rebuke and indignant resentment. When Mr. Bonzano tells the firemen on his division that they must abandon their Brotherhood or accept the penalty of quitting his service, he does not treat them as "gentlemen." He treats them as serfs; and all the more offensive is the treatment when he tells them "he likes the principles of the Order," the objection being that the "head officers are no good." He seeks to flatter the firemen, that he may slander men who, in every condition, in sunshine and storms, have sought to promote the welfare of the members of the Brotherhood, and who, with a courage born of conviction, and a high sense of duty, have denounced every wrong which firemen have been required to endure.

I appreciate the desire of firemen for promotion, but there is something better than promotion; better than station, however exalted, and that is for a man to maintain his independence and his self-respect. There is not, in the wide world a more humiliating spectacle than that of a man disrobing himself of his manhood that he may wear the badge of a master. He may obtain for the sacrifice what the world calls "promotion," but it is not promotion; it is degradation.

It is not for me to tell the members of your Lodge what they *shall* do or what they *shall* not do. I can only hope that there are men among you who, though few in numbers, will illustrate to the world that they cannot be *enslaved*. That they will not bend their necks to Bonzano's yoke; that they will not kneel for the purpose of accepting burdens that ought not to be laid upon their backs, but that, on the contrary, they will deport themselves like free, independent men, ready to work for fair wages, but determined to maintain at all times their rights, privileges and prerogatives as American citizens.

I note the clippings you send and see the drift of their logic. I neither overestimate nor underestimate the power of Mr. Bonzano. I fully appreciate his policy. He doubtless thinks he can win—whether he can or not depends entirely upon the estimate the men in his employ place upon their manhood. It is the old, old story; only the weak, the yielding, the timid can be enslaved; only such will accept stripes. The strong, the courageous may suffer, but they will not wear the collar of a master. I am, most fraternally, your friend and brother.

EUGENE V. DEBS.

We make no apology for introducing the Reading railroad in the columns of the *Magazine*, or for the space we devote to the subject. The fight is on. The alarm bell is sounded. Labor organizations may look facts square in the face. The dark shadows of coming events lie athwart the pathways of labor organizations. We would have all

labor organizations federate for the welfare of labor, and especially would we have all organizations of railway employes federate to maintain their rights.

Such questions are up for debate and settlement. Time will reveal the verdict.

THE Vanderbilts have a brother-in-law by the name of Elliott F. Shepard. This Mr. Shepard doesn't tend sheep, but he has lots of mutton. This brother-in-law of the Vanderbilts is known to be a crank of a religious turn, who finds in the Bible special causes for the collapse of railroads, which moves the *New York Standard* to remark that "there were a good many reasons assigned for the failure of the West Shore Railroad at the time it went into bankruptcy, but it has been reserved for Mr. Elliott F. Shepard to discover the true and only cause of the collapse. He says: 'The Lord blew upon it, and it failed!' It is curious that the Lord should have blown the road so directly toward the Vanderbilt family. The fact must have done much to confirm Mr. Shepard's faith." This thing of introducing the Lord as a blower up of railroads is a new departure in railroad affairs, and it is pretty safe to say if the officers of the road could get wind of such catastrophies they would speedily take in sail. Shepard, for a consideration, might be induced to take notes, and warn railroads of coming blows.

THE Minneapolis *Journal* is of the opinion that "both capital and labor have duties and responsibilities, and neither is justified in acting hastily or arbitrarily. Both owe something to the public and to each other. Cooperation, and not contention, is necessary in order to fulfill this public duty satisfactorily, and the sooner both employers and employed learn that more can be accomplished by reason than by force the better it will be for each." Capital is the child of labor, but under the educational influences of the times it has become anything but filial. It runs away from home, sets up business for itself, and becomes exceedingly heartless. Labor is trying to teach it better manners, and compel it, if possible, to regard its obligations.

THE JOHNSTOWN HORROR.

In writing of the indescribable horrors that befell the people residing in Johnstown and other villages situated in the Conemaugh valley, no effort will be made to introduce pen pictures of the awful scenes that transpired. In due time, the camera, the photographic art, will supply, in some measure, the demand for pictures of death, destruction and desolation brought about by the deluge of water, but, when the most, in that line, has been done, the half will not be presented to the eye or to the mind. Graphic pens have been at work from the first. Men of fervid imaginations, having at their command the wealth of all languages will find their descriptive powers totally inadequate for the task of portraying incidents of the mountain tide of desolation, as it rolled, in awful majesty, down the valley of death.

The Johnstown catastrophe, for such it is to be known, is to be monumental. It is to pass into history, and will be referred to when centuries are gone. There is nothing to compare with it in modern times. Nor does fancy conjure up anything more horrifying, in the contemplation of the overthrow of Pompei, Herculaneum or Sodom. The rain of ashes and the storm of fire could not have been more sudden or overwhelming, and had an earthquake lent its earth-splitting force to the mad wave of the mountain reservoir the horrors of the hour could scarcely have been more appalling.

Occasionally some one refers the awful visitations of Providence; to the mysterious ways of Providence; to Jehovah's inscrutable will. When such things can be saddled upon an Omniscient God, the convenient verdict, "no body to blame," is natural, and always in order.

The Conemaugh river was subject, like all mountain streams, to sudden floods. The people living along its banks were familiar with its eccentricities, and though frequently giving them trouble and inconvenience, was not regarded as specially dangerous, but in the mountains, a few miles distant, was a reservoir, originally constructed as a feeder to a canal. Its elevation above the bed of the Conemaugh was at least one hundred and seventy-five feet. When the canal was abandoned a number of rich persons ob-

tained possession of this reservoir, extended its area until it became a lake, three miles long, one and a half miles wide and of a depth of from forty to one hundred feet. It was for private sport, fishing, duck shooting and sailing; elegant residences and club houses adorned its banks. It was a place for elegant, luxurious leisure. It was known to be dangerous, and the millionaires who owned it had been required to give bond in the sum of \$3,000,000 to make the banks of the lake safe, and keep them in that condition, but the bond was never executed. Millionaires have a happy way of avoiding responsibilities; it is so much easier and less expensive to make Providence responsible. The cry had often been heard, "the dam has broken," or some similar warning, but as the dam did not give way, the people were lulled into security. The storms of the week preceeding the fatal Friday, May 31, created alarm. The pleasure lake was often referred to, but men had heard such things before, and went about their business. But the rains had swollen all the mountain streams, and they poured their floods into the lake far above the doomed valley. The Conemaugh had risen rapidly, but the people were familiar with its tantrums. It would rush and roar for awhile and then subside, and they pursued their avocations. The mountain streams continued to pour their floods into the lake. The pressure increased, until finally its banks collapsed. Then the desolating tide began its march. One man mounted his steed and sped down the valley, crying "the dam has broken, fly to the mountains!" A few heard the alarm and fled for their lives—only a few. A bank of water forty feet high, descending from an altitude of one hundred and seventy-five feet, gathering momentum as it flowed, swept down the valley of the Conemaugh. Its roar was the "voice of many waters." In its pathway were villages, hamlets, towns, cottage homes, palatial homes, massive public buildings, churches, school-houses and factories, shops, stores and warehouses, depots, and industries too numerous to mention: splendid triumphs of labor and capital were on every hand. It was the abode of enlightened civilization, of education, art and culture. There was wealth and

luxury. It was a busy valley—one company, the Cambria, employed from 5,000 to 6,000 workingmen. Other industries employed hundreds of men. It was a highly favored locality. There was iron and coal in the surrounding mountains. It is not difficult to fancy such a valley—such a hive of industry. It requires no effort of the imagination to picture the towns or villages of Conemaugh, Woodvale, Kernville, Ninevah and the thriving city of Johnstown. The mind readily grasps the picture. The Conemaugh is rising, but the swelling river gives wild beauty to the scene. It whirls and foams and roars, but it sounds no death notes. Occasionally, some one refers to the reservoir in the mountains, but no special solicitude is aroused. Now, suddenly, like thunder from an unclouded sky, comes the cry, "The dam has given way!" "Fly for your lives!" In the near distance, the moving mountain of waters is seen, and in twenty minutes—hamlet, village and town have disappeared, and in the track of the flood there is desolation and death, and thousands of men, women and children are dead. The millionaire pleasure lake has done its work.

We could fill the *Magazine* from cover to cover with harrowing details of the flood. This is not required, our readers are familiar with the story, as it has been flashed over the country and under the ocean. Referring to the force of the wave we note its effects upon the railway tracks. A special from Johnstown, June 5, says: "Every one has seen the light iron beam shafts and rods in a factory lying in twisted, broken and criss-cross shape after a fire has destroyed the factory. In the gap above Johnstown the water has picked up a four-track railroad covered with trains, freight and passenger, and with machine shops, a round-house and other heavy buildings with heavy contents, and has torn the track to pieces, twisted, turned and crossed it as fire never could. It has tossed huge freight locomotives like barrels, and cars like packing boxes, torn them to pieces, and scattered them over miles of territory."

Railroad men will readily comprehend that only incomprehensible power could do

such things. The dispatch adds that "thirty-three locomotives were in and around the round-house and the repair shops near. Of these twenty-six have been found, or, at least, traced, part of them being found scattered down into Johnstown, and one tender was found in Stony creek. The other seven locomotives are gone; not a trace of them has been found up to this time. It is supposed that some of them are in the sixty acres of debris at Johnstown, above the bridge. All the locomotives that remain anywhere within sight of the round-house, all except those attached to the trains, are thrown about in every direction, smashed, broken and useless, but for old iron. The tenders are all gone. Being lighter than the locomotives they floated more easily and were quickly carried away. The engines were apparently rolled over and over in whichever direction ran the current which had hold of them, and occasionally were picked up bodily and slammed down again, wheels up or whichever way chanced to be most convenient to the flood. Most of them lie in five feet of sand and gravel, with only a part showing above the surface; some are out in the bed of the river." Such a catastrophe staggers credulity, and fiction sits dumb in the face of the horrifying facts. As we write thousands are engaged in exploring the miles of debris to rescue and bury the dead. The great heart of the nation is touched, and contributions are flowing in from all directions. The estimated loss in money is placed at \$25,000,000—and another estimate is that the flood made hundreds of orphans. As we have said, the loss of life reaches thousands; some of the survivors have gone insane, and finally, comes the fears of the physicians that a scourge will set in, the ravages of which must be a matter of conjecture.

After a time inquiries as to the cause of the unparalleled catastrophe will be in order. It need not be protracted. The final conclusion will be that a select number of rich men wanted a pleasure lake in the mountains—they wanted a place to fish and shoot, and sail their pleasure yachts. Their ambition was gratified and the world knows the result.

FEDERATION INAUGURATED.

A new era has dawned. Federation is an accomplished fact. The *Firemen's Magazine*, animated by a fraternal spirit, sends cheerful greetings to all railroad employés.

The *Firemen's Magazine*, long ago, placed itself on record in favor of the federation of the various organizations of railway employés. Since the first article appeared in its columns, the subject has been widely and searchingly discussed. The proposition did not escape criticism, nor was exemption from the severest analysis desired. The friends of federation had nothing to fear from honest opposition, nothing to fear from the logic of history, of events, of facts, conditions or worthy ambitions. The grand old maxim, "In unity there is strength," embodying a truth that develops vitality as time speeds on, blooming and fruiting as centuries come and go, is the central truth of all federations. To make headway against federation, as a principle of action, finds its parallel in antagonizing an axiom in mathematics, in science and philosophy. Federation is "E pluribus unum," one composed of many. Without federation, the great American Republic would not exist to day. Its foundations were laid in federation. Federation, whatever it has done for others, is preëminently American; and the motto, "United we stand, divided we fall," hackneyed though it be, embodies the principles and the truth which holds all the States, like stars of a constellation, in their rightful places, and when Sumpter's gun obscured the skies by its smoke, and its roar awakened a nation from a lethargy born of fancied security, the one terrible truth confronted millions of patriots, that division would produce a downfall, compared with which the fall of Rome is but an idle tale. As a result, the "more perfect union," born of federation, stands to-day; and more than ever before, the "land of the free and the home of the brave,"—and what is more, new States are constantly entering the confederacy adding to its strength and glory, and wherever its coins are seen, and wherever its flag waves, they speak more eloquently than words, of the strength and influence of federation.

Federation, wherever found, means an effort to increase in power. True, it may be

said for the purpose of doing wrong, or, of perpetuating the wrong, bad men federate. We make no estimate of the wickedness of men. We need not be told of schemes concocted by bad men to multiply and intensify human ills. Nor are we required to read history, ancient or modern, sacred or profane, to arrive at rational conclusions upon such matters. The present is prolific of schemes productive of woe to men, women and children, for which the past furnishes no parallels, and it is such facts that have prompted workingmen to organize and to federate in the holy hope that to some extent, at least, artificial wrongs may be reduced in number and virulence. And here let it be said—here it must be said—if organization and federation on the part of workingmen cannot mitigate the wrongs under which they suffer—cannot ameliorate conditions, which, like the mills of the gods, grind exceedingly small, then within the entire realm of vagary, no such colossal sham as our "boasted civilization," ever lured men on to destruction. No such Dead Sea fruit ever tempted the eye, to turn to ashes on the lip.

But we do not take such a view of the subject. If there are bad men in the world, there are also good men in the world, and we believe the good are in the majority—and in that majority we believe are included the great body of workingmen—and included in the body of workingmen are the organizations, known as the Brotherhood of Locomotive Firemen, the Brotherhood of Railroad Brakemen and the Switchmen's Mutual Aid Association. We believe there are other organizations of railroad employés included in the majority, but we name those which on the 6th day of June, A. D. 1889, federated in the city of Chicago for the high and honorable purpose of "Mutual Justice."

What of these federated orders? How do they stand in the full glare of the noon-day sun of the centuries? What do they demand? What is the measure of their federated ambition? These are pertinent questions and demand answers. They are workingmen, whose extreme demands are fair pay for honest work, and fair treatment at the hands of their employés. With fair

pay they can rear their families in respectability, to lives of usefulness and honor. With fair treatment they can maintain their independence and maintain the dignity of American citizenship. If such rights are denied, they believe, and have a right to believe, that federation will help them to secure their rights. Not necessarily, by resorting to strikes, but because united for mutual justice, they will be more potent than by acting singly. But, should arbitration be denied, and concession and compromise set aside, and a strike result from a stubborn resistance to all reasonable demands, in that case it is held—and the logic is invulnerable—that a strike by all the federated orders would introduce a convincing logic well calculated to secure victory.

We believe that federation is based upon an immutable principle, and in the case under consideration only good can result, because only good is intended; and no law enacted by virtue of which a wrong can be perpetrated, can escape detection. The federation consummated at Chicago, by the three orders we have named, contemplates, ultimately the federation of all orders of railway employes. The laws of the federated body are framed with a view to that desirable end. No overestimates of the consequence of the federated body are made. Nor are misgivings to result from underestimates of its power and influence. It is not an organization of Utopians. No idle dreaming forms the basis of action. It deals with practical problems in a practical manner, and the good anticipated in its utmost reach, is embodied in "fair dealing." We bespeak for the new departure a fair trial. Attacks may come, but we are not apprehensive of danger. That defects may be found, we do not doubt, but we do not believe they will be pronounced fatal. At any rate, there is no exclusiveness. The door for admission is broad, and the invitation to other organizations of railroad employes is generous and manly. To them the latch string is within reach, and when they come they will be received with a true brotherhood welcome, and should they come, then as certain, as that:

"Truth crushed to earth shall rise again,"
the era of strikes will have disappeared.

We believe that reason will in due time triumph over prejudice, and that fortified by the practical workings of federation as inaugurated at Chicago, the victory will come at a much earlier day, than the most sanguine now anticipate.

THE PHILADELPHIA & READING RAILROAD COMPANY.

The Firemen's Magazine, to the extent of its ability, is disposed to do the public a favor, by devoting some of its space to the

TESTIMONY

brought out, concerning the operations of the Philadelphia & Reading Railroad Company, by the Congressional Committee, appointed specially to investigate that rotten and rascally corporation. In doing this, the *Magazine* will give extracts from the testimony of witnesses called, giving names and the page of the report where such testimony may be found, as also the conclusions arrived at by the committee.

Mr. Charles E. Smith, President of the Reading Railroad, from 1861 to 1869, was a witness. (See testimony; pages 219 to 234.) He says he made an investigation and that the reports were "dishonest, and I therefore resigned."

The reports were dishonest because of the "suppression of the truth."

"The value of the debt had been suppressed."

"A dividend had been declared and the money had not been earned; and the accounts had been made up so as to represent that the money had been earned."

"The object was to make a fine showing" and "plunder."

The cash investment is \$40,000,000, and the indebtedness "\$160,000,000 to \$170,000,000."

The debt accumulated "by doing a losing business and borrowing money right and left."

"They changed the character of the business and by crooked means" the debt accumulated.

The value of the stock is "22½."

The road has been twice in the hands of a receiver, in 1881 and 1885.

"What is the value of the Reading stock

and bonds, since this reorganization?" "I would not own one of them."

The foregoing is the testimony of an ex-president of the Reading. He charges its managers with dishonesty and crookedness for the purpose of speculation and plunder. Bankrupt, rotten, dishonest, crooked. This is the vile concern that makes war on organized labor. Take all the thieves, and embezzlers in the country, in or out of penitentiaries and their boodle all combined, would scarcely constitute a "vulgar fraction" of the amount the Reading corporation has stolen from innocent parties by "dishonest and crooked" practices—indeed so exceptional have been its nefarious practices that congress deemed it advisable to make a record of them for the purpose of arresting its robberies.

The committee, in making their report, say:

"It was by getting possession, almost without regard to cost of nearly all the routes of transportation by water or rail from the mines to market and then freezing out the private mine operators, either by putting down the price of coal at the mines or by limiting the supply of cars or by charging high freights, that the Philadelphia & Reading Railroad Company has been enabled, within, say, the last eighteen years to obtain practical control of the Schuylkill Canal & Navigation Company, also of the Susquehanna Canal and of about 1,700 miles of railroad, as well as about one-third of the whole anthracite coal fields of Pennsylvania, and at the same time to put up the average price of coal at least 50 per cent. to the consumer."

"It is true a few private coal operators still doggedly cling to their property and their business, but the testimony taken by your committee abundantly shows that the '*Reading devil-fish*,' as Congressman Prunum calls it, has been steadily branching out throughout the whole region, absorbing both coal mines and railroads, in order to rob the public by controlling the price of coal through limiting its output and charging an exorbitant freight for its transmission."

"In this way, the bonded debt of the Reading railroad has been increased to \$160,-

000,000, although the capital stock of the company is only about \$40,000,000."

"It has not paid any dividend for twelve years, although its average annual dividend for a long while, immediately preceding the time it commenced to mine coal, was over 10 per cent., frequently 15, sometimes 20 per cent."

"The avaricious grasping at a monopoly of both carrying and mining by such a gigantic concern as the Reading railroad and coal and mining company causes it to treat the miners and their help *with gross injustice in many ways.*"

"The railroads which both carry and mine anthracite always retain an abundant supply of help on hand, which help they *purposely* keep in *ignorance* as to when operations will be suspended, and for how long."

"Nearly all the houses at nearly all the mines belong to the mine operators, and not to the laborers, which latter are mere tenants at will * * *. Rent goes on all the while against employes, but wages are paid only in proportion to work actually done in short time, and of course no wages are paid during a lock-out or strike."

"This, together with other expenses next to be mentioned, serve largely to keep the miners in *debt slavery, as so many Mexican peons.*"

"Each miner, or mine laborer, who has a house for his family is charged and has the charge deducted from his wages for one ton of coal per month during the whole year, whether he uses the coal or not."

"Another abuse existing at most of the mines is the practice of compelling miners to fill underground coal cars of a larger capacity than the size agreed upon; * * * but a still more abominable practice, to make sure of deducting enough for slate, dirt and light loading, is to dock every car so much."

"The greatest outrage inflicted upon the workmen in and about the mines is the *pluck-me-store* system of paying wages."

* * * Several of the witnesses swore that some of the men get no money at all.

"Two ex-members of the state legislature testified that within their personal knowledge, several hard-working, sober miners, had toiled for years, or even a life time,

without having been able to draw a single dollar, or but few dollars in actual cash."

"These and other abuses detailed in the testimony precipitated the great anthracite strike of 1887-88."

"As already indicated, there are many suspicious facts, in truth almost satisfactory internal evidence, that the authorities of the Reading road *deliberately brought about the strike both among the miners and among its railway employes.*"

"Tramps are to be seen on every hand; vagabond squads of Italians, Poles, and Huns, many of whom cannot speak English, throng the mines to compete with Americans for work."

"The Reading Company alone has over 20,000 miners and about 15,000 railway employes in its service. Will these employes dare defy its behests at the ballot box?"

"In entering upon such a policy the corporations had to employ tens of thousands of laborers, most of whom *live in the lowest scale of existence.*"

"Mr. Austin Corbin, president of the Reading Railroad Company, while under examination before your committee in February, 1888, admitted that his railroad had then in employ, probably 300 of these domineering policemen, (armed with revolvers, sometimes with Winchester rifles, or both) and from reliable information, the number of coal and iron policemen alone in commission last October, was 412. These aggressive policemen tend to overawe, not only the local civil police, but the people themselves."

"From the *cautious and anxious* manner in which some of the witnesses testified, and from the *bated breath* in which they privately discussed their wrongs, and from the *subdued appearance* of the population generally, there was a forcible reminder to an intelligent man of the status of affairs in Russia or of other despotisms."

In the foregoing the congressional committee photographs the Reading Railway Company, an aggregation of pirates, which has a record of plunder for many years, and which under its present management its vicious methods are without one redeeming feature. There is not a gambling hell in this or in any other country which for infamous practices compares with it; viewed from

any point it is a colossal lie—a stupendous fraud. Such is the testimony, and such are the conclusions of the congressional committee, and yet the public robbers and enemies of men, women and children, have in their vile clutches the destiny of not less than 200,000 human beings who are forced to live "in the lowest scale of existence," reminding every "intelligent man of the status of affairs in Russia." This is the company that makes war upon labor organizations. Working men can contemplate the facts at their leisure and determine how they will deport themselves when some other devil-fish seeks to reduce them to the degraded level of men in the employ of the Reading.

SPEAKING of the most important and intellectual period of human history the *Homiletic Review* remarks that "within this half century the following inventions and discoveries have been made: Ocean steamships, street railways, elevated railways, telegraph lines, ocean cables, telephones, phonograph, photography and a score of new methods of picture-making, aniline colors, kerosene oil, electric lights, steam fire engines, chemical fire extinguishers, anesthetics and painless surgery, gun cotton, nitroglycerine, dynamite, giant powder, aluminum, magnesium, and other new metals, electro-plating, spectrum analysis and spectroscopy, audiphone, pneumatic tubes, electric motor, electric bells, typewriter, cheap postal system, steam heating, steam and hydraulic elevators, vestibule cars, cantilever bridges. All positive knowledge of the physical constitution of planetary and stellar worlds has been attained within this period." And yet the annoying fact remains that the science of the world is unable to fathom the mystery relating to building the pyramids of Egypt. Those old fellows who lived, say, 5,000 years ago, knew a thing or two as well as we moderns, and the period between building the pyramids and the time when the Egyptians were monkeys or tadpoles must have been immense.

PARNELL has sued the London *Times* for £100,000—\$500,000, and is likely to get it too.

JULY, 1889.

SUNDAY TRAINS.

The *Journal of Railway Appliances*, says: "We give on another page an article showing the opinion of a large number of railroad men as to the necessity of Sunday trains. The movement is bearing fruit, and it is gratifying to chronicle in this connection the recent action of the New York Central, the Lake Shore, Michigan Central, and the Boston and Albany roads. These roads have notified all connecting lines that on and after Sunday, April 28th, they will not offer for interchange at any junction point any freight (live stock and perishable alone excepted) from 6 a. m. Sunday, to 6 a. m. Monday, nor will they be prepared to accept any from their connections during the same hours. It is hoped that all the trunk lines will soon join the movement."

The article above referred to, says:

The first installment of replies by railway officials to a series of questions sent them by the field secretary of the American Sabbath Union is printed in *Our Day* for April, from which we make brief extracts. The principal question as stated is: *What obstacle, if any, do you see to prevent the complete suspension of inter-state Sunday trains (leaving out of account, as belonging to State jurisdiction, the question of local summer excursions?)*

Of over sixty-four managers and other practical railroad officials whose replies are the first installment of answers to a series of questions, of which the above inquiry is the last, *thirty-one declare there is no real obstacle to the complete suspension of Sunday trains*. One would make exception only for perishable freight, another only for live stock, and several others only for these two kinds of trains. *All except eight admit that more Sunday work is done by railroads than is necessary*, and favor a reduction—most of them would stop more of the Sunday work than they would continue. Only seven deny the statement that the same amount of work that is now done in seven days could be done in six. Some think this would require either a slight increase of employees, or of their hours of work, or of increase of expenses, but most of these railway officials think such condensation would result in no loss either to the roads or to the public. Some are confident it would be a gain. Only seven deny the assertion of the engineers that the work would be done *better* in six days than in seven, because of the better condition of railroad employees. Of this seven, two believe it would be done as well, but think the "better" an overstrong statement. In short, nearly all these railway officials favor a great reduction, and thirty-one of them the total suspension of Sunday trains.

"We run no Sunday trains." Fletcher D. Proctor, superintendent C. & R. Railroad.—"We do not turn a wheel on the Sabbath, and believe if all other than perishable freight were held for the remaining six days of the week, that railroad interests would be promoted thereby. Shall watch with deep interest results following the recent order to the above effect on the Pennsylvania Railroad." C. C. Woolworth, President,

New York Central, Hudson River & Fort Orange Railroad.—"Not any: A Sunday train is run on our road because a competing road runs trains—that is all. There is no need of it at all." F. M. Dean, General Foreman, Dakota Division C. & N. W. Railroad.—"None except the law of the United States requiring all railroads to do so (that is, for mails)." A Vice President and General Manager.—Same. J. H. Garride, Chief clerk, A., T. & S. F. Railroad.—"None at all, if exception were made for rare emergencies, and the general government would sanction the delay of the mails." A Division Superintendent.—"No unsurmountable obstacle if suspension was enforced on all lines by law." C. H. Platt, Division Superintendent, Hartford, Ct.—"There are many which could be overcome gradually in time." J. A. Spielmanns, Roadmaster, B. & O. Railroad.—"None but what can be adjusted by the people or commerce if willing or required." J. Houston, General Superintendent, P. O. & P. A. Railroad.—"Nothing in the way but the habits and customs of the people." If all Sunday trains were suspended all business and travel would soon conform to it, and a very happy condition of things would be the result. Sabbath desecration is wrong, and evil results must come from it in many ways. I have had a railroad practice of forty-four years in almost every capacity, and so have had opportunity to judge closely of the effects of Sunday work upon men and railroad interests, and I believe Sunday work is a losing business. I have charge of a road that does no work on Sunday. It works well, and it will work everywhere." Norman Beckley, General Manager, Cincinnati, Wabash & Michigan Railroad.—"None except the habit which has grown upon the nation. The boon to the laboring man on the railroad would be far greater than is generally realized." E. H. Mumford, District Foreman, Leavenworth, Kan.—"There are some serious difficulties in the matter of the transportation of fruits and other perishable articles in extreme hot and extreme cold weather. It is probable that some reduction in passenger service could also be made on Sundays by a concerted action. I strongly favor the Sunday rest so far as it is practicable to have it." J. Thomas, Superintendent C. & P. Division of the Pennsylvania Railroad.—"The only obstacle I can see is, that on long, through lines, in order to avoid laying over on Sunday, so large a portion of travelers would start on the same day—that on three days the facilities would be overtaxed, while on the other days they would be in excess of the requirements." L. W. Palmer, Superintendent, Providence, R. I.—"The railroads have revolutionized methods of transacting business to such an extent that trade, commerce and travel by these roads cannot be *entirely* suspended for one day." C. M. Hobbs, General Passenger Agent, D. & R. G. Railroad.—"Public necessity requires the running of at least one through mail and passenger train each way daily." C. A. Wright, General Manager and Superintendent Mineral Range Railroad.—"I do not believe in the entire suspension of either freight or passenger business, but in running as few trains as reasonable—transcontinental, fruit and live stock to feeding points." A Division Superintendent.—"The necessity for prompt delivery of the mails—the extra work that would come on the following Monday—the preachers must get to their congregations when they serve more than one place—it is contrary to Republican ideas and the constitution." A Railroad Officer. [The constitution protects the President against Sunday work—why should not others who are under its jurisdiction have the same protection?—Ed.] "None. I believe through traffic can be so arranged as to avoid loss or serious inconvenience. In fact, I believe in the Divine Law—"Six days shalt thou labor and do all thy work; but the seventh day is the Sabbath—in it thou shalt not do any work." L. L. Lincoln, Superintendent, Portland, Me.—"I see no objection to stopping all trains on Sunday. I would not run a train even for religious purposes. I believe that was the stepping stone from the good old way. One

kind of Sunday work follows another. Let us show up around the curve, or as a nation we shall go into the ditch." L. D. Berry, Master Mechanic, Osceola, Ia.

While it appears (as one of our exchanges says,) "that the curtailment of Sunday trains now seems to be the watchword of the leading managers of our great railway lines," it is evinced, that there is no good reason why we cannot have as total a cessation from labor on Sunday on the railroads, as is enjoyed by all other trades and occupations, and we rejoice in the above recorded actions and opinions, and in the actions of other roads as follows:

General Manager Hickson of the Grand Trunk Railway has ordered that no freight trains be run on Sunday with the exception of those carrying live stock and perishable goods. It is stated that the Delaware & Hudson road is also in sympathy with the movement.

It has been stated that the Delaware & Hudson road intended to stop running freight trains on Sunday. President Olyphant said last evening that they had stopped running Sunday freight trains some time ago in the sense that the Central has decided to do so, that is, stopping all trains except those carrying perishable goods and live stock. In Pennsylvania the Delaware and Hudson moves no trains at all on Sunday.

The Delaware, Lackawanna & Western R. R., has all along been very conservative in the observance of the Sabbath, and for many years business was almost totally suspended from midnight of Saturday to midnight of Sunday; very few second-class trains coming in between 12 and 6 a. m. Sunday, and only two or three starting out between 5 and 12 p. m. Sunday, while only one first-class train (a paper and milk train) passes over a portion of the road between those hours. Of late, however, it would appear as if, in the competition with other roads for the through passenger and stock traffic, the rule of keeping Sabbath has been somewhat relaxed, and we have more passenger trains arriving at their termini by 8 a. m., and leaving by 7 p. m. Sunday, besides a number of stock and meat trains, which seem to be run in upon us on Sunday more heavy than the average. It is admitted by all that it is possible to do away with much of the Sunday work, but it is also obvious that the greatest difficulty comes in at the attempt to fix a line at a certain point, and then through yielding a point here, and another there, find that the line has been broken so often as to be obliterated entirely. On most roads they claim that the mail service demands a train each way on Sunday; this rule does not seem to be universal, for on some roads there are no mail trains run on Sunday at present. So that if it is possible for these sections of country to get along, and even to flourish, without a Sunday mail, it is to be presumed other sections can do the same.

While it might be a hardship to some persons to be stopped over Sunday at some point before reaching the end of their jour-

ney, it would be a God-send to many if they were to be reminded that there is a day when others rested, and that they might go and do likewise. I have found a Sunday's rest in the midst of a long journey a good thing, and could go on Monday refreshed and strengthened for the rest of the trip.

Now, in regard to stock trains. They are used as a lever to raise objections with, and to show the necessity of forwarding them to their destination, under the plea of being guilty of cruelty to animals unless they were rushed through to their death. We sometimes speak of executive clemency in granting a respite from death, and while we are not prepared to say that stock would appreciate a day's respite given them by a Sunday's lay-over, yet if they had been kept shut up in some of the old fashioned stock cars without food or water for a day or two, it would be a relief from suffering to be allowed the freedom of a suitable yard and a good feed and drink. Instead of cruelty, it would thus become an act of mercy to lay the train over for a day.

If the new classes of stock cars are used, cattle and stock can be fed and watered while in transit, and, of course, could be attended to in the cars while laying over at some point for Sunday.

For perishable freight, refrigerators are being so extensively used, and they are so well supplied with ice, that much of it is often found in the ice-boxes on the return trips, hence, a day more on the road with these cars would not be a serious danger.

The only question that remains is one of money, after all, for the common cry, "If I don't somebody else will," is as true in this, as in some other evils. If the roads, however, all agree on the point, no one will be enlisted at the expense of the other, or enhance their position by the so-called superior accommodations afforded by their Sunday traffic. The question, can we earn as much for the stockholders in six days' work as we do in seven, has been answered in the affirmative in another greatly similar occupation, which was the forerunner of railroads, and from which railroads have already learned some valuable points, and may perhaps learn another. I allude to the teams which used to haul the goods, now carried by railroads, back and forth over the mountains. We learned from them that if we wished to ascend a heavy grade, we could make it easier by twisting back and forth in the road, thus virtually making the road longer, and the ascent so much less in proportion. The other point, which was tested by actual experience, was this, that a team of six horses attached to an "ark," would go farther in six days, and keep in better condition, than if driven every day without the seventh day rest. Not only this, but it used to be a matter of necessity with those who drove

every day, to lead a spare horse along so as to make a relief, as was often demanded, while those that drove only six days in the week and rested on the seventh day, found, in the course of time, that their team kept up so well that it was no longer necessary to keep a spare horse in attendance. If there is any doubt in the minds of any of our readers about this matter, let them apply the case to themselves, for they may have been there, or if they have not, let them ask some of their friends who have had an every-day job, and even if it be an easy one, the invariable reply will be that it is too much of a good thing. No one, however, can adequately describe the languor and listlessness which will eventually overtake and bring into subjection the most robust body and most energetic mind, if subjected to a never-ending routine of daily tasks for weeks, months and years at a stretch. Life becomes a mockery, and it is hardly worth an effort to prolong it. Men who have been in this treadmill for years, become surly in nature, jealous in disposition, and irritable in temper; thus feeling unpleasant themselves, and making others feel so too. Many a man may thus be blamed for being a crank when he is only doing what ninety-nine out of every one hundred men would do, and be, if placed in the same circumstances. A man in this condition is not to be compared with another one who has had his regular recurring days of rest and has made proper use of them, and there is no doubt in my mind, that the other will do as much in six days as he will in seven, and have some energy to spare. Fully realizing this it has no doubt prompted this action for the reason given.

"The leading Vanderbilt lines have given notice that they will not handle any freight on Sundays except stock and perishable goods. This is a practical movement to reduce as far as possible the running of trains on Sundays, so that employes may enjoy that as a day of rest."

It is no use asking what the men themselves think about the matter of having no work on Sunday and probably a proportionable smaller pay, for, as a rule, railroad men, are not so grasping after the "almighty dollar" as to wish to work on Sunday for mere gain, unless a loss of a job was likely to follow a refusal to work on Sunday. We have only viewed this matter from the physical and pecuniary standpoints, leaving out of consideration any higher law commanding us to keep a Sabbath, but this should also be taken into the account, for as no one can dispute the wisdom of the Creator, no one will be bold enough to say that He who created did not know enough to make laws to properly govern His creatures. Some nations in the past have tried to abolish the Sabbath, and during a short period of its suspension,

the whole nation degenerated so rapidly, crime became so rampant, murder and outrage so frequent, and licentiousness so shameless, that to save the nation from destruction, it was thought prudent to reestablish the Sabbath.

In this connection the example of some of our Lodges of fixing the time of meeting on other days of the week than Sunday is to be commended, for while there need be, and in many instances no harm is done, in attending a Lodge meeting, yet, strictly speaking, we are a secular organization, doing an insurance and mutual benefit business, and trying to advance the temporal welfare of our members by all proper means, and, as such, we have no greater right to monopolize the hours of that day with our business than any other class of workers or institutions. 'Tis only too true, however, that there really seems to be no other time available at which a small Lodge can gather a sufficient number of members to make the meetings a success and an encouragement to its officers. Hence, many of our Lodges are still obliged to meet on this day; but we hope that if the railroad companies say that the day shall be observed, we will be able to answer *amen* and act accordingly, by transferring the transaction of our business to some other day.

IS MARRIAGE A FAILURE?

With the permission of the *Magazine*, I will offer some reflections suggested by the question, "Is Marriage a Failure?" The question has been repeatedly asked in the *Magazine*. In no one instance has it been properly answered. The *Magazine* goes into thousands of homes. It is read by thousands of parents and children. To inoculate their minds with the belief that marriage is a failure is scarcely less than a crime. If it could be demonstrated that marriage is a failure, the conclusion would be inevitable that marriage ought to be abandoned. If marriage is a failure, it is so defective that it no longer serves any useful purpose—its faults are of a character to demand its renunciation.

In this practical age failures are not tolerated. If a locomotive is a failure it is laid aside. No more locomotives are built after that model. It has been pronounced a failure. That settles it. But it happens sometimes that a locomotive is a failure because the man in charge of it was stupidly ignorant—totally disqualified to operate it. To hear the ignoramus talk, one would suppose the defect was in the construction of the engine, but the moment a competent man takes charge, it is found that the defect was in the engineer who blatantly complained that the machine was a failure—and it is found to be true that the more ignorant and stupid the man who made the charge that the engine

was a failure, the more vociferously will he demonstrate to all around that he is totally disqualified to express an opinion.

All too frequently it happens that men get married who, by education, association, habits of life and habits of thought are disqualified for the duties and responsibilities of marriage. Instances are numerous—nor is the sad and repulsive spectacle confined to men. Upon such people marriage imposes no restraints. In many instances, to such people, marriage is made to serve as a cloak for unrestrained passion and incontinency. Such sins, like murder, "will out" sooner or later, and when wreck and disaster come there are those who exclaim, "Marriage is a failure!" As well say truth is a failure, because there are liars; that virtue is a failure, because there are monsters of vice. The failure is not in marriage, but in those who contract marriage and disregard their marriage vows.

Let us treat this matter seriously. If marriage is a failure, then the home is a failure, and legitimate children come in for their share of the penalties which the defective institution inflicts. Legitimate motherhood is a failure. There can be no home without marriage. There never was a home without marriage, and those who proclaim marriage a failure, whether in libidinous rhyme or in prose *sans* sense and grammar, attack the home and all things sacred that cluster around it. Those who write to prove that marriage is a failure, write in the interest of "free love," of unrestrained passions that would multiply children whose condition is worse than orphanage—victims of the blasphemous frothings of those who declaim against marriage, and who would fill the world with debaucheries such as were practiced in Sodom when it disappeared beneath a storm of fire.

The foibles of married people, advancing as they may and do to infidelities, are not to be charged against marriage, which, in itself considered, is neither a failure nor a mistake. That men and women marry unwisely, and often for unholy purposes, is true. They are failures as husbands and wives, fathers

and mothers. Out of wedlock they would be failures as men and women. Marriage works no miracles. Men and women, in the guise of worshipers, may enter a temple dedicated to the worship of the Most High, and profane it; and men and women may enter the holy state of matrimony for considerations which should make their marital vows burn their lips like fire.

I do not write to indulge in any morbid sentimentalities about marriage. I believe it should be founded on pure love—a union of hearts. It has been written by one of the world's acknowledged poets:

"Though fools spurn Hymen's gentle powers,
We, who improve his golden hours,
By sweet experience know
That marriage rightly understood,
Gives to the tender and the good
A Paradise below."

Marriage, I have said, is the foundation of the home, the family. If I were to admit for the sake of argument, that marriage is sometimes a failure, even then it is so much more frequently a success that the failures should not be urged against the institution. But marriage, as a sacred institution, because persons do not comprehend its obligations or employ it for base purposes, is no more a failure than truth because its ends are sometimes defeated by falsehood and perjury.

There is no more self-evident truth within the whole realm of history and experience, than that marriage is the embodiment and exponent of a primal law of man's moral nature implanted in him to hold him within ordained limits as certainly as the laws of attraction hold the stars in their orbits. If it were possible to abrogate the law, the result would be moral and social chaos and anarchy.

I have no inclination to introduce the the maudlin mouthings of libertines that I may reason against them. The verdict of the world is, that

"Wedded love is founded on esteem,
Which the fair merits of the mind engage,
For those are charms which never can decay;
But time, which gives new whiteness to the swan,
Improves their luster."

Fireside.

SEED.

WONDERFUL thing is seed—
The one thing deathless forever!
The one thing changeless, utterly true—
Forever old, and forever new,
And fickle and faithless never.

Plant blessings, and blessings will bloom;
Plant hate, and hate will grow;
You can sow to-day—to-morrow shall bring
The blossom that proves what sort of a thing
Is the seed, the seed that you sow.

—The Churchman.

Mechanical

Letters and Papers pertaining to Locomotive running, firing and management and other topics of interest to locomotive engineers and firemen are solicited for this department.

Correspondents are required in all cases to give their real names, not for publication necessarily, but as a guarantee of good faith.

Communications should be plainly written on one side of the paper only, and as brief as possible. No matter should be introduced for illustration or otherwise that does not have a bearing, directly or remotely upon topics of a mechanical character.

Contributions to this departments should reach the Editor not later than the eighth day of each month to insure publication in the next ensuing number, and should be addressed to

MECHANICAL DEPARTMENT,
Locomotive Firemen's Magazine,
TERRE HAUTE IND.

JULY, 1889.

Formation of Steam.

In the April number of the *Magazine* I propounded the question: "Is the formation of steam caused by a physical or chemical change in water; and what is a physical change, and a chemical change?" To this question, "A Philadelphian" and "F. T." both submit answers in the June number of the *Magazine*, and both are of the opinion that steam is the result of a chemical change in water. I think they are wrong in their conclusions and shall try to demonstrate in this paper the true answer, believing a thorough discussion of the question will bring forth much that is interesting to firemen and whereby they can acquire some facts, a knowledge of which is convenient and useful in any of the walks of life.

To discuss this subject intelligently, it is necessary for us to state a few fundamental principles or definitions upon which we may base our argument, and to understand of what matter consists, and how the constituent parts of matter are affected so as to cause a physical or chemical change. Water is matter. Anything that occupies space is called *matter*. A definite portion of matter is called a *body*. A particular kind of matter is called a *substance*. A general property of matter is that which all substances possess, as divisibility. A specific property of matter is one which distinguishes particular substances, as color, odor.

It matters not how small a grain of sand or a drop of water may be, we know it may still be subdivided and made smaller. And that even the smallest particles of matter which we can see are composed of still smaller particles. These smaller particles

are called *molecules*, each of which possess the specific properties of the substance to which it belongs. That is, if it is a molecule of salt, it retains the taste, color and other characteristics of salt; if it is a molecule of water it retains the specific properties of water, is tasteless, colorless, etc. Now, each of these molecules is composed of two or more minute parts called *atoms*. These atoms cannot be changed by any material force. Let me illustrate. A molecule of salt is composed of two atoms; one of these is an atom of chlorine and one is an atom of sodium. A molecule of water is composed of three atoms, two of hydrogen and one of oxygen. A molecule of cane sugar is composed of twelve atoms of carbon, twenty-two atoms of hydrogen and eleven atoms of oxygen—forty-five atoms in one molecule, being the greatest number in the molecule of any substance my memory now recalls. In each of these, after the molecule is broken up and the atoms set free, the atoms themselves can not be changed. They are original elements. For instance, we can resolve water into oxygen and hydrogen gases, but we are unable to resolve either of these gases farther. They are original elements. An element is a kind of matter that has never been resolved into other substances. There are only sixty-three original elements now known. Every other substance of which we know, and there are thousands of them, are but combinations of some of these few original elements. It may not be out of place to remark here that these elements of which we speak belong to the mineral kingdom. Animal and vegetable compounds are composed of some of these elements in various proportions. To this combination, however, is added the magic, vital element of life. Our own physical bodies can be resolved into some of these sixty-three elements, so we see that life and consciousness are divine gifts from our Creator which places man over all things on earth.

Let us keep these three facts in plain view: First, matter is made up of molecules. Second, molecules are composed of two or more atoms. Third, atoms are undivisible portions of original elements. This makes it easy for us to understand what is a physical change and a chemical change in matter, and the difference between the two.

A physical change is one which does not affect the molecule, hence does not alter the specific properties of the substance. We dissolve sugar in water and it is seemingly lost as sugar. But we know that the water simply holds it in solution. Evaporate the water and the sugar remains. This shows that the molecule has not been affected.

On the other hand, a chemical change is one that breaks up the old molecules, tearing apart their atoms and keeping them separate or forming them into new molecules composed

of a lesser or a greater number of atoms, or the same number of atoms differently grouped. For example, if we take water and mix with it properly a piece of zinc and some sulphuric acid, hydrogen will be evolved in large quantities. We will not be making hydrogen; we will be simply disengaging it from the oxygen and collecting it separately from the oxygen. After this process the water is no longer water. Neither the oxygen in one flask nor the hydrogen in the other bear the least resemblance to water. Indeed, here is one of the marvels of chemistry. Two gases totally unlike each other will unite and form a liquid entirely different from either; yellow sulphur and white quicksilver form red vermillion; poisonous and and offensive chlorine combines with the brilliant metal sodium to form common salt. Is it not wonderful?

Now, although not necessary to the demonstration of the original proposition, but requisite for a full understanding of it, let us go a step or two farther. A physical force is one that produces a physical change in matter. Churning butter from milk is a physical change; it is simply the gathering of the molecules of butter, which already exist, together, and separating them from the residue. A chemical force is one that produces a chemical change in matter. For instance, affinity, when it converts soda and sand into glass; or oxygen and hydrogen into water. An experiment demonstrating the last statement proves a curious fact, i. e., the product of burning hydrogen is water. Put a lighted candle into a jar of hydrogen gas; the light is extinguished, but the gas itself takes fire and burns very feebly. One atom of the oxygen of the air unites with two atoms of the hydrogen and the result of the combustion is water, which may be condensed on a cold tumbler held over a jet of the burning gas. Hence we see that the formation of water from its original elements is a chemical process, as is, also, the resolution of water into its original elements. But the changing of water from one of its forms to another is not a chemical process, but simply a physical change which brings us to the consideration of the original proposition: "Is the formation of steam caused by a physical or chemical change in water?" A body of water is so much matter. Water is a mineral. As matter it is composed of molecules, which are the smallest divisions of matter to be made by a physical force. Its molecules are composed of atoms. In the formation of steam these atoms are not separated from within the bounds of the molecule, hence, as it does not alter the specific properties of the water, no chemical change takes place.

Water assumes three different forms, viz: Solid, as ice; liquid, as water proper; gaseous, as vapor and steam. Heat is the controlling

agent of these forms. Extract sufficient heat from the liquid water and it becomes solid. Its specific properties remain the same, hence no chemical change has been effected. Add sufficient heat to the liquid water, which is the part that makes a fireman's back ache, and it becomes an invisible gas. The molecules, which are themselves invisible, are forced far apart by the heat, but they are not broken up into their constituent atoms, neither are the specific properties of the substance altered, for, eliminate the heat and you again have the water, hence no chemical change has been effected.

So we see, since the formation of steam does not alter the specific properties of water, that it is not caused by a chemical change, but is caused by a physical change.

In my own defense I will add one more paragraph to this already too lengthy article. I would recall the "vacuum in boiler" problem. In my discussion I did not suppose the engine to be out on the road, but in her stall during the entire experiment. With that premise, which should have been distinctly stated, my article was stable and the conclusions arrived at were true. Sam Rarus would demonstrate the presence of a vacuum *after the air had been expelled*. In my argument the air was not supposed to be expelled. Wilson Dungan also remarks that I left out a portion of the practical part of my illustrations in not giving the air a chance to escape. It is not the intention to allow anything to escape. My opinion of the condition existing within a boiler after the air had been expelled and the steam gone down, has been expressed in a former article, and is in line with those expressed by "Sam Rarus" and "Wilson Dungan" and other Mechanical Department writers, when that was one of the premises of the argument.

Lewis H. Evans.

CHICAGO, ILL.

Patents About to Expire.

Relating to expiring railroad patents, which become public property during June. Furnished by F. B. Brock, Patent Attorney, Washington, D. C.

Conductor's Check Box, E. Keith.
Car Wheel Construction, W. M. Arnold.
Coupling, H. W. Barnum.
Cattle Car, A. Welch.
Car wheel and Axle, J. S. Upton.
Rail Splice, D. J. Clark.
Tie, D. B. Hay.
Rail Chair, M. G. Freeman.
Tank Valve, M. N. Lynn.
Car Axle, M. P. Hadley.
Coupling, S. G. Northrop.
Draw-bar iron for Buffers, J. T. Wilson.
Car Spring, J. Anderson.
Construction of Railway, W. S. Morrow.
Snow Remover, G. Sewell.
Car Pushing Device, R. Odenath.

MR. EDITOR:—The Mechanical Department for June, opens its budget of good things with an article by Bro. Tucker, in which he tells us some of his pumping experience, as compared with "Dirigo's." It is really an exceptionable circumstance, that "Dirigo" should not have found an exception to his rule in three years running, and is one which does not often fall to the lot of engineers, for in that time they generally get a hold of all kinds of machines, running through all the variations, from good to bad and indifferent water works and especially is this the case on roads which to a great extent depend upon pumps for their boiler supply. Even with good injectors, it does not show good judgment to attempt to treat all locomotives exactly alike, for in spite of apparent similarity of designs, it seems as if they were endowed with a certain individuality which makes them differ. (Mind I say apparent similarity—for if the similarity fully existed, I believe the results would be alike.) While certain methods may be styled—and that with truth—scientific, the practical running of locomotives requires judgment, and above all that capacity to take advantage of every advantageous circumstance, and turn it to good account. While I may have said something about the number of gauges of water to be carried, I have found that in actual practice I was forced to deviate, sometimes very widely, from my rule, and while I would not be understood as laying down any cast iron rule, I fully accept Bro. "Tucker's" rule, "To carry water as high as possible, and have dry steam." But here is the sticker with most engineers: when do they cross the line between dry and wet steam—for many do not stop till it appears at the stack, and then the damage is done.

As Bro. "Tucker's" answer to "Eccentric's" circle problem fully corresponds with my figures given on the following pages, I suppose we must be correct, but no matter who else is benefitted, Bro. "Tucker" has evidently been the gainer, for the solution of the problem has led him to "grub up" a rule, which was about slipping away from him for want of use, and thus Bro. "Tucker" is in better shape to tackle the next problem to be solved. Bro. "Tucker" will no doubt be accorded the premium as a puzzle-solver, for having given the first and only answer to "Godfrey's" query about the "first rule in railroadng," for while we all knew "that the safety of passengers and trains is of the first importance," yet I could not make up my mind whether this was what our friend wanted to know, and so laid it over for future consideration.

I had no idea that Bro. "Tucker" was a Yankee, and entitled to the privilege of asking a question to answer one, but as I have also answered "Ink Bottle's" query before,

I await his answer to Bro. "Tucker's" query with some degree of curiosity.

I did not imagine that "E. S." and myself were the only ones who had suffered "griefs," and "pains" in our railroad journey, and I can and do heartily sympathize with our brothers on new roads in the Northwest, or in fact anywhere else, and it is the aim of all progressive engineers and firemen, to try to make the "griefs" lighter and the "pains" less frequent.

"Wilson Dungam" gives us "Roper's" rule for calculating the horse-power of a locomotive, and this fully agrees with the rule I and others have given.

"W. D." invites Mr. "Evans" to view a practical test of the vacuum in a cooled boiler, and thus fully concurs with the majority of your correspondents in the view, that there is at least a partial vacuum in the boiler, and shows that in working an engine, the air that at first was in the boiler escapes with the steam used, and thus we have no air in the boiler to take the place of the vacuum created by the condensation of the steam.

"F. T." answers "L. H. E.'s" query about steam, and its comparative volume to the water, by giving quotations from "Forney," to which or other books like it we have to resort for information on such points, for they are beyond the reach of ordinary appliances to determine, and as a matter of course no one can be blamed for quoting good authority for points beyond his means to determine.

"F. T." thinks that water undergoes a chemical and physical change when converted into steam, but as I before stated I claim it a physical change only, because heat and water are mixed and become steam.

"A Philadelphian" also answers "L. H. E.," that he leaves the problem incomplete by not giving the size of drivers, and a given speed. The size of drivers and the speed at which the locomotive is running are really no factors in the problem, only in so far as they go to determine the number of revolutions of the crank, or the distance which the piston travels in a minute.

"Philadelphian" says: "Multiply the area of the cylinder in inches." This is confusing, for piston is the proper word, and should also be used in speaking of the pressure; otherwise the rule given is correct and corresponds with the others given. Mr. "Sinclair's" illustration on page 350 of "locomotive running and management" follows this rule, and uses the terms area of piston and pressure on piston as "Philadelphian" will notice.

As before stated, it is not in our power with our limited resources to work out the problems of the expansion of water, when converted into steam by heat, nor the

amount of heat it absorbs in the process, but when it comes to mixing two bodies possessing different degrees of heat, we can calculate the average degrees which the mixture will have.

"Philadelphian" is inclined to think that water is chemically changed into steam, and brings some quotations as authority, and desires to prove the point by the well known action of water on quicklime. While I agree with him that water poured on quicklime makes a chemical change, and evolves heat, I fail to see the analogy of the illustration, for in the one case we have water poured on a solid, producing heat, by the action and leaving a semi fluid mass, and no reverse action will be able to bring the component parts of this mass to their former condition. In the other case we have the water in a vessel, and generate heat outside of it, which is allowed to heat the vessel, and this in its turn heats the water, and when a sufficient amount of heat has been absorbed it becomes steam; this is purely a mechanical mixture or physical change. Reverse the process, the heat is abstracted and the steam again becomes water with about the same properties as before, and even in the same quantity unless it has been suffered to escape.

"S. V. 286" gives quotations in support of his idea of there being a vacuum in a cooled boiler, showing that water can only furnish one of the gases which forms air, and hence it lacks the necessary parts to form air in the space formerly occupied by the steam, and uses the illustration of a cylinder with a cubic capacity of 1,700 inches, being filled by steam created from one cubic inch of water, and having thus been filled, asks what is in the 1,699 inches when the water has resumed its original shape? This is a good argument and hard to controvert.

"S. V." says the term horse-power is not generally used when speaking of locomotives, but says they are rated by their tractive force, and describes his idea of tractive force by comparison with a stationary engine, or a rope passing over a pulley and lifting a weight out of a pit, by passing around a driving wheel of a locomotive used as a stationary engine. He then also gives the rule for calculating horse power as before given by several of the correspondents.

"East Saginaw" gives "Seeking Information" some quotations, showing that steam and air will not mix under pressure, and that steam will expand into 1,700 times the bulk of the water from which it was generated, and also corrects "S. I." for saying that "water changes to steam under an atmospheric pressure of 212 degrees and to ice at 32 degrees." This was so palpable a mistake, that no one thought it worth while to correct it, for evidently the allusion was to degrees of heat instead of pressure, which as

"East Saginaw" truly says, will not in any way affect or raise the temperature.

"L. H. E." has not seen the water stop flowing from the leg of a boiler, but he has had some experience with a barrel of cider, and learned what to do to make it run out. But he says when first started "it would give a little spurt and dribble and then cease to flow." "Was it owing to vacuum in the barrel?" "If so, how did it get there?" The answer to this should be: It is owing to the vacuum, and it got there because of the cider that spurted and dribbled out into the pitcher, thus leaving the barrel that much less than full, and with the space it formerly occupied left empty. The air pressure existed all about the barrel before the bung was pulled out, and did not prevent some of the cider from running out, but just as soon as a space was formed over the cider with nothing in it, it ceases to flow, not through air pressure but from a lack of it, as is proven by the admitted fact that as soon as air was permitted to fill the space, and thus restore the pressure, the cider continued to flow. Mr. "Evans" seems to think that "W. Gore" could not have had a second, or a third vacuum, after admitting air once. If "Evans" had given that cider a rest after tapping it, by putting a small plug into the ginlet hole, or driving in the bung, he would have seen the effects of a second, third, fourth and fifth vacuums. It has been stated that no really perfect vacuum has ever been formed, and that hence there is a little air in even the best vacuums. If a quart of cider has been withdrawn from the barrel a quart of air has taken its place; if the supply of air be thus shut off, and a gallon of cider be drawn, the quart of air would be attenuated or so thin as to fill five times its former bulk, this would of course reduce its pressure to one-fifth of the outside atmospheric pressure, making only three lbs. inside as against fifteen lbs. outside and this would again stop the flow. This process could be repeated a number of times, but of course as the quantity of air inside increased, it would take a larger flow to again produce a partial vacuum.

While I have had some similar experience with "W. Gore," I have never found the flow from a boiler to stop entirely, but only to subside in part, and then to continue in the gurgling fashion, which is familiar to all who use a jug, and hence my query to "W. Gore" whether he meant to say "entirely" or only in a modified sense?

I have found a little paragraph on the expansive use of steam, and think it will do as a starter to answer "L. H. E.'s" request about working steam expansively, and I insert it herewith:

If the flow of steam to an engine be stopped when the piston has made one-half of the

stroke, leaving the rest of the stroke to be completed by the expanding steam, then the efficacy of the steam will be increased 1.7 times beyond what it would have been had the steam at half stroke been dismissed without extracting more power from it; if the steam be stopped at one-third of the stroke, the efficiency will be increased 2.1 times; at one-fifth, 2.6 times; at one-sixth, 2.8 times; at one-seventh, 3 times; and at one-eighth, 3.2 times.

Now, if this is not enough or in the line of "Evans'" ideas, let him mark out a way. It would be rather too long an article, to try to give an idea of the calculations which are necessary to arrive at the load a locomotive will haul, and even then we can only get an approximate estimate, because tables formed for the purpose vary so much and circumstances, tracks, cars and loads are so changeable, that what may be right on one day at one season, would be wrong and a good ways out at another time.

Next we note Mr. Lockwood laying down his lines of defence for Mr. Tucker's expected attack, and await the issue.

"R. Cunningham," an old stationary engineer, tells us of his short method of calculating horse-power, with a given pressure of 100 lbs. and a speed of 100 revolutions per minute. He says multiply the diameter of the cylinder in inches, by the stroke in inches, and divide the product by four, and the result will be the horse-power very nearly correct. It is the simplest rule I have yet found, and could of course be used for other pressures or speeds by increasing or diminishing the final product in proportion. "R. C." says for instance a 6-inch cylinder, multiplied by 6 inch stroke is 36 and this 36 divided by 4 yields 9 as the horse-power. Now if the speed had been 200 per minute it would double the horse-power, or 300 would triple it, while if the main pressure had been 50 it would have made 4½ horse-power. The rule seems to be approximately correct, but I have not yet been able to fully tell why it is so which would be some satisfaction to know.

"Sam Rarus" comes into the fulcrum fight, just as all were about quitting it, (except Messrs. Lockwood and Tucker) and puts several questions which ought to stagger our friends of the opposition, but they have been put at them in a somewhat different form, and had no effect, hence we dare not hope for too much now. "Sam" is also in full accord on the vacuum question and has several nice illustrations in proof of the fact.

Vulcan.

THE St. Charles Car Co., delivered this week two parlor cars to the Toledo, Ann Arbor & North Michigan. They were on exhibition in St. Louis for a few days. They are equipped with the latest Johnson reclining chair, and have a smoking-room and a ladies' sitting-room. They are most elegantly finished in mahogany and quartered oak and embody the best features in modern car building practice.

MR EDITOR:—I regret that "Mr. Lockwood" is not Master Mechanic of some good railroad, for if he were I should feel as though I had somewhere to go should the "bottom fall out" of the position I am now trying to hold.

I was an interested listener to Mr. "Lockwood's" lecture at the Novelties Exhibition, during the B. of L. F. convention in Philadelphia, and thought at the time that there might be something new in his theory of the action of a locomotive. That is, something that had not been thought of before. True, he has some ideas peculiarly his own, but I fail to see where he has made any important new discoveries. I like the way he has of insisting on the "boys" giving an explanation and their authority on any point stated. Too many of us know a thing is so because we have been told so, and can give no other explanation.

In the June Magazine "Mr. Lockwood" has asked me a few questions which I will attempt to answer. To begin with, I am called on to give one of the first lessons in geometry. This I am not over well qualified to do, but will do as well as I can, and if I fail I know some one will come to my rescue.

On page 513 of the June number, "Mr. Lockwood" writes: "This sheet of paper has some thickness; how it can exist without it, and yet have length and breadth, passes my comprehension." He also says that, if a surface has length and breadth but no thickness, he does not understand it. It would seem that my first duty is, if possible, to make this point clear to him. And this is where the geometry lesson comes in. Before one can do much in geometry he must understand that the surface of anything (a surface) has no thickness, and one can not go far in mechanics before he strikes geometry, though he may not recognize it as such.

Mr. Olney, of the University of Michigan, and the author of mathematical works, says that there are propositions so elementary as to require no demonstration in order to satisfy the mind of their truth. These propositions are known in mathematics as "axioms." Suppose I say, "the whole is greater than any of its parts," and "Mr. Lockwood" says, "I don't understand it. Explain it." I secure some familiar object, say an apple, and cut it in several pieces and present a piece to "Mr. Lockwood" and say, "this piece is smaller (less) than the whole apple." But "Mr. Lockwood" still says, "I don't understand it. Demonstrate it." What more can I do? I might weigh it, or measure it, and he could still insist on a demonstration of the demonstration *ad infinitum*.

It seems to me that the proposition, that "a surface has length and breadth but no thickness," partakes very much of the nature of an axiom, and practically admits

of no demonstration. I did not say that a sheet of tissue paper, nor any other substance, had no thickness. The surface that bounds the paper, the top, the bottom and the sides is what has no thickness. The paper has thickness, and this thickness can be measured. Where this thickness terminates we find the surface. The surface is immeasurable except in two directions—length and breadth. Now, "Mr. Lockwood," I have fooled away a good deal of time in trying to demonstrate a proposition which, to my mind, admits of no demonstration. If you still think a surface has thickness, please tell us about how thick the surface of the tread of a locomotive driver is.

In the figures introduced on page 513, "Mr. Lockwood" shows clearly what causes the rocking, rolling motion of a locomotive. Those who thought "Mr. Lockwood" held the opinion that these motions were due to counterbalancing will see that they were mistaken. In considering figures 3 and 4, however, he states an impossibility, through what I conceive to be a misapprehension of the word *reverse*. The crosshead undoubtedly stops at each end of the stroke; that is, with reference to other portions of the locomotive, and were it not for the fact that the main rod is pivoted to the crosshead, that, also, as well as the wheel, and with that the whole locomotive, would stop. As it is, however, the wheel and the main rod, with the exception, perhaps, of a small portion next the crosshead, goes merrily on in the direction of its rotation; and just at the point where "Mr. Lockwood" thinks the pin and main rod stop and *reverse* themselves, they are moving at right angles to the crosshead. If they stopped and reversed themselves they would return in the same direction from which they came and turn the wheel the other way.

Suppose now that we locate two points in the wheel, Fig. 3, one just above the pin, the other on the opposite side, the same distance below the center line as the first is above it. Now imagine a straight line drawn through these points, and that it moves by translation only. According to "Mr. Lockwood's" theory every time any given point in the wheel comes to this line it *stops, reverses* itself, and starts again. Let us see where this conclusion leads. If we locate a point for each atom of matter in the whole wheel and unite them by lines, as indicated, and each point stops when it arrives at its respective line, we have the whole wheel standing still, or at least coming to a full stop.

Yes, "Mr. Lockwood," when the speed of the train is fifty miles per hour, the crank pins, rods, crossheads, etc., etc., when on back or forward center are carried forward at the same speed. Now, what excuse have you for stating on page 271, May 1887 *Magazine*,

that they are rest? If they are at rest, say so, and stick to it. If they move fifty miles per hour, stick to that. Do not try to mix us up with two statements that squarely contradict each other.

If you had a rotating trip hammer of 300 pounds weight coming in contact with the rail at rest, you would have a genuine hammer blow. But that is just what you do not have in a correctly counter balanced driver. Again, you can not have a *rotating trip hammer* striking a blow at its own axis of motion, as you claim the point of contact between the rail and driver to be. You claim that the 300 pounds of counterbalance comes down from its greatest speed to rest. Did you ever see any kind of hammer that struck a blow in that manner?

When the counterbalance is at its highest point it will not "lift or ease" the driver from the rail, particularly if there is the same weight moving in the same circle of the pin opposite. And the fact that *no* flat place at either of the points you mention is worn is the best argument that it does not. Let us now suppose that in a locomotive of the Shaw type the weight supported at each of the crank pins of the forward driver is 300 pounds, and that she is running fifty miles per hour. When the pins are in line above and below the center, according to your idea, the upper weight is moving seventy-five miles per hour, the lower one twenty-five miles per hour. Won't you please figure the momentum of these two weights and show me how they can balance. This is one point that mystifies me. Won't "Mr. Lockwood" explain?

From "Mr. Lockwood," on page 514, June number, I infer that we do not agree on the definition of the word *fulcrum*. He seems to think that a fulcrum is a support pure and simple. This, as I have said before, takes us to the center of the universe. I will, however, try one more illustration to try and convert my friend to my view of a fulcrum. Let us take a common auger, with handle extending at right angles to the bit. Suppose with this auger we bore a perpendicular hole in a ceiling. Now, "Mr. Lockwood," where is the fulcrum by means of which that hole is bored, provided both lips of the auger cut equally?

With regard to that draw-bar. Every engineer knows that there is a vast difference in the wear of such a bar in freight and express service. The wear on the bar being the greatest in freight service, especially when there is much switching. Here let me suggest to "Mr. Lockwood" that express trains are not the only ones that make sixty miles per hour.

"Mr. Lockwood" will notice that I referred to what I *personally knew* of the frequency, etc., of repairing bridges, not to the frequency of such repairs.

I believe I have replied to all of "Mr. Lockwood's" direct questions. I will now give a few reasons why I think a locomotive can be counterbalanced so nearly perfect as to render her harmless so far as disturbing influences in that line are concerned. I have rode on locomotives that were so badly counterbalanced as to have a very disagreeable reciprocating, or forward and back, motion, which increased with the speed. Those who went on the excursion at the close of the Denver convention will remember that the engine that pulled us out of Denver had this motion, which it imparted to the head coach also. I have rode on others which were entirely wanting in this particular. For instance, the engine of which I am now in charge. I have run her at all speeds, from 0, to — well, quite fast, and there is no perceptible reciprocating or bounding motion about her at any speed. The only time she shows any disposition to "we wah," "nose round," or "rock" is when she is doing heavy work going slow on a grade, and this is due to the action of the steam in the cylinders, and not to the counterbalance.

Replying to the inquiry in the *Railroad Gazette*, I will say, that I do not think it necessary to use additional weight in the counterbalance to resist the inertia of the reciprocating parts. From some articles I have recently read, I infer that the pressure on the crank pin is nearly uniform throughout the stroke, and if there is an excess of inertia at the end of the stroke it ought to be checked by compression of steam or pre-admission.

In conclusion I want to say to "Mr. Lockwood" and others that I regret that my time and opportunities for making experiments are so limited. I should dearly like to see the test made with the new dynamometer. Can "Mr. Lockwood" tell us when it will be made, and whether a very orderly Western engineer could gain admission to see the test made?

A. H. Tucker.

MR. EDITOR:—In further reply to "Mr. A. H. Tucker," I beg to refer your readers to my recent article in the *Journal of Locomotive Engineers* for March, entitled, *My Quest*. It may be found in the technical column. In this account of my work for the past seventeen years there have occurred many incidents that are full of suggestion and instruction. One that comes to mind has a direct bearing as a further answer to "Mr. Tucker's" article in March *Magazine*, 1889, page 218.

In my early investigations I was introduced by the President of one of our great railways to their General Manager, for the purpose of discussing the hammer blow question. After several interviews I was introduced to Prof. —, the technical ex-

pert of the company, in somewhat the following style:

G. M.—"Professor, let me introduce to you Mr. W. E. Lockwood. He does not make any pretence to great technical knowledge, but to that in which he believes, he is eminently practical, and only practice will bring conviction to him. Now, on this hammer-blow question, you and I know there is not and cannot be such a thing; if Mr. Lockwood can show or convince us that the wheel comes to rest at any point then we might concede that it could strike a hammer-like blow." The Professor, by silence, conceded the point well taken. Without further argument, I said: "My answer, gentlemen, for the present is to give you all the authorities, and later on, when I am ready to demonstrate and prove by working models this proposition, we will further consider and discuss it." Neither General Manager or expert Professor will question the fact that the bottom of the wheel is at rest, even if for an almost incomparable instant of time it may be.

"Mr. Tucker," on page 401, *May Magazine*, says: "Now, 'Mr. Lockwood,' listen. In a genuine hammer-blow, one struck with a hammer in the hand of a mechanic who means business, there is no slow up. The hammer is going just as fast at the instant before it comes in contact with the object aimed at as when it started, and I may say, a good deal faster." I have been recently to see a blacksmith swing a sixteen pound steel sledge-hammer, and instead of a direct drop, as shown in "Mr. Tucker's" Fig. 2, as indicated by the arrows, say like a steam-hammer, he raised the hammer in a circle from rest to over his head, where, reversing its direction from rest, by weight gravity it struck the blow; so the counterbalance comes in a circle of rotation and translation to rest at the rail, with a minimum of weight in each rotating or rolling trip hammer of 300 pounds to a maximum of 660, five and one-tenth times (driver 5X-8½) in a second of time at the speed of a mile a minute. Conceding, and with no wish or intention of belittling the American standard type of locomotive, that from the present or past standard it has been wonderfully successful, and for what it accomplishes under all the conditions of service, it is in advance of the world, yet, judging from my stand-point, as a piece of mechanism, judging of the future by the past, the comparison will not be unlike comparing Stevenson's "Puffing Billy," of 1813, with the highest standard of a Baldwin of to day.

I trust my friends, "Messrs. Tucker and Evans," will read carefully "High Rates of Speed," *Magazine* June, 1889, page 515, from the *Railroad Gazette*. A standard machine which cuts up such didos as this, wants

what is contained in the communication.

The suggestion I desire to make is that each writer changes his method. Instead of writing a communication, that he write a paper upon the principal subject in hand. Suppose it is the "HAMMER BLOW"—let that be the caption of the article, and so on through the entire list of subjects—one paper for one subject—long or short. This done, in the absence of an index, or, with one, reference, is quick and easy. If a writer simply wishes to ask a question, let it be placed under the caption "QUESTION" with or without the name of the questioner, as the editor may determine. This arrangement, would I think, add much to the value of the department, at least that is the view of one who has been a constant reader of it from the day of its inauguration.

The suggestion I make does not do away with correspondence, for it frequently occurs, I notice, that letters are properly printed in the department which, while interesting to firemen and engineers, and students of the machine, do not discuss any particular question of mechanics.

The suggestion I make, would, I think, be in the line of economy of space. Condensation would take the place of elaboration, a matter of no little importance to a man who has only so many hours at his command for study. If a fireman or an engineer wanted to refresh his memory on a certain question he could run through twelve numbers of the *Magazine* and find all that had been written upon the subject, in less time than at present is required to go through one number, and with such readers time is money.

I do not know what the editor of the *Magazine* will think of my suggestions, nor do I know what the contributors to the Mechanical Department will think of them, but they are offered with becoming modesty, and in the hope that they may do some good.

M. M.

[We print the paper of M. M. with special satisfaction. The suggestions made we regard as eminently prudent. Since the paper came to hand we have devoted some time in reviewing the Mechanical Department for the purpose of ascertaining if the positions taken by "M. M." were warranted by the facts, and were forced to the conclusion that his suggestions ought to be heeded, and that decided advantages would result from their adoption. Suppose it was desired to know what has been said on the "Hammer-blow," or on "Horse-power," or on "Open-throttle," or many other important subjects, as suggested by "M. M.," the time required would make the task vexatious. If, on the contrary, writers who have discussed such subjects had had the article properly captioned, and had introduced no other subject, reference would be quick and satisfactory. When

numerous questions are referred to, a few words said and then dismissed, little information, if any at all, is afforded, and this thing repeated from month to month is productive of monotony, and is in direct conflict with the interest the department should create and maintain. We desire to act upon the suggestion of "M. M.," and we believe it will be gratifying to contributors to adopt the new departure.—ED. MAGAZINE.]

Economy in Oil.

One of the greatest aids to successful railroad train service is a good lubricant, and the importance and value of a really efficient and high grade oil has never been shown up in a better manner than in the article below, which we reproduce from the *National Car and Locomotive Builder*, whose pages ever teem with good things, but whose May number seems to exceed the average in the number and variety of good articles it contains directly bearing upon subjects connected with our line of railroad service; and in this connection we deem it best to say to our members, subscribe for the paper for fear our stock of cheek runs out and forbids our copying so many good and instructive articles, and our readers thus fail to see them. We are under a load of obligation to Mr. Sinclair, the able editor, for the encouraging words of good cheer with which he has been pleased to recognize the labor which is being bestowed upon this department of our *Magazine*, in the hope of being able to help such of our members as are willing to help themselves. Mr. Sinclair, in writing of this matter, says:

"The readers will derive important benefit from that part of the *Magazine*, and railroad companies ought to feel under obligations to the men who are imparting such valuable instruction and inducement to study, to their firemen."

Let us hope that both parts of this good opinion will come to pass, and that while we are reaching upward for a higher plane of knowledge, may we also be able to attain and keep a still greater degree of favor from those of our employers who are progressive enough to appreciate the efforts which are being made in this department, and intelligent enough to distinguish between routine and brain work:

The lack of data regarding the wear of journal brasses, commented upon in our last issue, is more than paralleled by the absolute ignorance regarding the true efficiency of the lubricating oils that are used upon them. The average purchasing agent seems to think that he has done his whole duty when he has bought the lowest priced lubricant and waste upon the market, and squeezed the last cent in discount out of the seller; provided he delivers at the same time an article or articles that will not allow the journals to get hot.

There is another element, however, that is never taken into account in the purchasing of supplies; it is the coefficient of friction developed by the oil between the journal and the brass. We will suppose that an oil is offered whose coefficient is .10. It is evident that it will

be cheaper, at even a higher price, than one which develops a coefficient of .16, when regarded solely from the standpoint of ease of draught. Again, it is well known that the higher the grade of the lubricant the smaller the quantity required for a given service, so that it possesses this two-fold advantage over its cheaper rival in that less of it is required and the hauling is made easier.

But the purchasing agent will say that so much oil is wasted, and the men in charge of the oiling of the cars are so careless that the theoretical saving in quantity disappears and all oils stand on the same basis. Granted that this be so, our purchasing agent still shrugs his shoulders and doubts that any difference in oil can add to or detract from the hauling power of the locomotives.

It is now our turn to turn theory into practice. A number of years ago a certain man took the contract to furnish oil, waste and brasses for all of the coal cars on a trunk line. He believed that the best was the cheapest. In all his purchases, therefore, he bought only the best of supplies. He attended to the business in person, and throughout the whole time of the duration of his contract not a train was delayed by a hot box, while the standard train hauled by the locomotives in the service rose from fourteen to nineteen cars. Unfortunately for the railroad company, he made money out of the job, and the purchasing agent found it out.

This wily official therefore persuaded the railroad authorities that what man had done man could do, and that the company could purchase its own supplies and save the profits of the contractor. So when the contract expired it was not renewed, and the era of cheap oils and waste once more set in. As a result, in less than three months, or as soon as the old oil had all worked out of the boxes, the length of train hauled dropped from nineteen cars to fourteen, and the cost of oil and waste had risen above the figure paid to the contractor.

Here was a case of a direct loss to the company of over 26 per cent. in the hauling power of their locomotives due entirely to a difference in the grade of oil used. The reader will readily understand that this will compensate for a vastly greater difference in price. In each case the engine was doing all the work of which it was capable, therefore the consumption of coal remained the same. Wages of engineer, firemen and trainmen were the same. Hence the company lost 26 per cent. in crew wages, and the increased cost of oil, but the purchasing agent had the satisfaction of knowing that he was paying the bottom price for supplies. It can hardly be asked whether it paid the company to disregard such a purely theoretical matter as the coefficient of friction of the oil it was using.

BATTLE CREEK, MICH., May 15. 1889.

MR. EDITOR:—In May number of the *Magazine*, page 410, Bro. Godfrey asks: What is the first rule in railroading? If not mistaken, this brother is from Michigan, therefore I am interested in answering. If I am wrong, some one will surely enlighten me. Safety is the first consideration. Much could be said upon the subject. I was going to answer protection or self-protection. But please ask something easy next time, Bro. Godfrey. 84.

THE Ohio Falls Car Co., of Jeffersonville, Ind., has within the past few weeks received orders for twenty platform cars for the Midville, Swainboro & Red Bluff road, and smaller orders for the Georgia Southern & Florida, the Tucson, Globe & Northern, and the Wrightsville & Tennessee Coal, Iron & Railroad Co.

Shops.

The Southern Car Works, Knoxville, Tenn., contemplate enlargement.

The Southern Pacific Railroad Co. expect to enlarge their shops at Houston, Tex.

It is expected that the Atlantic & Danville railroad will build shops at Danville, Va.

The Norfolk & Western Railroad Company will build large repair machine shops at Roanoke.

The Baltimore & Ohio Railroad Co. are building car and repair shops at Grafton, W. Va., to employ 200 men.

The Poughkeepsie Bridge Co. has purchased 400 acres of land near Grantville, Conn., on which repair shops and round houses will be erected.

The Sheldon Axle Works, at Wilkesbarre, Pa., which has the largest plant in the country, are increasing their force of workmen as fast as room and facilities can be had. The company has orders six months ahead.

The Pittsburg Locomotive Works have commenced the erection of a new boiler shop 120x275 feet. They expect to make it one of the best equipped and most convenient boiler shops in the country.

The Cooke Locomotive and Machine Co. Paterson, N. J., is putting in 205 H. P. Sterling vertical water-tube boiler for testing locomotives. These boilers are specially adapted to high pressure and are manufactured by the International Boiler Co., Lt., of New York.

The work for the new shops on the Nashville, Chattanooga & St. Louis at Nashville, is being rapidly pushed. The stone work is nearly completed, and the contract for the brick work has been let. Bids for the wrought iron work for the roof structure have been invited. There are nine buildings in all. They are to be of stone foundation, brick construction, with iron roof. The round house will not be erected this year. The buildings now in course of erection are the machine and erection shops, boiler and tank repair shops, blacksmith shops, foundry, planing mill, coach erecting shops and freight car erecting department. The buildings vary in size from 60x200 feet to 100x250 feet. The planing mill and storage department buildings are each to be two stories high. The expenditure on the whole plant will be about \$250,000.

The construction of the Shops at Cheyenne has commenced, and of the buildings to be erected, many of them will be ready for occupancy by Nov. 1. The following is a list of the shops that will be built during 1889: A machine and erecting shop 125x225 feet will be built, and the plans show that future extensions as large again will be made. Adjoining are a lavatory 25x50 feet, a stack house 12½x12½, and an engine and boiler room 12½x80 feet. A blacksmith shop, 26x80, will be put up immediately, the plans showing that an extension 90x80 will be added next year. A transfer table 70x285 will be made to answer for the coming year. A freight repair shed, 70x200, with an extension 70x100, is to be erected and tracks will be laid to make a repair yard immediately adjoining, with a capacity of 150 cars. This freight car repair yard was not contemplated at first. A boiler shop 100x150 feet, with an addition 50x48 feet, and a future extension is to be added, 80x150 feet. A copper and tin shop 50x175 is to be built around one of the present buildings. The present round house with twenty stalls will not be demolished, but the circle is to be completed so as to accommodate forty locomotives. The coal pockets are to be made 240 feet long, an addition 100 feet long for sand added and an additional ash pit put in between the present coal chutes and the water tank. On either side of the viaduct crossing Central avenue track, 1,000 cars is to be made, so that 500 freight cars can stand on the east side and an additional 500 cars on the west side of the long bridge. The greater portion of the tools for these shops will be furnished by Manning, Maxwell & Moore, New York, and the Niles Tool Works, Hamilton, Ohio.

Power of Compound Locomotives.

The paper on Compound Locomotives read at the last meeting of the New England Railroad Club by Mr. Angus Sinclair, which is published elsewhere in this issue, excited considerable discussion in the meeting and out of it. Nothing pleases the author of the paper better than bringing out anything to arouse discussion about matters pertaining to railroad rolling stock which are in dispute, for the exchange of ideas resulting therefrom is certain to make someone the wiser, and the more that the subject of compound locomotives is discussed, the more our railroad men will know about a type of steam engine that ought to be better understood than it is. The mistakes that men fairly well informed about compound locomotives may readily fall into is well illustrated by the position taken by one of the speakers at the club meeting, who insisted that a compound locomotive developed as much power for starting a train as a simple engine. A mistake of this character is so liable to happen in the course of a verbal discussion, where there is not time to make calculations, that we would have passed the incident over without notice had it not been that two railroad journals, the *Railroad Gazette* and *Railway Review*, have taken up the subject editorially, and informed their readers in effect that the author of the paper on Compound Locomotives did not know what he was talking about when he made the assertion that compound locomotives did not exert the power in starting a train or on a slow pull usually possessed by a simple locomotive. In contradicting at the club the statement that compound locomotives were deficient in power at starting, Mr. Barnes quoted from an article in *Engineering* as the foundation for his belief. The article cited as authority described the working of a Worrell locomotive with high pressure cylinder 18 inches and low pressure cylinder 26 inches diameter. The boiler pressure was 160 pounds, and when the intercepting valve closed in starting a train the high pressure cylinder showed a mean effective pressure of 100 pounds and the low pressure cylinder 53 pounds. At this rate the combined pressure exerted by the steam on the two pistons would be 53,493 pounds, and would be equal to a mean effective pressure of 105 pounds on the two 18 inch high pressure cylinders, that pressure being 65 per cent. of the boiler pressure. The Worrell engine that was brought into the discussion, with the exception of the large low-pressure cylinder in place of an ordinary cylinder, is in all respects the same as the builder's standard 18 inch passenger engine, and is required to perform the same work. Now compare the admitted performance of the compound locomotive with a simple engine having two 18 inch cylinders. After the first revolution of the wheels the cylinders would receive 65 per cent. of the boiler pressure. This would be 91 pounds mean effective cylinder pressure with an engine carrying 140 pounds on the boiler. An American locomotive which developed only 65 per cent. of the boiler pressure in the cylinders in starting could not put into motion 75 per cent. of the freight trains that have to be hauled, and a majority of through passenger trains could not be started without the help of a pusher. Of course, at high speed, the compound, which is nominally equal to a simple 18-inch cylinder locomotive, would develop greater power than the latter, which is an important element in its place; but for American railroad service, full power at starting is of greater importance than surplus power at speed.

The statement made in the paper on compound locomotives that no engine of this type yet built will handle American trains satisfactorily cannot be refuted by a mere contradiction. We invite the attention of engineers to the subject with the full assurance that they will find the averment to be substantially correct. Compound locomotives work satisfactorily on European railroads because the prevailing train loads are much lighter than ours, and consequently the

difficulty in starting is not so great. The information respecting the working of compound locomotives supplied by foreign engineering journals is very valuable, but it needs to be properly digested before it can be safely wielded as arguments in a discussion. There are a great many things about the working of a compound engine that are difficult to comprehend, and we commend our contemporaries to study the subject a little more before they pose again as authorities and captious critics.

By the above editorial article it would appear that Mr. Sinclair does not favor the design of the compound locomotive recently imported from England by the Pennsylvania railroad, and ably defends the position he has taken that for our heavier cars and trains and the more frequent stops made by American roads, the compound of the dimensions given is not a formidable rival to the ordinary American locomotive, and that while some saving of fuel might be effected in compounding, it would require considerable study and improvement before a compound locomotive could be built that would overcome the objectionable features so prominent in the Webb, and all other types. It seems that as yet there are less than 500 compound locomotives in use out of over 50,000, which haul the trains of the world, and this is as only one to 500, so they have not made very great headway in gaining the affection of the railroad people. *

Car Notes.

THE Texas & Pacific will in a few days place orders for building 500 box cars.

THE Rome, Watertown & Ogdensburg is asking for bids on 200 box and 100 coal cars.

THE New York, Lake Erie & Western is negotiating for the building of 200 box cars.

THE Maine Central is completing at its shops at Waterville a lot of 100 freight cars, mostly box.

At the United States Rolling Stock Co.'s Annapolis shops there has just been completed a number of new cars for the Florida Railway & Navigation Co.

THE new cars that are being built by the Pullman Co., for the Kings County Elevated Railroad are being equipped with the Martin Car Heating System.

THE Dover & Statesboro Railroad is negotiating for rolling stock and for thirty-five and forty pound steel rails. F. T. Lockhart, of Augusta, Ga., is President.

THE Murphy Car Door Co., with a capital of \$50,000, has been organized at East St. Louis, by P. H. Murphy, W. S. Wilson and others, to manufacture a freight car door fastener.

THE Laconia Car Company, of Laconia, N. H., is busy with orders for ten passenger cars for the Boston & Maine, ten box cars for the Cheshire road, and 100 freight cars for the Upper Coos R. R.

THERE was recently built at the works of the Marion Steam Shovel Co., Marion, Ohio, what is believed to be the strongest railroad wrecker so far built in this country. It is guaranteed to lift fifty tons.

THE St. Charles Car Co., of St. Charles, Mo., has received orders from the Union Pacific for twelve passenger, four baggage and four mail cars and fifteen cabooses. The company has also recently finished and delivered seventeen chair cars for the same road. The Missouri Pacific has just placed an order with the company for building 500 box cars.

As to Some Locomotive Tests.

West Chester (Pa.) Local News.

EDITOR NEWS:—Your advice, so kindly given in the *Local News* of the 15th, not to individually enter a contest against a "strong locomotive," I will reconsider the matter and gracefully back out.

Nevertheless, some locomotive tests soon to take place in Philadelphia, will be of interest to railroad men and the travelling community.

First. The recently imported English locomotive, Dreadnaught, known as the "Webb Compound Locomotive," is expected on the Philadelphia Division, P. R. R., this week. Over two hundred of this type are running successfully on English railways. Mr. F. W. Webb, Superintendent of the London and Northwestern railway, and inventor of this locomotive, has ninety in use on his line.

Its peculiarities are, according to rule and English law, no smoke and sparks are permitted. One hundred and eighty pounds steam pressure, high drivers, two steam cylinders actuate the rear drivers, one single cylinder, double the size of the first two, actuates the front drivers by second expansion and by a crank axle. This is a wonderful piece of work in steel. Instead of forging, a seven-inch steel axle is heated and bent into shape by hydraulic pressure, and of this Mr. Webb says: "Its life is limitless." He also says: "Among the advantages we get in a coupled engine with a crank axle is a better distribution and balancing of the reciprocating masses without having to use such enormous balance weights in the wheels, which, our experience shows, have a very bad effect in getting flat places on the tread of the tire, and, consequently, more hammer-blow effect on the rail." There is also a peculiar valve movement known as the Joy valve, largely in use in England and on the continent of Europe.

Second. The Strong locomotive; two of them are running now on the Lehigh Valley railway. The first one was built to show the action of the Strong valve, which is said to be a modification of the Joy valve; the second one was built to show the Strong valve in combination with the Strong corrugated pant leg boiler, using high pressure steam. The third one, combining the same principles as in the second, is the one recently in service on the Erie railway, which made such a long continuous run and is one of the most powerful locomotives ever built, standing in weight on her drivers one hundred and forty-two thousand pounds (142,000 lbs, or seventy-one tons).

Third. The Baldwin company are building ten of the more recently improved Wootton dirt burning locomotives for the Reading's Philadelphia and Atlantic City line, to be in service by June.

Fourth. The Shaw locomotive, Henry F. Shaw, which was in West Chester, is expected out of the Third and Berks streets shops of the Philadelphia and Reading railroad this week, where she has been undergoing extensive repairs and adjustments under direction of Master Mechanics Jackson Richards and John Probst. She is entered for the "world's tests" as the only steam counter-balanced locomotive, in accordance with the plans suggested by the joint action of the American Railway Master Mechanics' Association and the Franklin Institute, supplemented by the recent action of the Committee of Sciences and Arts of the last named Institute in January last.

As contradistinguished from the standard type of locomotive, each of these is the representative of one or more advanced ideas in the mechanics of the locomotive as applied in practice.

It is expected that Henry F. Shaw will be put in complete working order, under the direction of the gentlemen named, after which, for a short time, she will go into service on the Baltimore and Ohio line from Chestnut street station to Wilmington, Del. It is also expected the Strong, and perhaps the one Wootton type will run experimentally from the same station. The present

ultimate destination of the Henry F. Shaw is the Reading's Philadelphia and Atlantic City short line, "one of the finest alignments of railroad in this country." I expect to see this locomotive cover these fifty-four (54) miles in forty-five (45) minutes this summer. If eight consecutive miles at seventy-two (72) miles per hour, with a spurt of seventy-seven (77), as done with the Ohio Railway Commission from Urbana to Columbus, Ohio, is any criterion, she will do it.

William E. Lockwood.

Locomotives.

THE Brooks Locomotive Works, Dunkirk, N. Y., are building six engines for the Kansas City & Southern road.

THE Baldwin Locomotive Works have secured an order from the Bound Brook railroad for ten mogul locomotives.

THE Delaware & Hudson Canal Co. is among the roads that have lately adopted the United States metallic packing.

A Boston dispatch says that the Hinkley Locomotive Works were closed March 30th, on account of a lack of orders.

THE Rogers Locomotive Works, of Paterson, N. J., have delivered a 30-ton 14x24 locomotive to the East Louisiana road.

THE Rogers Locomotive Works, Paterson, N. J., are building a number of consolidation engines for the Louisville & Nashville road.

THE Pittsburg Locomotive Works recently completed several freight engines for the St. Louis, Vandalia & Terre Haute Railroad, and have a number of orders on hand.

THE Rhode Island Locomotive Works, Providence, recently delivered ten locomotives to the Savannah, Florida & Western; five to the Charleston & Savannah, and seven to the Brunswick & Western.

THE Baldwin Locomotive Works, Philadelphia, recently delivered three passenger engines to the Raleigh & Augusta Air Line. Late orders include ten passenger engines for the Philadelphia & Reading Railroad.

An order has been received at the Altoona shops of the Pennsylvania for fifteen class "A" anthracite locomotives. It is stated that another order will soon be given. The company are preparing to build a compound locomotive suited to the requirements of their service.

THE Canadian Pacific have lately built in their shops at Montreal some fast passenger ten-wheel locomotives designed by Mr. F. R. F. Brown, mechanical superintendent, that have some novel features. They have cylinders 20x22 inches, drivers 75 inches diameter, boiler pressure 180 pounds. The cabs of steel, with smooth finish to correspond with dome and sand box.

THE Schenectady Locomotive Works are running with a full force and turned out during the month of March twenty-four locomotives, as follows: Nineteen 18x26 in. eight-wheel, for the Union Pacific; three 18x24 in. passenger, and one 17x24 in. six-wheel switching, for the Cleveland, Columbus, Cincinnati & Indianapolis; one 9x16 in. inspection locomotive for the Delaware & Hudson Canal Co.

THE Portland Locomotive Company are driven with orders. Among their jobs are three locomotives weighing about forty-five tons each, two of which will be run on the P. & O. division of the Maine Central R. R.; a six-ton tilt-hammer for the Cape Ann Forge Works, this being the third built for that company; a seven-ton condenser, a seven and a half ton cylinder, and a two ton air pump for the new Portland and Boston steamer now being built at Bath; pulp grinders for the Otis Falls Pulp Co.; three rotary furnaces for S. D. Warren & Co., and car wheels and other small castings for railway and steamer construction without number.

Notes.

Within the boundaries of the city of Denver are a hundred and fifty artesian wells, large and small, that constantly spout water. There is water in abundance to quench the thirst of a million people, together with their domestic animals.

An experienced railroad timber dealer of this city says that you may talk about Oregon and Washington fir and Southern pine for such a purpose, but white pine is better than either of them. He alleges against fir that it checks badly under the influence of the hot sun and blasting winds of the prairie regions, while white pine stands the climate first rate. Yellow pine, he says, rots quickly when exposed to the weather. He should qualify this by saying that the sap or white wood of yellow pine rots from exposure, but that the heart or red wood stands the weather well. Decay in yellow pine can be obviated, too, by painting. And what about cypress for railroad work? Its friends claim that it is very enduring when exposed to dampness—that it will last for generations without decay. But it is claimed that there is another side to the cypress question; that it disintegrates when exposed to the vicissitudes of the northern climate—scales up, splinters and falls into dislocation. In respect to coast fir, it is alleged that when it is placed in bridge work, the vibration of passing trains shakes its grain apart, and thus impairs its strength. Thus the rival timbers have advocates and critics. Without doubt white pine timber is reliable for bridge work, and it will be used as long as it can be procured; but it is diminishing in average size and quality, and other woods will have to be substituted for it. It is a satisfaction to know that fir, yellow pine and cypress will be sufficient to fill the bill fairly well when white pine has been played to the finish.—*Northwestern Lumberman.*

The fifth annual report of the State Board of Assessors for the State of New Jersey opens with a reference to the revision of the tax laws of the State in 1888, and the added convenience in the work of the Board afforded by the change. The railroad and canal law has now been in operation for five years, and the Board congratulates the State on the fact that the main questions in dispute concerning the working of the law have been settled by the courts, and that it is as a whole, now working successfully. The Board refers to the increase of railroads in the United States, and quotes the *Railroad Gazette's* table of new mileage in 1888. "The value per mile of the railroads of New Jersey is greater than that of those of any other State." Nine new roads have been incorporated, and all are believed to be bona fide enterprises, for which there is a real need. The mileage of roads in the State is 1,977%. There are 564½ miles of second track, 139½ of third and fourth track and 965 miles of side track. There are 2,395 miles of track laid with steel rails. The mileage of canals and feeders is 173. The capital stock of the roads of the State is \$117,457,285 and the funded debt \$143,109,781, both together being \$132,070 per mile of road. The valuation of road, franchise and tangible property used for railroad and canal purposes is \$196,363,394, on which the tax is \$1,316,283, an increase of \$63,300 over the previous year. The gross earnings from freight and passenger traffic for the year ending January 1, 1888, amounted to \$34,472,532, an increase of \$2,431,115 over the previous year. Besides railroad and canal property the Board levies assessments on miscellaneous corporations, of which there are 1,457, and against which \$360,198 is assessed. Many of these corporations, have no substantial existence, however, and the amount of tax collected is not by any means commensurate with the assessments. Attention is called to the fact that the large express companies are partnerships, having no corporate existence, and that they therefore escape taxation.

Traffic.

The Georgia Central is reputed to be suffering from Too Much Purchasing Agent, a malady that did much harm to the Baltimore & Ohio and other roads in the near past.

Dr. Long, in the *Minneapolis Tribune*, says: "A soulless corporation hauled a carload of goods 500 miles for me for the sum of \$46. A smiling-faced individual, conceded to have a soul, thereafter hauled the goods two miles for \$18.

An Omaha dispatch says that Presidents Adams, of the Union Pacific, and Perkins, of the Burlington, have signed a contract for the construction of a Union depot here, to cost \$15,000,000. As part of the agreement all the Iowa lines now terminating in Council Bluffs will cross the Union Pacific bridge, and have terminal facilities in that city.

The Milwaukee, Lake Shore & Western made a better showing in net earnings last year than any of the neighboring roads. The operating expenses were reduced \$195,000 below what they were the previous year without reducing the condition of the property. A material part of the satisfactory condition of things was due to the able way in which Mr. John Hickey, Master Mechanic, managed the operating of the rolling stock.

The Philadelphia & Reading road has contracted for widening the tunnels on the main line at West Manayunk and Phoenixville. This improvement is made necessary to allow the clear passage of the new and large passenger coaches and freight cars, which are built the standard width and height, and the new anthracite-burning locomotives now in use on some parts of the Reading road. The road bed on this line has been generally improved, and the distance between its tracks on the principal divisions and nearly all the branches has been made from one to three feet greater.

Dealers in dressed beef who feel that they have been discriminated against by the Baltimore & Ohio railroad in freight charges from Chicago, will ask the Inter-State Commerce Committee to investigate the matter. It is charged that Vice-President Smith, before leaving Baltimore for his vacation, made a contract with the Armour, Swift and Hammond, of Chicago, to carry dressed beef for them at 45 cents per 100 to New York, 43 to Philadelphia and 40 to Baltimore for a period of five years. An officer of the Baltimore & Ohio, who was asked about the matter, said it was a fact that the contract had been made by Vice-President Smith, and that the rates mentioned were about 5 per cent. lower than previous to April 1, are now in effect.

The annual report of the Union Pacific shows an increase of gross earnings for the Union Pacific Company of 1.8 per cent., and for the whole system of 2.5 per cent. The increase in operating expenses and taxes was 12.5 per cent. for the company, and 8 per cent. for the system respectively, leaving a decrease in net traffic earnings of 11 per cent. for the company, and 7.3 per cent. for the system. The unfavorable result is attributed in the report largely to poor crops in Kansas and Nebraska. The amount of traffic, both freight and passenger was greater on the lines of the company as well on those of the system than in the preceding year, but rates were lower. On the whole system the receipts per passenger mile fell from 2.509 cents to 2.416 cents, and per ton mile from 1.422 cents to 1.281 cents. On the lines of the company there was also a reduction but somewhat less. The surplus fell off 3 per cent. in case of the company and 4.6 per cent. in case of the system. This seems to be entirely due to lower rates, except that the system had to meet increased deficits from the St. Joseph & Grand Island, the O. R. & N. and the Central Branch, to the amount of \$332,000 in 1888 against \$274,000 in 1887.

EDITED BY IDA A. HARPER.

All Correspondence pertaining to this Department should be directed to
 MRS. IDA A. HARPER,
 TERRE HAUTE, IND.

MARY L. BOOTH.

Among the examples of women who have made a financial success of their work, the name of Mary L. Booth is always prominent. Her death, a few months ago, brought out many interesting facts in regard to her literary career. For twenty years she has been the editor of *Harper's Bazar*, with a large salary, probably four thousand dollars per annum. Ambitious women, with some talent for writing, feel greatly encouraged when they consider the fame, honors and excellent financial rewards that have been bestowed upon Miss Booth, and they take up the pen with renewed energy, inspired by her illustrious example. In some respects it is a good thing for struggling toilers to behold one of their number who has reached the summit. We can never place our standard too high. And yet it fills one with sadness to think of the countless thousands who will perish by the wayside, and of the other thousands who must always remain at the bottom of the hill. It requires exceptional ability and unusual opportunity to attain a position so prominent and profitable. There are, perhaps, not half a dozen women in the United States who receive a salary of four thousand dollars a year. Fiction commands the highest price of any literary work. A number of our women-novelists are able to accumulate wealth, but the vast majority of feminine writers, barely earn a livelihood. The market is overstocked with ordinary ability, and, as in all cases where the supply exceeds the demand, the prices are very low.

Miss Booth's early life was one of great hardship and small remuneration. She commenced her literary career at the age of eighteen, in the face of every discouragement from family and friends who loved her too well to willingly permit the sacrifice. The women of to-day have little conception of the courage it required forty years ago to enter into competition with men in any industrial pursuit. For several years she lived in New York, making vests during the day and studying and writing at night. The work of the hands brought a small compensation, the labor of the brain brought none. Under these unfavorable circumstances she thoroughly mastered French and German

and up to the close of the war she had translated a large number of books into English, involving a great deal of work and producing but a trifling remuneration. During this time she wrote the *History of New York City*, a book of 900 pages, requiring twelve hours a day of hard labor for months, and yet she did not receive enough for it to pay her expenses. Afterwards she went to Washington and did a large amount of writing for Charles Sumner, Henry Wilson and Secretary Seward, receiving for compensation only her board at Willard's Hotel, her other expenses being borne by her father. This was twenty years ago, when it was regarded as an innovation for women to enter man's domain, and woman's work was considered to have very little value in dollars and cents. Finally, however, Miss Booth's fine talent, her energy, perseverance and large acquaintance, brought her an offer from the Harper Bros. to edit the *Bazar* at a moderate salary. She accepted, and proved so capable that her salary was steadily increased and her distinguished services received a full recognition. She died during the past winter at the age of fifty-eight.

In many of the obituaries published by the daily press, prominence is given to the statement that "she never allowed her name to be associated with any so-called 'woman's movement,' and was opposed to the idea of the ballot for women." If this were the case, Miss Booth would form almost the only exception to the rule that all women in business recognize the necessity of the ballot; but it is not true. She was associated with the "woman's right movement" from the beginning, acting as Secretary as long as she had the time, and afterward supporting it with her pen. A short period before her death she wrote a letter and furnished it for publication, in which she says:

"I am in favor of woman suffrage and would vote if the right were extended to me, for many reasons, based on the advantage to be derived therefrom by both sexes. One of my weightiest reasons for it is that I think it would be the surest means of securing for women the simple justice of equal pay for equal work. Facts show that voters alone have their interests properly guarded. Moreover, I believe that the exercise of suffrage would train women to higher thoughts and aims, and introduce a refining influence into politics, so that women would be made stronger and men finer thereby."

Miss Booth never married. Absorbed in her work, the years slipped by. Her profession took the place of husband and children, but to claim that it filled this place is to say what never has been, never will be, true. There is a demand of woman's heart, a cry from her soul, that can only be answered by the affection and sympathy of a husband, the love and devotion of children. This longing, which will wake an echo in many a lonely woman's life, finds touching expression in a birthday poem sent to a life-

long friend, a lady physician, of New York, which closes with this pathetic stanza:

Oh, it is bitter to be alone
In the midst of the loved and loving,
Longing for one you can call your own,
Yet doomed to a constant roving,
Gleaming a kindly smile from all,
Yet no heartfelt love from any;
Oh, it is sad when the heart's wild call
Is met by the voice of the many!

THE last Legislature in Vermont passed a very stringent liquor law, providing for the fine and imprisonment of saloon keepers, which, like most laws of this kind, was not enforced. Public sentiment demanded an example, and so a one-armed woman was arrested, fined \$200 and sent up for one year. She has since been conditionally pardoned by the Governor. How beautifully it all works! Interfere with a male saloon keeper and you imperil a certain number of votes and injure the chances of the "party" at the next election. If the law must have a victim, strike a woman, she has no political influence. In Indiana the statute does not permit a woman to keep a saloon. The profits of the liquor traffic must go to the men, the poverty and suffering may fall to the women. But shall not a woman be held amenable to the laws? No. So long as she is forbidden a voice in the making of the laws or in the selection of the law makers, she is entirely justified in refusing to obey them.

"A FIREMAN'S Sister and an Engineer's Daughter," from Bucyrus, O., writes a very caustic letter in regard to the Brotherhood of Locomotive Engineers. We cannot use it, because it does not seem advisable for the Woman's Department to enter into the controversy that is in progress between the two Brotherhoods. The men are fully capable of settling their own disputes.

TRENTON, MO., May 6, 1889.

To the Editor of Woman's Department:

My husband is a member of Success Lodge, No. 33, and what a grand, noble Order it is. The boys ought to be proud of their Order in Trenton. They have about sixty good, honest, true and upright men.

The firemen have no Auxillary here. I do wish they had, for I would love to be a leading member in that society, for I think they, the boys, are worthy of all the aid and assistance they could receive from the ladies. I feel that we could be a help to them in many ways. There is a Ladies Auxillary to the Engineers' Order, and they do a good work for that lodge.

I am a constant reader of the *Firemen's Magazine*. I never see anything from Success Lodge, so I thought I would write a few words in their praise.

Hoping Success Lodge may have a bright and happy pathway through life, I remain as ever, theirs,
A Fireman's Wife.

MISCELLANEOUS.

Stern parent (to a young applicant for his daughter's hand)—Young man can you support a family? Young man (meekly)—I only wanted Sarah.

Grandma—Johnny, I have discovered that you have taken more maple sugar than I gave you. Johnny—Yes, grandma; I've been making believe there was another little boy spending the day with me.

Bankrupt's wife—Well, at any rate, the Thompson failure was worse than ours. Sympathizing friend—Why, I thought it was just the other way. Bankrupt's wife—No, indeed; Edward only failed for 10 cents on the dollar, while Mr. Thompson failed for 50!

Bishop Gullum—Miss Autumn, I hear you are an earnest student of the Bible. What, in your opinion is the most interesting line of Holy Writ? Miss Autumn (promptly)—Behold, the bridegroom cometh!—*Life*.

Tender hearted young lady—Oh, you cruel, heartless little wretch! to rob those poor birds of their eggs. Wicked little boy—Ho! That's the old mother bird that you've got on your bonnet. Guess she won't care.—*Forest and Stream*.

A little fellow went to a blacksmith's to see his father's horse shod. The blacksmith began to pare the horse's hoof, and thinking this was wrong, the little boy said, earnestly, "My pa don't want his horse made smaller."

"O, papa," said a vivacious girl (within hearing of a Pittsburg *Chronicle* loiterer) "we want a good name for our young ladies' club. Can you think of one at once significant and appropriate?"

"Well, I don't know," replied the old man; "how would 'Giddy'uns' Band 'do'?"

A bustle was put to good use the other day. The horse car was crowded, and a schoolboy, who was anxious about his geography lesson, having no other chance to open his book, laid it carefully on the shelf formed by the spreading draperies of the woman who clung to the strap in front of him. She was none the wiser and he learned his maps.—*New York letter in Savannah News*.

"Mr. Sampson asked me to be his wife, last night, papa." "And what did you say?" "I told him he must give me a little time, and he said I could have the usual thirty days or five percent. off for cash, and then he stopped and apologized. What am I to think of him, papa?" "Think of him," shouted the old man. "That young man is full of business, and you can't say 'yes' too quick!"

A Louisville lady was explaining to some children a few of the mysteries of astronomy, telling them how far the stars are away from us and how large they are. Some of them, she said, probably had people living upon them. "I wish I had to live upon a star," said a small boy. "Why, what do you want to live there for?" "Well," said he "I could sit out on one of the points of the star and tilt."—*Louisville (Ky.) Post*.

DOMESTIC.

The Woman's Hospital, of Philadelphia, Pa., has an incubator in successful use, for raising babies of premature birth.

William D. Howells, the novelist, says it is easier for a man to seek the forgiveness of God than it is to seek the forgiveness of his wife.

He-To-morrow will be the fifteenth anniversary of our marriage.

She—Yes, dear, and I must have \$10, you know. Our wedding ring has never yet been left in pawn over our anniversary.—*Jewelers' Weekly*.

A little girl who had mastered her catechism confessed herself disappointed "Because," she said, "though I obey the fifth commandment and honor my papa and mamma, yet my days are not a bit longer in the land, because I am put to bed at seven o'clock."—*G. M. A.*

If homes are to be happy they must be comfortable. To be comfortable they must have order, cleanliness, quiet and sunshine. Good homes will make good men and women, as surely as rum and deceit make paupers and murderers. No one thing is so important as quiet. Insist at certain times there shall be repose.

The New York *World* states that Mrs. Mary A. Logan is contemplating founding a post-graduate course in domestic accomplishments for young women. It is to be conducted in connection with a Home which will doubtless be established in Chicago, where the young ladies may learn practically everything that pertains to the management of a household.

Ella Wheeler Wilcox says: "If I were asked to define the meaning of a successful man, I should say a man who has made a happy home for his wife and children. No matter what he has done in the way of achieving wealth or honor, if he has done that he is a grand success. If he has not done that, and it is his own fault, though he is the highest in the land, he is a most pitiable failure."

Do not marry until you are full-grown, fully-equipped women. And then do not marry unless you can marry for love. But beware, in the first place, of loving any one who is unworthy of you. If you feel that you are worth having, you can afford to be particular as to your choice; and if you, and others like you, set up a certain high standard for men, they would be obliged, in very self-defence, to bring themselves up to it.

"Ah, wasteful woman! she who may
On her sweet self set her own price,
Knowing he cannot choose but pay:
How has she cheapened Paradise!
How given for naught her priceless gem;
How spoiled the bread and spilled the wine
That, spent with due respective thrift
Had made brutes men, and men divine!"

—Selected.

TEMPERANCE.

New Hampshire W. C. T. U. is about to build a home for friendless women.

Rev. Chas. Garrett points out that £10,000 is spent every day in Liverpool for strong drink.

Place two drops of the oil of tobacco upon the tongue of a half grown kitten. After two minutes of extreme agony it is dead.—*Mrs. R. R. Johnston*.

Of all our industrial classes one man in twenty is unfitted by the liquor traffic for steady and continuous work; unfitted, indeed, for any work at all.—*Neal Dow*.

Were the disuse of alcoholic drinks, except under medical treatment, to become general, in six months we should be rid of prostitution by at least one-half.—*Sanger's History of Prostitution*, 1858.

A cigarette-smoking boy will not make a strong man. He will have impaired digestion, small and poor muscles, irritable temper, and a lack of capacity for sustained effort of any kind.—*Dr. Bartholow*.

There is not a group or assembly of Anarchists or extreme Socialists in America that does not soak its silly and dangerous resolutions in beer. Nor is there a single revolutionary or communistic assembly of total abstainers. The connection between prostitution and drunkenness is intimate. There is not a brothel conducted on total abstinence principles in the world.—*Chicago Inter Ocean*.

The California *Voice* says that if the laborers of the nation would expel the grog and tobacco shop and then be half as liberal in making investments in railroads, banks, tenement houses, business blocks, steamships, factories, flour mills etc., they could in ten years have a labor union invested capital of \$350 millions, and an income of \$17 millions a year, allowing only five per cent. a year on the investment.

The following rhyme that was sent to the *Union Signal* illustrates the farmer's practical tendency, even when versifying. It also exemplifies the economy of prohibition:

"Where sell our corn, if stilling stops?
For corn is chief of all our crops."

Answer:

"We'll feed it, friend, and then we'll sell
More milk and meat, and have less—hell."

The Woodstock Brewing and Bottling Company, which has just opened a branch in Chicago, has received a contract from the county Board for supplying the county institutions with beer, at the expense, of course, of county tax payers. Says a correspondent of the *Lever*: "Is this beer used in the hospital? If so, it is against the most advanced ideas of the medical profession. Is it used in the treatment of the insane? It is recognized to day as the most potent factor in producing insanity. Or does the promoting of a Christian sentiment among the criminals in our jails demand beer?"

FRANCHISE.

Mr. Henry George thinks that England is likely to have complete woman suffrage within two or three years.

Detroit has amended its charter allowing women to vote for school officers, and a bill was passed prohibiting Boards of Registration to meet in places where liquor is sold.

A great number of women voted in Kansas. In some large towns they held the balance of power. The press wired "as vote the ladies so goes the State," and still some say women will not vote if enfranchised.

It is said that woman municipal suffrage, in Kansas, under the Prohibitory law, has resulted in reducing the numbers of able-bodied men in the State Penitentiary, so that contracts for work cannot be filled, and that more than half the County jails in the State have no prisoners.

"You don't want to vote!"

"No women have no talent that way."

"But they ought to get talent."

"They're not fit to get talent."

"Then, they ought to get fit."

"Fudge, John, they are not fit to get fit."

A quick-witted Iowa woman, noting the invention of a ballot-box that cannot be stuffed, exclaimed: "Now, if some one will invent a voter that cannot be stuffed with beer, brag or bribery, we shall have made a long stride toward better government!" An exaggeration containing altogether too much of truth for complacency.

Iceland.—A resolution has been passed by an assembly of delegates, asking the Althing to establish as much as possible the equality of women who are in an independent position, eligible to the communal or parish councils; carefully considering how a married woman's rights over her property can be better secured than at present over her husband, and to facilitate as much as possible the admission of women to education in every direction.

This is the Primrose League, which, if any candidate for election honors underrates, will most likely bring him to grief. I have never seen so powerful a society in any country working openly and attracting all classes of the community. It now numbers over three-quarters of a million, and is managed almost entirely by the fair sex. It was founded by Lord Randolph Churchill and Sir Drummond Wolff and has turned the scale of many an election since then.

Miss Mary F. Eastman, at one of the recent hearings on Woman Suffrage before the Massachusetts Legislature, told of a man in Montreal, who was vaccinated during a small-pox epidemic, and was indignant, because he could not get a certificate that his wife and children had been vaccinated also. He thought his own vaccination ought to be sufficient for the family; but in this case he evidently could not "represent" them.

EDUCATION.

A few years ago there were only five schools for girls in Yokohama and Tokio. There are now more than thirty.

Of the fifteen students sent by the government of Siam to receive professional training in England, four are young women.

In Greece, an Industrial School for Girls has been opened at Athens. Four hundred girls are employed there, with the happiest results.

Rev. Ida. C. Hultin, a graduate of Michigan University, has charge of a Unitarian Church at Des Moines, Ia., and preaches twice every Sunday. Her congregation has more than doubled in two years.

Mrs. M. S. Cummins, principal of the High School, Helena, Montana Territory, has just been elected president of the Territorial Educational Association of Montana, at its recent session in Butte City.

The Boston Educational and Industrial Union is doing some excellent work by its Lecture and Class Committee, and special attention is called to the industrial classes where sewing, millinery and dress-making are taught.

Fifteen young Hindoo ladies have been admitted to the new female class of the Campbell Medical Schools at Calcutta, and are studying medicine. Many of them are Brahmins. Ten have obtained scholarships, and the others are admitted as free students.

Princess Christian, who has always taken a deep interest in the progress of her own sex, is about to inaugurate a school of dress-making and millinery. She intends that the school should be primarily for the benefit of gentlewomen who have to earn their own living.

The President of Michigan University takes occasion to say in his last annual report that "a larger portion of women than of men are taking by choice the full classical course." He assigns as a reason for this, that there is a demand for woman's services in teaching Greek in preparatory schools.

A friend of the School for Young Women in Columbus, Miss., says that the idea on which the school is founded is that "Women, being physically inferior to men, should be more carefully educated in order that they may make the most of such opportunities as are offered them." This school has more than 200 boarders, and they are taught, aside from the regular course of study various kinds of house-work, telegraphy, type-writing, type-setting, stenography, art decoration, wood-carving, dress-making, as they may elect, and all are carried to a proficiency to enable self-support. It is claimed by the supporters of the school that the young women, when they have finished the course, are as well fitted as science can make them for earning a living unaided, or for making a home happy by a proper performance of those domestic duties which fall to the part of wife and mother.

INDUSTRIES.

Miss Alida M. Mehan is Supervisor of the schools of Thomaston, Maine.

Women do the work of ushering people to their places in most of the theaters in Paris.

Mrs. Clara Foltz has been chosen President of the San Felipe (Cal.) Water Company.

There are about three thousand women in the United States who are architects, chemists and assayers.

A department in domestic economy is in operation by the Young Woman's Christian Association of Boston.

Two girls under the age of nineteen are sole proprietors of a newspaper published in New Orleans and devoted to the interests of women.

A recent patent office pamphlet is a glowing tribute to American womanhood. Nearly 3,500 patents have been granted to women.

Dr. Mary McCrillis has been chosen Superintendent of the National Temperance Hospital, and Dr. Bessie Cushman Resident Physician.

Col. T. W. Higginson says that women have taken the places of men with stringed instruments for orchestral performances and church services.

Chicago has ten police matrons on duty, alternating day and night. Washington, D. C., has four, appointed by Congress, supported by an appropriation.

Two hundred girls are now being educated in the medical schools of India, and Madras has already supplied six fully qualified female doctors for the northern part of the country.

Mme. Magnus, a graduate of the Paris School of Medicine, was the principal operator upon her father, General Salomon, ex-President of the Haytian Republic, in a delicate surgical case.

The *Woman's Tribune* says that a woman seventy years old has patented a sewing machine needle that threads itself, by means of a slot on the side of the eye through which the thread slips.

Miss Mary McPherson, of New Glasgow, N. S., was the other day appointed as stenographer to the Provincial Secretary. She is said to be the first woman ever appointed to a Government position in Canada or any of its provinces.

Miss Rachel A. Hardgrove, one of the three colored teachers in the Chicago public schools, is said to be the best drawing teacher in the city, and of the twenty female teachers in the Froebel building she is considered the best mathematician.

There are more than 2,700,000 women in Belgium engaged in industrial pursuits, mostly very poorly paid. But when one woman asks to be a lawyer—a profession in which ability commands honor and profit—her application is refused by the court, and she is told that a woman's sphere is to marry, not to labor for her own support.

For Woman's Department:

LOOK AHEAD.

Should misfortune overtake thee,
And thy friends upon thee frown,
Look ahead, be not discouraged,
Be courageous, live it down.

Should base scandal so pernicious,
Aim at thee; its poisonous dart—
On thy name to bring dishonor—
Have no fear, 'twill miss its mark.

Should to-day be dark and cloudy,
And the sunlight hid from view—
Bright the sun may shine to-morrow,
And the sky be cloudless blue.

Learn to gather up the sunbeams,
Casting not one ray aside,
Nobly battle with life's troubles,
Fearlessly whate'er betide.

Tho' dark shadows fall around us,
We each duty here should do—
And if thorns bedeck our pathway,
We shall find the roses, too.

Find the roses and the sunshine—
Find the sorrows and the cares,
Intermingled with each other,
As in wheat there grow the tares.
Mrs. Nellie Bloom.

WEST OAKLAND, CAL.

WOMAN'S WORK.

[We publish herewith the first half of an essay written by Miss Frances Gillam Holden. It was originally published in the *Town and Country Journal*, the largest weekly newspaper in Australia. This essay won the silver medal at the Exhibition of Woman's Industries at Sydney, New South Wales. It was sent to Mrs. Eugenie Selby by a friend of her husband's and through her courtesy we are enabled to present it to our readers. It is a very fine production and should be carefully and conscientiously studied by the thousands of our regular readers and then passed on to other women.—Ed.]

The nobler born the maiden, the more bound
My father to be sweet and serviceable.

In one of the works of that great moralist and noble writer, George Eliot, there is a graphic expression of opinion which touches so directly, and diagnoses with such happy skill the weak point in woman's work everywhere—a weak point which is working such lamentable evil all through social and domestic life—that the words justify emphatic insistence, and need to be deeply pondered in these days of higher education and enlarged spheres of endeavor. For there is danger that women, in escaping the rock Scylla of undeveloped minds, dormant talents, and monotonous lives, should be fatally lost in the whirlpool of Charybdis, in the scorn and contempt of the simple duties of domestic life, "the common round, the daily task." Both errors equally react for evil upon the happiness of home, individual, and national life; while this happiness is really the one legitimate ultimate object for which all higher education and broader culture are to be desired and secured. There is

danger of forgetting the invisible but essential foundation in rearing the elegant and admired superstructure. To avoid this fatal error, let us, then, read and mark these words of one of the most thoughtful and gifted minds of any age.

George Elliot wrote: "What I should like to be sure of as a result of higher education for women is their recognition of the great amount of social unproductive labor which needs to be done by women, and which is now either not done at all or done wretchedly. No good can come to women more than to any class of male mortals while each aims at doing the highest kinds of work, which ought rather to be held in sanctity, as what only the few can do well. I believe, and I want it to be well shown, that a more thorough education will tend to do away with the odious vulgarity of our notions about functions and employment, and to propagate the true gospel that the deepest disgrace is to insist on doing work for which we are unfit—to do work of any sort badly." Could these pregnant words everywhere penetrate and permeate our daily life, the result would be a great and beneficent reformation, not second in its practical effects upon the elevation of the world, to that of the sixteenth century.

In using the current phraseology, "highest kinds of work," it is very certain that George Elliot implies no slur upon the lowly duties of life. For insistently did she hold and teach, that all well done duty is essentially honorable, that it is not the nature of the work performed, but the spirit of its performance, which gauges the measure of its dignity. She would have been the last to disparage that "social unproductive labor which needs to be done by women," and which she counsels them that it is their truest wisdom to recognize and accept. If there is one lesson more than another pervading her life-teaching it is, that all nobility, heroism, and pathos may lie enwrapped in the neutral-tinted folds of common everyday life, and in the hearts and paths of simple working men and simple working women. Who does not feel that the manhood of Adam Bede ennobled his humble workshop, and that Dinah's lofty motives irradiated her lowly life as with a heavenly halo.

Yes; old George Herbert's lines are literally and eternally true; would that they were engraven on the mind and heart of every Australian girl.

A servant with this clause makes drudgery divine
Who sweeps a room as for Thy laws, makes that
and the action fine.

That is the lesson we need to learn. Loyally to recognize, and cheerfully to accept, the common prosaic offices of domestic life, and to glorify them by the devotion, intelligence, and thoroughness with which they are wrought out; to string the scattered duties of the days upon a golden cord of high purpose, and in the end to find a rich reward attained in a more vigorous physical and mental being, and better balanced emotional life. In short, an increased range of health and happiness; the richest reward life has to bestow upon any mortal from peasant to princess.

Mr. Walter Besant has lately been eloquently pleading in the cause of women—as he believes—pleading that an endowment scheme may be initiated on their behalf, to save them from the necessity for work, which he avers they "hate." In parentheses, let me say here, that, far from hating work, I have found that women, (predicating legitimate physical, moral, and spiritual conditions), take just the same honest pride and pleasure in downright work as many men do. Mr. Besant is no true friend to woman in formulating this idea. Provide funds, indeed—it is a piteous necessity—for those women, who, having done their part in the world's work as they were able, have not in the eventide of life, when worn, weary, and often broken in health, the wherewithal to secure the necessities and decencies of life. But teach every young woman who is born into this world, with sound limbs and accountable brain, that she is bound to use both to useful purpose for the world's and her own welfare; that she is bound to work under penalties of disease and suffering of body, mind, and nerves, in comparison with which even painful toil were as a Paradise. The human frame is made for work; and without work it can neither thrive nor prosper. Work is the very law of the universe; and women have no exemption. Why should they? Why should they be denied the glow and thrill over accomplished difficulties, the rest which is only sweet after toil?

Teach them rather that work, *especially active physical work such as domestic services afford*, is the saving salt of life, of sound wholesome being; that it is a blessing, a precious privilege to be used with heartfelt thankfulness, and held with jealous care. What does the old wisdom of the world say in its proverbs: "It is better to wear out than to rust out." "To labor is to pray." "The worst road to death is the road by ennui."

First, and foremost, then, in these days of aspiring womanhood, and varied spheres of usefulness opening and extending on every side (and well occupied, I am proud to say), I should have every woman remember that no sphere is more important than home; no duties more honorable than domestic duties; than only as her other labors work for the ultimate peace, purity, and broad elevation of home life, are they truly useful, or is she doing a truly noble work in them. And here it may be said that the writer is no opponent of, or lukewarm advocate of woman's higher education, but one sympathizing ardently with every effort women have made, and are making, to burst the cruel bonds of prejudice and jealousy wherewith they have been centuries bound, to the infinite loss of humanity. But they must never forget that the higher education can only be solidly based upon the integrity of domestic life in its lowest duties. It is like the tree of the poet, which only "So high to heaven uplifts its leafy crest, as to the center pierce its deep-fixed roots." Unless the higher culture and wider avocations of the few react to induce a deeper reverence in the many for the simple woman's work of home and household, it will be a delusion and a mockery. But I believe that it will so react

It is not the cultivated and thoughtful mind which holds simple service in contempt. Witness Charlotte Bronte, who peeled the potatoes with the same nice conscience she put into her literary work. Witness such women as Mrs. Somerville, and Catherine Herschell, and George Elliot. It is the note of an uncultured mind to despise any necessary service, and to accentuate all that is implied by the wretched word "menial."

Yes; all education is to be encouraged. Women are wanted as doctors, for sundry good and solid reasons which only ignorance or prejudice can fail to appreciate, but which can not now be dwelt upon. Hospital nurses—who can fail to admire their quiet bravery; serenely facing the loathsome horrors of the smallpox ward, or the perils and hardships of a Zulu campaign. But no higher or more holy is the mission or life of either women doctors or hospital nurses than is hers—the quiet, unnoted wife, mother, sister, who untiring, year in, year out, plods through her uneventful, unexciting days; making beds, cooking meals, mending little garments, washing little hands and faces, fulfilling a thousand trivial wants with often scant appreciation, and no thought of praise; with an unconscious heroism and unselfish abnegation which look for no reward save in the well-being of those loved and cared for.

Ah, there are many such simple heroic souls doing life's common work on the dusty highroads of toil, only recognized by the angels, and only appreciated when the sunshine no longer falls on their worn faces, but lights the grass growing greenly on their unrecorded graves! Talk of soldiers leading forlorn hopes! Why, many a woman leads a forlorn hope against poverty, ingratitude, injustice, unkindness, ill-health, every day of the years of her life, with a sword piercing her heart, and never flinches till the death angel quiets the long anguish of a crushed life, and buried hopes. * * *

As home is, and must always be, the sphere in which the great majority of women must pass through their earthly probation, it follows that to teach how to fulfill its duties well should be the primal aim in the training of girlhood. Whatever other functions she may legitimately aspire to, those of the domestic hearth are—by the instinct and consensus of the world—hers, and can never be abrogated.

This being the case, the first step toward their right, instead of this present wretchedly perfunctory performance, is a matter of great moment. And this first step seems to lie in realizing their essential dignity and worth in relation (as has been pointed out) to the high issues depending upon them. To grasp this idea firmly would be an immense help to both teachers and girls, in facing the large amount of "social unproductive labor" of which George Elliot speaks. Thus it becomes another important consideration, how best to inculcate and press home this belief in the dignity of common work, and to efface the word "menial" from women's consciousness altogether.

For Woman's Department:

WOMAN'S WORK.

With many a turn my steps I take,
In many a crook and crevice,
And many a biscuit I must bake
For Maud, and me, and Lewis.
I sweep, I dust, I cook, I rise
Up in the morning early,
I wash the breakfast dishes, and
I churn, and dress the baby.
I make the dust and dry leaves fly
Against my new broom fairly,
I chatter, chatter as I go,
Because I rest so rarely.
For men may come, and men may go,
But I go on forever, ever,
I go on forever.

I move about, and in and out,
While there the chickens feeding,
Now here and there at a hawk to shout,
But little they are heeding.
I walk, I run, I skip, I hop,
From one thing to another;
I stop to dress a bruise or cut,
For the children run to mother,
Then to the garden I must go,
To see what work is needed,
For plants must be set out, you know,
And then they must be weeded.
For men can't stop, for they must go,
But we work on forever, ever,
We work on forever.

I scrape the tray "and put to rights"
The dining room and kitchen,
And then go in my room to sit
And try to do some stitching.
I wonder if there is on earth,
No respite from our labors,
No time to go and gossip some
With pleasant, friendly neighbors;
Before I end this piece of work
And try to think a little,
I throw it down and run and make
A fire, and then put on the kettle,
For men must eat, and go, you know,
But women can go—never,
Yes, men will come, and men will go,
But we work on forever, ever,
We work on forever.

—E. E. Witt.

[Daughter of A. P. Witt, Receiver of Jackson Lodge, No. 274, Clifton Forge, Va.]

LOUISVILLE, KY., May 18, 1889.

To Woman's Department:

Having seen a great many articles in your interesting journal, in reference to Lodges, I thought, perhaps, you would like to hear something from Plain City Lodge, No. 238. The Lodge is in a more prosperous condition than ever before, and the members declare that in another year she will be "one of the first." The members of No. 238 are all manly, young fellows, and hold their heads up. I think a fireman's life a very trying one, and being a fireman's sister, have a tender feeling for all the "knights of the scoop."

Of all the Lodges I've heard of of late, There is none to compare with 238. Her men are all proud of her, And say wait and see, What 238 is going to be: She will prosper, although she came in rather late, She is on the right track; look out for 238!

Wishing the *Magazine* success, also 238, I will close.

I am most respectfully,

A Fireman's Sister.

YET NO TIME TO PRAY.

Come Oh! Come!
 Saviour! who died for you and me,
 Yet no time to pray;
 His love claims all thy power,
 Yet no time to pray;
 Oh! where is thy refuge, sinner
 'Mid thorns or flowers?
 Oh! sinner, I bid you make haste,
 To pray, and save thy soul.

Don't say! earth has no resting place,
 And no time to pray.
 The Lord supports the fainting mind,
 Yet no time to pray;
 His truth forever stands secure,
 He helps the stranger in distress,
 And none shall find his promise vain,
 Yet for all, no time to pray.

Well! the delightful day will come,
 Oh! sinner! find time to pray,
 When our dear Lord will call us home,
 Then! we'll wish we'd prayed;
 Oh! could I speak the matchless worth,
 To those who need his help and love
 Oh! come to Jesus now, don't wait!
 He'll receive thee, and hear thy prayer.

If human kindness meet return
 Oh! that's the time to pray;
 If tender thoughts within us burn,
 That's the time to pray;
 God calls us back, day by day,
 And helps each poor trembler to repeat
 Don't put off the time to pray
 For you the Saviour died, and for me.

God grant that all shall come
 To prayer—Oh! sinner pray;
 To be called to the eternal home
 We must pray;
 Oh! the passionate tears that we weep
 For our friends who are far from God;
 They do not know the peace we do
 Who live for Christ our Lord.

OAKLAND, PA.

M. C. Foley.

A Brotherhood Engineer's wife.

BROCKVILLE, ONT., April 20, 1889.

To the Editor of Woman's Department:

I have been reading some of the letters sent to you by firemen's wives and sisters, and found them very interesting indeed. In fact, there is very little, if any, uninteresting matter in your *Magazine*. I am not a fireman's sister nor a fireman's wife, but I have several friends who hold permanent places in that great and noble system—the railroad. Among other letters I read were some very good ones about towns or places of interest. But they all seem to be what we call "Yankee" places. I know you Yankees are very conceited people about your country, but I don't think you are a bit more so than we Canadians. And I would now like to tell you of a Canadian town in which I live. The name of the town is Brookville, and is often called the "City of the Thousand Islands." It is situated on the St. Lawrence river, about sixty miles down from Lake Ontario. When first discovered, it was the haunt of the roaming savage and the home of innumerable wild beasts, birds and serpents. Now and then, rude huts could be seen, miles apart, in the midst of dense forests. The river flowed past it, while now and then a rude canoe dashed in and out among the thousands of uninhabited islands, which are scattered for miles

along the river. Now, where those dense forests were, large, expensive houses, and other buildings of every description, have been built. Brookville is now a town of nearly ten thousand inhabitants, industrious, intelligent and educated people. Large stores of every branch of business are found in large numbers. Beautiful churches of every denomination have been built. Two hospitals, a court house and jail, an extensive post-office and custom-house buildings, a college, high schools, public schools, a library, and many other places to promote the welfare of the town. A very few of the red race are left, and these live in contentment, unmolested by the whites. On the noble and mighty St. Lawrence, instead of the Indian's canoe, are large steamboats, carrying tons and tons of cargo, pleasure yachts by hundreds and row-boats by thousands deck the waters. The islands, that were once the home of only beast and bird, are now objects of beauty. Lovely cottages have been built on them, decked with flowers, flags and colored lights, and are made pleasant resorts for the tired and burdened population of our busy town. We think, in every respect, our town one of growth, and interest, and beauty. But the steamboat is not the only means of commerce. The railroad takes a very prominent part. Trains come rushing in and out almost every hour of the day, and the hardy fireman walks to his home and holds his head just as high as if his hands and face did not make him resemble the dusky race of Africa.

And now, I think I have almost tired your patience, and I hope this will escape that horrid waste-basket, of which every writer is so much afraid, and that it will appear before long in one of your *Magazines* for friends in the sunny South and colder North to read. *Milly.*

[We are in favor of annexing our Canadian sister to the Woman's Department.—
 Ed.]

To the Editor of Woman's Department:

I want to have a chat with you and all the members of the Department. I am sorry that you felt called upon to ask the members to all rise up against "Shandy Maguire," though I did not admire the verses you referred too much more than some that have been addressed to him in the Department. I am sure we have no right to write "soft nonsense" and then complain if we are paid in kind. I propose that the Department lead off by apologizing to "Shandy" for the sentimental rhyming of some of its members, and then all start anew in our efforts at being, and doing, and saying all the pure, helpful, hopeful things we can, to cheer each other.

Anyone who knows "Shandy" personally, can not fail to understand his answers to the ladies who write to him of "love," as sarcastic rebukes for the nonsense addressed to him.

We need not all put on a funeral countenance every time we get together in this cozy, chatty corner of ours, but let us remember that *wantonness is not wit*. This reminds me of something I

read somewhere sometime, that impressed me: "A woman will be treated exactly as she chooses to be." I think this is true. Now, that we are living in the "Woman's era," where we are free to do, and be, and know, all that we are capable of acquiring, let us strive that our thoughts, the well-spring of our actions, be so clear that only the most wholesome influences shall emanate from us.

I wonder how many of the girls who write for the *Magazine*, earn their own living and are proud of the fact. I will count myself as one. I am proud to belong to the producers of the comforts and necessities of life. The wife who cares for her household, is, of course, one of those whose hands pay their way. Let us get out of this old fashioned dread of being "working-girls," and rejoice in the "dignity of labor."

I am sorry I can't give an opinion on the question we were asked to discuss: "Is Marriage a Failure?" Never having tried it, I can't say from experience, and am too busy to think much about it. There might be fewer marriages which are failures if every girl would learn a trade thoroughly, think less of romance and more of reality, cheerfully support themselves and not accept the first unsuitable person who presents himself because she must have somebody and is afraid she can't get anyone else. There, I'll subside.

Christin Nell.

[A good letter.—Ed.]

GREEN BAY, May 18, 1889.

To the Editor of *Woman's Department*:

I am going to write a letter to the *Magazine*, but I do not know what to write about, as I am not very well versed in any of the popular subjects.

Never having tried marriage, I can not say whether it is a failure or not, but I think it depends as much, if not more, on the wife than on the husband to making a success of it. Women are too apt to let trifles annoy them, and men are often not patient enough with the women. If both members of the firm of man and wife would only take Mr. Meagle's advice to Tattycoram, and "count five and twenty," when tempted to say some disagreeable thing, I feel pretty sure there would be less failures.

The members of "181" are contemplating having a moonlight excursion in June. If they do, it is sure to be an enjoyable affair, as they never do anything half way, and spare no expense to make a success of everything they undertake.

Poor, old "Shandy!" What a curtain-lecture you must have got after Masquerade; but perhaps it will teach you not to flirt another time, unless you are sure your wife is really out of the way. By the way, "Shandy," when do you expect to emigrate to Utah?

I would like to know why the *Woman's Department* can not have lectures just as well as the *Lords of Creation* do in their Department? I, for one, move that we have those of "Mrs. Harper," "Mrs. Jones," "Nellie Bloom," and other regular contributors. Who will second the motion?

Well, "I am going to leave you now," but if you receive me kindly, I may come again. Yours (what is feminine for fraternally?)

Tabitha Tangleweed.

COLTON, UTAH, May 17, 1889.

To the Editor of *Woman's Department*:

I have started several times to write, but have not finished a single letter, there was always something in them at fault. This will be far from perfect, but hope you will excuse that. I have not been a reader of the *Magazine* long, but now I find them interesting.

My husband is a fireman on the D. & R. G. Railroad, and belongs to Lodge No. 178, but has not been able to attend for some time, as we do not live where lodge is held. It is very dreary where we do live, but as I have my home and my husband, there is little that I desire.

I quite agree with "Alice Brooker"—one who has found it a blessing—and "B. A. T." on the question, "Is Marriage a Failure?" but do not think as "Jesse White," that all depends on the woman whether it is a failure or not.

I was pleased that "B. A. T." gave his views on the subject, and wish some of the other gentlemen would also.

I agree that Mr. "Shandy Maguire" ought to be "sat down upon," and think if he was not so spoony on other men's wives, and would learn how to treat his own wife, he might change his mind.

If this, my first, reaches the *Magazine*, I think I will have courage to try again.

Respectfully yours,

Mrs. M. W.

COLUMBUS, OHIO, May 5, 1889.

To the Editor of *Woman's Department*:

"Is marriage a failure?" Yes, if we see fit to make it so; but I do not lay all the blame at the woman's door, as do "Jesse White" and "One Who Has Found It a Blessing." As I live close to the railroad I see a great deal of the railroad men. Not far away lives a woman who is not particular whom she waves at, married or single, and her husband works every day in the week. When home at night he works till dark and is up at daybreak, busy till it is time to go to work. In this case the woman is to blame.

One fireman waves coming in and going out. Every opportunity he gets he is in her company, while his wife is home wearing herself out trying to please her husband, studying what he will like best and praying that he will get home safe.

Jesse, do you think this wife could lead her husband around like a lamb? No, she would have to put a ring in his nose and lead him around like a Durham. It takes both to make marriage a blessing. I am very glad my husband thinks me his equal and at home or abroad treats me like one. I could give many similar examples, but my letter is already too long.

Wishing success to the *Magazine* and the Brotherhood, I remain,

Yours,

Mrs. J. A. W. L.

BROTHERHOOD.

JULY, 1889.

HOUSTON, TEXAS, May 28, 1889.

Editor Firemen's Magazine:

I will try and let the Brotherhood at large hear from Bayou City Lodge, No. 146. I've read the *May Magazine* with great interest and each copy I notice always increases its quality. I've been a reader of this *Magazine* three years and every month, after finishing, I say to myself, this month is better than last—and it will with the material it has for a head be handed down as one of the best railroad papers published. It is now far superior in paper, printing, editorials, communications, etc., in advance of the other railroad organization papers published. I take five *Magazines* each year (one of each railroad order) and am "onto" all the editorials that are written up in each of them. Brother, one thing I wish to speak of here is this: you receive your *Magazine* through funds of the Lodge you belong to; of course it cost you something, but a small expenditure for value received. Now, what you want to do, is to help this paper on to greater success. Some say, "I can't write, I am a poor scholar;" others says, "I don't know what to do." First, read; next, assist financially. Now, here is the issue: They say "I pay my Lodge dues, etc. for it, and the Grand Lodge makes laws to that effect." I pay \$3 per annum for magazines I never see, (only on one occasion when a young lady friend of mine had one volume bound). Now, take the membership of our Order and take each member that is in good standing. Let him on the first of each year present one year's subscription to some friend, (a fireman that does not belong to this Order, preferred) and brothers, it would help the only paper that helps you, far beyond any idea you may conceive. That firemen will not fail to notice the magnitude of this Order, and the success it is fast making. Then he will notice the nice and interesting Mechanical Department, the finest railroad editorials written, and many other things that make any periodical a favorite. The consequences are he will, if he has any idea while reading, stumble on to something that will bring him into the fold to which he belongs. Now, a subject the brothers do not write on to amount to anything, is non-Brotherhood men. I've often asked men of this sort, this question: "While you are out on the road do you ever think of your mother and the aged father and dependent sister, or the young children at home, should an accident befall you? Their answers are all the same. I always wonder what would become of them, as it now keeps me "rustling" to support them. And should I be killed, I do not know what fate would befall them." When you

explain to them the purposes of this noble Order, if they feel for themselves or families, they are sure to come into the Order. The trouble is we have not enough agitation on this subject. There is lots of room at home and where I've traveled for this one subject. Agitate the principles of your Order, brothers, as the merchant advertises his goods. In the future, when brothers who are taking a trip, or hunting work, ask how is the B. of L. F. on this road, let us be able to say it is prosperous and growing every day. Your answer now in many cases is, Oh about one-third B. of L. F. men, the balance all non-Brotherhood men. Now take ninety firemen and make only thirty B. of L. F. men and that is enough per centage to agitate your Order; to make it eighty, allowing for rejections. Take hold of the wheel brothers and make it run hot or make the firemen outside join us. It don't need much hard talking. I've found that out, and don't forget to see the Collector with the amount due the Lodge, when notice has been issued. A man that sees you and all the members standing together will not resist very long; if he does, he is a dandy and don't want a decent burial. If we only had a few hundred more Sargents, Debs and Hannahans (some material as the originals) we would do a great deal and we can make them, if we try. Bro. Hannahan was here to see us and we appreciated his visit very much. I do not think the Ticket Agent in the Grand Central Depot, appreciated his "Spanish;" of all the Mexicans, the Irish-Mexicans beat them all. Well, I must wish all the Lodges as much success as is attending No. 146, and may peace and prosperity always remain in our borders. Wake up brothers as it is now time to go out on your mission to convert non-Brotherhood men. This is all from one who wishes to see all locomotive firemen Brotherhood men.

A New Correspondent.

WEST BAY CITY, May 6, 1889.

Editor Firemen's Magazine:

I belong to the B. of L. F. and have run a locomotive for the last two years and a half, and I never had any desire to enter the charmed circle of the B. of L. E. The B. of L. F. is good enough for me. We have got eighteen or twenty members in our Lodge who have been running locomotives from six months to three years, and they all seem to be well satisfied with the B. of L. F. and all give good satisfaction. I think as Bro. Sand Box does, that it would be a good idea for you to draw up rules for a Brotherhood to be known as the "Brotherhood of Locomotive Firemen and Engineers" and lay the same before every Lodge of our Order for the purpose of taking a vote upon the same. Business is lively on the Mackinaw Division, and all the boys are making good time. We have got between fifty and sixty members in our Lodge. The C. B. & Q. strike was pretty hard on us, but everything is running smoothly now.

North Pole Lodge, No 152.

Federation Picnic.

GALVESTON, TEXAS, June 6, 1889.

MR. EDITOR:—Considering the all-important question of the hour, the above seems a fitting caption for a brief synopsis of the picnic, the following account of which was published in the *Galveston News*:

The Brotherhood of Locomotive Firemen and the Switchmen's Mutual Aid Association held their first annual joint picnic at Opitz park, Hitchcock, yesterday, leaving the city at 9 A. M. and returning about 8 P. M. About 1,200 people were in attendance, and dancing, feasting and merrymaking was the order of the day.

A very exciting game of base ball, between the Tallowpots and the Geese, resulted in favor of the latter by a score of 7 to 4, but the former claim that their pitcher was bought up by the latter, and that he deliberately ran them in the ditch. It is charged that he paid no attention to train orders or danger signals, and that he persisted in backing up when the conductor signaled to slack ahead. They declare that they will never make another trip with him at the throttle, as the man behind the bat was totally unable to make a coupling or side-track a single box, owing to the engineer's reckless running.

One of the great features of the picnic was the contest for an elegant gold-headed, ebony cane, to be awarded to the most popular candidate for mayor. The contest was by ballot, and resulted as follows: McCormick, 318; Fulton, 152; Helman, 36. The cane was formally presented to Candidate McCormick, who received and returned thanks in a brief but happily worded speech. The Tallowpots and Geese then proceeded to give him three rousing cheers and a tiger, after which they crowned him with moss and brought him home in triumph a la Roman conqueror. Captain Jack says, however, that his crown of moss does not signify that he is a moss-back.

The picnic passed off very pleasantly; no rowdiness or drunkenness, and everybody returned highly delighted and proclaiming it the greatest picnic of the season. Quite a number of visitors were present from Houston and Temple.

In addition to the above, it is meet that due credit should be given to the ladies, *God bless them*, for they are human angels; they are the guiding stars of man's destiny. No pleasure can be made successful or complete without their assistance. Take woman away from man and you take away the sunshine of his life. You place a cloud over the horizon of his hopes, and his cup of happiness is empty; but bring her back again, and see how quick the lustre of his former self will return; see how buoyant and elastic he becomes.

"Through life's winding valley, in anguish, in rest,
Exalted in joy or in sorrow depressed,
From its place in the mirror that lies on my heart,
Thine image shall never one moment depart."

There are exceptions to the men of which I write, but they are fossilized, and the place where their hearts should be contains only a gizzard.

The picnic was a grand success, and the mothers, wives and sisters, as well as the lady friends of the firemen and switchmen rendered valuable assistance in making it so. The ice cream, lemonade, wine punch and lunch were Queened over on the grounds by Mrs. John Tarpey, Mrs. Abe Moore and Miss Moore, Mrs. James and Mrs. M. Hussey and Miss Hussey, Miss Mary Powell and Miss Nora Lucy. For their superior man-

agement they have the united thanks of the firemen and switchmen. The ice cream and cake was delicious, and, judging by the number of times the punch-bowl had to be refilled, it, too, was superb, but the lemonade was a nectar fit for the gods, and was evidently made by a master-hand, for its flavor would satisfy the epicurean taste of the most fastidious connoisseur. The boys adopted a commendable resolution before reaching the grounds that none of them would drink stronger than lemonade; a compact which they faithfully kept, and by their good conduct and gentlemanly deportment they covered themselves with glory, and were highly complimented for their good management. They had music, dancing and merriment, foot-racing, sack-racing—for all of which they gave prizes; and the "Old 14" was dressed in holiday attire, covered over with flags and bunting. On the front was two large white silk banners, trimmed and tasseled with gold embroidery; across the center of one was the letters B. L. F., embroidered with red silk, and on the other S. M. M. A. The flags were made by Mrs. Ed. Lewis, and reflects much credit on that lady; and the manner in which the engine responded to the throttle made the engineer almost believe she knew she was serving the boys of the switch and the scoop.

J. McD.

LOS ANGELES, CAL., May 26, 1889.

Editor *Firemen's Magazine*:

Knowing that you have not heard from Orange Grove Lodge, No. 97, for a long time, I make this attempt at a letter, to let you and all the brethren of the Order know that we are still on deck, and progressing finely. We have a Lodge of about seventy-five members, (the largest west of the Rocky Mountains I think) and I must say we always have a good attendance; probably owing to the scheme we have of levying a fine of twenty-five cents on members failing to attend meetings. We hold our meetings every Tuesday night, and have not missed but two nights in almost two years; they were Christmas and New Years of 1888 and 1889—the said nights coming on Tuesday. Bro. G. C. Morton still wields the gavel, and we are in hopes he will accept it for another year. You can rest assured that No. 97 will be well represented in San Francisco in 1890, at the time of the convention, because pretty near all of the boys I have talked to about it, say, "Well I'll be there too." By the way, we had a rousing meeting when Bro. J. J. Hannahan was here last month; in fact it was quite a surprise to have any of the Grand Officers visit us. He told us that Bro. Sargent was coming in May, but he will have to get here pretty soon if he is. I am not in the service of any railroad now, and never expect to be again, but nevertheless, I am with the boys in everything they undertake. As I never wrote a letter for publication before, and not knowing whether it is fit for publication, I will close for this time with kindest regards for any and everybody recognizing the writer.

W. T. Curl.

Who are the Representative Men of the B. of L. E.?

KALAMA, W. T., May 17th, 1889.

EDITOR MAGAZINE:—In the May number of the *Engineers' Journal*, page 387, appears a very ably written article, penned by one who, no doubt, has the best interests of the B. of L. E. in view, but with whom I wish to take issue in regard to his opening remarks, wherein he assumes to criticise the meaning and purport of an article in the February number of the *Fireman's Magazine*, claiming that the writer of said article did not show proper respect for the conclusions of the representative men of the B. of L. E. in convention assembled. Also that the writer thereof gives his opinion of the proper way of conducting the B. of L. E., etc. In regard to the above statements, I will merely say that said criticisms, if they may be termed such, were facts that cannot be denied; but the main point I wish to take issue with the brother on, is the remark claiming that the conclusions of the representative men of the B. of L. E. had not been shown proper respect. Now, as I understand the term "representative," as applied to an organization of the magnitude of the B. of L. E., I claim that the term is susceptible of more than one meaning, or definition, and will endeavor to prove the assertion. While I am willing to concede that the delegates represented their undivided Divisions, so far as law making goes, and establishing rules and regulations for the government of their organization, I am equally safe in saying that ninety out of every one hundred B. of L. E. men were not pleased, and never will be, with past rulings and treatment at the hands of their delegates relating to the welfare and best interests of the B. of L. E. as a kindred organization, and it is a mystery to me how the different Divisions of the B. of L. E. will continue to send men, year after year, to represent them in convention who will persist in making laws antagonistic to their own welfare and that of kindred Brotherhoods, and in that sense I claim such men are not the true representative men of the B. of L. E. From my own personal knowledge, I have known Divisions of the B. of L. E. to send the same delegate to their conventions five and six years in succession (I should judge, from force of habit), rather than from any good they have done or will do the Brotherhood. These same brothers are men who have long been at the top of the ladder, so far as their calling goes as engineers. I claim that this is all wrong, placing such men at the head of grievance committees and sending such men to conventions, to the exclusion of brothers less favored than themselves. For such men are not the ones to note a grievance or make inquiry as to its cause or merits, from the simple reason that they have no cause to complain themselves. And I am proud of just such men as H. J. Fackenthal, who is shrewd enough to see where the mistakes are made, and who makes them, and is bold enough to express his opinions through the *Magazine* of the most wronged Brotherhood in existence to-day; and while I am not a B. of L. E.

man, I am one who is not blind to the great injustice done that organization by the founder of labor organizations, the B. of L. E., to which I am proud to belong, and who believes that when brothers of the type of Bro. Fackenthal are chosen to represent the several Divisions in convention, past wrongs will be righted and new ones cease to exist. And while I do not believe in contention or strife between the two Brotherhoods, I trust the *Magazine* will keep its many readers posted and their memories continually refreshed in regard to the gross injustice they have received in the past, so that the perpetrators may be made ashamed of their acts and brothers chosen to make laws for the B. of L. E. who are representative men in spirit and thought, and not in name only. And that both and all kindred labor organizations may be guided in the right and prosper, is the wish of a Brother.

W. S. C.

[In the foregoing communication our correspondent, "W. S. C.," presents a question of special significance and eminently worthy of consideration.

It is well understood that all too often men chosen to represent constituencies, misrepresent them; that influences are brought to bear upon them which swerve them from the line of duty, and that instead of being of service to those who conferred upon them power and influence, their acts are in flagrant conflict with those principles of probity which distinguish all truly representative men. A man may be a representative demagogue, a representative crank, the representative of a faction or clique, but in no proper sense can he be called a representative man. Such representative men are not governed by prejudice or bigotry; they are not the victims of envy and jealousy. They are animated by a high sense of honor, and their acts are based upon principles of right and justice.

For various considerations we direct attention to the views and conclusions of "W. S. C." He is a member of the B. of L. E., and not a member of the B. of L. F. What he says is a triumphant vindication of the policy pursued by the *Firemen's Magazine*, and is good reading for the members of our Order.—ED. MAGAZINE.

For the *Firemen's Magazine*.

LIFE IS IN LIVING.

This life is not all sunshine, nor yet is it all showers,
But storms and calms alternate, as thorns among the flowers;
And while we seek the roses, the thorns full oft we scan,
Still, let us, though they wound us, be happy as we can.

This life has heavy crosses, as well as joys, to share,
And griefs and disappointments, which you and I must bear;
And if we may not follow the path our hearts would plan,
Let us make all around us as happy as we can.

DENVER, COL.

C. S. B.

GREETING.

To the Officers and Members of Division No. 1,
 Brotherhood of Locomotive Wipers, Newton, Kan.:

You're welcome as the April showers
 That start from sleep the drowsy roses,
 B-sides all other perfumed flowers,
 To captivate our eyes and noses.
 This world, my boys, has room for all
 Who strive to better their condition,
 Who do unite to stand or fall,
 However humble their position.

A wiper in a round-house pit,
 If he but has the inclination,
 Besides a share of mother wit,
 To logically fill his station,
 Can soon ascend and gain the floor;
 He'll scarcely note the time that passes,
 Until he swings the furnace door,
 And rolls the bell to catch the lasses.

Ambition spurs the crimson tide
 That through his reins keeps bounding ever,
 Until he wins the longed for side,
 To handle throttle-bar and lever;
 And then—Ah, well, to higher climb
 Will bark his two shin bones severely—
 Boys, this is truth, though told in rhyme,
 And by experience taught me dearly!

You're on the ladder's lowest round,
 Where most of us have stood before you;
 But, boys, although you're near the ground,
 Don't ever cringe to those up o'er you;
 God never made a human slave,
 No matter what the preachers tell us,
 We all are equals at the grave,
 A fool may know if he'll but smell us.

For wipers I've an old regard,
 And some of them I've loved as brothers;
 They are the boys who can reward
 The engine men above all others.
 They always kept my oil cans full,
 Although some engineers abhorred them;
 And waste as white as lambkin's wool
 I always had, the Lord reward them.

I'll watch the progress which you'll make
 Within the ranks of honest labor;
 I hope you'll guard against mistake,
 And friendly be with every neighbor.
 May offspring round the parent tree
 In triplets and quadruplets gather
 At every birth, until we'll see
 Dear Number One a numerous father.

Shandy Maguire.

POCATELLO, IDAHO, May 12, 1889.

Editor Firemen's Magazine:

In perusing the last issue of the *Conductor's Monthly*, I notice that Mr. Wheaton condescends to tell the public the position of the B. of L. F. as I presume he sees it. He says: "Ignored in the settlement of affairs of mutual interest, indignities without number heaped upon them, they meekly bow and having been smitten on one cheek, turn the other for a like rebuke." Might I humbly ask what there is in the present attitude of the locomotive firemen to indicate a desire for a like rebuke on the other cheek? Does the columns of our *Magazine* indicate meekness and submission to an alarming extent? Every sane man says no; that we we present to-day a solid and unflinching front, ever marching and fighting for the right, and the better protection of railroad men of every class; ever willing, ready and able to avenge any indignities that may be heaped upon us. Throughout this broad land, wherever the banner of the B.

of L. F. waves, men are thinking, talking and acting. What will all this amount to you ask? If "coming events cast their shadows before," all this thinking and talking, will, like the low rumbling of distant thunder, become louder and louder as it comes nearer, until in September, 1890, in San Francisco, it will culminate in one great, destructive storm cloud. The thunder-bolt will strike. The proud and haughty oak tree that has withstood so many storms, will be seared and shattered; its nourishment cut off; its life blood, oozing from every pore; its despised and insulted friend of later birth and meeker men will live and prosper, proudly telling to the world its new and more appropriate name—"The Brotherhood of Locomotive Enginemen."

If the able editor of the *Monthly* can read the "hand-writing on the wall," he can see that this is the manner in which we turn the other cheek, also. Let all Brotherhood firemen agitate the new name question in their Lodge rooms; talk it over among yourselves, and send a solid vote to San Francisco. Thus you will benefit yourselves and heap untold blessings on the Order you love so well. Let your motto be, "Federation and a new name." Fraternally,

Frank Walton.

NEW HAVEN, Feb. 24, 1889.

Editor Firemen's Magazine:

It has been the cause of some wondering that Elm City Lodge, No. 289, is seldom noticed in the columns of the *Magazine*, and the following is to inform the Brotherhood that notwithstanding our silence, we are up and doing, with hearts for any fate. There are many interesting features connected with our Lodge, but we cannot expect space for them in the *Magazine*. One thing about the *Magazine*: it is very much liked by those who have the good fortune to receive it. The boys have not fully recovered from the fifth annual ball of Jan. 23d. It has been pronounced the most successful ever held. All of which was owing to the untiring efforts of the members to make it so. The committee of arrangements spared no pains, and were ably assisted by the brothers. It was remarked that there never was a more respectable or pleased party at any of the former entertainments. The Wheeler & Wilson Band, of Bridgeport, Conn., was engaged to furnish the music and this was considered the most important feature of the evening. There were 128 couples in the grand march, which was led by Bro. James E. Eddridge, one of the proudest members of our Lodge. The conduct of the brothers throughout the evening was highly complimented. Among the many guests were our General Superintendent, O. M. Sheppard, and Lieut. Gov. Gen. S. E. Merwin. The financial result shows \$250, which goes toward helping our sick and distressed brothers. On the occasion of our last meeting there was a good attendance and one candidate was initiated.

Wishing that the future may be a prosperous one for all our Lodges, I am fraternally yours,

W. A. P.

AN INTERESTING MEETING.

Presentation of a Locomotive Model to Just-in-Time Lodge, No. 149, B. of L. F.

Presentation Address of E. J. Rauch, Etc.

NEW YORK, May 30, 1889.

Editor Firemen's Magazine:

On Saturday evening, 11th inst., there was a pleasant time at Just-in-Time Lodge, No. 149, B. of L. F., the occasion being the presentation to the "boys" of a model of the working parts of a locomotive engine by the Manhattan Elevated Railroad Company. The presentation was made on behalf of the Company by Road Foreman of Engines on the Eastern Division, E. J. Rauch, in a little speech. He said:

MR. PRESIDENT AND BROTHER FIREMEN AND ENGINEERS:—There are sometimes pleasant hours in a man's life, and this is one for me. The General Manager of the Manhattan Elevated Railway has delegated to me the pleasant duty of presenting to the firemen of the system a working model of the essential parts of the engine in use on the roads of the Company. This model is not so elaborate as it might be, yet it is sufficient for the purpose intended. A thorough knowledge of its construction will go very far towards fitting the men on the left side, to take a position on the right. As the grub precedes the butterfly, so is the fireman the embryo engineer. Following that code of reasoning, the more perfect the grub the handsomer the butterfly; hence the more intelligent and better educated the fireman, as a matter of course the better will be the engineer. Being alive to this fact the Company is anxious and willing to throw out every inducement and afford every facility to their firemen to become masters of their business; being well aware that the more intelligently any man performs a duty, the more profitable will he be to his employer and the happier himself.

This model is the property of all the firemen of the L. System. The Company does not desire to draw lines between any class of their employes—receiving faithful service alike from all the Company intends that all shall share alike in favors.

If the firemen of the System had a hall free of access to all, to that place would, I think, this model have been sent. Our firemen, as a body, have no such place. A portion of them (I believe a large majority) have very wisely, in my opinion, united themselves into a body—a Brotherhood—for mutual benefit and assistance, and have provided themselves with a suitable place to meet and transact their business. That, in the estimation of the General Manager and myself is the proper place, under the circumstances, for this model; fully believing that this Brotherhood will extend the right hand of fellowship to all good men and true, who are found worthy and well qualified, if they knock at the door; thus placing the model within the reach of all who worthily bear the title of locomotive firemen.

You have members in your Order who are amply qualified to teach the less informed all that is necessary to be known to make a competent engineer. To those I say take an interest in your fellows and devote some of your leisure hours in imparting to them the knowledge you possess. And to the novice I say, make up your minds to learn your business thoroughly.

I will say right here, that three years ago I was astounded at the ignorance of the firemen who came before me for examination for promotion; scarce one in three had any conception of the machine they had been working on for periods

of five to six years. This deplorable ignorance was not due in the majority of cases to any lack of intelligence, but to a complete apathy and indifference to learn. Some of those same men aroused themselves and applied to study, came up again for a test and stood the fire; and there is not one of them that I am ashamed to admit that I said he was qualified to be a locomotive engineer and take his place amongst the body of men who hauled 2,356,000 passengers in three days without an accident or even a complaint against them.

What a change have I found in the past three years? The last firemen who came up for a *hacking* some few months ago had not the least trouble, and, if my memory serves me right, not one in six failed to make the *right*.

Another point worthy of the fireman's attention is to learn obedience to his engineer, and to carry out his ideas about doing his work. I do not say this because I think being on one side or the other of an engine makes a man any better or worse, but the responsibility for the performance of the engine rests on the engineer, and he should have full control; and the fireman who listens to his engineer and obeys him, will be qualified to control his fireman when he has one in charge. Do not understand me to mean that the fireman should take for granted that in every case the engineer's way is the best, but follow his ideas and carry them out, and if you have any doubts on the subject, try and reason on it with yourself; and, also, ask some one whom you think better informed. This course will give the fireman a great deal of comfort on his engine, and will, in addition yield him much information to store up for future use.

One word for myself. It has always been a study with me to make it as pleasant as possible for men whom I have had under my control; knowing, in business, neither friend nor foe; and I again repeat what I have said before, any assistance I can give the firemen of the "L" system in their efforts to educate themselves is at their command.

Master Workman Jas. F. Hough, of Lodge No. 149, received the model in behalf of the firemen and brothers in a very handsome and appropriate manner.

There were present Mr. J. D. Campbell, Supt.; Mr. E. M. Headly, Gen'l Foreman of Shops; W. W. Thompson, Railroad Foreman of Engines, Western Division; Mr. J. Brown and Mr. Headly, Foremen of 2d and 6th avenue shops. In fact nearly all the Officers of the Mechanical Department were present. General Manager Hahn and Master Mechanic Peoples being away from the city and could not attend.

Supt. Campbell was called to the front and made a very happy and well received address, calling the attention of the boys to the fact that the model would be of no use to them if they did not study it: and proffering his services to them in a lecture (which he is well able to make instructive and interesting) on the locomotive, at any time he was honored by a call.

Addresses were made by Mr. E. M. Headly, W. W. Thompson, Bro. Donigan and others with a wind up by Bro. Geo. Ford, who announced that a collation was in readiness and invited all present to join in and refresh. The party accepted the invitation and adjourned to a near dining room and passed an hour in social chat and enjoyment. There were some forty or fifty engineers present and amongst them the old war horse, Nat Sawyer, of the N. Y. Central. When it is known that "Nat" is present at any gathering, it goes for saying that there was some fun

on hand; and the number of engineers present is a clear proof that on the "L" the man on the right hand of the fire door takes an interest in the chap on the other side, showing "how sweet it is for brethren to dwell together in unity."

A committee of firemen with Road Foreman Rauch called on Mr. Nathans to ask for a sectional model of the "Monitor" Injector and the "Nathans Lubricator;" and it took Mr. N. about three minutes to decide to give them to the Lodge.

It is the purpose of Lodge No. 149, as soon as arrangements can be made to have at least one meeting a month for lectures on the locomotive, its uses and abuses, and to invite such men as Angus Sinclair, Mr. Lockwood and others of like ability to help out the local talent in furthering this object.

If railroad companies would place in the reach of their firemen convenient means for them to master thoroughly the construction and workings of locomotives, injectors, air and steam brakes, etc., the money thus expended would be as "bread cast upon the waters," and would return a fat dividend. *E. J. Rauch.*

[The *Magazine* takes special pleasure in publishing the foregoing, as the incident supplies proof that the employes on the "L" are living and working in harmony, and advancing in knowledge and skill, and furthermore, that the relations with the officials of the road are such as must always exist when there is intelligence, moral worth and fair dealing.—*ED. MAGAZINE.*]

SAN FRANCISCO, CAL., May 10, 1889.

Editor Firemen's Magazine:

The boys of Golden Gate No. 91, gave their annual ball at Odd Fellow's hall Saturday evening, May 4th, and it was pronounced by all who had the opportunity of attending, as being one of the most enjoyable events of the season. The attendance was not very large on account of the inclemency of the weather—there being about one hundred couple present, which gave all a chance to dance to their heart's content. The committee of arrangements spared no time or expense to make everything as complete as possible. The hall was trimmed with the red, white and green lights, and with corresponding flags, also with the big headlight, which sat up over the clock at the back end of the hall, and as it cast its glaring light across the spacious hall and fell upon our motto, "Golden Gate B. of L. F., No. 91," it made a scene that will long be remembered. Much credit is due our brother, W. J. Allen, who acted as floor manager, for the way he rustled the boys around, at the sound of his whistle, and as the band sounded its joyous strains, each man swung his partner, and they made at least sixty miles an hour, if not sixty-five—throttle wide open.

Mr. Ed. Stewart, one of our engineers, made our motto, which was admired by all for its artistic taste and neatness of design, as being one of the most beautiful things of its kind. Our

Master Mechanic, Mr. J. T. Wilson, kindly gave his consent to allow as many of the boys to be in that evening as possible, also, the loaning of lights and flags all of which was appreciated. Blum's Band, which gives the best dance music in the city, executed some of their finest music, and as their joyous strains poured forth, all seemed to forget the small hours of the morning, which were fast approaching, and as the last dance was finished, each couple bade adieu to the pleasures of the evening, and wended their way homeward. The joys of the evening will long be remembered by all who were there.

2 C's

STRATFORD, ONTARIO, May 12, 1889.

MR. EDITOR:—Bro. William O'Brien was seen a few days ago with his coat off, and his good-natured face beaming with smiles which indicated that his heart had expanded to the size of a watermelon. The boys could assign no cause just then, but in the course of twenty-four hours we solved the conundrum; it was a boy, ten and one-quarter pounds in weight, who had arrived to bless his sweet home. We are glad to report everything in favor of parent and child. Bro. John Cooper was in attendance at the fireman's ball, held April 25th, 1889. Bro. Cooper made quite an impression on the fair sex by his graceful dancing, and the ease with which he chewed gum. Suggestion, try hay next. Bro. Frank Bowen, located at Fort Erie, Ont., says he contemplates living in a hall; that is when autumn arrives. Enquirer wonders if it is Rideau Hall? Bro. William Patterson says the young lady who is considerate enough to carry one's overalls, will receive his first consideration. The lady came to the rescue. Therefore Rufus is engaged. Bro. George Metter, now located at Fort Erie, was heard to remark in stentorian tones, that is, between gasps and smiles, that a stranger had entered his cosy little home, and that with his usual custom, he reconciled himself to the fact that with the stranger it would make his family three. Correct—two and one equals three. It's a girl, and we are glad to report favorably on both the child and parent. Fraternally,

James Burke.

CHICAGO, ILL., May 24, 1889.

Editor Firemen's Magazine:

The members of Chicago Lodge, No. 95, wish, through the columns of the *Magazine* to return their sincere and heartfelt thanks to the brethren of Triumphant Lodge, No. 47, and S. S. Merrill Lodge, No. 188, as also to the members of Division No. 97, B. of L. E., for their able assistance in making arrangements for the funeral of our beloved brother, James Gallagher, who died May 18th, after a long and painful illness. Our especial thanks are due to Bro. Frank Denehan, of No. 47, for the trouble he went to in securing for us the regalias of his Lodge. Hoping that we can some day be of some service to these brothers in some way, we remain as always with sincere thanks and good wishes.

Chicago Lodge, No. 95, B. of L. F.

For the Magazine.

UNSEEN FRIENDS.

"A friend in need is a friend indeed,"
I have often heard it said;
And I never heard of so small a word
In all that I have read,
As this word "friend," in which there blend
So many jewels of thought,
Like purest gems in diadems,
With purest luster fraught.

And yet as dear as friends more near
Are some I have never seen;
I enjoy their smiles though many miles
Between us intervene;
And there's a place for each friendly face
In the casket of my mind;
And in my heart, there is set apart
A corner for all mankind.

But still I think that a stronger link
Is the one that binds to me,
Through the *Magazine*, my friends unseen,
Perhaps from sea to sea;
For farther west than the Rocky's crest,
All over our country wide
Are those who pore upon its lore
And in its columns pride,

A year ago, perhaps, you know
I expressed my "Gratitude"
To friends unseen, through the *Magazine*,
A theme that I wish renewed.
A volume neat and all complete,
Was kindly sent to me,
And I take my pen to state, again
The giver kind and free,

Remember still with a kindly will
The efforts of a man
Who, I'll not deny but tries to try
To do the best he can,
By a volume more, like that before,
In half morocco bound;
And I feel, indeed, the friends I need
Are the very ones I've found.

For as I look all through that book,
'Tis a joy, indeed, to see
So neatly there, on its pages fair,
The lines of one like me;
But better still if the thoughts that fill
One uncouth, broken rhyme
Were but impressed within the breast,
Where the heart's own echoes chime.

And when I stand on a brighter strand,
In the haven of the soul,
I hope to clasp with a friendly grasp
The hands that have shoveled coal:
A veil of tears and a few short years
Are all that intervene,
When I shall see the friends to me
No longer then unseen.

Geo. W. Hall.

STANBERRY, Mo., May 28, 1889.

A Ringing Neigh From the Old War Horse.

PHILLIPSBURG, N. J., May 20, 1889.

MR. EDITOR:—I am no writer. I make no pretensions in that line, but I have seen J. Paffenberger's admission of being in the dark. I am glad that he is a man, and a game one, to admit it when in the wrong, and I will try to see him, to shake hands with him.

I love true manhood. Bro. Sargent, I think if you will just recall the words I spoke to you at the round house at Hoboken, you will think I am a prophet. I told you I was down-hearted because the B. of L. E. was dying, that its laws were killing it. But, thank God, I have done my whole duty to save it, but it will not be saved. J.

Paffenberger is my witness that I did my duty, I will not have anything more to say to save them. I have been treated like a thief and a felon. The more I have tried to save it, the more I have been persecuted. Now, I say, "Let her go Riley, for Gallagher is dead." Yes, I am my own man, and I do not intend to take any more taffy. I only get mad when I think how much the B. of L. F. boys have stood from the B. of L. E. I am a member of Division No. 30, B. of L. E., and a member of Excelsior Lodge, No. 11, B. of L. F. Now, I challenge any member of the B. of L. E. to a joint debate for right and wrong. But what is the use of wasting words; the engineers don't want the firemen. Now, I am opposed to any more begging to change the laws of the B. of L. E., but give us the new name and make the insurance \$3,000 and \$1,500, and let the old ship go to the bottom. She is dying, dying, dying—Bro. Sargent, how do you like that sound? It is what I told you some years ago at Hoboken. I want federation, but I do not want the *Firemen's Magazine* nor the members of the B. of L. F. to beg engineers for it any more; but I want them to stand up like true, honest men, and say, "We will federate with those who federate with us," and I say, I will not trust the man who takes a withdrawal card from the B. of L. F. to join the B. of L. E. He is anybody's dog. This you can send from Maine to California, and just put "Old War Horse's" name to it, too.

Yours in bonds of Brotherhood,

George R. Nichols.

LA FAYETTE, IND., May 15, 1889.

Editor Firemen's Magazine:

As we have not heard anything from Tippecanoe Lodge, No. 36, for a long time, and as two of our brothers have lately taken that dark and mysterious road down through the shadows of death, I think it some one's duty to send a few words to our beloved *Magazine*. Bro. Mark Hewes was killed on the evening of May 20th. While trying to jump from his engine he lost his foothold and fell so close to the track that an oil box hit him in the head, and death was sudden. We all mourn the loss of our dear brother, for the Lodge loses a worthy member; but we have done all we can for him now. Our attention will be given to the widow, and it will be our pleasure to look after her welfare in the future, and if she needs a friend No. 36 will always be willing to help or counsel her in every way. Bro. Buchanan died May 11th, with brain fever. He was another good worker in the ranks of the Brotherhood. He was a single man but leaves a sorrowing father and brother to mourn his loss. As to all the other brothers they are doing well; a few are getting to the right side. Bro. Cartwright of the L. E. & W. was among the lucky ones of late. Bro. Johnny Kreigar has taken a lay off and gone east for sixty days; we think he may bring back a bride from his native town—hope you will John. No. 36 wishes all the brothers God speed, and would like to hear from them.

Fireman.

BONZANO.**Cogitations and Interrogations.**

BY SWITCH.

MR. EDITOR:—I don't want to press my welcome beyond the limits of good breeding—
And the fact that I am satisfied, you very well do know,
But I have seen so many paragraphs about the boys on the "Reading,"
That I've wanted to ask you about Mr. Bonzano,
The Bound Brook Bonzano.
Is he an Italian Dom Dago,
Or is he a Spaniard, a Polander or a Hun?
His name sounds brigandish,
Stilltoldish, outlandish,
In fact, isn't he an imported son of a gun.

[We know nothing of Mr. Bonzano except what we hear of him in the papers. He seems to have taken it into his head that the days of chattel slavery have come again, and that firemen and engineers on the "Reading" have no more sense of independence than the same number of imported Africans in the days of the slave trade.—ED. MAGAZINE.]

MR. EDITOR:—I have been feeling of myself from my heels to my head,
And have asked myself, also my wife, if I really am a man?
Mrs. Switch remarked, "If you ain't, I wish you were dead."
And I endorsed the sentiment, if I didn't I'll be d—d.
I said, "If Bonzano was my boss,
And as big as a rhinoceros,
And I no bigger nor any stronger than a cockroach or a beetle,
Should he try his gad on me,
I should get as mad as mad could be
And should show Bonzano some courage, just a keltle.

[Courage is very desirable, if it is only "just a keltle" sometimes. Locomotive firemen ought not to be "bulldozed," nor intimidated nor will they be unless they invite the degradation when a boss cracks his whip.—ED. MAGAZINE.]

MR. EDITOR:—I have traveled on the "Reading,"
a road of debt and disaster,
It is loaded down with mortgages, bonds and other kinds of debt.
For years its been going to the devil, and every year goes a little faster,
For its fate is in the hands of an awful mangey set—
Among them Bonzano,
A mass of bird guano.
But Corbin likes the smell of his Bound Brook boor,
But no matter what he is,
His position, pay or biz,
He should not control my destiny, that's sure.

[Yes, the Congressional Committee fully warrants your estimate of the "Reading's" financial condition, and the reputation of its managers is worse, if possible, than its finances.—ED. MAGAZINE.]

MR. EDITOR:—I see a startling statement going the rounds of the press,
That Bonzano has busted a Division of the B. of L. E.,

And that a Lodge of firemen is about to confess
That their hearts are in their boots, and that
they are weak in the knee—
That their rights they will waive,
That they will cower like a slave,
That they will lick the dirt from Bonzano's boots,
That they will kiss Bonzano's rod,
And obey Bonzano's nod,
And play to perfection the part of d—d galoots

[Well, for the sake of the proud name of Americans, it is to be hoped that "Switch" exaggerates the situation. At any rate, it is reported that some engineers can't be whipped in, and it is to be hoped that some of Bonzano's firemen will show equal manliness.—ED. MAGAZINE.]

NEW YORK, May 11, 1889.

Editor Firemen's Magazine:

An open meeting of Just-in-Time Lodge, No. 149, B. of L. F., was held in their rooms this date for the purpose of receiving a model of a locomotive from the Manhattan Railway Company. An invitation was extended to the sister lodges in this vicinity, to the officials of the company, and to the enginemen on the system. The meeting was called to order with Bro. F. C. Donigan in the chair, who stated the object of the meeting, and thereupon introduced Mr. E. J. Rauch, Road Foreman of Engines of Eastern Division, who presented the model on behalf of the Manhattan Railway Company with some very instructive remarks. The model was received on behalf of the Lodge by the Master, James F. Hoogh, who stated, in the course of his remarks, that the Lodge would hold special open meetings for the purpose of inviting proper persons to explain the workings of the locomotive to all enginemen who wished to attend. Mr. John D. Campbell, Superintendent, was then introduced. He stated the benefits to be derived by studying the working parts of the locomotive from this model, and that, not only would the members derive benefits, but that the company would also derive great benefits through the members by presenting them with this model. He was followed by Mr. W. W. Thompson, Road Foreman of Engines of Western Division, Mr. J. D. Dutot, Engine Dispatcher Second Avenue line, Mr. Headly, General Foreman of Ninety-eighth street shops, who had charge of building the model, Mr. J. A. Brown, Foreman of Sixty-sixth street shops, and by Mr. Headly, Foreman of 145th street shops.

Among those present were visiting members from Lodges Nos. 3, 13, 155, 284, 285, 291, 309, 349, 382 and 354. Dr. Nat Sawyer, Chief of Division No. 145, B. of L. E., kept the meeting in an uproar by his witty remarks, and Engineers Outwater, Holeman, Courtwright, Trimner, Stillwell and Hallaway, of Third Avenue line; Tower, of Sixth Avenue line; Carpenter, Ryan, Taulman, Morrell, Dolback, Feil, Crosby, Russell and Babcock, of Second Avenue line, and W. Peeples and E. L. Slayback, of the Suburban road, were also present.

Yours fraternally.

A. H. Hawley.

For the Magazine.

IN THE OLD PLANTATION DAYS.

In the old plantation days—the days of pen, and block and lash,
There was a “labor-market,” and the “nigger” sold for cash.
Then labor didn’t strike, ’twas in its owner’s grip,
And any show of discontent was subdued by the whip.

In the old plantation days, when “Massa” held the rod,
When “massa” owned his “labor,” and “massa” owned the sod,
There were no “labor troubles,” peace reigned everywhere, profound,
For old “massa” was supreme, with his shot gun and his bound.

In the old plantation days, the laborer was a chattel,
And laborers were bought and sold, just like so many cattle,
And when “old massa” had more men than he had work or hash,
He traded them for land, or auctioned them for cash.

In the old plantation days, when “old massa” had control,
Of the “market” and the laborer, his body and his soul,
All grievances were settled without arbitration or appeal,
In a way the chattel could both understand and feel.

The old plantation days are gone; so reads the pleasing story.
We hear it in the poet’s song and in thrilling oratory,
That the chattel block has disappeared, the chattel, lash and pen,
But the “labor market” still exists for worthier workmen.

And every day, throughout the North, workmen are told,
The “labor market” is “thus and so,” when labor’s bought and sold;
That “labor’s a commodity,” like wool or hides or hair,
A “raw material” to be “worked up” by the purse-proud millionaire.

Veteran.

SOMERVILLE, MASS., June 12, 1889.

Editor Firemen's Magazine:

Personally, I don’t care what we call our Order. I should like to see it named to suit all parties interested, but I do care, personally, that our precepts and principles remain the same as at present, for they are the acme of honor. By our honor have we reached our present greatness; by the honorable dealings of our officers and members have we been placed on the pinnacle of integrity, and only by such precepts and principles can we or any other order exist. Of what low, mean, contemptible acts have we ever been guilty of? I can not remember any such acts; they are not yet placed on record, and if we do not forget our obligations (of which there is no present danger) such acts will never be recorded. I have never heard of our officers sneaking out of their part of the “Q” strike, crying “It was the men, not I.” What I have heard was, that we acted nobly. Don’t forget, my brothers, that there is nobility in a lost cause, if the object in

view was a righteous one; and remember, brothers, that with a very slight experience, our officers entered upon the great battle on the “Q,” and now look and see if they do not appear in a more favorable light than the rest. They had no mistakes to profit by or improve upon, notwithstanding, they showed ability that was equaled by whom? Now, don’t get excited, for it was equaled by none. All we wanted was a little experience. It came a little high, but we have it, and what is more, we mean to profit by it. That is the kind of stuff the B. of L. F. is made of. No sneaking off behind the returns and holding love-feasts; no vain attempts to lull us into inaction. We had a little business matter to attend to, and we did it up brown; not a love-feast, but hard, solid facts. Nobody heard us belly-aching around skinning our jaw for “no strikes.” *We will never strike*, (our colors, I mean.) Not much. We are not built that way. We are just taking sand for future need, and intend to use it if we are called upon. Who said defeat? Why, my brothers, there is not a man in our Order that can define the word. We are dandies, if we do wear cowhide boots. The man who said “we can’t have any change,” forgets that we can go barefooted in winter if we want to. Now, let’s return to the name. What’s in a name? Is the purport of some of the letters in the June *Magazine*. I say there is everything in a name. No matter about the rose, etc., but just rename the O. R. C. and make it B. R. C. Rename the B. L. E. and make it ———. Extreme modesty compels me to stop. Now, my friends and brothers, do you think there is nothing in a name? I like the double header, the B. of L. Men, the Brotherhood of the Footboard, and I love the B. of L. F. Question, Question! Are you ready for the question?

*Chas. H. Trenholm,
Boston Lodge No. 57.*

MONCTON, N. B., May 11, 1889.

Editor Firemen's Magazine:

I feel it my duty to send you a few words from this section of the country. Glad Tidings Lodge is again in a prosperous condition. The firemen here, are all in favor of federation. Some of the B. of L. E. men are against federating with the B. of R. B., but what I believe is, if they don’t want to federate with the brakemen we don’t want them with the firemen. The B. of L. E. has used us pretty rough at their conventions by passing such obnoxious laws and then not repealing them when they had the chance. But, thank God, we have engineers in our Order who are willing to stick to us and who, I believe, will never join the B. of L. E. as long as they keep such insulting laws upon their books. Let every brother go to work and see if we can’t double our membership—and let us change the name of our Order and call it the Brotherhood of Locomotive Engineers and Firemen. Hoping this will find space in your valuable columns,

I remain yours truly,

Patent Ash Pan.

IS MARRIAGE A FAILURE?

In reply to "E. M." in April Number.

It's a failure, a fraud, sighed poor little wife
 As she sat by the embers alone,
 While S—— was off on a glorious spree
 And the hearth was as cold as a stone.
 "With this ring I thee wed." "Ah! what did it
 mean?"

'T is a fetter indeed to my soul,
 But a glamour was o'er me, the future unseen,
 I fancied I'd reached woman's goal.

So I had, if 't is spelled with a j and an i,
 And the fetters are double and strong,
 And she glared at the stove-box that stood by
 the jam

Where "the twins" sang their matutinal song.
 "To his pals he steals off like a thief in the night"
 Or snores on the lounge or the chair,
 While I mend, or I wash by the flickering light
 And sigh for my girlhood so fair.

I fear it's a failure, but when you have crushed
 And withered, this opening rose,
 You can go for some "vidder, with a wallet of
 cash,"
 To crimson the end of your nose.

"One month," "Shandy" says, is as long as one
 wife

Can stay one man's longings so fierce,
 When Solomon, with his thousand fair brides
 "Sipped liquid honey" for 85 years.

Ye gods! what a life! but then, what a fix
 The amorous old monster was in,
 When Aurora, with smiles, ushered 86 in,
 Nary new one, on which to begin.

No wonder he raises the sorrowful wail,
 When Atropos' scissors he'll see,
 He has found that at last "desire will fail,
 And the grasshopper a burd'n can be."

It's a failure, we cry. Give a standing vote;
 From her chair Mrs. Maguire half arose,
 But sank, with a sigh, and cried with a groan,
 "Let the rest of the pigs scald their nose."

Sue M. Miller.

"I've given the old fellow a few extra days be-
 tween times, which is, no doubt, good for him,
 and my rhymes, too.)"

A New Name for Our Order.

HUNTINGTON, IND., May 13, 1889.

Editor Firemen's Magazine:

I am glad that so many of the members of our Order are taking an active interest in the new name suggestion, and it is also gratifying to know that so many of the B. of L. E.'s are ready to go in and take the new name with our boys. The new name proposition is in the line of success, independence, self-reliance, and no reasonable objection has been waged against it, while a great many good reasons have been published in its favor in the *Magazine*. I could name a great many instances, give place and date, showing how the B. of L. E. has used the B. of L. F. as a boot jack, and then thrown aside, but the Brotherhood is too familiar with such things to require their particular mention here, though I am tempted to do so; but it may be better for the present to reserve such ammunition for future use, as it is surmised that the B. of L. E. at its Denver Convention will change its laws and its policy. For one, I do not take any stock in such a theory; and whether laws remain as they are, or changed, is of no consequence to me. Let

the B. of L. F. go forward and do what is right and proper, regardless of what the B. of L. E. may do or refuse to do. If the B. of L. F. goes courageously forward in the discharge of its duty, no brother will ask in the name of one God, nor of all the gods at once, why engineers, members of the B. of L. F. join the B. of L. E., because not one in a hundred of them will ever be guilty of such an act of folly. Submit the new name to the Lodges and let them vote upon it—then perfect federation and success will be achieved. I suggest that the new name be Brotherhood of Locomotive Firemen and Engineers, leaving out "of"—the initials would then be B. L. F. & E.

Yours,

Sand Box.

MR. EDITOR:—Why should we call a *halt* in our march of progress, simply because some men of other days have builded a monument to commemorate their victories? Because men before us did well, is that any reason why we should stand still? Must we pay tribute simply because we live? True enough the B. of L. E. has done a grand work, when viewed from the side colored with greenbacks, but have we done less, for the same length of time? The very fact that the B. of L. E. has done well should stimulate us to do better, for we would be far less than men to try and do half as well. For my part (and that is only one twenty-thousandth), I have had quite enough of this senseless mouthing about an engineer being *better* than a fireman, in the sense that he can't associate with firemen. I have been on the right side four years in road service and found the B. of L. F. good enough, so far, and as for B. of L. E. men getting jobs, I have had just as good luck as they can boast of, and don't you forget it. I am not above associating with any honest toiler, white or black, Christian or pagan. Give me fair play, tell the truth about me, as you want me to do about you, and one Brotherhood (without caste) of Locomotive Men.

Dirigo.

TRIBUTE TO THE LATE L. B. CHAMBLIN.

[To the memory of Luther B. Chamblin, who died September 26, 1888, at Queen City, Mo.]

If joy is the wages that faithfulness gives,
 Thy joy, my dear brother, we cannot conceive.
 If forgiveness is proffered for trusting in Him,
 Thy cup of salvation is full to the brim.

If fervor could teach us to conquer the strife,
 That lesson we've learned from your manner of life;

If for hoping and watching a "home" could be given,
 Thy title is sure to a mansion in heaven.

As the tempest-torn clouds are succeeded at eve,
 By the sun's golden rays and the twilight they cause.

So this boisterous life has drawn to a close,
 As serene as the death of a freshly plucked rose.

And thine may it be in the ages to come,
 When the ransomed are gathered to sing "Harvest Home."

To be found in the van of the incoming train,
 And fire with new spirit that welcome refrain.

G. F. Boynton.

Responsibility of Firemen.

ALLEGHENY, PA., June 3, 1889.

Editor Firemen's Magazine:

I notice in the June number of the *Engineer's Journal*, an article under the heading of "Responsibility of Trainmen," which seems to favor the plan of holding the fireman equally responsible with the engineer for carelessness in overlooking danger signals, and condemning the Board of Railroad Commissioners, of New York, for announcing in a recent report, that they did not think it advisable to hold the firemen responsible for such oversight. The article states that the fireman has a great deal of spare time away from the scoop; it also states that any fireman who "*knows enough to lie*" can escape the consequence of this most *flagrant heedlessness* by simply stating that he was throwing in coal at the time of the engineer's oversight. Now let us moralize. In the first place, what right has the fireman to share the responsibility of the engineer when he is only serving an apprenticeship? If you ask an engineer why he gets so much more pay than his fireman, he will say, "it is not the work we do; it is the responsibility that rests upon us." Well, now, we will take half of that responsibility and place it upon the fireman. Do you think the engineer would be willing to have a portion of his pay also placed on the fireman? As to the fireman having so much spare time away from the scoop, I will cite one instance from my own knowledge. There is a run on this division that is forty-four miles round trip; the train is generally composed of from sixty-five to seventy loaded cars, each way, and the round trip is made in about three hours. We are allowed at the rate of four pounds of coal to the car per mile, which, for seventy cars each way, or one hundred and forty cars, the round trip, would be 12,320 pounds of coal, all to be shoveled in three hours, so you can see how much spare time the fireman has away from the scoop. I do not think it necessary to make it compulsory for the fireman to watch for danger, for self-preservation teaches him that much, even if he did not "*know enough to lie* out of it," for it is a glorious and well-known fact that the time has long gone by when the firemen were supposed to be made out of wood. Do they, the engineers, offer this suggestion only because "misery likes company," or is this their idea of federation?

Yours fraternally,

Division A.

[The point is well made that if responsibilities are to be equally shared, pay should be equalized. The Railroad Commissioners of New York, in deciding that the fireman are not responsible for the neglect of duties on the part of engineers, decided wisely, and the case cited, in which a fireman is required to shovel into a fire-box six tons of coal in three hours, emphasizes the wisdom and justice of the New York Commissioners and really leaves nothing more to be said upon the subject.—ED. MAGAZINE.]

Personals.

On June 26, Bro. Geo. A. March, member of San Diego Lodge, No. 90, was married to Miss Lydia Leveidge. The *Magazine* tenders hearty congratulations.

W. F. VANARSDALE, of Fairmount Lodge, No. 333, recently led to the altar Miss Mame Brudner, an accomplished young lady of Tullytown, Pa. All the members extend their hearty congratulations.

LAWRENCE DONEHUE, Secretary of Atlantic Lodge, No. 291, writes to say that the members of Atlantic Lodge have extended congratulations to Geo. W. Bruno, upon the arrival, at his home, of a ten pound baby boy. The *Magazine* joins the procession.

JAMES WILLIAM TERRELL, of Great Western Lodge, No. 24, was united in marriage, June 20th, to Miss Ann Mary Hixon, daughter of Mr. and Mrs. Armanus J. Hixon, of Parsons, Kansas. Most cordially does the *Magazine* felicitate the happy couple and wish them a happy life voyage.

STEVE DAVIS, one of the most popular members of Taylor Lodge, No. 175, was married May 22d, to Miss Cummings, of Newark, O. We happened to be in that vicinity at the time and helped to smoke a box of excellent cigars to the health and happiness of Steve and his accomplished bride.

JOHN BURNS, one of the active members of Gate City Lodge, No. 93, of Keokuk, Iowa, was married on May 26th, to Miss Mary McCarty, a beautiful and accomplished young lady of the Gate City. The members of Gate City Lodge wish Bro. Burns the largest share of success, and in this the *Magazine* most heartily joins.

It is most gratifying to know that Past Grand Master, Frank W. Arnold, has been elected Secretary of the Columbus, Ohio, Water Works Company—a responsible, and we are glad to learn, a lucrative position. Brother Arnold has every required qualification for the position, and his hosts of friends in the Order, of which he is one of its most distinguished members, will be glad to hear of his good fortune.

WE are glad to announce that Bro. J. D. Franklin, of Fort Pickering Lodge, No. 206, has been promoted and has taken his place on the right-hand side of the cab. His first trip at the throttle was on the pay car, May 13th, and he is now running a work train, and for his efficiency has been highly complimented by General and Division Road Masters, as also on the success of his first trip. We are told that promotions on the K. C., M. & B. R. R. have been dull of late, but an improvement is promised—all of which is agreeable information.

WM. T. FIELD, Master of Custer Lodge, No. 191, has been elected a delegate to the Montana Constitutional Convention, to be held at Helena, July 4th, 1889, to draft a constitution preliminary to the admission of the Territory into the Union. The election of Bro. Field to the important position is a high compliment to him personally and the Brotherhood of which he is an honored and active member feels justly proud of his success. The organic law of Montana should make it impossible for trusts and combinations which prey upon the weak to get a foothold in that young State.

THE Schenectady Locomotive Works, Schenectady, N. Y., are building three passenger engines, with 18 by 24 inch cylinders, fifteen mogul freight engines, and seven six-wheel switching engines, for the Lake Shore & Michigan Southern road.

Correspondence must in all cases be brief and to the point.

Subscriptions must begin with the January, April, July or October number and expire with the year.

Changes of Address of subscribers should be reported to us promptly to insure the safe delivery of the book.

Subscribers failing to receive their Magazine will please notify us, giving name and location of Agent to whom they subscribed.

Matter for Publication should be written on one side of the paper only, in a clear, legible hand, and all letters relating to the Magazine should be directed to

LOCOMOTIVE FIREMEN'S MAGAZINE,
TERRE HAUTE, INDIANA.

JULY, 1889.

THE Order of Railway Conductors paid insurance policies during the last fiscal year amounting to \$145,000.

THE railroads of the United States will want for the current year, about 200,000 ties, which is a strong argument in favor of tree planting.

A LITERARY gentleman remarked that he never read the Mechanical Department of the *Magazine* because it was "too cabalistic for him." He seemed to be Vulcanized, and entirely indifferent to hammer-blows.

THE New York *Times* is of the opinion that workingmen should favor prison labor, so that convicts may have good trades when they get out of limbo.

A GYPSY long ago informed the emperor of Russia, that he would die in his forty-sixth year. He is now forty-five, and recent events indicate that the Gypsy was on familiar terms with Fate.

JAY GOULD's daughter, Nellie, is now said to be worth not less than \$6,000,000. She inherits about all of her mother's wealth, and her indulgent daddy occasionally, as the mood takes him, presents her with such trifles as a hundred thousand or two.

SEVENTY-FIVE Pullman car builders went out on a strike early in April. Pullman is several times a millionaire, and to read of the town one would think it an earthly paradise. Still mechanics have their wages reduced to a point where they say it does not afford them a living.

QUEEN PIA, of Portugal, is in the habit of ordering two or three hundred dresses during the season. Twenty at a clip, with bonnets, gloves, etc., to match, is her style. There is nothing mean about the Porter gal, and she knows how to feather her nest by plucking the Porter guse.

IT is stated that a mammoth coke enterprise has been organized in Pennsylvania, in which Pittsburg and Philadelphia parties have invested \$1,000,000, and at the same time news comes that a big strike is threatened in the Connorsville Coke District, owing to the grinding oppressions of proprietors.

THE *Switchmen's Journal* for June, in speaking of the benevolent features of the Order of which it is the organ, gives the figures showing that Lodge No. 1, since March, 1885, has paid out in benefits, other than total disability and death benefits, which are paid by the Grand Lodge, the sum of \$16,615. These figures answer the question, "What good is your association?"

ON April 14th a freight train was wrecked on the Cairo Short Line, near Belleville, Ill. While passing over the Walnut Valley Co.'s coal mines, the ground gave way and suddenly sunk from six to eight feet, completely wrecking the train. The engineer and fireman jumped and escaped with slight damage, but the brakemen were caught in the wreck and seriously, if not fatally, injured.

THE *Railroad Gazette* of May 3d reports for the month of March 101 railroad accidents, classified as follows: Collisions, 28; derailments, 39; miscellaneous 4. Forty-four persons were killed and 104 injured; total killed and injured, 148. If this rate is maintained for twelve months, we shall have sum totals as follows: Killed, 528; wounded, 1,776. Total, 2,304.

THE *Railway Section Foreman*, in its May issue, refers to Mr. James Sweeney, of St. Louis, as follows:

To show our readers how much Mr. Sweeney has done for the Brotherhood and the Journal, we will state, first, that he never lifted his hand to help the paper, or never subscribed himself. Second: He never joined the Brotherhood until last fall, and he never did one single act to help build it up or improve it, but has, ever since joining, been a great disturbing factor in its progress. Instead of trying to improve the Order and better its condition he has been a constant fault-finder and a determined disruptionist.

Notwithstanding all this, the *Foreman* seems to be getting on exceedingly well. Opposition is not always an unmixed evil. It tests staying qualities, and develops many qualities of head and heart which challenge admiration.

FEDERATION.

Three Orders of Railway Employees Federate. Viz.:
The Brotherhood of Locomotive Firemen, the
Brotherhood of Railroad Brakemen,
and the Switchmen's Mutual
Aid Association.

THE LONG HOPED FOR MOVEMENT CONSUMMATED
AT CHICAGO, ILL., JUNE 6, 1889.

The Meeting of the Grand Officers of the Fed-
erating Brotherhoods Harmonious, and
Their Mission Accomplished.

A Constitution Adopted Creating a New
Order with the Title of—

THE SUPREME COUNCIL OF THE UNITED ORDERS
OF RAILWAY EMPLOYEES.

In furnishing the readers of the *Magazine* with a summary of the proceedings of the meeting of delegates, representing three Orders of railway employes, held in the city of Chicago, Ill., commencing June 3d, 1889, we deem it appropriate to refer to the fact that as early as February, 1887, the *Firemen's Magazine* referred to "federation" as the hope of workmen of the country, we refer to the fact here and now, because we desire to have it understood, that while the C., B. & Q. strike brought into the boldest possible prominence the importance and necessity of federation, it did not suggest such action on the part of workmen to the *Magazine*. We said—"federation is not impracticable. On the contrary, federation is feasible, and if labor is ever to reach the goal of equality with capital in shaping policies, in the assertion of prerogatives, it will have to federate." * * * "No greater service could be done for society, for the welfare of all, than for thoughtful men to devise plans whereby labor organizations could be brought into a grand national federation." At the time these expressions were printed, the C., B. & Q. strike was not thought of, but when it did come, "as waves come when navies are stranded," it served as a convincing argument in favor of federation, and the logic of facts and the logic of events finally, and at a much earlier date than was anticipated, culminated in the

FEDERATION

of the three orders of railroad employes, viz.:

THE BROTHERHOOD OF LOCOMOTIVE FIREMEN,
THE BROTHERHOOD OF RAILROAD BRAKEMEN,
AND THE
SWITCHMEN'S MUTUAL AID ASSOCIATION.

The great strike on the C., B. & Q. had but just begun to develop the staying qualities of the strikers and the corporation when

this *Magazine* put upon record its views relating to "federation, the lesson of the great strike" and among other things, said: * * * "Viewing the subject from such standpoints, we venture the prediction that the day is near at hand when the Brotherhoods of railroad employes will federate for mutual protection." * * * "Federation means victory for the right, and the great strike on the C., B. & Q., has brought its necessity into such bold relief that its advocacy becomes a duty, and its consummation will be fraught with incalculable blessings, not only to employes, but to employers, to society and to the whole country."

During all the dreary days and months of the strike on the C., B. & Q., days of hopes, and doubts, and fears, when money flowed in from a thousand sources, and the hearts of all Brotherhood workmen beat responsive to duty, and sacrifices were endured with a heroism as sublime as ever embellished the pages of fiction or fact, thoughtful men saw the weak link in the chain of circumstances which was the want of federation on the part of all the Brotherhoods of railroad employes on the system. As a consequence, federation became the theme the one important subject of discussion in the lodges of railroad employes. It reached beyond the boundaries of the organizations, and was discussed in the press of the country, and the more it was discussed, the more convincing became the conclusion that federation was the one thing needful to achieve victory for the right.

In the month of September, 1888, the

BROTHERHOOD OF LOCOMOTIVE FIREMEN

at its first biennial session, held at Atlanta, Ga., took action upon the subject and decided to federate with such other organizations of railroad employes as should arrive at the conclusion that federation was required to emancipate them from oppression and secure to them their rights as men and citizens.

Fortunately the

SWITCHMEN'S MUTUAL AID ASSOCIATION

was then in session in the city of St. Louis, and was at once informed of the action of the Brotherhood of Locomotive Firemen. Promptly, without delay, the Switchmen's Association came into line under the banner of federation. Its bugle blast was grand. Doubts and fears were given to the winds. Reason triumphed. There was conviction and the courage of conviction. Misgivings went down before the conquering power of facts, and the outlook was such as to dispel despondency. In the month of October, 1888, the

BROTHERHOOD OF RAILROAD BRAKEMEN

held its annual convention in the city of Columbus, Ohio. It is needless to say that all eyes were turned towards that city, and

the question was everywhere asked, what will the Brakemen do? The country did not have long to wait. In fact, it never had been a debatable question, and soon the wires flashed the tidings. "The Brakemen have declared in favor of federation." Then there were three great Orders in line, shoulder to shoulder, knee to knee, hand in hand, they had decided to form a national and an international alliance, the fruits of which they hoped and had a right to believe, would be fruitful. This done, the discussion went forward, and the agitation strengthened conviction that federation was in the line of emancipation.

The subject having been thoroughly analyzed, the Brotherhood of Locomotive Firemen issued the following letter to the organizations of Switchmen and Brakemen:

GRAND LODGE OF THE
BROTHERHOOD OF LOCOMOTIVE FIREMEN,
TERRE HAUTE, IND., March 18, 1889.

DEAR SIRS AND BROTHERS:—The subject of federation having been brought to the attention of our respective organizations in convention, and having been passed upon favorably, and all matters involved, referred to the Grand Officers of each, for further deliberation and action, we respectfully submit the following propositions:

1st. That the time has arrived when the representatives of the Brotherhood of Railroad Brakemen, the representatives of the Switchmen's Mutual Aid Association, and the representatives of the Brotherhood of Locomotive Firemen, as designated by the conventions of the respective Orders, should meet for consultation and to perfect and put into practical operation, the *alliance* contemplated by the action of our respective Orders.

2d. We respectfully suggest that the time for the meeting of the representatives of the Orders named, and for the purpose set forth, be the first Monday in June, 1889, and that the city of Chicago be selected as the place for holding the conference.

3d. We suggest that the representatives of the Orders prepare a plan of federation to be submitted and discussed at the conference, as this will, we believe, greatly facilitate action, and enable the representatives of the Orders to arrive at wise and judicious conclusions.

The foregoing suggestions are respectfully submitted for your consideration. With regard to the time and place designated, we hope they will suit your convenience, as we are desirous of doing all in our power to facilitate deliberations, so that final conclusions may be reached with as little delay as possible.

In conclusion permit us to say, that our respective Orders have conferred upon us great power, which, if wisely used will not only redound to the glory of our Orders, but will be fraught with untold blessings to organized labor throughout the land. Our Orders fortunately are the *avant courier* of a new departure, which, if wisely inaugurated, is to lead to victories in the interest of the rights of labor which the most sanguine of us find it difficult to estimate. That we can meet reasonable expectations we feel assured and that we shall set an example of equality and mutual respect and confidence, we do not doubt.

Anticipating, at the earliest possible date, your reply to this communication, with such suggestions as you may wish to make, we subscribe ourselves in the bonds of federation, most respectfully and fraternally, your friends,

F. P. SARGENT, Grand Master.
J. J. HANNAHAN, Vice Grand Master.
EUGENE V. DEBS, Grand Sec'y and Treas.

The response to the letter was favorable. The time and place were agreed upon, and as a consequence the official representatives of the federating Orders assembled in the city of Chicago, on the first Monday in June, 1889, to formulate a plan of

FEDERATION.

The representatives of the Brotherhood of Locomotive Firemen, were:

F. P. Sargent, Grand Master.
J. J. Hannahan, Vice Grand Master.
E. V. Debs, Grand Secretary and Treasurer.

The representatives of the Switchmen's Mutual Aid Association, were:

Frank Sweeney, Grand Master.
John Downey, Vice Grand Master.

John A. Hall, Grand Organizer and Instructor.

The representatives of the Brotherhood of Railroad Brakemen, were:

S. E. Wilkinson, Grand Master.
W. G. Edens, Vice Grand Master.
Ed. F. O'Shea, Grand Secretary and Treasurer.

ORGANIZATION.

The representatives of the Orders having assembled, they were called to order by S. E. Wilkinson, whereupon an organization was effected by the election of

F. P. Sargent, Permanent President.
E. V. Debs, Permanent Secretary, and
J. A. Hall, } Associate Secretaries.
Ed. F. O'Shea, }

The organization having been effected, a committee of three was appointed, representing the three federating Orders, to formulate a plan of federation. The committee was constituted as follows:

S. E. Wilkinson, J. A. Hall and E. V. Debs.
J. A. Hall was made Chairman of the committee, and E. V. Debs, Secretary. The committee promptly entered upon the task of formulating

A CONSTITUTION

for the government of the Orders in their federated capacity. After two days of exhaustive work, the delegates were reconvened and the constitution prepared by the committee was submitted for final action. Every section, and paragraph was critically considered, and when a vote was taken the constitution, as submitted, with a few unimportant alterations, was unanimously adopted and subscribed to, on Thursday, June 6th, 1889. The constitution thus adopted confers upon the new Order, which it creates the following title:

THE SUPREME COUNCIL OF THE UNITED ORDERS
OF RAILWAY EMPLOYÉS.

In connection with the proceedings of the Supreme Council, the following official letter was prepared and ordered sent to all the local Lodges of the federating orders:

To all Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby

notified that at a meeting of the Representatives of the three Orders above named, held in the city of Chicago, Ill., beginning June 31, 1889, a plan of federation was formulated and agreed upon, the same being now in full force and effect.

The federated board, having jurisdiction of the three organizations, is known as the Supreme Council of the United Orders of Railway Employés, and its acts and decisions upon all matters of grievance are final.

A Constitution and Common Seal have been adopted.

The Supreme Council takes occasion to warn all members of the several organizations embraced in its jurisdiction against the so-called Voluntary Relief Associations, which are being organized upon some of the principal railways. The purpose of such Relief Associations is apparent to the most casual observer. The methods employed to capture employés is like the alluring song of the spider to the fly. Of course it is made to appear that the authors of the movement are animated by a purely philanthropic spirit, that the high purpose is to provide for "our dear employés," who must be cared for on the same principle that the owners of plantations, in the days of chattel slavery, provided for their slaves.

Brothers, the simple purpose of such movements, stripped of their alluring embellishments, is to undermine and ultimately destroy every organization of railway employés. At first the system is voluntary, so as to make the bait more tempting, and the scheme more plausible; but, as soon as a sufficient number of the employés have been taken in under the voluntary arrangement, penalties more or less direct will be attached to the non-participants, and later on it will be found that the so-called voluntary plan is compulsory, and that the men have placed themselves in a position to be the victims of the despotism of the corporation.

We are persuaded that the time has not come for railroad employés to abdicate their manhood, sacrifice their self-respect and strip themselves naked of independence. We are inclined to the opinion that railroad employés have an ambition above the plane contemplated by voluntary relief associations, which would reduce them to the level of serfs and constitute them a part of the rolling stock of the corporation. We take the position that a corporation is simply required to treat its employés fairly, and pay them fair wages for fair work. If this is done, the employés can provide for their own relief in their own way; they can employ their own doctors and otherwise administer their own affairs, without becoming the wards of the corporation or being subjected to humiliations of surveillance, under the guise of solicitude for their welfare.

Brethren, we call your attention to this matter for your own good. We would warn you against what we believe to be an organized effort to destroy your organization, thereby depriving you of the protection you now enjoy, and which, if successful, will place you at the mercy of the corporation.

Now, that the organizations of brakemen, switchmen and firemen have federated, the supreme desire is unity and harmony all along the line. Let local discontent and factional feeling disappear. Let the motto be, "Each for all and all for each."

The step we have taken has far reaching significance. It practically unites the three organizations into one body, for mutual protection. We appeal to each member who is enlisted under the banner of federation to be a true soldier in the cause. Let the past with its differences and prejudices be forgotten. A new era has dawned and the future is rich with promise. Hand in hand we shall march forward together, animated with high ambitions and noble purposes. Our sympathies for each other, born of mutual peril and mutual privations, should cement us together as one Brotherhood, and to be a true and devoted member of that Brotherhood should be the ambition of each and all who hope for the

triumph of labor over corporate oppression and injustice.

We salute, you, brethren, in behalf of the Supreme Council of the United Orders of Railway Employés, and trusting that your hearts are attuned, as are our own, to the harbinging notes of victory, we are,

Yours faithfully,
S. E. WILKINSON, JOHN A. HALL,
W. G. EDENS, F. P. SARGENT,
ED. F. O'SHEA, J. J. HANNAHAN,
FRANK SWEENEY, EUGENE V. DEBS,
JOHN DOWNEY, Supreme Council U. O. R. E.

Immediately following the adoption of the constitution, the representatives of the federating Orders, proceeded to the election of officers for the Supreme Council, resulting as follows:

F. P. Sargent, President.

Frank Sweeney, Vice President.

Ed. F. O'Shea, Secretary and Treasurer, who are to hold office one year, or, until their successors are elected and qualified.

THE SUPREME COUNCIL

meets annually at Chicago, on the 3d Monday in June, and the constitution makes provisions for special meetings as exigencies may arise.

The constitution makes provisions for admitting

OTHER ORGANIZATIONS

of railway employés, which the Supreme Council will welcome when application is made, and it is believed that other organizations will, at no distant day, see the reasonableness of the movement and unite their power and influence with the federated Orders.

At present, and as it has ever been, the weak are at the mercy of the strong. Power is only overcome by power. In theory, the wrong is always weak, the right always strong. The saying is as old as the hills, that "Truth is mighty and will prevail," but the history of the world shows conclusively that Error has stubbornly resisted Truth, and by federating its forces, has scored innumerable victories.

The time has come for Truth to federate its forces and say the onward march of Error. The firemen, the switchmen and the brakemen have federated to secure and to maintain the right. The right wrongs no man. Its triumph is alike a benediction to all, to the employé, to the employers, to society, to the state, to humanity.

The Supreme Council of the federated Orders of railway employés sets up no claim to infallibility. It believes its constitution fairly meets demands, but it may be amended as time and circumstances make known requirements.

With this, for the present, it must be content. Every provision bears the impress of an earnest desire for the betterment of conditions, the elevation of labor, in which, say what we will, the hopes of humanity (croakings to the contrary) center.

A RECEIVER'S EMBEZZLEMENT.

IN the latter part of May we were required to attend the trial of John Adkins, late Receiver of Taylor Lodge, No. 175, at Newark, Ohio, indicted for embezzling the funds of the Lodge. The trial occupied ten days, at the conclusion of which the jury rendered a verdict of "not guilty" on the Grand Lodge indictment. This is a mere legal technicality and Adkins is still held to answer an indictment upon the same charge made by Taylor Lodge. The *Magazine* is not disposed to pursue Adkins, who still lingers in jail, though there is no doubt of his guilt, and should he be finally acquitted it will be because of the careless manner in which the accounts of the Lodge were kept, and for which there can be offered no excuse. The methods prescribed for keeping accounts are simple and designed for clearness and accuracy, and when followed, errors are reduced to the minimum and are readily found and corrected. The case of Adkins should serve as a warning to all subordinate Lodges. Loose account keeping is certain to lead to troubles of the most serious character and are well calculated to dishearten and demoralize a Lodge.

The embezzlement of the funds of a Lodge, all things considered, is a crime of exceptional depravity. The man who is guilty of it is without one redeeming trait. He steals from the sick, from the unfortunate, from widows and orphans. He may not be totally depraved, but he is so near it that only a miracle could save him. The remedy for such evils is found and found only in frequent examinations of the finances of the Lodge, and such examinations should be of the most searching character. The custodian of the funds of the Lodge should be the first to invite such investigations, and if he winces, the more close and thorough should be the scrutiny.

* *

A. D., 1889, marks one hundred years since George Washington was inaugurated President of the United States, and as a consequence we are hearing a great deal relating to the ancestry, character and education of the men who have held the distinguished position. It is said that "VanBuren is the only President whose ancestry is not traceable to Great Britain. His parents were both Dutch. Monroe, Grant and Hayes were Scotch; Jackson, Polk, Buchanan and Arthur, Scotch-Irish, and all the others of direct English descent. Both Harrison and Hayes have clearly defined recorded history for six generations, while Cleveland and the younger Adams' count four: but there are some of the Presidents of whom historians have found it difficult to say who were there grandfathers. In religion, the Presbyterians claim five; the Episcopalians, nine; the

Methodists, four; the Congregationalists, two, and the Reformed Dutch and Disciples, one each. Jefferson was an atheist." Such facts pretty effectually knock Knownothingism in the head, since all hands, at no very remote date, were immigrants, and as certainly as those who came later, and are still coming, sought a new country for their own if not for their country's good. But the chronicles are suggestive of another and a still better line of thought. It is said that "the parents of Jackson, Fillmore, Buchanan, Lincoln, Johnson, Grant and Garfield, were in humble circumstances. Johnson was taught the "three R's" while he was courting his wife. Jackson, in early life, was exceedingly ignorant. Washington was without college experience, and the schooling of Lincoln was of the most limited and original character. Fifteen of the Presidents, however were graduates of institutions of learning, three being credited to William and Mary, of Virginia, two to Harvard, and one each to Hampden-Sidney, Princeton, University of North Carolina, Bowdoin, Dickinson, West Point, Kenyon, Williams, Union and Miami." Such facts triumphantly establish the truth of Burns' philosophy—

"The work is but the guinea's stamp;
A man's a man for a' that."

And it brings into the boldest possible prominence the insufferable idiocy of American aristocracy based upon birth, or anything else outside of manliness. Lincoln splitting rails, Johnson handling his goose, Grant working in a tan yard, Garfield driving a mule on tow-path, how better they than a fireman with his pick and scoop? The poor boy who is ambitious, industrious and studious is certain to rise, and fortunately there is always room on top.

* *

It is reported from Warsaw that the newly-appointed Russian Minister of Communication has ordered all the railroad managers in Poland to send him lists of those employes who are Catholics or Jews. Since the accident at Borki, which nearly cost the Czar his life, all employes on the Russian railroads are required to belong to the Orthodox Church. That's it. Now let us Russianize the American railways according to Mr. John Livingston's idea, and it will then be proper to institute inquiries in this country as to the religious belief of employes.—*Railway Service Gazette*.

But first we must establish a State Church, define the metes and bounds of Orthodoxy, what shall constitute heterodoxy, etc. It might be well to decide if there be a personal devil. To "Russianize the American railways" we must have a Czar, which can't be had under the Inter-State Commission act. As it does not appear feasible just now to Russianize American railways, it occurs to us that it is best to go forward with organization and federation. They are American ideas and winning cards.

PRIZES FOR 1888 AWARDED.

In the *Magazine* for January, 1888, the Grand Lodge made the following announcement:

The (Grand Lodge of the Brotherhood of Locomotive Firemen has decided to offer the following Prizes to Agents, and other persons, securing the best lists of subscribers to the Locomotive Firemen's Magazine for 1888, viz.:

First Prize.—To the Lodge securing the largest number of subscribers, one set (4) Officers' Upholstered Chairs, finely finished. (This includes a chair each for the Master, Vice Master, Past Master and Chaplain.)

Second Prize.—To the Lodge securing the largest number of subscribers in proportion to membership, a handsome ornamented Banner, suitably inscribed.

Third Prize.—To the Lodge organized after January 1st, 1888, securing the largest number of subscribers, a handsome Altar, suitably inscribed.

Fourth Prize.—To the Ladies' Society, B. of L. F., ordering the largest number of subscriptions provided not less than fifty are ordered,) through its authorized Agent, a Parlor Organ.

Fifth Prize.—To the Lady (open to all) securing the largest number of subscribers, (provided not less than twenty-five are ordered,) a handsome Gold Watch.

Sixth Prize.—To the Gentleman (exclusive of regular agents,) securing the largest number of subscribers (provided not less than twenty-five are secured,) a set of Chambers' Encyclopedia.

Seventh Prize.—To the Members' Wife or Daughter, securing the largest number of subscribers, (provided not less than twenty-five are secured,) a first-class Sewing Machine.

Eighth Prize.—To the Members' Son securing the largest number of subscribers, (provided not

less than twenty-five are secured,) a Silver Watch.

MISCELLANEOUS PRIZES FOR REGULAR AGENTS ONLY.

The following Prizes will be awarded to the *Magazine* Agents (regardless of membership of their Lodges,) who secure the largest lists of subscribers:

PRIZES:

First Prize	Gold Watch
Second Prize	Diamond Shirt Stud
Third Prize	18 Karat Gold Watch Chain
Fourth Prize	Monogram Gold Ring
Fifth Prize	Monogram Gold Watch Charm
Sixth Prize	Forney's, Sinclair's and Alexander's Books on the Locomotive.
Seventh Prize	Nickel-Plated Scoop
Eighth Prize	Nickel-Plated Cab Light
Ninth Prize	Nickel-Plated Torch
Tenth Prize	Gold Badge B. of L. F.

The time for awarding the prizes has been postponed for proper reasons, but the awards are now made in strict conformity to the foregoing announcement, and the prizes ought to be esteemed far above their intrinsic value, because they bear testimony of efforts to increase the circulation of the organ of the Order, which, whatever else may be said of it, has sought, by every means at its command, to increase the growth and influence of the Brotherhood. The award of prizes for 1888, was as follows, (there being no competitors for the 4th, 5th, 7th and 8th prizes for Lodges,) viz.:

PRIZE LIST FOR LODGES.

No. of Prize.	Character of Prize.	Name of Lodge.	No. of Lodge.	Name of Agent.	Remarks.	No. Subscriber.
1st . . .	Set of Officers' Chairs	Justin Time	149	Peter Witzel	Largest number of Subscribers	208 ¹ / ₂
2d . . .	Banner	Re-Echo . .	195	James Duffey	Membership	138.
3d . . .	Altar	Mutual . . .	314	I. N. Lancaster	Organization after January, 1888	17 ¹ / ₄
6th . . .	Set Chambers' Encyclopedia .	Vigo	16	W. H. Crise	Largest number exclusive of agent . . .	65.

PRIZE LIST FOR AGENTS.

No. of Prize.	Character of Prize.	Name of Lodge.	No. of Lodge.	Name of Agent.	Remarks.	No. Subscriber.
1st . . .	Gold Watch	Justin Time	149	Peter Witzel	280 ¹ / ₂
2d . . .	Diamond Shirt Stud	Mo. Valley .	254	H. F. Reimoebl	208.
3d . . .	18-Karat Gold Watch Chain .	Re-Echo . .	195	James Duffey	138.
4th . . .	Monogram Gold Ring	New Era . .	76	Fred. Whitbread	131.
5th . . .	Monogram Watch Chain . . .	Vigo	16	Ed. Bundy	114.
6th . . .	Book on Locomotive—Forney's, Sinclair's and Alexander's	Salt Lake .	178	Arthur Roberts	108.
7th . . .	Nickel-Plated Scoop	Gold Range	341	John Simons.	104 ³ / ₈
8th . . .	Nickel-Plated Cab Lamp . . .	Prospect . .	162	Frank Roderick	100.
9th . . .	Nickel-Plated Torch	Ortole . . .	214	Frank Gibbons	91.
10th . .	Gold Badge B. of L. F . . .	Mt. Hood .	167	H. C. Smith	85.

The foregoing tells the story of those who won the prizes, and comments are not required, but, when again prizes are offered, those who have done well, we are confident will do better, and in the absence of prizes, for the good of the Order, the *Magazine* ought to enlist the best efforts of every member to increase its circulation.

One of the difficulties that beset locomotive engineers and firemen is that from impure feed-water, resulting in scale formations and corrosion. A novel and fair offer covering this subject is made in our advertising columns under the head of "Notice to Firemen," which every one should read and consider.

THE MILWAUKEE UNION MEETING.

On Sunday, May 19th, the Brotherhood of Locomotive Firemen held a large Union Meeting in the city of Milwaukee. The *Milwaukee Sentinel* of the 20th said:

"The Brotherhood of Locomotive Firemen held an open meeting in the large hall on the third floor of the Public Library building, on Grand avenue, last evening. The meeting was attended by about 400 firemen and 200 to 300 persons, embracing men in various departments of railroad employment, citizens and ladies. Delegates were present from Lodges of the Brotherhood throughout Wisconsin and from various points in Minnesota, Dakota, Iowa, Illinois, Indiana and Michigan. The object of the meeting was to discuss the purposes of the organization, with a view to giving the general public some knowledge of its intentions, and the objects it seeks to accomplish."

The private meeting of the Order, for the transaction of Brotherhood business, was held Sunday morning, but the evening meeting was for the public and was called to order by C. S. McAuliffe, Receiver of Guiding Star Lodge, No. 130, who introduced E. E. Chapin, Esq., a prominent lawyer of the city, who was asked to preside during the exercises of the evening. In taking the chair Mr. Chapin made a ringing speech, and among other things said:

He held that while there were many things in the organization of skilled labor which the general public did not understand, yet an organization whose Constitution and By-Laws contained such sentiments as did those of the Brotherhood of Locomotive Firemen, could not well be otherwise than worthy of high respect. The fundamental principles of this Order were protection, charity, sobriety, and industry, which he regarded as four of the grandest words in the English language. The work of locomotive firemen is so hazardous, he said, that a majority of mankind was too cowardly to engage in it, and he held that it was right and just for skilled labor to organize and stand together for mutual protection in the performance of duty and that the prime objects of this organization were not the engendering of strife and disruption, but exactly the reverse—the alleviation of suffering, the proper education of its members, the production of a better class of labor and the prevention of strife, and an organization based upon such principles was worthy of the confidence and encouragement of all worthy persons in every station in life. He believed that ignorance regarding the purposes of such organizations on the part of the people was the cause of all opposition to them, and rejoiced to see them hold open meetings to discuss their principles, that the people might thereby gain a proper knowledge of them. He pitched into organized capital that seeks to breed dissension in the ranks of organized labor with a big broad ax of contempt, and shoveled big scoopsful of odium upon the so-called detectives, who sell their services to corporations for the purpose of getting up strife and wars between different organizations, lest they become too strong and too firmly federated to be controlled by organized capital. The speaker closed his remarks with a hearty welcome to the visiting firemen to the city, and was heartily applauded.

Bro. Jerry Doherty, member of S. S. Merrill Lodge, No. 188, responded felicitously to the words of welcome, and indorsed the eloquent words of the presiding officer, who had so happily referred to the noble purposes of the Brotherhood.

The remarks of Bro. Doherty were followed by Senator Kroeger, of Milwaukee, who said:

I am highly in favor of the intelligent and thorough organization of skilled laboring men. It was no new thing, but dated back to the fifteenth century, when, in Holland, all branches of skilled labor were thoroughly organized and worked together for mutual protection and for protection of the government. He saw, with pleasure, a better feeling existing, on the part of the people, towards organized wage workers than existed a few years ago, and counseled against strikes, except as a last resort, when all other means of maintaining harmony had failed. He denounced trusts as the greatest outrage of the age perpetrated by combinations of capital upon the great mass of people of this country, and as well calculated to bring such encroachments upon laboring classes as to cause justifiable disruptions between capital and labor.

At the conclusion of Senator Kroeger's remarks, Brother Frank P. Sargent, Grand Master of the B. of L. F., was introduced, and is reported as follows:

In addressing the assemblage as brothers, he wished it understood that he included, in that expression, all organizations whose objects were the moral, mental and physical improvement of the laboring classes, the alleviation of human suffering, and maintaining of amicable relations between capital and labor. He said the object of this meeting was to give the people an intelligent idea of the purposes of the organization. The common belief that organization was maintained for the purpose of strikes and causing trouble between capital and labor did great injustice to the Order.

Mr. Sargent said the organization dated from November, 1873, soon after the Sputen Duval disaster on the Erie road in which a fireman was killed who left a widow and two children in destitute circumstances. The superintendent of the road sent another fireman to inform the family of the death of the husband and father. The messenger's heart was touched by the helpless condition in which he found the family; he raised money for their relief and then set to work and effected the organization, with the prime object of caring for the widows and orphans of firemen who lost their lives in railroad accidents. He related many touching cases in which the organization had carried comfort to the destitute. As it grew in years other worthy purposes obtained places in it and by its influence and teachings the character of the locomotive firemen of the country had been vastly changed. Fifteen years ago they were, as a class, intemperate and untrustworthy. To-day they are, as a class, temperate, careful, conscientious men, the owners of homes and the heads of families, and the class of service they render was of a vastly higher character. As in every other occupation, there were men among them, who became members of the Order, who did not obey its dictates, but the Order should not be judged by the course of the few. The worthy far outnumbered the unworthy and all were being improved. When railroad managers and the public understood the purposes of the Order, they would no longer look upon it with disfavor.

The meeting was one of the most important that has been held since the Atlanta convention, and the true Brotherhood spirit was exhibited, which could not fail of having a most salutary effect.

* * *

The Canadian Pacific is building 150 miles of track into Southwestern Manitoba to head off the Northern Pacific. The rivalry is entirely pacific.

FUNERAL ADDRESS.

The following funeral address was delivered at the burial of Bro. Geo. Knecht, by his former Pastor, the Rev. J. E. Freeman, A.B., now Pastor of the Reformed Church of the Good Shepherd, at Boyntown, Pa.:

Brothers, Parents and Friends:

Must I, for the first time since I left Weissport, stand here, where I have often stood, among my dear friends and acquaintances, under such trying circumstances?

Dear parents, I knew your son; children, I knew your brother; Order and Brotherhood of Locomotive Firemen, I knew your Brother. I know that the fraternal tie bound you together. As a mere boy, I knew George Knecht; he lived in my family for a year and a half.

Would it be necessary to have any witnesses, I would summon the tears of his Engineer, who said at the house of mourning, while he was weeping bitterly, "George was a good man. I will never get such a one." If I would need any other witnesses to prove his character as a man and his faithfulness as a father and friend I would call on you all present on this solemn occasion of mourning and bereavement.

He was a steady, sober young man. He was of industrious habits. Earnest and liberal in the church of his choice. Being a man of sturdy character and integrity, he was honest and trustworthy. He was a good workman, always ready and obedient.

He was your brother. He is gone; gone to that country from whose bourne no traveler has ever returned. But the Great Head Light shone on his path and track of life that he could enter his glorious destination. It is Jesus who is the light. His light is our life. He is the Head Light. We must be on the narrow track of eternal life. Here no broad gauge. That is the other road.

I know not the secrets of your Order, but let me point you to that secret which shall be made known in Heaven, "which eye hath not seen, nor ear heard, nor has it ever entered into the heart of man to conceive." This world is the ante-room. Here we may not see at all, perchance "through a glass darkly." In the Grand Lodge of Happiness we shall "see face to face" after we shall have passed the inner door. There we will learn all the secrets previously unseen, unheard, and unconceived. When found worthy these will be revealed.

Christ is the Inner Door and the Great Head Light. Run carefully around the curves of life. Not too fast. Slowly. Keep the throttle of life in the hand of faith, all ready for any emergency, so that when the last station of life is reached the Lord may receive you through the tunnel of the grave and pass you higher into the last degree of love and joy unspeakable, and full of glory.

It appears that the Legislature of Maryland has repealed the charter of the Baltimore & Ohio Relief Association, and now that railway system contemplates the formation of a new society to be known as the Relief Department of the Baltimore & Ohio. Against this new society the employes of the B. & O. are making a manly protest. They contend that it has "many objectionable features, such as medical examination before employment, limitation of age at which employment can be had, exorbitant monthly dues, small benefits to be received, and much red tape and circumlocution." The employes further assert that the company

having derived great gains from the association, is now demanding that the employes "sign a new contract containing many objectionable features" which they resolutely refuse to do. The purpose of all such Relief Associations on the part of railway corporations is chiefly to tie the employe to the road and thereby totally obliterate organizations of railway employes. The road assumes the right, under the rules of the Relief Association, to deduct dues from employes, to loan them money on mortgage, and thereby virtually own the homes of their men. The road supplies the members with medicine, physicians, hospitals, etc., precisely as was the case in old plantation times "down south," and the movement is predicated upon the hypothesis that railroad employes are incapable of taking care of themselves, and require an overseer. The Baltimore & Ohio men see this; they have been made to realize it, and at a meeting held in Chicago resolved to decline to enter into any contract of benefit or insurance with the B. & O. Railroad Company.

MR. CARROLL D. WRIGHT, Commissioner of Labor, has made an exhaustive report on the statistics of the laws relating to marriage and divorce in the United States from 1867 to 1886, inclusive. It is shown that during the period named there were granted in the United States 328,716 divorces. Illinois leads the column, having to her credit 36,072. Ohio comes next, with 26,367. Indiana stands third in the list, with 25,193. Only five states afford the means of showing with practical completeness the marriages celebrated during the period named. Connecticut reports 96,737, Massachusetts 308,195, Rhode Island 49,593, Ohio 544,572, Vermont 54,913, a total for the states named of 1,055,007. Accepting such data as the basis of calculation, the conclusion is warranted that for the twenty years ending 1886, there were 12,000,000 marriages in the United States.

We are under obligations to Burt E. Sione, Esq., Secretary of the National Steam Fitters' Association, for a copy of the hand-book of the association for 1889. The publication contains many well written articles upon subjects of importance to the members of the association, and to all who are interested in machinery operated by steam power. The motto of the association is "mutual protection, education and cooperation," and notwithstanding its first annual meeting was held in June, 1888, the association has developed strength and is rapidly growing in numbers and importance. The *Firemen's Magazine* wishes it continued growth and prosperity.

THE HARP OF TOM MOORE.

Read at the Scotch-Irish Congress, May 8, 1889,
Columbia, Tenn.

[The harp is now owned by George W. Childs, Philadelphia, and loaned by him to the Scotch-Irish Congress.]

The top of the morning to Ireland
And the Scotch-Irish Congress to-day!
All hearts respond at the banquet
When the harp of Tom Moore leads the way.
The bells of the Shandon are ringing
Their music from over the sea,
But sweeter the harp of her poet
In the mountains of old Tennessee.

The sons of the Shamrock and Thistle
Still cherish the visions of yore,
And the harp of old Tara awakens
Again to the voice of Tom Moore;
Each string, with memories sacred,
Is tuned to Liberty's key;
And the songs that float down the ages
Are always the songs of the free.

It stings of the "Exile of Erin,"
But her exiles are exiles no more,
For the Isle of Old Erin has drifted
Close under Columbia's shore.
"Where liberty is, is my country,"
Has guided her over the way,
And Columbia holds in her borders
The heart of old Ireland to day.

Manhattan and Plymouth and Jamestown
Can boast of their heritage true,
But Mecklenburg's fame is immortal
When we number the stars in the blue;
The Scotch-Irish Puritan Fathers
First drafted the words of the free,
And the speech of Virginia's Henry
Is the crown of Our Liberty's plea.

The sons and the grandsons of heroes
Who fought for freedom and right,
With joy hail the dawn of the morning—
"Mavourneen!" awake to the light!
The maidens of Lorne and Killarney
Are swelling the chorus to-day,
For true castles of Oban and Blarney
Are only just over the way.

Then welcome, a thrice hearty welcome,
To legendry, lyric and lore,
With a pledge and "Guld Hielan" welcome"
To the voice and the harp of Tom Moore;
A toast to the Shamrock and Thistle,
And sunshine both sides of the sea,
As Erin clasps hands o'er the ocean
With Columbia in fair Tennessee.

—Wallace Bruce.

THE READING.

The *Locomotive Engineer*, in a late issue, pays its respects to the Reading Railroad under the caption of "The Czar and His Serfs," in true American style. It says:

Both the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen have been complimented by the delivering up of the charters of all the divisions and lodges on the Reading Railroad. Men who will surrender every vestige of manhood and independence, and conduct their private business to suit the whims of such men as the Reading officials, can best serve any Order by getting out of it.

The Reading Railroad, from top to bottom, from first to last, from the men at the mahogany desks in the general office to the coal-pits, where half naked Huns toil from sun to sun for a pittance of sixty cents, is manned—in the main—by such things as these.

The Reading officials demand for their service

men who dare not look up and say they are free and independent men; to be sure there are a few who will, and who defy the autocrats who would disrobe them of their manhood; but the great majority are the kind of clay that fall down and lick the sweat off their master's belly, and then swear it is holy water. The service of the road shows it, their shops show it, their reputation shows it, and their business will show it.

We have not so far lost faith in human nature as to believe that people will continue to patronize a road conducted on such principles, by such excuses of men, under the orders of such slave-drivers as openly declare that they want no one in their employ except that they surrender soul and body to the service of the company.

These are not the first individuals invested with a little brief authority who have tried to make money by injustice, oppression or force, and by outraging every sense of right, justice, or humanity. Pirates used to do so, but they finally got to the end of the string. Public opinion, like the mills of the gods, grinds exceedingly slow—but it eventually gets there. In the case of the Reading it is long over-due, but it is thundering down grade—and the brakes are beyond control.

While we can hardly find language strong enough to condemn railroad officials who oppress the men under them for not conducting their private business to suit them (the officials), we have very little sympathy for the Reading men; they have not the requisite manly independence to make good Brotherhood men—or hardly good citizens. When the Knights of Labor trouble came on there, two years ago, the Engineers' Brotherhood offered themselves for service (with the approval of their officers), and became the tools with which the officers of the road knocked out the Knights; last year, when the "Q." trouble came on, the Reading Knights "got even," and the officers of the corporation, seeing that they could pit the one against the other, did so—and then fired them both.

By this process the Reading will be able to keep their men just where they want them, and, as we said in the first place, the Orders are to be complimented on getting rid of them so easily.

It is a cheering sign of the times when a publication like the *Locomotive Engineer*, of acknowledged ability, and with a rapidly increasing constituency, uses its pages and its power to properly advertise such a colossal fraud and devouring devil-fish as the Reading railroad. We invite the readers of the *Magazine* to read the article we reproduce from the pen of Editor Hill. It is in the right direction, and has the ring of pure coin.

REPORTS have it that the Inman steamer, "City of Paris," during her voyage terminating at New York, May 8, made the westward run in five days, twenty-three hours and seven minutes, being two hours and forty-eight minutes better than the best previous run, that of the "Etruria." This was the second trip of the "City of Paris." The greatest distance run in any one day was 511 miles. The run for each day was:

May 3	445 miles.
" 4	492 "
" 5	504 "
" 6	505 "
" 7	511 "
" 8	388 "

An average of something more than twenty miles an hour.

CHARLES LAPHEN.

The *New York World*, of May 15, contains the following special dispatch, dated Denver, Col., May 14:

With his body crushed and pinioned beneath his engine and his face so near the fire that it was blistered by the heat, the brave and heroic fireman, Charles Laphen, made his last will and testament. It is one of the most thrilling stories in the history of railroad accidents, and ranks with that of poor Ben Westlake, the Colorado engineer whose hand, though severed from the body, still held the lever.

Laphen was the fireman of a South Park freight train that was wrecked Monday near Bailey's Station, thirty-five miles from Denver. The train was composed of the engine and fourteen cars. A short distance above where the accident occurred a freight car was picked up, and, there being no switch, it had to be taken ahead of the engine.

Two brakemen, one of whom was Ben Hedges, were seated on this car as a lookout. A few moments later, when turning a short curve, a boulder, several tons in weight, was seen on the track. There was hardly time to signal, much less stop, the train. The engine and seven cars were thrown into the ditch. Under the engine was the mangled fireman, Charles Laphen, crushed to the ground beneath the terrible weight. He could neither move arm nor leg. Only his head was free from the debris.

The heat of the fire-box added to the terrible torture of the unfortunate man. It was impossible to rescue him, and he must slowly die in the presence of his friends, who were powerless to aid. It was suggested that water be thrown upon him, but that would not do. What with the intolerable heat he would be scalded to death.

Though slowly roasting to death Laphen did not lose his grit. "Boys," he said, "I know you can't do anything for me. I have a good constitution and may last a good while, but I am living longer than I want to, anyway."

Among the group of horrified men that gazed upon the scene was Robert Jacks, the engineer. It had been impossible for him to stop his engine. He had been knocked senseless by the collision, but reviving was brought to where his partner was dying.

The big-hearted engineer forgot his own misery and pain, and bending beside the pinioned form of his friend cried like a child. "I don't blame you," said Laphen to the engineer. "It could not be helped. Nobody is to blame. Don't cry Jacks, it's not your fault."

Never in their experience on the mountain roads did the train men witness such a scene. Engineer Jacks was not the only one who cried. They all wept.

One of the train men whom he called Mike, came to his side at his request. "Mike," said the pinioned man, "I want to make a will," and kneeling by his side "Mike" took down his last testament. He said he had property and money in San Francisco valued at about \$12,000. Of this sum he gave his brother James \$1,500 and his other brother, Thomas, the remainder. He said his father and mother were dead, but he had two rich aunts in San Francisco. "I have \$75 in my pocket," he added, "that can be used for my funeral expenses."

He made the request that the Rev. Father Carr, of Denver, preach his funeral sermon. Laphen then asked for a priest and prayed fervently. He lingered for over an hour in this horrible condition, without a word of complaint, and then died. He was conscious until a few minutes of his death. He was a member of Lodge No. 77, Order of Locomotive Firemen. The body has been brought to this city.

In the foregoing it would seem that all is said that the terrible accident demands. The cause of the accident, where and when, are

recited. The awful death of Charles Laphen is given with horrifying minuteness and the unparalleled heroism of the dying man is brought into the boldest relief. Still, there is something more to be said. Charles Laphen was a member of Rocky Mountain Lodge, No. 77, Brotherhood of Locomotive Firemen. He was a Brotherhood man. The *New York World* says "he was a railroad hero." All railroad men will claim him; all men, everywhere, in all lands and climes, who admire the qualities that go to make up heroism, as they read of Charles Laphen's death, will claim him—but in a special sense the Brotherhood of Locomotive Firemen will claim him. He was one of our boys, and don't you forget it. Is the question asked, how do Spartans die? It is only required to say "Thermopylae;" and if it be asked how locomotive firemen, members of our Brotherhood die, let the answer be, "Laphen at Bailey's Station," and then challenge all history to furnish a parallel case of heroism in the presence of horrible, appalling death. No extravagance of hyperbole reaches the case. No imagination can add to its blood curdling and soul-thrilling, fearful and solemn features.

Charles Laphen was learning railroading. He was a member of an order which seeks to supply railroads with that sort of men, and which, in that line, has achieved wonderful success. How ought such an order to stand in the estimation of railroad corporations? How ought such an organization to stand in the estimation of the public? And how ought such a railroad corporation as the Reading to stand in public estimation, which tells locomotive firemen, members of the Brotherhood, "You cannot be promoted while you remain a member of the Brotherhood?" Take the ashes of Charles Laphen's little finger, and let them stand for manhood; they outweigh such human reptiles as Corbin, McLeod, Bonzano and the rest who control the destinies of the Reading railroad and the subjugated men in their employ. Fortunately, the engineer of the train, Robert Jacks, did not lose his life. Knocked senseless, he regained his feet, and forgetting his own wounds and condition, went to the place where his pinioned partner lay, and while the fire was doing its work, cried like a child. What a text for equality! Death agonies were leveling up Charles Laphen, the locomotive fireman, and when his work was done, the fireman stood high enough to make the proudest monarch envy his exaltation. Says the account: "Laphen did not lose his grit." No martyr ever looked death squarer in the face, nor more composedly. He said, "Boys, I know you can't do anything for me. I have a good constitution and may last a good while, but I am living longer than I want to, anyway." Yes, fire and torture were doing their work, slowly.

creeping up to his vitals. Minutes must have seemed like centuries. In this agony, Laphen's soul triumphed throughout. He quietly made his will. "I have \$75 in my pocket that can be used for my funeral expenses." Courage to the last. His Lodge would have buried him, but no, thoughtful of his brethren he provides for the funeral, and then naming the priest he desired to officiate at his funeral he prayed fervently, and having lingered for more than an hour in indescribable agony, passed on and up to his reward.

It is painful to record such deaths as that which befell our brother fireman, Charles Laphen, and yet, in such deaths human nature expands to colossal grandeur. Such deaths, such heroism, ought to teach and do teach lessons of incalculable value. They multiply horrors and become monumental.

THE Court of Appeals, of Kentucky, affirms a verdict for \$3,000 in a case where a woman took a train to ride to her home, having purchased a ticket for that purpose. The train passed her destination without blowing a whistle; she asked to be put off at her destination, but the conductor refused, offering to take her on to the next station; she then got off the train, the conductor not offering to assist her in any way, and his voice and manner to her being rude and insulting; she walked back about a mile to the station to which she had purchased her ticket, carrying a bundle and valise; her route lay through an uninhabited country, and, as a result of the walk and excitement, she was sick for several days.

REV. JOHN R. PAXTON D. D., is making a robust effort to get Jay Gould to join his church—Presbyterian—and said to be one of the wealthiest congregations in New York. Mr. Gould has got so far along as to be the owner of two pews, and now attends the church regularly. But should Mr. Paxton say to Mr. Gould, "If thou would be perfect go and sell that thou hast, and give it to the poor," the probabilities are that the great financier would say, "The bears are on top, and for selling, I think it would be better to wait for a rise."

THE Chicago News of April 9th says that "About seventy clerks employed in the statistical department of the Burlington Road have been discharged, and Vice President Stone says a policy of retrenchment is to be adopted. Business has been very bad, and the outlook for the future is not good." The real fact is, that the C., B. & Q. is about in the condition of the old Yankee, who in trying to get credit, said his "neighbor owed him \$20 for pasturing his cow next summer."

TO MAGAZINE AGENTS.

Let it be understood once for all that all subscriptions for the *Magazine* must come to the Grand Lodge through the *Magazine Agent*. For the purpose of simplifying matters and to avoid confusion, the forms of blanks are provided and should be used.

One blank is for members of the Lodge, and such subscriptions are charged to the Lodge under the provision that every member of the Order receives a *Magazine*.

Another blank, which is white, is provided for subscribers who are not members of the Order. It is easily seen that unless these subscriptions are kept separate, confusion is introduced which grows worse as it proceeds.

Lodges are responsible only for subscriptions sent in by the Magazine Agents, hence the *Magazine* will be sent only to such persons as the Agents authorize.

If at any time, from any cause, a members' blank is used for a subscriber, not a member, opposite the name should be marked "subscriber."

THE *Magazine* is in receipt of information from Boston Lodge, No. 57, that the anti-Pinkerton bill, before the Massachusetts Legislature, has a fair show of becoming a law, and we are also informed that the Lodges, east of New York, which we think should be profoundly interested in the passage of this bill, are showing an indifference, of a most discouraging nature, to its fate. By showing a bold front, by being active and energetic, anti-Pinkerton legislation can be secured in all the states. That these things should be permitted to overawe workmen, and shoot them down with impunity is a disgrace to the age, and it is to be hoped that our brethren of all Eastern Lodges will wake up to the importance of the subject and push the bill through the Massachusetts Legislature.

THE *Denver Patriot* says "the receipts of the Grand Lodge of the Brotherhood of Railroad Brakemen at Galesburg for the quarter ending February 28, 1889, was \$70,624.32. Two hundred and ninety lodges furnished this sum and the largest amount sent in by any lodge was \$1,558.72. This was from No. 160 located at Philadelphia. During the same quarter the Grand Secretary and Treasurer disbursed \$66,600 from the beneficiary fund alone." The B. of R. B. is a mighty live order, and we hear of its success with unqualified satisfaction.

It goes the rounds that \$300,000,000,000 about represents the value of the railroads of the world. That is placing a higher value on water than has been known since the deluge.

UNION MEETING AT BLOOMINGTON, ILL.

On May 23d, a grand union meeting was held in the city of Bloomington, Ill., under the auspices of the Brotherhoods of Railroad Brakemen and Locomotive Firemen. The Bloomington Daily Leader, of May 24th, gives an extended notice of the public meeting of the Orders. The Leader says, "the Opera House was filled last evening with the friends of the railroad men, it being the Brotherhood's open session. De Molay band furnished some excellent music, and on the stage were noticed Chairman Patrick H. Morrissey, Hon. L. S. Coffin, Messrs. Frank P. Sargent, S. E. Wilkinson, Grand Masters of the two Brotherhoods, Mayor J. R. Mason, Revs. J. W. Dinsmore and J. L. Jackson, and William Ryan." The meeting was called to order by Mr. Morrissey, a member of the B. of R. B. Prayer was offered by the Rev. Mr. Dinsmore, and Hon. J. R. Mason was introduced, and delivered the opening address. The mayor was received with generous enthusiasm. He said:

It is a pleasure to welcome the representatives of such organizations. * * * They may present a rough appearance as they come in after an all night's run, but go with them to their homes, and see the love and thought that displays itself there. I should like to see so grand a meeting as all the steam workers and railway brakemen in one grand convention. I am glad to welcome all whose objects are to lift men up. We see men now in the manager's chair who twenty years ago twisted the brake or fired the locomotive. True grit, a fixed purpose, and a determined spirit is what elevates men to power and influence. The mayor referred in a modest way to his own experience as a railway employé. Twenty-four years ago this spring he beheld Bloomington for the first time from the top of an Illinois Central box car, and my brief career in that capacity taught me to look upon the railway employé with only feelings of friendship. My experience was a sad one, for my partner was killed between two cars, and it was my duty to care for him until he died, which was but a few moments, and to convey to his mother and sister the last words of farewell from his dying lips. It was in this single instance that I learned the loyalty in the brakeman's heart. The city extends you a cordial welcome, and is interested in your proceedings.

At the close of the mayor's address, Hon. L. S. Coffin, of Fort Dodge, Iowa, a railroad and warehouse commissioner of that state, was introduced. He is known as the "railroad man's friend," and his remarks were listened to with undivided attention. Among other things, Mr. Coffin said:

Since the railway was first invented there has been no improvement in the link and pin and the hand brake as now used on freight trains, and by these bungling appliances over 2,700 of these brave boys are killed every year, and over 20,000 more or less, are crippled for life. Of the 2,700 two thirds are killed away from home, thus rendering a severe shock to the family. About one passenger is injured to ten employés, and one passenger is burned from the car stove to 10,000 employés. Let one passenger be fatally burned by this means and every paper in the land will set up a terrible cry about the deadly car stove, and every sort of a safety heating apparatus will be tried in the passenger coach, but did you ever hear a newspaper argue for a safety

heater in a caboose, or demand a new coupling pin or brake for the freight train to insure the safety of these brave and faithful employés? Never.

At the close of Mr. Coffin's address, Bro. F. P. Sargent, Grand Master of the B. of L. F., was introduced, and referring to the Brotherhood of which he is chief executive, said that "the Brotherhood aims to make better and nobler men of its members, and its aims are all that is good. It teaches its members to do as they would be done by, to love their mother, their family, to be sober, industrious, and while to the world his exterior may be rough no, truer heart beats than that of a railroad man." Mr. S. E. Wilkinson, Grand Master of the Brotherhood of Railroad Brakemen, was introduced and made an interesting address. During a second meeting of the Order, held on the 24th, the following resolutions were adopted:

ON COUPLINGS.

WHEREAS, As long as men are compelled to go between the rails and between the ends of cars to couple or uncouple them, there will be the ever increasing and fearfully long list of casualties now so common from the use of the old link and pin coupling, and

WHEREAS, The continued use of the old hand brake for controlling freight trains causes the death of hundreds of train men every year, and

WHEREAS, It has been demonstrated beyond all further question that automatic safety couplers and power brakes are as practically applicable to the freight as to passenger cars. Therefore be it

Resolved, By this union meeting of brakemen, firemen, switchmen and conductors, this 24th day of May, 1889, called for consultation by Bloomington Lodge, No. 40, B. of L. F., and the Ed. F. O'Shea Lodge, No. 62, B. of R. B., Bloomington, Ills., that we respectfully petition the Honorable Board of the Inter-state Commerce Commission, Hon. Judge Cooley, chairman, to earnestly take up this matter of danger and exposure to train and yard men by the longer continued use of the old form of coupling and braking on freight cars, and recommend that congress shall require, by proper laws, that all cars entering into Inter-state commerce be equipped with some uniform safe automatic coupler and brake as speedily as consistent with a proper regard to the ability of the railroads to do this.

Resolved, That as every man prizes his limbs and life above dollars and cents, so we ask railroad commissioners, both state and national, and legislators, state and national, to regard the limbs and lives of railway employés above the money they earn for transportation companies; therefore the cost, which is not great, should not be considered as an obstacle in requiring safety appliances.

This has our hearty approval and endorsement.

F. P. SARGENT,
Grand Master B. of L. F.
S. E. WILKINSON,
Grand Master B. of R. B.

ON SUNDAY LABOR.

WHEREAS, The Sabbath was ordained for man, and

WHEREAS, All history shows the best state of society and the highest and best civilization when the hours of Sabbath were devoted to rest and a relief from labor, therefore, be it

Resolved, That we, as railroad employés, ask of the general public to forego Sunday travel on railroads, and the demanding or requiring managers of railroads to run Sunday trains for freight traffic, to the end that we, who are willing to give six days and nights of our time to the faithful service of the public and to our employers, may

have the hours of the Sabbath with our families at our own command for the great good and comfort to ourselves from being at home with our families and for church, Sabbath school and other privileges the Sabbath is designed to bring to us.

Resolved, That we tender our sincere and hearty thanks to those presidents and managers of roads who have recently issued orders curtailing Sunday work, and we most respectfully ask all other managers of roads to follow their example.

Resolved, That, as workingmen, we feel that we can do better service during the six days of the week when we are permitted the rest and recuperation the Sabbath was designed to give us.

Resolved, That we, as railway employes, pledge ourselves to be of the best possible service in our power to the several railways which employ us, and to regard the interests of our employers when they show an interest in our best welfare by giving to us the best possible safety appliances and as much of Sunday rest as the exigencies of railway transportation will admit.

This has our hearty approval and endorsement.

F. P. SARGENT,
Grand Master B. of L. F.

S. E. WILKINSON,
Grand Master B. of R. B.

The foregoing indicates very conclusively that the Union meetings of the Orders of Railway Employes, are growing in interest and importance, and that they all have interests in common which continued and united action can promote. As final action, the following resolutions were also adopted:

Resolved, That the sincere thanks of this meeting are due to His Honor, J. R. Mason, mayor, of Bloomington, for the courteous welcome extended us on behalf of the citizens of Bloomington; to Revs. J. L. Jackson and J. W. Dismore, and Mr. L. S. Coffin, for their presence and efforts in our behalf; and to the citizens of Bloomington for their liberal attendance and interest shown in our open session, believing it indicates an awakening interest in the welfare of railway employes by the public at large.

Resolved, That the thanks of this meeting are extended to the ever generous officials of the Alton road for the transportation placed at our disposal; to Mr. W. W. Hunter for the beautiful gavel and slab presented to us; to Grand Master F. P. Sargent, B. of L. F., and Grand Master S. E. Wilkinson, B. of R. B., for their presence and the kindly instructions given us; to the committee of arrangements for the complete arrangements and untiring efforts made for our reception and entertainment; and to the press of Bloomington for courtesies received.

Resolved, That a copy of these resolutions be sent to the press of Bloomington and to the official organs of the different railway organizations for publication.

C. N. TERRELL,
J. TURPIN,
JOHN KIRK,
Committee.

* * *

MR. JAY GOULD and his well trained subordinates, have recently made a tour of inspection over his vast railroad properties. Mr. Gould laments the tendency to hostile legislation, but finds generally, that business has improved, as for instance, the Missouri Pacific, shows up from \$40,000 to \$50,000 a week increase over last year, or, say \$2,500,000 gain for the year. Mr. Gould sees in the tendencies of the times, the swallowing up of all small lines by the big ones, and when the swallowing time comes, it goes without the saying, that Mr. Gould will swallow his share of the small fry.

NEW INSURANCE POLICIES.

At the Minneapolis convention, a new series of insurance policies was ordered to be issued, and all the old policies were ordered to be surrendered. The old policies were declared dead, null and void, and each policy holder was required to provide himself with a new policy. To carry out this order, blank slips were at once forwarded to all Subordinate Lodges, in number corresponding with the number of members of the Lodge. These blank slips were to be filled out by every member of the Lodge and forwarded to the Grand Secretary, who, under the law, was to fill out an insurance policy in accordance with the slips and forward the same back to the Subordinate Lodge, when it would be properly signed and sealed and placed in the possession of the member entitled to it, upon his surrender of the old policy.

In numerous instances these slips have not been returned according to law, and, as a consequence, there are a number of the dead, null and void, old policies, still outstanding.

In all cases, where members have not received their new policies, they should lose no time in filling out a slip properly, and sending it to the Grand Secretary for a new policy. If the Lodge, from any cause, is not provided with slips, the Secretary should at once inform the Grand Secretary, and upon application, they will be promptly forwarded.

In every case where a new policy is issued the old policy must be taken up and destroyed before the new policy is delivered.

We give this timely warning, and we urge upon members to regard it. It is given in their interest, and if disregarded and trouble should arise in consequence the fault will not rest with the Grand Lodge. We have repeatedly notified the membership, and in this regard have done our duty. We hope all interested members will act promptly in this matter.

* *

A RAILWAY tunnel, under the St. Clair river at Port Huron, is now in process of construction by the Grand Trunk Railway Company. The tunnel, as finished, will consist of 2,500 feet on the American side, 2,200 under the river, and 4,000 feet on the Canadian side, and its estimated cost is \$2,500,000, although well-informed men predict that it will cost \$5,000,000.

* *

SAM JONES claims to have converted 1,200 persons during his campaign in Los Angeles, Cal. We are inclined to the opinion that Sam ought to divide the honors with Col. Howard, Chief of the B. of R. C., who has been doing a large converting business in the ranks of railway conductors.

THE FIREMEN'S MAGAZINE.

A bound volume of the *Locomotive Firemen's Magazine* for 1888 is before us. The volume is bound in morocco, gilt edged and handsome. Editor Debs has the reputation, not only in his own order, but among railroad men in every part of this great country, of saying just what he honestly thinks ought to be said, regardless of who it pleases or displeases. Careful not to wrong any man, he fearlessly defends the right, and denounces the wrong, without caring who is hit or missed, so long as it is the right ones.

The *Magazine* is the best family magazine published for railroad men; it contains ringing editorials on the live subjects of the day, of interest to the head of the family, and gives advice that can be safely followed; it has an interesting mechanical department, in which practical railroad subjects are discussed, and a woman's department, equal if not better than that of any metropolitan magazine.

Presuming that bound volumes are for sale, we would say that no one interested in labor subjects can afford to miss the chance of preserving the honest, able and eloquent opinions expressed in the editorials of the *Magazine*, from the pen of so fearless a champion of right as Eugene V. Debs.—*Locomotive Engineer*.

Such complimentary words from such a paper as the *Locomotive Engineer* have a significance and a value reaching far beyond mere personal pride, however agreeable they may be in that line. We accept and value them as meaning, in a special manner, that the *Firemen's Magazine* is worthy of the support and patronage of every Brotherhood Fireman; that it is a publication they ought to support, and leave no honorable means untried for extending its circulation.

* *

The *Railroad Gazette* has an excellent article on "Red tape." Red tape means circumlocution, routine, as distinguished from directness, and when carried to an extreme is ridiculous, and excites derision. There should be order, method, regulation, in all business, but in cases of emergency if the right thing to be done has to await the slow and toilsome process of redtapeism, serious consequences are likely to follow. As an illustration, the *Gazette* introduces the following:

In a certain yard a track used for cabooses was so near an adjoining building that a certain style of caboose, of which a dozen new ones were lately put in service, came in contact with the roof of the building and suffered damage. Every one of these cabooses, which was pushed far enough down on the track, encountered the roof and had to go to the shop for about \$10 worth of repairs. The first one smashed was reported to the yard master, and he reported the case to the local agent; thus far the routine was all right. But the next report went to the engineer of buildings; and as the offending roof was on a private owner's building, off the company's premises, this officer took little interest in the subject. In the meantime another caboose was put upon that track one dark night and necessitated repair bill No. 2. After awhile the local agent reported to the division superintendent. This superintendent happened to be one who meant well, but whose red tape was all of his own make and not very effective; but after two or three attempts, the owner of the troublesome roof was seen and the projection cut off, but not until the third caboose had run against it. Here

was a case where several kinds of red tape was needed. First, station agents and yard masters ought to have received written notice when the wide cabooses were put in service. There being but a few of them and the obstruction being near the inner end of a spur track, it is perhaps not to be wondered at that the yard master made the blunder of not ordering them kept off that track. The local agent ought to have known at once what office the report should go to. If he had no authority to negotiate with the owner of the building, he should have been able to set the right officer on the track immediately. The officer to whom the report was wrongfully sent should have been drilled in a routine that would have led him to either turn that letter over to the proper official or else send it back to its writer without any delay. All concerned should have known when to use the telegraph and when to request a telegraphic acknowledgment of a letter.

It is doubtless true that redtapeism has much to do with the accidents and troubles which beset railroading in this country. It takes too long to find the man in authority, the man who dares exercise discretion. Orders and instructions have to take such a circuitous route, that waiting throws everything out of gear, and it is not until the mischief has occurred that a remedy is found. Redtapeism carried to extremes is fruitful of endless troubles. Once started it grows, becomes more aggravating, and invariably secures the contempt of its victims.

* *

WORD comes from Bonanza Lodge, No. 194, that its members have been imposed upon by brotherhood firemen, who visit Missoula on the Northern Pacific Railroad in search of work, and when it is secured for them, in a number of cases, they have worked for a short time, and then, without cause, or, no cause at all, have demanded their time, received their money and quit. In one case specially referred to, a fireman worked till he earned \$75. He then drew his money, went on a big drunk, and when finally he left town he had only \$3.50. To help such men to find work, with such results, is exceedingly annoying, and what is still worse, their conduct is well calculated to create such feelings of opposition, that when a really meritorious brother is in search of work, his chances are rendered more precarious by the unpleasant experience of those who have been deceived. There have always been imposters, nor is there any good reason to hope that the tribe will be immediately reduced in numbers. But when found out, they should at once be driven from the Brotherhood. There are good men in search of work—and that such men should suffer for the wrong doing of others is deplorable. It is to be hoped that the Lodges generally have escaped the annoyance that has fallen to the lot of 194, and that the number of imposters who are traveling with the endorsement of the Brotherhood is small, and that by vigilance it may be rapidly reduced.

A CIRCULAR.

We have received the August circular of the Order of Railway Conductors, over the signature of Wm. P. Daniels, Grand Secretary of the Order. In this circular we find the following:

Information has been received at this office that members of the B. of L. E. and of the B. of L. F., are acting as "spotters." It behooves members to be on their guard. Three members of the Order have lost their situations for passing engineers or firemen within the last few weeks, and in two cases it is known positively that the men who were passed were the ones who reported it.

To start out, we brand the statement that members of the B. of L. F., "are acting as spotters," maliciously false. The purpose of the statement is easily seen; it is to saddle upon the Brotherhood of Locomotive Firemen, the insufferable stigma, of favoring or permitting its members to play the role of spotter, than which nothing is more foreign to its principles and laws. The secret circular seeks to stab the Brotherhood in the back and in the dark, and is designed to arouse suspicions that every locomotive fireman, member of the Brotherhood, is an indescribable sneak and scoundrel, who would, while receiving a favor at the hands of a conductor plot his ruin. If Mr. Daniels tells the truth, let him name the fireman who has played traitor to friendship, and if he is a member of the Brotherhood he will be ignominiously expelled.

It will be noticed that the charges made in the circular are vague. These conductors have lost their situations for passing *engineers or firemen*. Which? The conductors knew, why not state the fact. If engineers, say so; if firemen, say so. Why "engineers or firemen"—possibly neither, or if one or the other, they may not have been members of either Brotherhood. The conductor passing them could have known their names, could locate them, and now, if the statement is not a bold, bald fabrication, let the names be given. If a fireman was guilty of such an act as the circular charges, he is simply a scoundrel, a depraved wretch, and if found out and found to be a member of the Brotherhood, he could not remain in it a day, and this *Magazine* would take special pleasure in publishing the name of the villain.

We ask Mr. Daniels to specify. If he knows of a fireman guilty of the base conduct he charges, give the name, the place, the date, and we will help hunt him down, expose and exorcise him.

Stabbing in the dark is an outrage and is a poor way to gratify personal spite. In all such matters the demand is boldness, daylight work. A spotter is a human reptile, and no honorable man will engage in the dirty business, and the O. R. C. cannot more heartily detest such cattle, than does the Brotherhood of Locomotive Firemen.

BEER FOR THE MILLION.

The *Western Brewer* furnishes some interesting statistics relating to the brewing and consumption of beer in seventeen of the largest brewing cities of the United States as follows:

Cities.	1887. Barrels.	1888. Barrels.
Albany	377,442	378,252
Baltimore	409,611	457,773
Boston	867,294	872,882
Brooklyn	1,394,419	1,328,648
Buffalo	428,584	447,070
Chicago	1,228,843	1,331,631
Cincinnati	1,077,750	1,067,458
Cleveland	306,587	293,311
Detroit	249,650	256,163
Milwaukee	1,273,811	1,322,048
Newark	892,900	911,337
New York	4,215,518	4,239,207
Philadelphia	1,410,421	1,318,223
Pittsburg	281,441	267,611
Rochester	318,219	373,489
San Francisco	398,169	459,558
St. Louis	1,378,133	1,469,057

If this ocean of beer costs five cents a glass, then in that case the beer drinkers of the cities named paid out for the beverage for the two years named, about \$485,000,000.

* *

A NEW conspiracy against the life of the Czar has been discovered. It was among the military officers and had extensive ramification through the army. Several hundred conspirators have been arrested, and the cable reports have it that the Czarina is completely unnerved by the discovery. How the Czar himself feels about it is not reported.

We who have the power of curing evils of government by the peaceful agency of the ballot can have no sympathy with conspiracies against the lives of public officials, nor conspiracies of any kind that aim to accomplish their objects by means of violence. If we suffer from bad government the fault is with ourselves, for the remedy is in our own hands. But in a country like Russia, where the Czar is autocratic, and refuses his people a constitution to govern himself as well as them, there is but one remedy, and that the conspirators of Russia have adopted. Not only is it the best way, in that it involves the lives only of the crowned criminal and of those who make the voluntary sacrifice, but it is the only way. Civil war would be sanguinary and hopeless, while regicide is economical of human life and if pursued as a policy will make an autocratic throne too dangerous to be enjoyed.—*Henry George in N. Y. Standard.*

A great many people deplore the frequent attacks upon the life of the Czar, the Russian Bear. But this autocrat does not hesitate a minute to take the lives of any number of his subjects who dare intimate that they desire liberty. If all tyrants could be made to pass in their checks without a day's delay, it is quite possible that constitutions would take the place of autocratic decrees.

* *

THERE are beds of anthracite coal in Rhode Island, and the Worcester Steel Co., of Worcester, Mass., will, in future, draw its supplies from the Rhode Island field instead of Pennsylvania. If it were possible, the country should boycott the rascally Reading corporation until its Russian methods of conducting its business are abandoned.

A NEW NAME.

Under the caption of "A New Name," the *Locomotive Engineer* has the following:

The Firemen's Brotherhood is composed of engineers, firemen and hostlers, and, in many Lodges, there are as many engineers as there are firemen, so that the name, Brotherhood of Locomotive Firemen, is misleading and unsatisfactory.

The *Magazine*, the official organ of the Order, proposes a change in name to Locomotive Enginemen, Locomotive Men, or some name that will cover the three classes entitled to membership. Locomotive Enginemen is a little cumbersome, and is as much too broad in its scope as Firemen is too narrow; and Locomotive Men might reasonably include machinists and wipers.

We are inclined to think a change would be beneficial if a good name were selected. A quarter of a century ago, when the engineer's brotherhood was organized by W. D. Robinson, he called it the Knights of the Footboard; but some influence, with a love for long titles, soon got it lengthened into Grand International Brotherhood of Locomotive Engineers.

While we believe in leaving knights to the chess board, the queen's garter and the history of the sixteenth century, there is something modern, inspiring and fitting in the word "Footboard;" it is the deck of the locomotive, where the engineer, the fireman and the hostler stand while on duty, and where no other employé does stand; it covers the three classes entirely, and includes no outsider, and as these three co-employees are brothers, why would not "Brotherhood of the Footboard" cover them all, and be preëminently the proper name?

Let the Firemen's order become the Brotherhood of the Footboard. Let them preserve, respect and live up to their grand motto of Benevolence, Sobriety and Industry. Let them disband their grievance committee, and thereby two-thirds of their grievances, and put their striking power into the hands of the grand officers.

Let them establish higher standards of membership—expel men for drunkenness before, rather than after, they have been discharged by the master mechanics. Let them establish Lodge room discussions, buy books and models, seek instruction, court examination, and offer to railroad companies better posted, better selected and more reliable men from the ranks of the Order than can be secured outside of it, and they will have found a practical solution of their dream of federation; for in ten years the Brotherhood of the Footboard would soar above orders with any other foundation, just as an eagle soars above a toad.

Few men are better qualified than the editor of the *Locomotive Engineer* to suggest a name, and for brevity and significance "Brotherhood of the Footboard" is likely to have a large following. The indications now are that a new name will be adopted at no distant day, and we doubt not that the "Brotherhood of the Footboard" will be nominated with favorable chances of adoption.

* *

L. O. GODDARD, in the *April Century*, in writing of Railway Relief Associations, says: "Seeing as we do the many lines in the country grouped into large systems, whose ownership will no doubt remain stable in years to come, permanence of employment and stability of position is easy to be guaranteed, and the corporations can now better secure their own rights and strengthen

themselves against the encroachments of the public by drawing their employes more closely to them, showing that paternal care and solicitude for them which tend to establish good feeling and community of interest." The corporation proposes to "strengthen themselves against the encroachments of the public." What encroachments? In what way does the public imperil railroad corporations that they can escape, by "drawing their employes more closely to them." What self-respecting railroad employé wants the "paternal care and solicitude" of a railway corporation? Such language used towards an American citizen, is to the last degree degrading. It is the old plantation talk, when, throughout the South, the black flag of chattel slavery floated everywhere—and the slave-pen and the auction-block constituted labor markets. Workingmen, railroad employes want no "paternal care" exercised over them by their employers. It is the old serf talk of Russia. It ought never to be heard in America. The animus of the business is disclosed by the corporation parasite, who referring to two corporations that have established relief associations, says, "the employes are rapidly leaving the local benevolent association; they find they can insure themselves, with the aid of a solvent and powerful company, for much less money than in the thousand and one local lodges, whose solvency depends on the honesty of a secretary or a treasurer." Here is disclosed the purpose of the corporations, which is to break up organizations of railroad employes. Employes who do not see this are blind.

TAYLOR LODGE, No. 175.

During our visit to Newark, to attend the trial of Adkins, the embezzling Receiver of No. 175, we had the pleasure of meeting with the Lodge, and a more devoted, loyal and energetic body of firemen cannot be found. Few Lodges have had a larger share of trials to test their fidelity, their fealty to conviction and obligation, but such ordeals have only served to make them more courageous. They will not yield to adversity. Their motto is "Up, and at 'em." Like the trained hunters of the olden time, nothing discouraged, they "pick their flint and try it again." Taylor Lodge will do to "tie to," you bet, and with such men as Hickerson, Callahan, Hogue, Stone and others of the same type, No. 175 is bound not only to overcome every adverse circumstance, but to grow in numbers and influence.

* * *

A GEORGIA Sheriff, armed with a writ attached a railroad train by chaining the engine to the track, but when informed that Uncle Sam's mail bags were aboard, he just let her go, Gallagher.

PLEASANT MEETING AT CONNEAUT, OHIO.

On June 12th Grand Master Sargent held a meeting with switchmen, brakemen and firemen at Conneaut, Ohio. This union meeting, which was of special interest, continued for an hour and was addressed by Bro. Sargent. After the union meeting adjourned a closed meeting was held by Nickel Plate Lodge No. 337. During the proceedings, and at about 10 o'clock, a delegation of about fifty ladies, the wives, mothers, sisters and sweethearts of 337 came to the Lodge room, headed by Mrs. C. A. Wilcox. The meeting, as in duty bound, promptly adjourned to receive the ladies and to extend to them the freedom of the hall. Rarely has it been the good fortune of the Grand Master to see so many beautiful women at a glance. It was apparent that they were on a mission of love, of kind regard, and that some testimonial of their esteem was to add still another charm to their smiling presence. Mrs. Wilcox was orator of the occasion and in words of liquid music presented the Lodge, on behalf of the ladies, with drapery, beautifully ornamented and painted, for its charter. It was the work of the ladies, and therefore thrice valuable to the members of the Lodge, and it will be cherished as a beautiful souvenir of the ladies' regard for the Lodge. Brother Sargent, on behalf of the Lodge, accepted the present, and seldom has the Grand Master had to face so many bright eyes in such close proximity to the rostrum. Following this pleasant ceremony, the members were invited to follow the leadership of Mrs. Wilcox. The invitation was obeyed with that faith which is "the substance of things hoped for," and sure enough, the boys were led into a banqueting room, where the viands were such as to tempt the most fastidious palate. It was a complete surprise; not one of the boys had had an intimation of it from any one, and it was therefore the more enjoyable. Supper over the happy company returned to the hall, where, *ad interim*, the carpets had been removed and where music was in waiting for the merry dance. Tripping feet soon responded to the music, and the dancing was under full headway when Bro. Sargent took his departure, at 12 o'clock, retiring to the delicious strains of Prof. Thompson's orchestra. It is useless to say the occasion was one of unalloyed pleasure.

* *

THE Canadian Government is awakening to the insufferable stigma of being the refuge of American rascals, and a bill has been introduced in the Dominion Parliament which, if it passes, will effectually rid Canada of American boddlers. Prof. Weldon said, in responding to a question referring to the object of the bill:

"It is to clear Canada of the horde of American

criminals now finding a refuge within her borders. I, as well as every respectable man in the Dominion, am suffering with the facility with which a thief, or blackmailer, or briber, or embezzler, can find a refuge here. I go to a hotel, and the chances are that my name on the register is preceded by some well-known American boddler or defaulter. In the dining-room the chances are that I am put at the same table with this thief. I ride beside him on railroad cars; he sits in the galleries of this house and mixes with my family and friends; he lobbies in the halls of legislation; he is omnipresent, leers into your face and obtrudes his unsavory personality and worse character at every turn you make; he occupies a box at the theater while you sit in the stalls; he obtains control of important manufacturing industries and becomes a director in corporations chartered by the Dominion or provinces; he is a social Pariah, a national disgrace, a menace to our institutions, and a temptation to our clerks, our business men, our cashiers, our bank officials and our children to do wrong and live in luxury on the other side of the line, safe from pursuit and punishment."

The Canadian legislator sized up the business magnificently, and thieves and embezzlers are frightened. But should they be driven out of Canada, it is not probable that one in a dozen of them would ever be punished. "Influence" would shield them. As a general proposition, every law in the United States has a "technicality," and if a villain of any grade has the funds, the technicality can be found, and out he goes. It is this technicality business that sends a great many cases to Judge Lynch's court, where mistakes are seldom made.

* *

THE *Indianapolis Journal* remarks that "under new regulations on the New York, Susquehanna & Western road, employés are restricted to one pass a month, and their wives to but one pass a year. A few years ago an Indianapolis line refused to give any employé or member of his family free transportation, but the road was the loser in the end, and with a change in the management this close-fisted method of doing business was dropped. The friendly relations between the present management and the employés is doubtless one of the causes of the increasing prosperity of the road." Shrewd railroad managers, long since learned, that for every act of courtesy extended by them to their employés, was an investment that paid wonderfully large dividends. Such managers, are not only students of human nature but of a philosophy, the mastery of which has been productive of incalculable benefits and felicities. When an employé works a day for his wages, and receives it, no question of kindness or gratitude is involved, any more than there is between lender and borrower, when principal and interest have been paid. Honors are even. But when a man accepts a favor, if he is not an ingrate, he feels the weight of the debt of gratitude, and he may pay it a thousand fold, and still believe the obligation is not cancelled.

GRAND MASTER SARGENT.

The *Magazine* makes no apology for referring to the enviable position occupied by Grand Master Sargent of the B. of L. F. Untiring in his devotion to the interests of the Order of which he is the chief executive, observant and sagacious, cautious and conservative, neither premature nor presumptuous in his acts, he has won his way from a fireman in the cab, to his present position in the B. of L. F., and to that responsible office of President of the Supreme Council of the United Orders of Railway Employés, and certainly, while such honors must be fruitful of pleasant meditations on the part of Bro. Sargent, we regard his election to the chief executive office of the Supreme Council, as a compliment to the Brotherhood of Locomotive Firemen. That he will do his duty fearlessly there need be no doubt on the part of those who have a right to expect good results from federation.

* *

THE man in this free land, where the race for success is open to all, who by word, or pen, or act, incites, or seeks to incite hostility and strife between labor and capital, is an enemy to labor, an enemy to capital, an enemy to his country, an enemy to mankind. Labor is helpless and foodless without capital to furnish it employment. Capital is dead and worthless without the aid of labor to make it remunerative. Labor and capital are complements of each other—together they form the perfect arch, complete in symmetry and strength; separated, each is only the broken, weak and useless fragment of the arch. From the creation of man down to the present time competition has been the life of trade and the soul of progress. It gives inspiration to effort, arouses ambition, quickens invention and nerves a man for endurance in life struggles. Combinations and aggregations of either capital or labor formed for the purpose of throttling competition, and controlling the price of either labor, or the commodities and products produced by labor, are hurtful; and hurtful not only to the individuals immediately affected but to the community at large and to the nation.

Hon. Jno. M. Butler, of Indianapolis, is credited with the foregoing utterances. They are taken from a speech delivered April 30th, 1889, the anniversary of the inauguration of the first president of the United States.

In a certain sense "the race for success is open to all." The idea is embodied in constitutions, but it is often throttled in statute. It is very pretty to talk about "this free land," but if Hon. Jno. M. Butler will read the report of the congressional committee, charged with the investigation of labor troubles in Pennsylvania, he will be profoundly impressed with the fact that the anthracite coal region is not a part of "this free land." He will find that it has been Russianized and that as foul a despotism as ever cursed any country prevails in that poor benighted region.

The talk about "hostility and strife between labor and capital" is an old chestnut, as antiquated as any clownish quip known to circumsdom. Since the world began, labor

was never hostile to capital. Capital is born of labor, it is the child of labor. There never was a man since the day Adam began to tend the garden of Eden, that has sought to "incite hostility and strife between labor and capital. As a result, no such "an enemy," as Mr. Butler's imagination creates, "to labor, to capital and to mankind" ever existed. The enemy, Mr. Butler talks of is a spook; a goblin, dressed up and made to do duty on occasions, when orators at a loss for argument, seek to tickle the ears of the people with thread-bare platitudes totally unworthy of a first class demagogue.

Capital, as Mr. Butler remarks, to his own discomfiture, "is dead and worthless without the aid of labor," but when Mr. Butler says, "labor is helpless and foodless without capital," he makes a mistake, so utterly baseless, so foreign to fact and experience, so destitute of that ordinary common sense so prevalent now-a-days, in the ranks of workingmen that there is nothing left to redeem it from ridicule. Mr. Butler, like many others, whose profession it is to *spout*, has yet to learn the difference between capital and a capitalist. It may not be to his interest to learn the difference, or if learned, to state it. Capitalists are the men who pay lawyers large fees, and lawyers would have to be something more than human if they were not influenced by incomes. A capitalist is a man who has capital, who uses capital, wields capital. Some capitalists are just men, honorable men, who use their capital in a way to merit approval. Others there are, who pursue just the opposite course—they deny labor its just share of the capital it creates—they degrade labor, they clothe it in rags, they starve labor, they shelter it in dens, and thus it happens that labor is often in a state of hostility and strife with capitalists, but none with capital.

* *

THE B. of L. E. *Journal* for June, has an article under the caption of "A Senator's Honor," in which the Legislature of Illinois, or certain members of that august body, are censured for failing to pass a bill providing for the examination of engineers. Some how the Illinois Legislature concluded that "strict neutrality" would be the thing to adopt, and as a consequence the members of the Legislature declined to *federate* on the bill. In all such matters it is best to be philosophical.

* *

THERE is a small rumpus on the B. & O. relating to dividends. It is claimed that from 1882 to 1887, both inclusive, \$7,220,731 was earned for dividends, and only \$6,200,339 paid, and experts are trying to find out what has become of the difference, \$1,041,392. Perhaps it went into the B. & O. insurance fund.

A MOVEMENT is on foot to build steel freight cars, and designs have been prepared. It is held that they will be greatly superior to the wooden structures.

* *

MR. CALVIN S. WHEATON, G. C. C. of the O. of R. C., has ceased being editor of the *Conductor's Monthly*, and Mr. Evans H. Belknap, of Galesburg, is Mr. Wheaton's successor, who takes charge July 1, 1889.

* *

THE *Frog* of May 15th makes the announcement that hereafter it will be published in Denver. The statement is made that the *Frog* "has been a success from the first issue," and the *Magazine* wishes it continued prosperity.

* *

PRESIDENT CABLE, of the Rock Island road, says that the low rates fixed by the Iowa Railroad Commissioners, is costing that company \$1,000 a day. Nevertheless, it is asserted that the Commissioners will not make any change of rates.

* *

THE rulings of the Iowa Railroad Commissioners, it is said have compelled the roads in that state to cut down their local train service, all the traffic now being handled by the main trains. It is claimed that this will make a saving of 150,000 miles of service per month, amounting to about \$30,000.

* *

THE O. of R. C. has decided to make Sioux City, Iowa, headquarters of the Order, and will erect a building costing \$200,000. The city donates \$75,000, and guarantees 8 per cent net increase on the investment. In case the Order gets tired of the business, the city will take the edifice off their hands at the original cost.

* *

MR. W. H. ERMENTROUT, 141 North Fifth street, Reading, Pa., upon receipt of a postage stamp, will send a photograph of a model link and valve motion. The model is said to be one of the most useful devices about a railroad association, as it is made to represent any valve gear or any locomotive, or any other link motion engine.

* *

ON June 11th Grand Master Sargent held a union meeting in the city of Buffalo, under the auspices of Buffalo Lodge, No. 12, B. of L. F. There was a large attendance of switchmen, brakemen and firemen, and the meeting was addressed by Grand Master Sargent upon topics of mutual interest, and was both interesting and profitable. Under the auspices of federation, now an accomplished fact, such meetings will grow in fraternal fervor.

THE photograph of Bro. Joshua A. Leach, the founder and first Grand Master of the Brotherhood of Locomotive Firemen, can be secured by addressing Messrs. COE & MYERS, PHOTOGRAPHERS, ST. LOUIS, MO. These gentlemen are artists of acknowledged ability and their work is unexcelled. For price list see page 5-13, June *Magazine*.

* *

JAY GOULD's projected railroad across the northeast corner of the Indian Territory, connecting Coffeyville with Fort Smith is under construction and will be completed within six months. The road will be about ninety miles long and will contribute largely to Mr. Gould's facilities in the southeastern portion of the country, to meet the wants of the people of that section.

* *

WE had the pleasure recently of attending a meeting of Eureka Lodge, No. 14, and were delighted with what we saw and heard. The meeting was largely attended and the interest manifested in Brotherhood affairs, could not have been more cheering. Eureka Lodge is in line of the best thought of the Brotherhood and on all matters it is "on time."

* *

THE Fourth of July has been designated as the day for giving prominence to the eight hour movement throughout the country, and under the auspices of all branches of organized labor, a grand demonstration is advertised to take place in the city of Minneapolis, Minn. The movement is in the right direction and good results may be anticipated.

* *

THE Master Mechanics of the Wabash have issued an imperative order that in future positions will not be given to any young man to learn any of the skilled trades who has not passed a creditable examination in the eighth grade of the common school. Boys who want to be railroad mechanics will have to be industrious students or there will be no place for them in the Wabash shops.

* *

THE Journeymen Barbers' International Union of America, being eager to push the Trades Union cause, appeals to Trade Unionists, affiliated with the American Federation of Labor to help in the work of organizing branch unions of barbers throughout the country. By addressing H. G. Hach, President, Room 15, Landreth Block, Muskegon, Michigan, charters can be obtained, and all required information necessary to perfect the work. Labor organizations are increasing in numbers and in power, and when Federation comes—as come it will—the day of Labor's emancipation will dawn.

B. OF B. C.

Advices of the most cheering character are constantly received, showing the steady growth of the B. of R. C. The railroad press of the country, with the most gratifying unanimity refers to the new Order in a way that shows it to have a warm place in the regards of all classes of railroad employes. The reputation of Col. Howard, the Grand Chief of the Brotherhood, meets with universal endorsement. Intellectually equipped for a leader, possessed of indomitable will, and of a courage which defies opposition, he is steadily and surely leading his Order on to victory. The Brotherhood of Railway Conductors has a mission and a field, and Col. Howard will make the most of both.

NEWLY ADMITTED MEMBERS.

The Subordinate Lodge has no higher duty to perform than to follow strictly the law relating to beneficiary certificates of newly admitted members to the Brotherhood. Section 58 of the Constitution provides as follows:

Upon the admission of an applicant the Secretary of the Lodge shall forward his application for a beneficiary certificate to the Grand Secretary and Treasurer, who shall immediately enter the name of said member on the Grand Register, make proper record of the same and issue and forward to the Secretary of the Subordinate Lodge, a beneficiary certificate for said member. The Secretary shall make proper record of the same in the beneficiary certificate register and, in conjunction with the Master, countersign, seal and deliver the same to said member.

When should the Secretary forward the application for a beneficiary certificate to the Grand Secretary and Treasurer? We hold that the law contemplates that it should be forwarded *immediately*. The very day the brother is admitted to membership. There should be no delay. The Secretary should forward the application immediately after the close of the Lodge meeting at which the brother was initiated. This is a matter of supreme importance to the newly admitted member. Why? Section 64 gives the reason why, as follows:

No members shall be entitled to participate in the Beneficiary Fund of the Order until his beneficiary certificate shall have been signed and sealed by the officers of the Lodge of which he is a member.

Now, then, it will be observed that according to Section 58, of the Constitution, the application for a beneficiary certificate must be sent to the Grand Secretary and Treasurer. That section should be read carefully by the Secretary of Subordinate Lodges. The Grand Secretary and Treasurer, after receiving the application, must issue a certificate which must be returned to the Subordinate Lodge, where it must be signed, recorded, countersigned and sealed, and all this must be done before the newly admitted member is "entitled to participate in the Beneficiary

Fund." Read Section 64. The laws we have quoted, show how important it is to newly admitted members to have their application for a beneficiary certificate attended to with the greatest promptness. We invite the earnest attention of all Secretaries of Subordinate Lodges to this matter; it is a case in which "delays are dangerous." The law must be complied with to the letter as a guarantee to the newly admitted member, that in case of death or disability, his rights and interests are secure. We write this because there are far too many instances of delay and disregard of the laws, and in every case, the interests of the newly admitted member are placed in peril.

* *

MR. ECKLEY B. COX, one of the witnesses before the Congressional Committee appointed to investigate the Reading Railroad rascalities, testified that he had been mining anthracite coal since 1865, and employed 3,699 men and boys. He testified regarding the houses he supplied for these people as follows: We have

1 house that rents at	25 cents a month
1 " " "	50 " "
68 houses that rent at	\$1.00 a month
29 " " "	1.50 "
44 " " "	2.00 "
1 house that rents at	2.40 "
3 houses that rent at	2.50 "
25 " " "	2.75 "
10 " " "	3.00 "
1 house that rents at	3.20 "
13 houses that rent at	3.25 "
1 house that rents at	3.45 "
10 houses that rent at	3.50 "
20 " " "	3.60 "
348 " " "	4.00 "
1 house that rents at	4.10 "
1 " " "	4.35 "
24 houses that rent at	4.50 "
28 " " "	4.60 "
45 " " "	4.75 "
131 " " "	5.00 "
3 " " "	5.25 "
119 " " "	5.50 "

931 houses. Average monthly rent \$3.21

What sort of houses must they be that rent for 25 and 50 cents a month?

* *

THE *Railroad Gazette* remarks that while Eastern roads are curtailing Sunday freight traffic, Western roads are expanding Sunday passenger traffic. Round trip tickets from Denver to Georgetown, Col., are \$3.30 on week days and \$2 on Sundays, and rates to other points are in proportion. To Manitou a round trip ticket good for five days costs \$5, while one for Sunday only can be had for \$2.25. The Western idea is the correct one. Thousands of poor people only have Sunday for recreation, for enjoyment, and the railroad that contributes to their pleasure and happiness is fulfilling a splendid mission. Railroad employes should have one day of absolute rest in seven—but it need not be Sunday.

THE TRANSFERRING OF INSURANCE POLICIES.

It frequently occurs that members of the Order desire to transfer their insurance policies. It should be remembered, however, that the legal transfer of a policy involves Lodge action. Section 67, to which we call special attention, provides as follows:

Any member desiring to make a new direction as to the payment of his beneficiary certificate may do so by and with the consent of the Lodge of which he is a member. He may then authorize such change in writing on the back of the certificate in the form prescribed, attested by the Secretary, with the seal of the Lodge attached, but no such change or transfer shall be valid or have any binding effect until reported to the Grand Secretary and Treasurer. All subsequent transfers shall be made in the same manner, except that a duplicate beneficiary certificate shall be issued by the Grand Secretary and Treasurer, when a third transfer is authorized, provided that the old certificate has been returned to the Grand Lodge. All transfers of beneficiary certificates shall be recorded in the beneficiary certificate register of the Subordinate Lodge, and also in the Grand Register.

In this matter the letter of the law must be strictly complied with, if not the action is null and void. The directions are simple and easily understood, and when not followed as the law directs are fruitful of great vexation and trouble. We print the law relating to the subject so that no one can claim that they were not informed.

Let it be understood that when the transfer is made that it is *not* required to send the policy to the Grand Lodge, but it is of the utmost importance, as is shown in Section 67, that the transfer be promptly reported to the Grand Secretary and Treasurer, because until that is done the transfer is not valid and has no binding effect whatever, and must of necessity be disregarded by the Grand Lodge. It is only required of the Secretary of a Subordinate Lodge to make the transfer on the back of the policy as per blank there printed, and then notify the Grand Secretary and Treasurer. This fills the requirement of the law and the transfer of the policy will stand. We hereby notify all that the law must be strictly complied with to avoid complications, and we hope it will be done. If not, the responsibility must rest where it belongs.

.

THE annual report of the Rock Island Railway Company has been published, as follows:

The gross earnings for the year ending March 31 were \$12,841,029; operating expenses and taxes, \$9,127,198, leaving net earnings for Rock Island proper of \$3,713,831. The lines west of the Missouri River earned \$4,721,476 from June 1, 1887, to March 31, 1889, and operating expenses were \$1,038,978, leaving net earnings amounting to \$3,682,498, and swelling the total net of the entire system to \$4,396,429. In addition the other receipts, including \$130,000 for land sales, \$103,500 premium on bonds sold and \$1,116,442 interest from the Chicago, Kansas & Nebraska Road, swell the total net income to \$6,057,259. The expenditures were

\$2,282,200 interest on bonded debt, \$1,865,733 rentals, \$220,141 bridge tolls and rentals; dividends, \$2,653,824; premium on bonds purchased for sinking fund account, \$3,585; total expenses \$7,031,493, leaving a deficit for the year of \$974,231. The comparative statement shows that gross earnings for the year decreased, as compared with the previous year, \$668,697; operating expenses increased \$323,801, and net earnings decreased \$1,053,836, or 22.13 per cent. The salient feature of the financial report is the deficit of \$974,231 for the year. The report shows that the lines west of the Missouri River did not earn interest charges by nearly a million dollars, so that this heavy deficit can be charged almost wholly to this account.

President Cable expresses the opinion that in the near future the lines west of the Missouri River will pay handsomely.

.

THE *New York Sun*, discussing the health of railroad men, says, "that according to M. Duchesne, railway men improve in health during the first four years, but at the end of ten years they are tired out; in fifteen years they are actual sufferers, and very few can remain in the service after twenty. Dr. Lichtenbag, of Buda Pesth, says that out of 250 railway employes, ninety-two, or more than a third, suffered from ear disease. Engine drivers are especially liable to rheumatism and pneumonia, and after some years' service a certain proportion of them become dull of sight and hearing. Others suffer from a mild form of spinal concussion, muscular feebleness and continuous pains in the limbs. They are also apt to develop a peculiar mental state—a sort of cerebral irritation—with excessive nervousness and morbid sensation of fear." If this is true, it supplies a strong argument in favor of good wages for the few years that railroad men are in a condition for effective service.

.

THE members of Macon Lodge, No. 246, May 25, held their annual picnic at Beach Farm, on the Georgia Southern & Florida railroad. Ample provision was made for a grand good time, and our sunny southern boys make no mistake when they determine upon having a good time. Preparations were made for music, and dancing, and feasting, and we confess that we should have liked to have participated in the festivities. We anticipate a lively account of the picnic from some one of 246.

.

A RUNAWAY engine at Kingston, N. Y., recently made eleven miles in nine minutes over the West Shore road, but a message starting somewhat later got ahead of the engine and measures were promptly taken to render the runaway harmless, and it finally stopped for want of steam, but electricity was the only thing that could have out-traveled the truant. In "getting there" electricity is a success.

ORDERING SUPPLIES.

It has become seriously embarrassing to receive orders for printing and supplies from the Collectors, Receivers and other members of the Lodges. Such orders cannot in any case be complied with by the Grand Lodge. No order will in any case be honored, except from the Secretary of the Lodge. This is the law, it is eminently wise and economical and will be *strictly* adhered to in every case. If supplies are forwarded to any Lodge the order must *invariably* come from the Secretary of the Lodge. By bearing this in mind much annoyance can be avoided.

* *

DURING the month of May the Inter-state Commerce Commission issued a circular addressed to the labor organizations of the country soliciting information and discussion upon the question of federal regulation of safety-appliances on railroads. The letter is important, and reads as follows:

"The large number of accidents to employes and passengers occurring on the railroads of the country, and the public belief that a great part of these might be avoided by the use of proper appliances have led many States to make the mechanical features of railroad working the subject of statutory regulation. It is well known, however, that in respect to some, at least, of these features, the conditions are such that regulation, if attempted, can neither secure adequate benefit to the public nor be just to the railroads themselves unless it be universal over the whole country. In view of this fact, and of the request of the Railroad Commissioners of the country as embodied in a resolution adopted at their recent convention, the Inter-state Commerce Commission desires to call out as full information and discussion as possible upon the question of federal regulation of safety-appliances on railroads. The following matters seem to be of especial importance, but it is not intended to restrict the discussion to them:

"First—The history in each State of safety-appliance legislation? How far such legislation has been enforced? What have been the means used to enforce it? What obstacles have been met with? What the general effect has been?

"Second—What is the present condition regarding automatic couplers? What prospect there is of a uniform and safe coupler coming into use? What progress the standard coupler, adopted by the Master Car-builders' Association, is making, and what is the attitude of railroads toward it?

"Third—What progress there is in the use of train brakes on freight cars? Whether such progress is satisfactory, viewed as a means of greater safety to trainmen? To what extent freight trains are run without the necessity of brakemen traversing the tops of cars?

"Fourth—What is being done to introduce safer methods of heating and lighting passenger cars?

"Fifth—What is the state of affairs respecting other safety devices?

"Sixth—Whether legislation looking to federal regulation of these matters or any of them, as described, is desirable, and what the reasons are for and against such regulations?

"Seventh—What such federal legislation, if any be desirable, should attempt to accomplish in regard to couplers; in regard to train brakes; in regard to car heating and lighting; in regard to other matters? What its provisions should be upon each of these points?

"Eighth—If federal legislation be expedient, what special administrative agencies, if any, should be provided to carry it out? Whether

federal inspection should be attempted, and to what extent and how? Whether a board should be created after the analogy of the steamboat inspection service? If so, how such a board should be constituted in regard to the number and character of its members; what its powers and duties should be; what its connection with other branches of the administration?

"The commission believes that justice to railroad employes, and to all others concerned, requires that this matter receive thorough consideration, and trusts that you will be able to give it immediate and careful consideration."

That such a letter should have been addressed to labor organizations, indicates several things of special significance. 1st. That labor organizations have, or will properly obtain, the required information and forward it to the commission. 2d. That they are able to discuss the questions propounded intelligently and honestly. In view of such facts, it is to be inferred that labor organizations have obtained consequence in the eyes of the Inter-state Commission. Labor organizations of railway employes now have an opportunity to discuss important questions before a commission eminently qualified to render an honest verdict; a chance to be heard, which should not be permitted to pass unimproved.

* *

A PAPER that on more than one occasion has scabbed its office, remarks that "Some of the younger members of the Brotherhood of Locomotive Engineers are somewhat uneasy that the association is not more radical in its character. They think that the chief officers are entirely too conservative, and if their numbers were sufficient would endeavor to bring about a change in the leadership of the association. Fortunately, a majority of the membership are cool-headed, sensible fellows." Cool heads are well enough, but cool hearts are at a discount when workmen are in trouble. It is then that "strict neutrality" is the equivalent of scabbing.

* *

DURING the month of May there were serious "shake-ups" among the conductors on the L. & N. and the Cincinnati Short Line. A number of conductors were unceremoniously bounced, without warning or explanation. As a matter of course the O. R. C., even if the conductors were members of that Order, will accept the situation, since getting "nearer the throne" requires silence and obedience.

* *

THE *Chicago Knights of Labor* remarks, that "it is unfortunate that the Brotherhood of Locomotive Engineers don't see their way clear to federate with other railroad organizations. The refusal to do so is liable to precipitate a feeling that will be anything but advantageous for any of the parties concerned except the railroad companies." It is doubtless unfortunate for the B. of L. E.

SELECTIONS.

MORN AT NAZARETH.

I think I see Him now at morn
Before the burst of sudden day,
Above the silver fields of corn,
Where He has gone apart to pray;
I think I see Him looking thoughtful down
Beyond the corn, beyond the waking town.

Beyond the silver'd mists that rise
From all-night tolling in the corn.
The mists have duties up the skies,
The skies have duties down the morn.
While all the world is full of earnest care
To make the fair world still more wondrous fair—

More lordly fair; the stately morn
Moves down her walks of golden wheat,
Her guards of honor guild the corn
In golden pathway for God's feet.
Her purpled hills she crowns in crowns of gold,
And majesty before the Lord is rolled!

—Joaquin Miller, in the *Independent*.

RAILROAD BUILDING IN 1888.

It appears from statistics presented by the *Engineering News* that 6,430 miles of new railroad were laid in the United States during the year just closed. Although this is about half the number of miles of railroad constructed in 1887, the result is by no means unfavorable in view of the direful predictions concerning the effects of the inter-state commerce law.

In New England and the Middle states railroad construction seems to be well-nigh completed. During the last year 167 miles of new track were made in New England, of which 127 miles were in Maine, 19 miles in Vermont, 17 in Connecticut, and 2 each in Massachusetts and New Hampshire. In the Middle States 176 miles of new railroad were constructed during the year.

On the other hand, greater activity in railroad enterprise was displayed in the South than ever before. Of the new railroads, 1,107 miles were laid in the South Atlantic States, 946 miles in the States of the Gulf and the Mississippi basin, and 1,504 miles in the southwest—making a total of 3,557 miles, or more than half the entire railroad construction in the United States.

In the Northwestern States 750 miles and in the Pacific States 937 miles of new road were made in 1888. Kansas leads all the states of the Union with 523, and California come next with 465 miles.

Among the great trunk roads that have extended their lines during the year the Rock Island system takes the lead with 298 miles of extension to Colorado Springs. The Santa Fe Company constructed 174 miles; the Northwestern, 120; the Burlington, 102; the Illinois Central, 90; the St. Paul, Minneapo-

lis and Manitoba, 312; the Northern Pacific, 80, and the Southern Pacific, 237 miles.

On the whole, the statistics of railroad construction do not indicate that the great transportation companies have been discouraged or checked in their prosperity by the legislation of congress. So far from it, they are extending their giant arms in every direction in which trade can be reached.

LOCOMOTIVES IN CHILI.

From the Engineering News.

Mr. Jas. W. Romeyn, United States Consul at Valparaiso, gave in a recent report some interesting particulars as to machine works in Chili. He had visited and inspected, unofficially, the extensive works of the contractors for the six locomotives for the State railways, Messrs. Lever, Murphy & Co., at Caleta Abarasa, about four miles from Valparaiso. Mr. Lever is an Englishman, though formerly a resident of San Francisco. The firm has a large capital, has been long established, and has done a great deal of work in repairs on United States vessels of war.

The wages of employees, about 450 in number (some 70 per cent of native birth, the others English, Scotch and Irish), run as high as \$7, Chili money (nearly \$4 gold), per day. The locomotives (two still in the shops in a forward state, the four others contracted for having been delivered, the first in December last) were entirely constructed there with the exception of the wheels, which were of English manufacture. The contract price was \$40,000 each, about \$21,000 gold. Eighteen months were allowed for the construction of all. The general design is the American type, with "bogies" trucks and outside cylinders, instead of the English plan. The cylinders are 17x24. "Certainly the American engine is much the better adapted to the sharp curves of these mountain roads."

The machinery used by the constructors for this and other of their metal work is English; that for wood working the United States. Their steel is imported from England, pig-iron for castings from Scotland. Through Capt. Saukey, an Englishman, holding the appointment in the Chilean naval service of Inspector General Machinery, Mr. Romeyn had the opportunity of inspecting the new steel boilers in construction at the same works for the Chilean steam corvette *Pilcomayo*, a wooden vessel built in England and captured from Peru in the late war. The contract price for these two boilers was \$52,000 paper currency, about \$27,000 gold.

DEPENDS WHERE IT IS PUT.

New Orleans Picayune.

When the iron enters a man's soul it crushes him. When it enters his stomach, in the shape of tonic, it naturally braces him up.

TWO FAMOUS DETECTIVES.

**The Pinkerton Brothers and the Great Agency
They Have Built.**

St. Paul Pioneer Press.

The Pinkertons—William A. and Robert A.—better known as "Bill" and "Bob," came to St. Paul yesterday and put up in parlors I and K at the hotel Ryan. It would be hard to find two brothers anywhere who think better of each other than these two sons of the great Allan Pinkerton.

These two are at the head of the greatest private detective agency in the world. Allan Pinkerton started the business in Chicago before the war. Bill and Bob grew up with the business and the business grew up with them. Few people have any idea how big a concern it is. The Pinkertons employ 5,000 men. Besides the two head offices in Chicago and New York, there are agencies in Boston, Philadelphia, Kansas City, Denver and St. Paul. They have a force of patrolmen in these cities known as "Pinkerton's Preventive Watch." They have arsenals at Chicago and New York, with uniforms and Winchester rifles enough to arm five regiments of men. Pinkerton detectives are everywhere.

They are employed in nearly every large mercantile house in America, in hotels, in banks, following circuses and watching suspected employes of railroads and other big corporations. The business has doubled in the last ten years, and promises to double in the next decade. It is making rich men of Bill and Bob. Their joint income is variously estimated at from \$150,000 to \$200,000 a year. Either one of the brothers could probably count more than a half a million dollars' worth of this world's goods.

The secret of their success in business is that it has been run on business principles. The Pinkertons do not chase criminals in the hope of getting rewards. They charge their clients so much a day for the services of an operator. Prices vary, but \$8 a day is about the average. The Pinkerton detectives are not known to outsiders, and very often they do not know each other, except when two or more are put on the same case. Bill and Bob hire all the new men themselves, putting their knowledge of human nature and the world to use in making their selections.

They have plenty of applicants to choose from. Healthy young men who are quick-witted, well informed and have large bumps of secretiveness and valor, are preferred. Usually the new man goes to work as a watchman or in the office until he has shown what stuff he is made of. Then he is put forward by degrees. The Pinkertons have gray-haired detectives in their employ who have been there from boyhood. No man who ever worked for them and did his duty was allowed to go unrewarded, and when

death takes off a good man the Pinkertons pension his widow and orphans.

There are probably few men in the world so well posted on what might be called thievery as "Bill" Pinkerton. He has made it a life study. He has in his library a photograph, description and record of every professional criminal of America and the most important of those of Europe. He has cultivated a wonderful memory for names and faces, and his brain is a store-house of knowledge on this subject. He keeps a constant watch of the movements of professional criminals of all kinds, and when any big crime is committed in New Zealand, or Delaware, or anywhere else, he can come pretty near guessing who did it, if it was the work of a professional.

TRUSTS AND LABOR.

The trust is the natural offspring of the protective tariff. The protective tariff we are told is maintained solely in the interests of American labor. To what extent labor is benefited the Chicago Sentinel briefly tells:

"Last week Senator Vest rolled up his sleeves and pitched into the whisky, the sugar trusts and the copper syndicate.

If the Missouri Senator had gone farther he might have referred to Stewart's Statistics of Idleness and found out that the combined industries of the country pay the Vulcan steel works of St. Louis \$400,000 to stand idle, thus throwing its workmen out of employ. The Weaverly stone ring pays quarries thousands of dollars—in one instance \$4,500 a year—to do nothing. The salt works along the Kanawha were bought up by the American Salt Manufacturer's Association and never have employed a man since. The Standard Oil company buys up competitors and dismantles their works. The tack manufacturers buy out a refractory fellow who will not join the pool, and not a wheel has turned since. The Western Lead and Shot association buys the shot tower of Dubuque, Iowa, to keep men from working there. The bagging-mills at Dixon, in this State, have been idle for three years, while the proprietor draws a dividend from the pool for "limiting production" greater than he could realize by running the works. Sloan & Co. stop as many coal mines as is necessary to prevent the output from exceeding the limit agreed upon at the "annual meeting" of the combination.

ASHES OF ROSES.

I've buried the past deep down in my heart,
Where near it fond memory reposes;
Yet often my senses are roused with a start,
By a faint, distant perfume of roses.
It awakens old memories, calls up the past,
Its lights and its shadows discloses;
But the dream is a short one, such dreams do not last,
And it leaves me but ashes of roses.

—Mrs. F. G. de Fontaine.

This Department is for the exclusive use of the Grand Lodge of the Brotherhood of Locomotive Firemen, and will contain all Notices of Dues and Assessments, and other Official Notices, Reports and Statements emanating from the Grand Lodge. All Lodges and members of the Order should note carefully each month the contents of this Department.

JULY, 1889.

Grand Dues Notice.

1889-90. \$1.50.

OFFICE OF GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., July 1, 1889.

To Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified that the amount of One Dollar and Fifty cents (\$1.50), for Grand Dues for the year ending July 31, 1890, is now due and must be paid on or before August 1, 1889. Any member failing or refusing to make payment of his Grand Dues as above required, will stand expelled, said expulsion taking effect August 2d. Collectors are required to deliver their returns for Grand Dues, together with the proper statements, to the Receivers of their Lodges not later than August 5th, and Receivers are required to forward the same so as to reach the Grand Lodge not later than August 10th, as provided in Section 12b, (Page 44), of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.
EUGENE V. DEBS, G. S. and T.

Notice of Quarterly Dues.

OFFICE OF GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., July 1, 1889.

To Subordinate Lodges:

SIRS AND BROTHERS:—Notice is hereby given that the Quarterly Dues, for the Quarter ending October 31st, is payable on or before August 1, 1889. The amount is regulated by each of the several Lodges, provided that it can in no case be less than five (\$5.00) dollars. This payment will be in full of local dues and Beneficiary Assessments for the quarter. Any member failing or declining to make payments as above provided will stand expelled (said expulsion taking effect August 2d) and will be so reported by the Secretary to the Grand Lodge.

Yours fraternally,

F. P. SARGENT, G. M.
EUGENE V. DEBS, G. S. and T.

Notice of Protective Fund Dues.

OFFICE OF GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., July 1, 1889.

To Subordinate Lodges:

SIRS AND BROTHERS:—You are hereby notified that the amount of seventy-five (75) cents for the Protective Fund for the quarter ending October 31st, is now due, and must be paid to the Collector on or before August 1st, as provided in Section 215 (Page 62) of the Constitution. Any member failing or declining to make payment as herein provided, will stand expelled, said expulsion taking effect August 2d, of which the Secretary is required to make due report to the Grand Lodge. Yours Fraternally,

F. P. SARGENT, G. M.
EUGENE V. DEBS, G. S. and T.

Acknowledgments.

BRIGHTON PARK, ILL., May 15, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

BROTHERS—I wish to extend my sincere thanks to my brethren for their kindness shown in granting me my disability claim; also to Brother Lighe for the earnest and sincere interest displayed by him. Brothers, accept my best wishes, and may you ever be kept from affliction, is the wish of your brother,

J. EVANS.

HAMPTON, VA., April 27, 1889.

To the Members of Hinton Lodge, No. 236, B. of L. F.:

I desire to return my sincere thanks for the prompt payment of fifteen hundred dollars, the insurance due me on the sad death of my husband, John G. Elkins, who was killed near Charleston, W. Va., Oct. 27, 1888. I also wish to express my appreciation of the kindness and attention shown him at his burial. I have not words to express the gratitude I feel towards your noble Order. May the blessings of God rest upon your noble Order, one and all, is the prayer of his bereaved widow.

EMAR J. ELKINS,

PARSONS, KANSAS, May 17, 1889.

To the Officers and Members of Great Western Lodge, No. 24:

GENTLEMEN—I desire to return my kindest and most sincere thanks for your kindness shown me in my troubles. May Heaven's choicest blessings rest upon you all who so tenderly cared for my husband, and during the last sad rites of bearing his remains to their final resting place. When I read this letter to my little boy, he said, "Mamma, put it in that Richie thanks the Brotherhood, too, for I love the Brotherhood, so did Papa."

May God bless you, one and all, and bless the noble Brotherhood, and keep you all from sudden death, is the wish of

MRS. A. G. MCMAHUS.

Unknown Addresses.

FRED MELVIN—Is requested to correspond with W. G. Mathews, of Magdalena Lodge, No. 261.

PAUL SHAFTER—Will please correspond with the Secretary of Re-Echo Lodge, No. 195, Montpelier, Idaho.

Members of Lodge No. 95 are requested to send their names and addresses to the Secretary, V. L. Culver, 174 N. Halstead St., Chicago, Ill.

MILTON GOCHNOUR—A locomotive engineer, who left Houston, Texas, last July with the intention of going to San Antonio, and has not been heard from since. Anyone knowing his whereabouts will please communicate the information to James J. Coyne, Engineer, Marshall, Texas.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER, }
TERRE HAUTE, IND., June 1, 1889. }

To Subordinate Lodges:

SIRS AND BROTHERS: The following is a statement of the Beneficiary Fund, for the month ending May 31, 1889:

LEGS and ARMS with Rubber Foot and Hands.**MARKS' PATENTS.**

In 1884 Mr. Harnes became the victim of a R. R. accident which necessitated the amputation of both of his legs. Five months after he provided himself with a pair of Marks' artificial legs with rubber feet. With these he was enabled to walk without the aid of a cane. A short time afterward he was appointed station agent, which he holds at the present time. The labors of this position are arduous, trying and difficult, requiring heavy lifting, much walking and quick movements. Mr. Harnes says: "With the Marks' Rubber Feet and Patent Legs I am able to handle boxes, barrels and trunks weighing 125 lbs. I can carry them and place them on a car without help. I can get on and off a train when it is moving at the rate of 15 miles an hour." All persons who have lost one or more of their limbs, or who are acquainted with those that have, are invited to write for a Treatise of 400 pages, which will be sent free. Limbs fitted from measurements with guarantee of success without presence of the wearer.

A. A. MARKS, 701 Broadway, New York.

Artificial Limb Manufacturing Company.

(Incorporated by the State of Pennsylvania).

Protect Your Watch Against Magnetism

—WITH—

“Giles’ Anti-Magnetic Shield.”

The Only RELIABLE PROTECTION.

The Shield can be fitted to any Case.

The following speaks for itself:

GENTLEMEN:—I have now carried three different Waltham non-magnetic movements, viz.: One A., T. & Co. and two No. 35's, and none of them gave satisfactory time. I now want you to get up for me a Howard movement and “Giles’ Anti-Magnetic Shield Case.”

(Signed,)

Respectfully,

N. MURRAY,
Engineer C. & N. W. R'y.

NOTICE TO FIREMEN!

Do you have trouble with scale in your boiler, or corrosion from acid feed-water? The Pittsburgh Boiler Scale Resolvent will remove and prevent scale formations and prevent corrosion. It contains neither acid or alkali, and is so bland in its nature that it can be used to dress a sore or a burn with excellent results. If you can persuade your Master Mechanic to let you try it, we will send a 30 gallon package without charge and prepay freight, on the simple condition that it be tested against the worst water on the road.

VENTILATED DINNER PAIL.

BEST PAIL MADE.

We have many testimonials like the following:

ARKANSAS CITY, ARK., January 15, 1889.

Reardon & Ennis:

Dinner pail arrived all O. K., and would say that it is just the box for engine men and those who take their dinner or lunch to work with them, and will recommend it to all the boys on the line, and hope they will get it from you.

Respectfully

JOSEPH GREGORY, Engine 448.

Size of No. 2 Pail is 9½ in. long by 5½ in. wide by 9½ in. high when locked up. To introduce these Pails until further notice, we will deliver one No. 2 Ventilated Pail, boxed and expressage paid, at any express point in the United States on receipt of P. O. Order for one dollar and fifty cents. Try one.

REARDON & ENNIS,

Sole Manufacturers, Troy, New York.

ENGINEERS' : AND : FIREMEN'S Time, Expense and Memorandum ACCOUNT BOOK.

Designed and Copyrighted by E. W. YATES.

A pocket Memorandum Book with rubber-tipped pencil attached, with calendar and pages most conveniently arranged for the engineer or fireman to keep his own daily record of time and miles run rate and amount earned; also for individual expense account each month and for general memoranda. A certain method of checking with the time-keeper in case of disagreement. It lasts one year and year and every engineer and fireman should have one.

Price, 50 Cents Each, \$20.00 for 50 Copies, or \$35.00 a Hundred.

Send 50 cents for one Copy and obtain the Agency for your Road.

AN INTERESTING HISTORY OF

Dimmick's Kidney AND Bladder Cure!

Having contracted a kidney difficulty while serving in the army in 1864, I was enabled to serve out my time only through the assistance of our regimental surgeon. Returning home in the fall of 1866, I found my old enemy [the kidney trouble] still clinging to me. I placed myself under the treatment of several successive physicians, who gave me temporary relief, but were unable to effect a permanent cure. I paid large sums of money to the different physicians whom I consulted, and tried all the various remedies which promised relief, but to no avail. I continued my efforts until the spring of 1875, my malady in the meantime increasing to such an extent that on several occasions I became unconscious and was confined to my house for several weeks at a time. I was then induced, through the earnest solicitation of a friend, to consult an old and learned practitioner of Chicago, then temporarily located in Binghamton. This physician gave me a prescription in liquid form, of which I used two bottles. The lameness in my back disappeared and I was relieved of the severe pains I had previously suffered. Having experienced such happy results, and feeling my utter helplessness in case of a recurrence of an attack of a similar nature, I decided, if possible, to purchase the recipe for compounding what is now so favorably known as "Dimmick's Kidney and Bladder Cure." The old physician, who was about removing to the Southwest, after some hesitation, consented to dispose of the recipe to me on payment of a considerable sum of money. About two years after the purchase, while acting in the capacity of a railway engineer, I became affected with a prickling sensation in the face, arms, right side and right leg extending to the knee, followed by numbness, or a partial paralysis. This gradually made such inroads that I practically lost the power of locomotion and had no use of my right arm. I was compelled to relinquish my position as an engineer, ran down physically, and became a mere shadow of my former self. The best medical talent abandoned my case as hopeless, and it was the commonly expressed opinion among my associates and acquaintances that I would soon pay the debt of nature. In my extremity, and not knowing the efficacy of the remedy I had purchased, a relative wrote to the physician from whom it had been obtained, for advice, and received the answer that I had in my possession a recipe that was a specific for that difficulty. I at once commenced taking it, and in 75 hours experienced a sense of grateful relief. I continued its use for about one year, taking in that time fifteen of the large sized bottles. This was two years ago and now I am as well and strong as I ever was and run my engine 110 miles a day. I feel that it has saved my life, and I heartily commend it to my fellow sufferers.

A. D. DIMMICK.

Castner & Curran, General Tide Water Coal Agts

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London. England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1833. Since that time the output has increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

Special Announcement to R. R. Firemen!

The results of sales the past year by railroad boys acting as agents for

THE BEST *POLISH* IN THE WORLD.

**BAKER'S
TRIPOLINE,**

Having been so satisfactory, we will for the balance of this year, ending Jan. 15th, next

GIVE FIVE PRIZES:

Viz:—1st Prize, 150 lbs. Tripoline, or a Watch of Equal Value.
2d " 125 " " " " "
3d " 100 " " " " "
4th " 75 " " " " "
5th " 50 " " " " "

Price same as last year, viz: \$2.40 per dozen for 1-lb. boxes. In lots of one-half gross, \$13.00. Lots of one gross, \$25.00.

3 lb. Pails 60 cents each, or \$6.50 per dozen; 5 lb. Pails \$1 00 each, or \$10.00 per dozen.

Cash must always accompany orders to avoid delays and mistakes.

ADDRESS,

**The Matchless Metal Polish Co.,
88 Market St., Chicago.**

N. B.—We cannot accept but one agent in same locality.

Correct account of sales of each fireman will be kept and award made and announced in next February number of Magazine.

"I would not trade my old Boss case that I have carried for twenty years for all the watch cases in the world. It has been in many a tight place, and has always come out safe and sound, insuring perfect protection to the works—which are the best—a necessary luxury with us knights of the throttle. If you want a watch, take the advice of an old engineer, and get a Boss."

These cases are guaranteed to last twenty-five years. Many that have been in use for thirty years are still intact. They are made of two plates of solid gold, 14 $\frac{1}{2}$ karats fine, overlaying a plate of composition metal, in such a way as to leave no exposed surfaces. They are stronger, stiffer, and afford better protection to the movements than solid gold cases.

Every genuine JAMES BOSS CASE contains this trade mark stamped in the back. Refuse all others.

AUGUST, 1889.

LEGISLATION IN THE INTEREST OF LABOR.

In the discussion of labor questions in this *Magazine*, it has been our pleasure to give the standard definition of politics, as the "science of government." It is all too often the case, that writers in discussing labor questions refer to "politics" as something essentially degrading—and it has come to this at last, that the terms "politician" and "demagogue," are, in the estimation of not a few, synonymous.

It is not our purpose at this writing to go over the often plowed ground, but it should be remembered, that in its proper sense, politics is not degrading. The study of the science of government, on the contrary, is elevating, and in a country, like the United States of America, where all citizens have the ballot, and where the ballot determines, ultimately, all questions relating to govern-

ment, politics should be advanced, in the estimation of all men, to the front rank of importance.

In a general way, politicians, men who have held high positions in law-making bodies, many of whom have been accorded the rank of statesmen, have eulogized labor, often for considerations totally unworthy of their positions and standing. They have wanted the votes of workingmen, and these obtained, the reward has been neglect. Obnoxious laws have not been repealed, nor were righteous laws enacted. Promises have been made to be broken. Wrongs have been permitted to exist unrebuked in legislative halls. Injustice, flagrant and barefaced, under the cover of law, or legal decisions, has, with cancerous fangs, been permitted to eat into the very vitals of labor, and the toilers while experiencing the iniquity, the foul-play, have been compelled to submit.

Workingmen do not believe that statutes constitute the panacea for all the ills under which they labor, but they have a right to believe that their condition has been unnecessarily aggravated by vicious statutes which ought to be repealed or greatly modified, and this being true, they have concluded to identify themselves with politics for the purpose of making the government conform more nearly to justice and to the welfare of society.

This fact was made conspicuous during

the last session of the Legislature of Indiana. During the campaign immediately preceding the election, there was an active agitation of labor questions. Workingmen were on the alert. They had certain distinct objects in view. Their interests were wisely considered. No extreme legislation was demanded. Every request bore the impress of prudent thought and painstaking investigation, and results justify the wisdom of their action.

Railroad employes were profoundly interested in securing the repeal of one statute and in the enactment of others important though different in their character.

In the year 1881 the Legislature of Indiana passed a law which was justly regarded by all classes of railroad employes, as monstrously iniquitous. It was class legislation enacted with special reference to railroad employes and was the outgrowth of the great railroad strike of 1877. The last Legislature of Indiana repealed that vicious law as follows:

SECTION 1. *Be it enacted by the General Assembly of the State of Indiana,* That sections 216 and 217 of an act entitled "An act concerning public offenses and their punishment," and repealing all laws in conflict thereof, approved April 14, 1881, being sections 2,126 and 2,127 of the Revised Statutes of 1881, be and the same are hereby repealed.

SEC. 2. An emergency exists for the immediate taking effect of this act, and it shall take effect and be in force from and after its passage.

It will be observed that the law repeals certain sections of a statute approved April 14, 1881.

The reader will want to know the character of the sections repealed. They are as follows. Sections of Revised Statutes and of the act approved April 14, 1881, being identical:

Section 2,126 Revised Statutes, Section 216, Act of 1881, *Preventing Work.* Whoever, by threats, intimidation, or force, prevents or seeks to prevent any person from doing work for or furnishing materials to any person, firm, or corporation engaged in any lawful business, shall be fined not more than one hundred dollars nor less than twenty dollars, to which may be added imprisonment in the county jail not more than six months nor less than ten days.

Section 2,127 Revised Statutes, Section 217, Act of 1881, *Impeding Railroad Travel.* Whoever unlawfully, by threats, intimidation, or force, prevents or attempts to prevent any railroad company, or any of its agents, servants, or employes thereof, from moving, running, and operating the locomotives, cars and trains of such railroad company, or from transporting and carrying passengers or freight in its cars on the line of such railroad company, or in like manner, prevents or attempts to prevent, any express company, common carrier, or persons engaged in

transporting or carrying passengers or freight for hire, from so transporting or carrying either passengers or freight, shall be fined not more than one thousand dollars nor less than fifty dollars, to which may be added imprisonment in the State prison not more than twenty-one years, nor less than two years; and such offender shall be disfranchised and rendered incapable of holding any office of trust or profit for any determinate period.

The foregoing sections were repealed. A glance at them shows their infamous character and purpose, and the penalties attached to the latter, indicates a spirit of vindictiveness totally at war with justice and flagrantly violative of the constitutional bill of rights. But the unjust law has been swept from the Statutes of Indiana, and that too by virtue of the aggressive spirit of workingmen in politics.

Another demand of railroad employes was the enactment of a law which should save Indiana from the deep and damning disgrace of employing Pinkerton armed thugs in the case of a strike or any other labor trouble in the state. This was a matter that had the earnest attention of the Convention of the Brotherhood of Locomotive Firemen at its Biennial Convention, held at Atlanta, September, 1888. These Pinkerton fiends are properly regarded as a trained gang of cut-throats, a menace to life, and enemies of order and the rights of citizens whenever and wherever employed. The following is the law that keeps Pinkerton thugs out of Indiana:

SECTION 1. *Be it enacted by the General Assembly of the State of Indiana,* That no Sheriff of a county, Mayor of a city or other person authorized by law to appoint special deputies, marshals or policemen in this State, to preserve the public peace and prevent or quell public disturbance, shall hereafter appoint as such special deputies, marshals or policemen any person who shall not have resided continuously in this State for the period of one year at least, and in the county where such appointment is made for the period of at least six months, prior to the date of said appointment.

SEC. 2. That it shall be unlawful for any person, company, association or corporation to bring or import into this State any person or persons or association of persons for the purpose of discharging the duties devolving upon sheriffs, deputy sheriffs, marshals, policemen, constables or peace officers in the protection or preservation of public or private property or in the punishment of any person violating the criminal laws of this State.

SEC. 3. That any person or persons who shall in this State, without due authority, exercise or attempt to exercise the functions of, or hold himself or themselves out to any one as a deputy sheriff, marshal, policeman, constable or peace officer shall be deemed guilty of a misdemeanor, and upon conviction thereof shall, in the discretion of the Court or Jury, be imprisoned in the penitentiary for any period not more than one year, to which may be added a fine not exceeding one hundred dollars.

SEC. 4. Any person or persons violating any of the conditions of section one of this act shall, upon conviction, be liable to the same punishment as prescribed in section three.

It will be observed that under the provisions of the foregoing act, no Pinkerton can be employed in the State of Indiana. They cannot be imported nor act under any authority. The statute bars their entrance, and no person will dare employ them. For the passage of this anti-Pinkerton act, the Brotherhood of Locomotive Firemen is entitled to special credit. It shows what can be done by workmen, when they unite for the purpose of remedying evils under which they labor.

Another law, enacted by the Indiana Legislature is designed to effectually stamp out the insufferable abomination of black-listing, than which nothing more completely demonstrates the tigerish nature of some men. The law passed by the Legislature reads as follows:

SECTION 1. *Be it enacted by the General Assembly of the State of Indiana,* That if any person, agent, company or corporation, after having discharged any employe from his or its service shall prevent or attempt to prevent by word or writing of any kind such discharged employe, from obtaining employment with any other person, company or corporation, such person, agent or corporation shall be guilty of a misdemeanor, and shall be punished by a fine not exceeding five hundred dollars, nor less than one hundred dollars, and such person, agent, company or corporation shall be liable in penal damages to such discharged person, to be recovered by civil action, but this section shall not be construed as prohibiting any person or agent of any company or corporation from informing in writing any other person, company or corporation to whom such discharged person or employe has applied for employment a truthful statement of the reasons for such discharge.

SEC. 2. If any railway company or any other company or partnership or corporation in this State shall authorize or allow any of its or their agents to blacklist any discharged employe, or attempt by word or writing or any other means whatever to prevent such discharged employe, or any employe who may have voluntarily left said company's service from obtaining employment with any other person, or company, except as provided for in section one of this act, such company or partnership shall be liable in treble damages to such employe so prevented from obtaining employment, to be recovered by him by a civil action.

SEC. 3. It shall be the duty of any person, agent, company or corporation after having discharged any employe from his or its service, upon demand by such discharged employe to furnish him in writing a full, succinct and complete statement of the cause or causes of his discharge, and if such person, agent, company or corporation shall refuse so to do within a reasonable time after such demand, it shall ever after be unlawful for such person, agent, company or corporation to furnish any statement of the cause of such discharge to any person or corporation, or in any way to black-list or to prevent such discharged person from procuring employment elsewhere, subject to the penalties prescribed in section one of this act: *Provided,* That said

written cause of discharge when so made by such person, agent, company or corporation at the request of such discharged employe shall never be used as the cause for an action, for slander or libel either civil or criminal against the person, agent, company or corporation so furnishing the same.

From the early years of the present century, efforts have been made by workmen to reduce the hours of labor, constituting a day's work. The old time idea was that a man should work fourteen hours a day to earn his bread—and the struggle in the United States has been going forward fully eighty years, nor is it yet ended. Concessions have been made, and fully four hours a day have been gained for all workmen, in some instances five hours, and to a limited extent six hours. The hours, now constituting a day's work, range from eight to eleven, usually ten, and in some isolated cases twelve hours for a day's work are exacted. The General Government, more than twenty years ago, passed an eight hour law, and several states have passed similar laws. The workmen of Indiana early in the last political campaign, pronounced in favor of eight hours as a legal day's work and gained their point. They were a unit upon all questions calculated to ameliorate their condition, and in demanding the eight hour law, they evinced a profound knowledge of man's physical, mental and social needs and rights worthy of the advanced intelligence of the times. The law enacted by the Indiana Legislature is as follows:

SECTION 1. *Be it enacted by the General Assembly of the State of Indiana,* That on and after the passage of this act, eight hours shall constitute a legal day's work for all classes of mechanics, workmen and laborers, excepting those engaged in agricultural or domestic labor, but overwork for an extra compensation by agreement between employer and employe is hereby permitted.

SEC. 2. This act shall apply to all persons, firms, corporations, companies or associations employing labor in this state, and to all mechanics, workmen and laborers, now, or hereafter employed by this state or any municipal corporation herein, through its agents or officers, or in the employ of persons contracting with the state, or any municipal corporation thereof, for performance of labor on the public works of this state, or such corporation.

SEC. 3. Any person, firm, company, corporation or association doing business in this state, or any officer or agent of this state or municipal corporation thereof, who shall violate or otherwise evade the provisions of this act, shall be deemed guilty of a misdemeanor, and, upon conviction thereof, shall be fined in any sum not greater than five hundred dollars, and if the person or persons violating the same, be an officer or agent of this state, or of any municipal corpo-

ration thereof, he shall in addition to such fine, be removed from his position.

SEC. 4. Any party or parties contracting with this state or any municipal corporation thereof, who shall fail to comply with, or secretly evade the provisions hereof, by exacting and receiving more hours of labor than is herein fixed, shall be deemed guilty of a misdemeanor, and upon conviction thereof, shall be fined in any sum not greater than five hundred dollars, and in addition thereto, in the option of the state or municipal corporation, forfeit such contract.

Indiana boasts of a common school system equal to that of any other state in the Union. but it so happens that all the youth of the state are not able to attend school during ordinary hours. Many are compelled to work, and when the day's work is over "school is out," and they are left without the advantage of instruction. It is eminently worthy of remark that the agitation of labor questions has included the welfare of working youth who, by the inexorable laws of existence, are required to work when the more favored children attend school. Thousands of these working youths deprived of the privilege of attending school during the day, ask that the state make some provision for them, and hence the night school as a part of the common school system of Indiana. Early during the session of the Legislature a bill was introduced providing for night schools under certain circumstances, and as a result the following statute was enacted:

SECTION 1. *Be it enacted by the General Assembly of the State of Indiana*, That in all cities having a population of three thousand, or more, according to the census of 1880, the School Trustees of such cities shall keep and maintain a night school, between the hours of seven and nine and a half P. M., during the regular school terms, as a part of the systems of common schools, whenever twenty or more inhabitants of such city having children between the ages of fourteen and twenty-one years of age, or persons over the age of twenty-one years, and who by reason of their circumstances, are compelled to be employed or have their children employed during the school days to aid in the support of such families who desire to and who shall attend such school, shall petition such School Trustees so to do.

SEC. 2. All persons between the ages of fourteen and thirty, who are actually engaged in business or at labor during the day, shall be permitted to attend such school.

To read such laws is to be able to comprehend in some measure the growing influence of workingmen in political affairs, and it will be observed that every law demanded by them is in the interest of society, that they are wise and prudent measures, demonstrating that workingmen have views of government which when they find expression

in statutes, an improved condition of affairs at once appears.

In addition to the foregoing, an act was passed of great importance to miners employed in mining coal in the state. The act provides for weighing and screening coal, for the ventilation of mines and for the protection of miners; matters which have special bearing upon the welfare of a large number of workingmen, who have been subjected to wrongs of a grievous character by mine owners, and which by the operation of the law it is hoped will disappear.

The state of Indiana has set a noble example for other states to follow in the enactment of wise and wholesome laws, which, while they relieve labor of embarrassments, are calculated to promote the general welfare. And the workingmen of Indiana, by their united efforts to obtain this Legislation, have demonstrated to their fellow workingmen throughout the country, that by uniting their efforts and by concentrating their votes on the right men they can in due time abolish every unjust law upon the statute books of the states and of the nation. That there is a growing determination in that direction is manifest, and the labor press of the country can perform no better service than to continue the agitation for the abolition of wrongs, which exist, either in defiance of law, or because laws for their suppression are not enacted.

A RAILROAD superintendent expresses the opinion that improvements to railroad beds and equipments are in their infancy, and feels confident that within five years rails will be welded by electricity, and the rail thus made continuous, doing away with fish-plates, chairs, and all like joint-protectors. He is of the opinion that all first-class roads will have such a track, and that it has already been demonstrated that to weld the rails in their position on the road-bed is perfectly practical. This, he thinks will be the next great improvement to road-beds. Manifestly the present is the age of inventions and improvement, and he who predicts seemingly strange things, is *en rapport* with the spirit of the age.

STRIKES.

The report of Mr. Charles F. Peck, Commissioner of the Bureau of Labor Statistics of the state of New York, submitted to the Legislature April 2, 1888, treats of strikes in that state, their causes and consequences. On page 42 of the report we find the following summing up of the Commissioner's investigations.

"The strikes for 1887 include 144 trades and callings against 137 in 1886; the number of shops on strike amounted to 1,604, against 2,061 shops in 1886. This, however, does not give an exact idea of the work performed by the Bureau in this direction, as 2,212 labor troubles were investigated. Many of these, upon inquiry and investigation, were found to come under the head of threatened strikes. Others never got beyond a simple demand for an advance or a mild protest against a reduction of wages. As a consequence, no figures could be obtained regarding them and the facts are only stated to show the under current of dissatisfaction which is always running, but owing to the lack of organization on the part of the workers in the unskilled trades in which most of these troubles occur, it lacks a direction. These cases, however, require as much work, and are often more troublesome and expensive than real strikes, as they require the presence of a special agent. The returns for the past year show 694 strikes successful, 190 compromised or partly successful, 686 unsuccessful and twenty-four pending. The returns for 2,061 shops reported on strike during the year 1886, show 751 successful, 426 compromised or partly successful, 212 doubtful, 624 unsuccessful and 147 pending. The number of workers engaged in strikes was 51,731; from this number, however, must be subtracted 1,005 workers, who were engaged in what are termed 'threatened strikes,' where there is very slight, if any suspension of work. This would make the actual number of strikers 50,726. Eight thousand one hundred and seventy-six strikers were refused work after strike. The loss of wages incident to strikes was \$2,013,229.45. The amount expended by labor organizations in relief and conduct of strikes, was \$217,069.78. Estimated gain in wages for one year to 11,472 persons, \$944,632.55. Loss to employers, \$1,102,576.70.

For the year 1886, the result was as follows: Number of workers engaged in strikes, 127,392, of whom 6,391 were refused work after strikes; the loss of wages was \$2,562,554. Amount expended for relief and conduct of strikes by labor organizations was \$329,090. Estimated gain in wages in 771 shops, \$1,420,895 per annum, benefitting 34,832 persons. Loss to employers from all causes, \$1,644,812."

The question that naturally arises just here is, are strikes failures? The figures given by the New York Commissioner show that in the two years, 1886-87 there were 1,445 strikes successful against 1,432 unsuccessful—a difference of thirteen in favor of the successful strikes. The "doubtful" strikes are included in the unsuccessful. The compromised strikes manifestly had an element of success to the strikers, at least, it may be assumed that they did not make matters worse for them. The aggregate loss to the strikers in the way of wages was \$4,565,783; to this may be added the amount

contributed by labor organizations, \$546,149, making a total loss of \$4,911,932. Deduct from this the gain in wages, \$2,364,517, and the loss is reduced to \$2,547,415. The average annual gain to the strikers is \$1,182,258. If this gain in wages to the strikers should continue five years, it would amount to the sum of \$5,911,290, which would be a gain over and above the loss in wages and the sum contributed by labor organizations, of \$3,363,875. In view of such official figures it must be admitted that the strikes in the state of New York for the years 1886-87 were not failures; but that grouping all the facts, they were a positive benefit to labor. Manifestly, in dealing with such figures as the New York Commissioner furnishes, we must deal with aggregates. There were 1,432 strikes unsuccessful. The strikers gained nothing, they went back to work, we will suppose, at old prices—submitted to former conditions—except the 14,567 strikers who, when the strikes were past, were ostracised; refused work. And just here comes in a feature of strikes deserving of special consideration. Who are the men refused work when the strike is successful or unsuccessful? Are they not the men who have the courage to step to the front and demand justice for themselves and their co-workers? Are they not the men, who, more than others, contribute to the agitation by virtue of which workingmen are emancipated from oppression and degradation, by virtue of which the wrong is cloven down and the right exalted? The answer is always in the affirmative. They plant that others may reap, they build that others may find shelter. They are the pathfinders, the men who blaze out new highways for the army of toilers, and all too often their reward is martyrdom. Labor organizations owe an eternal debt of gratitude to the men who do and dare for their fellow workingmen anything and all things calculated to relieve them of unjust burdens, and who, in the state of New York, for the years 1886-87, made it possible for 1,445 strikes to prove successful over all opposition, and who, when victory perched upon the banners of labor, were thrust aside by employers and made to pay the penalty of idleness for their unflinching loyalty to the cause they had espoused.

Says, Mr. Peck, the New York Commissioner: "Had the laborer been quiet and suffered in silence, as he had done through the centuries, with only occasional outbreaks, we should have gone on as our fathers did. But the persistent strikes, the labor organizations, and the repeated interruptions of money-making and quiet capitalistic investment, have compelled attention to the laborers' wants and claims." Here we have the declaration of a labor statistician, who has specially investigated strikes in the great state of New York, that but for the zealous agitation of questions relating to the rights and wrongs of labor, by workingmen themselves, there would have been no advance whatever; old conditions would have remained unchanged.

Speaking of the results of strikes, Mr. Peck says: "They have helped to raise wages, to shorten hours, to improve the condition, not only of the particular workmen who have risen up in protest, but also the masses. A strike in a particular shop for reasonable cause often ends in general improvement. Bakers have reduced their hours from eighteen to twelve. The nine-hour day is due to the strike system. Wages in whole trades have gone up from ten per cent. to thirty per cent. because the men in particular shops have asserted themselves and made good their claims to consideration."

In saying this, Mr. Peck shows himself to be something more than a statistician. His conclusions are eminently logical. The strike has been always in the line of emancipation, and says the New York Commissioner: "Even a 'lost' strike is not always a dead loss. It may carry with it the promise and potency of betterment in some other way. * * * Even if a strike be unsuccessful it brings to mind that what has happened may happen again, and may be repeated with worse effect; with the fear of another strike before his eyes, the taskmaster may be compelled to do tardy justice."

Here we have the declaration officially made that strikes are not wrong, they are not vicious, but on the contrary are to be classed with those movements and forces which better the condition of workingmen. Such is the rule. That there are exceptions

is true. But we are not dealing with exceptions. Men may deplore strikes as they deplore war. It is the dream of some people that the time will come when nations will "learn war no more," and there are those who look forward to the time when strikes will disappear forever. Such anticipations are highly commendable. They mean that some time justice will reign supreme. In the meantime, nations will prepare for war, and workingmen will prepare to resist oppression and secure their rights. Men may cry "peace" and deprecate war, but there will be no peace while workingmen create the wealth of the world and are denied so much of this wealth as will suffice to feed, clothe and shelter them as becomes sovereign citizens of the great American republic. It will do no good to tell American workingmen how European workingmen live. It will do no good to tell workingmen of the present how their fathers lived in the far away dead past. The workingmen of the present are profoundly interested in the present, and are determined to correct existing wrongs, and if strikes, which are said to be "war" and "mighty arguments," are required, strikes will come. Arbitration and compromise will be tried, but if these fail, then the strike will come as certain as that water will flow down a mountain side, and it will come regardless of consequences.

THE National Reform Association recently had a meeting in Pittsburg, and was addressed by Dr. S. L. Baldwin, of New York. Among other things the doctor is reported to have said, we find the following:

There should be no Chinese question in America; no Irish question, no German question—nothing but the American question. The law keeping out the handful of Chinese who want to come here and letting in the horde of immigrants from other nations was severely criticised, and the usual objections to the Celestials were shown to be radically wrong. It is not the Chinese, Dr. Baldwin said, who loaf on the street corners, who fill the saloons, penitentiaries and the alms houses. They are a peaceful, quiet race and among the best foreign residents in the country, as a class.

It is scarcely necessary to criticise such utterances. They are not American ideas. They do not represent the American thought of the present nor of the past. When a man eulogizes the Chinese at the expense of immigrants from Europe, it is putting it mildly to say that he is an opium eater.

SAFETY FOR RAILWAY EMPLOYEES.

Under the above caption the St. John's, N. B., *Daily Telegraph*, one of the most prominent of the Canadian newspapers, says:

The returns of accidents on United States railways show that 2,700 able-bodied men are killed and 20,000 injured in the discharge of their duties as employes. About one-tenth only of this number of railway passengers are killed or maimed in the same time. A thought of the hundreds of millions of passengers carried, and the comparatively few employes who do train service forcibly suggests the safety of railway traveling and the perilous calling of those who are employed. When some appalling accident like that near Hamilton the other morning, carries sorrow into so many homes, persons not aware of the facts above stated might conclude that as many passengers as employes are killed. But it is only on comparatively rare occasions when a holocaust of travelers are the victims of such disasters, while the killing and maiming of brakemen, engineers and firemen go on from day to day, the victims numbering, one, two or three at a time, yet making an alarming aggregate.

The fact that the press of the United States and Canada is giving wide publicity to statistics showing the slaughter of railway employes because of deficient appliances, which are a source of constant danger, is a sign of the times of cheering significance. It appears from the most reliable sources of information that 2,700 able-bodied men, railway employes, are killed annually, and over 20,000 injured while in the discharge of their duties. This is the estimate of Charles H. Cooley, as given in the *Railroad Gazette*. He has consulted the returns and speaks from the card. No one denies the statement. A searching investigation, no doubt, would show the estimate too low rather than too high, but as it stands it is horrible. Take a decade of ten years, and we have 27,000 dead—a mangled mass of humanity, and 200,000 maimed for life—thousands of them totally disabled, compelled to drag out lives of pangs and poverty.

The question up for debate is, what can be done to prevent this slaughter? That something ought to be done to reduce the death rate and the number of wounded, does not admit of discussion. Says Mr. Cooley:

Wherever the lives of citizens are put constantly in peril we are accustomed to see the police power of the State exerting itself to the utmost to provide against that peril. The United States regulates transportation by sea in the most minute manner and with a view to the greater safety of passengers and seamen. A complicated and expensive machinery of Inspector General, Supervising Inspector, Inspect-

ors and Assistant Inspectors is looked to to enforce every precaution against loss of life. The statutory regulations cover the whole field from the testing of boilers to the serving of lime juice to seamen. Its activity in securing safety for transportation by sea gives cause for surprise that the Federal Government has done nothing to secure safety for transportation by land.

The action of States, though necessarily inadequate, shows indeed, no reluctance in regulating mechanical appliances on railroads. The multitude of statutes in regard to switching, flagging, bridges, speed of trains, etc., a multitude greatest in States which, like Massachusetts, have been most successful in railroad regulations, force us to believe that if the States have done little to check the waste of life where it is greatest it is because of lack of power rather than lack of will.

So small has been the development of protection to railroad hands by the police power that a tone is sometimes taken which seems to imply that it is a kind of impertinence for the State to step in between a railroad and its employes and prescribe safety appliances. Proposals of such regulations seem sometimes to be taken as a reflection upon the humanity of railroad officers. On the contrary, I think it clear that, assuming those who control railroads to be neither more nor less humane than other classes of citizens, there is no reason whatever to expect that they will take adequate action to protect their employes; that they have not taken such action in the past, do not take it now and are not likely to take it in the future. A railroad is not a benevolent organization and is very ill adapted for benevolent action. Those officials who are brought face to face with the suffering of trainmen are not the ones who have power to appropriate money to prevent it. If we follow back the line of authority to those who hold the purse we find the sense of responsibility for death and injury to trainmen at a minimum. Expensive changes are and will be made only as they are expected to be profitable. It is only occasionally and incidentally that life saving is profitable. Even the expectation of profit in such matters acts very tardily. Outlays which produce a distant and indirect return are always more difficult to justify to directors than those whose advantages are near and obvious. Money invested in safety appliances comes under the former description. I think it would be very difficult to point out a case in which a railroad has gone to much trouble and expense from humanity alone, unsupported by motives of economy or by outside pressure. How much outside pressure has to do with the question may be suspected from the fact that while not one-tenth as many passengers suffer from railroad accidents as employes, at least ten times more care is taken to protect the former than the latter. The roads have no sufficient motive to protect trainmen, and consequently they do not protect them. Let us see if there is any good reason to expect that they will in the future.

If it be admitted that Mr. Cooley has given a correct diagnosis of the case, the conclusion is inevitable that it is vain to expect railway corporations to find and apply any efficient remedy. Employes will be compelled to look elsewhere.

The trouble has been, and it seems to exist still, that in the estimation of those who are in a position to control affairs, there exists a wide difference between the estimated value of the life and limb of an employe and that of a passenger; a difference, which upon investigation, will be found to rest

upon the decisions of courts, legal technicalities, and the viciousness of statutes. Laws for the protection of travelers have been enacted, while the employé must take the chances and pay the penalties, and if redress is obtained it is always by tedious process of legal red tape and judicial circumlocution.

Under such circumstances railway employes are forced to look for a remedy to legislation—State and National—because it is shown that relief can come from no other source. If we are to believe Mr. Cooley, railroad corporations are swayed only by the logic of money. Sentiment, rounded and high-sounding periods of eloquence, do not move them. They are not organized for benevolence. Touch their pockets and they listen. It is stated that 2,700 able bodied railroad employes are killed annually. Suppose the law in such cases made the road responsible to the amount of \$5,000 in each case, giving a grand aggregate of \$1,250,000 annually, to be paid out for dead employes killed in the service? Is that amount too much? The interest on \$5,000 at 6 per cent. is \$300. At \$1.00 a day an employé earns that amount. From a dollar and cent standpoint the amount is not excessive. Let it be the minimum amount, to be more as the dead employé's wages exceed \$1.00 a day. And of the 20,000 employes maimed let the law give an average amount of \$3,000, an aggregate of \$60,000,000, and our word for it, the remedy for the slaughter of railway employes would be found. The law fixing the penalty could be made so as to reduce the penalty when it was shown that in applying the most approved appliances for guarding against disasters the law had been complied with to the letter.

We are not one of those who look to statutes to supply all the defects in social and industrial affairs, but law, in some cases, is the only hope for justice, the only hope for the triumph of the right. Fortunately the workmen of the country by federating for the triumph of justice, can secure the boon. The ballot is the weapon to be used, and when wielded by intelligence, a victory is secured.

"Cowcatchers"—Milkmaids.

OLD Commodore Vanderbilt began laying the foundations of what is now a dozen or so princely fortunes, by pushing mud scows in the shallow waters near New York, while his thrifty wife helped on the business by keeping boarders. And now the papers vie with each other in telling the world of the luxuries the Vanderbilts enjoy, among other things the bath room of Mrs. W. K. Vanderbilt. This wonderful room has a high marble "wainscoting perfectly plain to the top, where there is a band of incased ornament traced in gold. The walls are paneled in small beveled mirrors separated by bands of gilt moulding. Over these are painted apple blossoms, drooping sprays laden with bloom. The ceiling is modeled in Henry II ornament, for the bath connects with a Henry III bedroom, and is colored in cream and gold. The color harmony of this cream, pink and gold, caught here and there and echoed by the mirrors, is one of the triumphs of latter day decoration. Beneath all this beauty is the tub cut out of a solid block of marble with a carved moulding of scallop shells. The faucets are swans' heads and breasts of solid silver, and at the head of this magnificence is a niche in which is a copy of that fair figure of a bather with her tunic lifted and about to step in the bath, by one of the Coysevox Brothers, sculptors in the days of Louis XVI, and the original of which is in the Louvre. A marble slab resting on fabled creatures is the only piece of furniture in the room." It is about seventy-five years since the old Commodore began to plant dimes and reap doubloons, and now, *mirabile dictu* not less than \$250,000,000 tells the story of the harvest. Labor creates all the wealth of individuals and nations, and the story of the Vanderbilts, the Astors *et al.* tells in gilt letters where the surplus earnings go.

RECENTLY a special train of five sleeping cars and a dining car left Boston, Mass., with one of the largest parties of capitalists that ever left the Hub in a body. Their destination was Denison, Texas, where the party, which numbered 125, proposed to invest largely in real estate, on the assumption that Denison will become the Kansas City of the southwest state.

THE READING.

The Labor press of the country, as also the newspapers, regardless of political persuasion, at all inclined to aid workingmen in their struggle to better their condition and obtain fair wages for their work, and all publications, regardless of specialties, whose owners believe that workingmen have a right to organize for social, benevolent, educational and pecuniary purposes, should advertise the Reading Railroad Company, as the enemy of such organizations, and therefore the enemy of workingmen. The Reading Railroad is in the hands of men, who, as the records abundantly show, are as pronounced in their hostility to the interests of workingmen, as the Czar of Russia is in his hostility to that portion of his subjects, who dare ask for any relaxation of his despotic power. The Reading officials, from Corbin, the President of the road, down to the meanest official flea in the hair of the corporation dog, seek, by every means in their power to degrade workingmen. The Congressional Committee, charged with the express duty of investigating the villainies of the Reading corporation did not hesitate to say, that the strike on the Reading, in 1887, was brought about by its officials for the purpose of advancing the price of anthracite coal, and of reducing the wages of its employes. In this, it is seen that the purpose of the officers of the Reading was a double villainy, first, the robbery of the public, by advancing the price of coal, and second, the robbery of its railroad employes and its miners, by a heartless reduction of wages.

The country should be fully able to comprehend the man, Austin Corbin, President of the Reading railroad. He is a man of money, a man of influence in the capitalistic world. He has, by virtue of his position, control of the fortunes of not less than 150,000 of his fellow beings; men, women and children. His word reduces their wages; his word reduces them to idleness; his word clothes them in rags, wrecks their homes and makes them wretched beyond description. When this man, Corbin, perpetrates such crimes as we have enumerated, he seeks to justify his acts by statements sent broadcast to the public. He issued a statement in which he said the company had

mined 51,000,000 tons of coal, for mining which the miners were paid \$57,110,000; that the company received for this coal only \$44,840,000, and therefore that the company sustained a loss of \$12,270,000. This statement was put forth to show how the company had lost money by paying wages to its miners. It was made to show that the company was justified in reducing the wages of its employes, in "Russianizing" the anthracite coal regions of Pennsylvania. The Congressional Committee investigated this statement of Austin Corbin, President of the Reading, who is the enemy of workingmen and the robber of the public, and it was found that Austin Corbin had "blundered," that his statement was not true, that it was a colossal falsehood; that it was gotten up to deceive the public and to cover up the most shameful rascalities. The Congressional Committee called before them Mr. John Norris, editor of the *Philadelphia Record*, and this gentleman produced the official figures, showing that the Reading had received for the 51,000,000 tons of coal \$86,024,188.84, instead of \$44,840,000 as Corbin had stated, and which was \$41,184,188 more than was shown in Corbin's statement; and that instead of being loser \$12,270,000 as Corbin had stated, the Reading had made \$28,914,188. When a president of a corporation manipulates figures in that way, for the purpose of deceiving the public, his usefulness as a truth teller is ended, and the verdict of honest men is that he is a bad man. Austin Corbin belongs to that tribe of human monsters who prey upon poor men, who combine the natures of hog and shark, who, being influenced by greed, make war upon the weak, regardless of right, and who are never more pleased than when they are bleeding those who are brought within reach of their "devil-fish" grasp.

The Reading Railroad Corporation is now making war upon organized labor, because it sees in such organizations, a power calculated to withstand assaults upon workingmen. It is well known that Corbin and his associates have gained what they call a victory over organized labor. They have wrecked lodges of workingmen, just as English Constables have wrecked, with crow-bars and battering-rams, the homes of Irishmen. But

in doing this on the Reading, they have aroused workmen everywhere to a realization of the dangers that confront them. The Reading has reduced its Railway employes to serfs. It has made them surrender their rights and prerogatives, has made them get down in the dirt at its bidding, and they wear their collars as uncomplainingly as did the slaves in old plantation days, the days of labor pens, block, lash and market. It is a pitiful spectacle, a spectacle in the presence of which the Starry banner ought always to be trailed in the dirt, for on the Reading when Corbin commands, it no longer symbolizes freedom and independence. In such places, as was said of it, in days gone by, it is a "flaunting lie."

We assume that railroad employes, in view of such facts, will go forward more determined than ever to organize and to federate for the maintenance of their rights, for if this is not done then their enslavement is as certain to come as that water will run down hill. Railroad employes, by organizing and federating, may hope to secure and to maintain fair living wages. With the organizations single handed and alone they will go down, one by one, but with the organizations federated for justice, the right and the truth, there is hope; without it there is in store for them wreck and ruin.

DWIGHT M. LOWRY, of New York, writes as follows:

"What I admire in Christopher Columbus," said Turgot, is not his having discovered the new world, but his having gone to search for it on the faith of an opinion." The nature of man is mirrored in his ideals, and the sentiment of the great French statesman and economist illuminates two characters. The true greatness of Columbus is just where Turgot placed it. His strong claim upon the honor and reverence of mankind rests upon his possession of that noble faith which is the result of qualities partly intellectual and partly moral, that far beyond the dim horizon of man's momentary environment, the teachings of reason and the laws of nature will be found ever to be in eternal and changeless accord.

"Noble faith" in what? In "an opinion." The opinion was that he could find the East Indies by sailing west. There are thousands of workmen to-day, who have faith in the opinion that federation will enable workmen to secure justice without striking. If they have the faith of Columbus, as certain as that the earth is round, they will succeed.

RAILROADING IN INDIANA.

Hon. William A. Peelle, Jr., chief of the bureau of statistics, in his biennial report for 1887-88, introduces a number of tables, showing the earnings and expenses of thirty-three railroads in Indiana for the year ending June 30th, 1888, as follows:

Earnings in Passenger Department . . .	\$32,542,153
Earnings in Freight Department . . .	72,289,601
Total earnings . . .	\$104,831,754
Operating Expenses . . .	74,892,845
Earnings over Expenses . . .	\$29,938,909

The report recapitulates the statements showing the total number of employes and occupation, the average monthly wages, average number of hours employed daily, and the average number of miles required for each run, as follows:

Employes—Occupation.	No. Employed.	Average Monthly Wages.	Average No. of Hours Employed Daily.	Average No. of Miles Required for Each Run.
General Officers . . .	240	\$266 33		
Division Superintendents . . .	24	228 41		
Civil Engineers . . .	39	145 76		
Master Mechanics . . .	47	157 84		
Road Masters . . .	75	112 43		
Clerks . . .	3,930	55 19	9.3	
Machinists . . .	1,922	60 85	9.8	
Conductors, Passenger . . .	676	95 88		147.59
Conductors, Freight . . .	1,233	78 19		103.66
Conductors, Yard . . .	481	63 00	10.9	
Engineers, Passenger . . .	841	111 29		125.06
Engineers, Freight . . .	1,651	101 80		103.66
Engineers, Yard . . .	508	79 00	11.1	
Firemen, Passenger . . .	808	59 58		125.66
Firemen, Freight . . .	1,706	55 15		103.66
Firemen, Yard . . .	549	49 00	11.4	
Wipers . . .	739	36 77	10.3	
Baggagemen . . .	486	51 07		147.59
Brakemen, Passenger . . .	919	51 44		147.59
Brakemen, Freight . . .	2,409	51 30		103.66
Brakemen, Yard . . .	1,034	54 60	11.1	
Station Agents not Telegraph Operators . . .	1,091	54 64	11.1	
Station Agents also Telegraph Operators . . .	991	43 48	11.1	
Telegraph Operators not Station Agents . . .	1,589	48 69	11	
Carpenters . . .	3,011	53 90	10	
Section Foremen . . .	2,125	43 00	10	
Sectionmen . . .	11,277	31 00	10	
Watchmen . . .	1,368	41 00	11.2	
Bridge Tenders and Pumpmen . . .	486	34 88	11.1	
Soliciting Agents . . .	191	87 83		
Traveling Passenger Agents . . .	84	97 00		
Contracting Agents . . .	60	102 91		
Painters . . .	441	52 20	10	
Extra Foreman . . .	92	58 42	10	
Other Employes . . .	14,102	39 24	10	
Total . . .	57,867			

"L. I. R. R." is heard daily by Austin Corbin, yet he never resents it.—E. C. Hubbell.

THE statement is made that more complaints have been filed with the Inter-State Commissioners relative to the issuance of free passes in violation of the law than from any other cause.

THREE Millionaires, Robert Petcairn, Andrew Carnegie and Harry Oliver, were all boys in the office of Thomas Scott when he was President of the Pennsylvania lines. The two latter began as messenger boys.

WE see it stated that the Pennsylvania system of railroads, on its New York Division, is reducing the size of its locomotive headlights. The glass face of the headlights now in use is but twelve inches in diameter, while the face of the ordinary headlight is twenty inches in diameter.

AND now, since the Vanderbilt lines have stopped some of the Sunday trains, a stockholder protests, and he threatens, if it is not heeded, to throw the Vanderbilts out of control of the New York Central road at the next annual meeting. He argues that the stock of the New York Central road has dropped from 155 to 83, and the loss of Sunday earnings will further depreciate the stock. It is hinted that when the protesting stockholder gets sick enough to sell he will be able to find a buyer.

DESPITE the fact that the result of the "Q." strike is generally supposed to have been discouraging to all the railroad orders, they were never in a more prosperous condition than now. The recent federation of three of them has fully doubled their power and importance in the labor world.—*Denver Patriot*.

That's it. The "Q." conquered, but it don't want any more such victories. The "Q." strike is to yield a glorious harvest of compensation to railroad employes. It was a school of experience with a big E. It made federation possible, and the possibilities of federation includes the maintainance of the right when capitalists combine to strike it down.

THE Arizona legislature has enacted a law making train robbery punishable by death. After reading the law we conclude that the death penalty can also be made to apply to train wreckers. If there is a demon in human form who deserves death, it is the train wrecker.—*Railway Service Gazette*.

And why not make the law apply to those who wreck a whole railroad system, as did the officials of the C., B. & Q.? Those fellows took a great and prosperous property and virtually wrecked it—bankrupted it—sunk, God only knows how many millions of money that they might crush and ruin men who simply asked for fair play and honest wages.

DURING the month of February, 1889, the Internal Revenue Bureau collected taxes on 274,548,927 cigars. If this rate is maintained for twelve months taxes will be collected on 3,294,587,124 cigars. Suppose they cost five cents each to the smoker, it will be seen that \$164,729,356 annually go for smoke.

THE United States is still engaged in feeding the world. The report of the Bureau of Statistics at Washington shows that the export of beef and hog products for the month of March was \$8,125,068, while in March, 1888, it was only \$5,323,354. For the five months ending March 31, 1889, the export was \$41,571,715; for the same period of the preceding year, \$32,461,098; and that the export of bread stuffs for the nine months ending March 31, 1889, was \$91,744,947.

THE estimate is that the United States has sixty-two wealthy women, who have in their own right \$372,000,000, an average of \$6,000,000 each. One of the number, with an eye to business, proposes to organize a company for the purpose of importing European nobility who have nothing but titles to recommend them, for matrimonial purposes, and thus establish an aristocracy without the smell of coal oil or cod fish; an aristocracy on the European plan. The New York heiress, who is a spinster and worth \$80,000,000, is of the opinion that the company, with \$372,000,000, could occasionally catch a King.

IN 1845, John Bright, and a nobler type of an Englishman never lived, made a speech in which he referred to landlordism in England, as follows:

The land owners have had unlimited sway in Parliament and in the provinces. Abroad, the history of our country is the history of war and rapine; at home, of debt, taxes, and rapine, too. In all the great contests in which we have been engaged we have found that this ruling class have taken all the honors, while the people have taken all the scars. No sooner was the country freed from the horrible contest which was so long carried on with the powers of Europe, than this law, by their partial legislation, was enacted—far more hostile to British interests than any combination of foreign powers has ever proved. We find them legislating corruptly; they pray daily that in their legislation they may discard all private ends and partial affections, and after prayers they sit down to make a law for the purpose of extorting from all the consumers of food a higher price than it is worth, that the price may find its way into the pockets of the proprietors of land, these being the very men by whom this infamous law is sustained.

Landlordism in the United States is becoming what it was and still is in England. There need be no mistake about it. Those who cannot see the drift are so blind that to their diseased vision, black and white are all same.

JOHN A. HILL.

Students of affairs are never more gratified than when, in pursuing their investigations, they are brought in contact with representative men, and fortunately for society there is everywhere manifested a desire to know as much as possible about the antecedents of such men. With the majority, the interest increases if the person who has distinguished himself is what the world calls a "self-made man," by which is meant that distinction has been secured chiefly by his own energies, and in the face of obstacles more or less formidable. In such cases the representative man is credited with special characteristics, qualities of mind, which it is worth while to know and to make public for the benefit of others, who in like manner are struggling to rise and to overcome adverse circumstances. Such reflections are eminently suggestive and relieve us of the necessity of elaboration. The history of our country supplies many well authenticated illustrations which the reader will readily call to mind, all of which will bear testimony to the fact that a representative

man, in any of the walks of life, who has secured his position by virtue of such inherent qualities as courage, energy, will-power, tenacity of purpose, and determination to succeed, rightfully enjoys a larger share of commendation than falls to the lot of others, who, though occupying perhaps a more extended sphere, were the favorites of fortune from youth to manhood. Nor should the statement be omitted that when distinction is secured in early manhood, prudent recognition should not be postponed to a later day in life as a concession to the maudlin idea that only years give value to merit. Without boasting, we claim for the *Firemen's Magazine* a purpose on all proper occasions to recognize merit, and in an especial manner is this true when we write of those who are directly or remotely identified with any of the Brotherhoods of railway employes, and who are devoting their time and energies in advancing the knowledge and general welfare of the men of the foot-board.

Such a man is John A. Hill, editor of the *Locomotive Engineer*, of New York, now

thirty-one years of age, having been born in the state of Vermont, A. D. 1858, and who, as a practical engineer, and a writer upon subjects connected with locomotive engineering, has become a representative man.

To advance to such a position at the age of thirty-one years must of necessity involve a train of circumstances worthy of record, and all the more important if it is shown that the victories won along the line of march were the result of faith in one's self, since it is this faith, more than all other things besides, that has given to the country the self-made representative men who have embellished it in every decade of its history.

We are neither disposed nor prepared to discuss climatic, geographical or topographical influences in the formation of character, though it would not be difficult to advance not a few well-defined facts in that direction. At any rate, the subject of this sketch, could he have been consulted, would have found it difficult to locate his infancy in a better land than Vermont. The inhalation of Green Mountain air for five years of his babyhood, doubtless gave him a send-off physically which has been of service in later years—whether in Wisconsin, Iowa, Colorado or New York—besides it could be easily shown that the Vermonter in his migrations westward, following the star of empire, has contributed his full share in laying the foundation of states, and in developing their growth and resources. At the age of five years, young Hill became a resident of Wisconsin, and soon thereafter his lot was cast in the state of Iowa. In the meantime, having lost his mother, his father returned to Wisconsin, where we find him mastering, under common school conditions, the rudiments of an English education. We are not advised that Mr. Hill claims academy, college or university for his *alma mater*. In that regard the common school was his fostering mother, and that he was a dutiful son and made the most of such favors as she could bestow, finds ample verification in the success that has attended his undertakings.

At the age of fourteen young Hill was transferred from the school room to the printing office, and began learning the "art preservative," and for four years was at the case, wrestling with such problems as a printing office offers for solution, and such as have laid the foundation of the fame of not a few representative Americans. But the duties of a printer were not congenial to the tastes of the young man. He sought a more active life, one that would afford a broader field for the play of physical energies and challenge mental effort in a different direction. The locomotive engaged the attention of the youthful aspirant. It is not surprising. A machine of wonderful power, and its connection with the great

enterprises of the age, was well calculated to arouse in the mind of young Hill a determination to master its construction, every principle of power and speed, that makes it still a wonder in all lands. In a word, young Hill determined to be a locomotive man, and at the age of eighteen years took his place on the footboard of an engine as a fireman on an obscure road for an obscure firm in the lumber regions of Wisconsin. This firing an engine stimulated young Hill's ambition to know more of the machine, and ever available hour was devoted to the study of steam engineering. At this period, like thousands of others, the subject of our sketch became the victim of the Western fever—the Horace Greeley idea, to go west and grow up with the country—and west he went, finding himself in the famous city of Leadville, Colorado, at a time when men of his acquirements were in demand to put up and manage hoisting machinery. But this work, though profitable, was not in the line of his ambition, the high mark of his endeavor being that of a locomotive engineer. He was still a student. Standard works on engineering by such authors as Forney, Clark and Reynolds were his constant companions, and in August, 1879, we find him again firing an engine on the Denver & Rio Grande Railroad, out of Pueblo, Colorado. He worked and he studied. In these two words, work and study, we have the key to John A. Hill's success. Every day was one of intellectual growth; days when theories were exploded or verified by practical demonstrations, and as a result, after two years' handling pick and scoop and book, John A. Hill was promoted to the throttle, and ran one year out of Leadville on mountain service, when a trip to Wisconsin for the girl he left behind him, brought those fruitions which make life worth living, and demonstrate that marriage is not a failure. Again on an engine on the great scenic Rio Grande, he remained at the throttle till 1886, when the printing office fever attacked him, and the *Double Header*, of Pueblo, was issued under his editorial management. The *Double Header* succumbed to the *Daily Press*, and Mr. Hill retired to resume work on the footboard, where he remained till November 1, 1887, when he was called to New York by the American Machinist Publishing Company to take editorial charge of the *Locomotive Engineer*, a monthly publication devoted to the special interests of locomotive engineers and firemen, and to locomotive maintenance and repairs, and which, in the second year of its publication, has won a front place in the list of railway periodicals, constituting its editor, John A. Hill, at the age of thirty-one years, one of the representative men of the times in railroad affairs.

Such references to Mr. Hill, if eulogistic,

are so because of the facts recited. We have not gone out of the way for figures of speech in writing of a man not yet in the full prime of his manhood, but who has, nevertheless, achieved success aided only by such advantages as the genius of our institutions afford to all men who have a disposition to grasp them and make them subserve the purposes of an honorable ambition. Uneducated in the sense that the scholar uses the term, we see a young man daily at work for a livelihood, not only mastering a calling of great responsibility, but so devoted a student that his contributions to the pages of papers of high standing in the department of applied mechanics secured for him, years before he became the editor of the *Locomotive Engineer*, the recognition of advanced thinkers.

This *Magazine*, in affording its readers the means of knowing something of the history of John A. Hill, whose life-like likeness accompanies this sketch, could assign many reasons for its course bearing the stamp of fitness, but one will suffice. Mr. Hill's life

ought to be accepted by thousands of locomotive firemen as an example. It ought to inspire them with a determination to study, to avail themselves of every opportunity to improve their minds and to become what the railway service of the country demands with ever increasing emphasis; educated engineers—indeed, Master Mechanics, for such is the recognition Mr. Hill has received from the American Railway Master Mechanics' Association, of which he is an honored member.

We predict for Mr. Hill a career of great usefulness. He is now where he can give full play to his steadily advancing intellectual powers. The phenomenal growth, in circulation of the *Locomotive Engineer* is significant of the fact that it has a field and a mission, and located as it is in the commercial metropolis of the continent, the question of success no longer confronts him, the only question being, what shall be the measure of that success? We predict that it will be large and equal to the expectations of its courageous editor, John A. Hill.

A REFRAIN.

 H, what makes the music so sad that seems
Like a sob of articulate pain?
With its sorrowful refrain
It strikes through my heart and my brain,
For mine eyes they have gathered the pain of man's dreams,
Like the clouds that have filled with the tears of the streams
That fall in the tears of the rain.

Now it tells of all things that are tender and sweet,
A touch of unutterable tears,
A sigh from invisible spheres.
A sob for the yearning of years
Unfilled to the hearts that lie dead at our feet,
Unfilled to the souls of the living that meet
Still filled with life's hopes and its fears.

Oh, what makes the music so sad that it seems
Like the touch of an infinite pain?
Is it a longing on earth that is vain,
Or a heaven we never may gain,
Seen only by man in the dim light of dreams
That are brief as the flash of a fire-fly gleams,
That it tells with its saddened refrain?

Oh, the sound of the music, its infinite wail?
Oh, the sound of its infinite moan,
To the sea of the heaven alone
May the soul of its secret be known,
For each dream of the soul is so fair that doth fall,
And the lips are so red of the living that pale
That the soul of the music must moan.

Again comes the saddened refrain,
It strikes through my heart and my brain,
For mine eyes they have gathered the pain of men's dreams,
Like the clouds that are filled with the tears of the streams
To fall in the tears of the rain.

—Bennet Bellman.

ESSAYS

AUGUST, 1889.

ENOUGH.

Only the truly wise know when they have enough; and this being true, the question arises, who are the wise? It may have fallen to the lot of the favored few to have known persons who confessed that they had enough of the world's goods, and were satisfied. Goldsmith made his "Hermit" sing—

"Man wants but little here below,
Nor wants that little long."

The fact is, the poet got things wrong end first. Just the opposite of the "Hermit's" declaration is true. Man wants everything in sight, and once in his grasp, he will not surrender his possessions. He holds on, nor will he let go except by the mandate of death. It is said that 300,000 persons own all the land in England, Ireland and Scotland. Was one of these landed proprietors ever known to confess that he had enough? Take the Vanderbilts, the Astors and Jay Gould, say a dozen individuals in all, with \$500,000,000. Is it on record that anyone of them ever intimated that the enough limit had been reached? Even when they die, they would if they could, take their wealth with them. Being unable to do that they seek to create dynasties for the perpetuating of their estates in the hands of the favored few, to establish an aristocracy of wealth, and of power, born of wealth.

The present is an age of greed, as well as an age of gold. The avarice of men was never more pronounced than in these closing years of the nineteenth century. It is a disease. It expands to the proportions of a scourge. Men who reason from cause to effect, and from effect to cause, predict manifold calamities as the result of man's uncontrollable ambition to get possession of land and command every avenue of business so that many shall pay tribute to the few. They are ready to exclaim:

"Dammed be he who first cries, hold, enough!" And few there be who invite the malediction. So wide-spread and deep-seated is the malady that men who have enough are combining everywhere to add to their store. They pull down their old barns and warehouses and build new ones more capacious that they may have space for their ever increasing wealth. Nor is this all, nor the worst of it. Those who have enough to live in palaces, to dress in purple and fine linen, to fare sumptuously every day, become so greedily that they combine

their wealth and form what are called in modern nomenclature, trusts, syndicates, pools, etc.—not to secure enough, not to guard against penury, not to add to their personal comfort, but to satisfy minds diseased and depraved by greed, cupidity, unrestrained rapacity, and though this exhibition of mental deformity creates wide-spread distress, they pursue their heartless career totally regardless of the woes they inflict.

Such people are multiplying rapidly in this God-favored (?) land—and the wrongs inflicted have the sanction of the law.

It was a noted miracle when the Master, to meet an emergency, changed water into wine, but in these latter days, man has discovered a way to change water into dividend-bearing stocks and bonds, and annually pockets millions of money, drawn from the surplus earnings of labor, while the very men who make such a piratical miracle possible, are reduced to beggary.

This trust and syndicate business is referred to now-a-days by people who are students of conditions as a great danger, but the business goes right along as if the warnings given were the utterances of visionaries—very much like the warnings given by prudent people relating to the reservoir near Johnstown. It was owned by the rich who built their cottages on its banks and on its waters sailed their pleasure boats and caught fish. The calamity came at last, and the world stands aghast at the horrifying results.

There are millions of people who know that the men who are constantly forming syndicates and trusts have got enough, more than enough, and that their growing surplus is wrested from workmen who have not enough, nor half enough—thousands of whom are destitute, and warnings are continually given that the reservoir into which this surplus is ceaselessly pouring, will eventually give way—and nothing is more certain. The reservoir has enough. The men who own and control it have enough, while the men whose earnings are used to embellish it are in want. A remedy should be found before the dam breaks.

Where is the remedy to be found? It is in the workman's ballot—in the workman's intelligence and courage. The remedy lies in the federation of labor. This accomplished, a law can be passed to squeeze the water out of stocks and bonds, a law can be passed annihilating trusts and syndicates, a law can be passed to wipe out land monopoly, a law can be passed which will put a stop to monopolizing opportunities, and though no law can be passed that will get the hog out of the man and make him cry "enough," laws can be passed to restrain his hoggish propensities, and give other men a chance to secure a just reward for the investment of their time, their skill and their work.

Fact.

"I'VE SAVED 'EM, MOTHER."

Occasionally, what purports to have been the last words of great men, go the rounds of the press. Why not add to the list, "I've saved 'em mother!" Elizabeth Stewart Phelps, relates the following incident in a late issue of the *Forum*:

In a New England town the other day, a newsboy, hardly higher than the platform, was run over by a horse-car and fatally hurt. What did the self-supporting baby of six years, when writhing in the last agony of a terrible death? He called piteously for his mother. To shriek upon her breast? That she might clasp him while the surgeon worked? No; to give her his earnings. "I've saved 'em, mother," he cried, "I've saved 'em all. Here they are." When his little clinched, dirty hand fell rigid, it was found to contain four cents.

Why not place the dying words of the dirty faced, dirty handed, ragged little newsboy alongside of the dying words of illustrious men? Those words, "I've saved 'em, mother," all things considered, will compare favorably with the dying words of any one of the illustrious men of any age or clime. The little baby boy only six years old, illy clad, illy fed, had been out all the morning hours fighting with all the odds against him, the battle of life. Look at him; illy clad, poorly fed, his home, doubtless some garret or cellar. His investment in the morning papers must have been small—possibly one cent. He had bought and sold, bought and sold again until he had four cents. He had toiled for his mother—for his dark and cheerless home. He had the price of a loaf of bread. He may have been on his way home when the horse-car struck him and bore him down to death. All of his treasures were in his hand—but under the horses' hoofs, and under the iron wheels he did not relax his grasp upon his four cents, and when rescued, and still able to speak, he cried for his mother that he might tell her of his success and that he had saved his earnings, and when his mother came, he cried, "I've saved 'em, mother," and when his dead hand was opened, sure enough, there were the four cents.

Elizabeth Stewart Phelps ought to have given the name of the infant who had earned the four cents and saved the four cents for his mother. That infant was a hero in all that the word means. He ought to have a monument. Cæsar, Philip of Macedon, Alexander, Napoleon, not one of the great captains ever fought a severer battle than did that baby newsboy in a New England town, to win for his mother and his home those four cents. He had courage, industry, fidelity, loyalty, patience. In hunger and dirt and rags, he faced a cold and pitiless world. No kind word cheered him, and yet, he had secured four cents and was taking it to his mother when struck down, and then he cried out with his expiring breath, "I've saved 'em, mother."

The incident is extremely pathetic, but there is such a splendid, heroic side to it, such redeeming features are presented for contemplation, as to almost make one forget its sadness. The world stands in need of the lesson taught by the baby newsboy, the infant worker for mother and home. He toiled, he suffered, he battled and won. His life was not a failure. The Vanderbilts, Goulds, Astors, and the whole tribe of millionaires do not stand the fraction of a millimeter above the wandering newsboy who had saved four cents for his mother—nor will death when he strikes them down, aim his shafts at a more shining mark.

Had the New England newsboy lived to be three score and ten, his dying words would not have been more worthy of immortality than when at six years, with the day's battle fought, he exclaimed, "I've saved 'em, mother."

If the workmen of the nation were always able to exclaim, when their day's work is done, "I've saved my earnings, wife," "I've saved my wages, children," ten thousand homes would be brighter, and ten thousand dram shops would be deserted. And if all the boys and young men, referring to their wages, could say as did the dying newsboy, "I've saved 'em, mother," ripples of joy and gladness would follow each other like tones of the harp, until mourning would cease and an era of happiness would begin.

It is one of the chief glories of our civilization that in many a humble home, where squalor reigns supreme, there go forth daily upon our streets and thoroughfares, little boys trained by good mothers, who in years to come are to be the hope of the world, provided they emulate the New England newsboy, resist temptation and save their money for mother and home. *

THE MERITS OF ARBITRATION.

There has been in the very recent past, a precedent established in the settlement of disputes between corporations and their employes by arbitration, that has no doubt attracted widespread attention.

I wish this short article to start a general discussion on the merits of arbitration, and hope that any reader of the *Magazine* opposing my views will enter the discussion. The most advanced thinkers of the times maintain that as the world advances in culture and intelligence, so will men of all classes more readily submit their differences to arbitration rather than force. The law also recognizes arbitration as the cheapest and most expeditious method of settling many classes of civil disputes.

But what more deeply interests us is the application of this principle in the adjustment of trouble between labor and capital. Some labor organizations have adopted res-

olutions, looking to the establishment of laws compelling arbitration in all cases under dispute. There have been in the past numberless instances where employes have expressed a willingness to submit their grievances to arbitration. In almost as many instances have corporations refused to settle in this way. Why? Because labor feared its own weakness, and capital knew its own strength.

In the days of the complete subjugation of labor, was arbitration ever spoken of by capitalists? Never! Because it could gain all its ends by force. When capital, in all its arrogance and pride, proposes arbitration, it points clearly to the fact that it fears the strength of the opposing element. Thankful should all workers be that this good time has at last come, and gladly should we embrace this peaceful method of settling difficulties whenever offered, except when the question at issue is a reduction of pay.

It is the oft repeated argument of all labor agitators, and a clearly proven fact, also, that in no case does labor receive a just proportion of its own products, that from the beginning of time it has been enhancing, many times over, the value of crude material, and receiving in return a mere pittance for a livelihood. On these grounds I claim that until it can be clearly demonstrated that laboring men receive too much compensation for their services, a reduction of wages is no fit subject for arbitration, in any case, and by submitting to this method of settlement clearly indicates the inherent weakness of labor organizations. It is usually conceded that if arbitrators split the difference between contestants, or both sides make concessions, that the award is just and fair.

Suppose a man's labor is worth \$5.00 per day, reckoning on a basis just and fair to both himself and his employer. His pay is reduced to \$4.75 per day. The case is submitted to arbitration, and he is awarded \$4.90 per day. In the eyes of the on-looking world that would be entire justice, and all parties concerned would be applauded for the spirit of fairness displayed. But this man is receiving ten cents less than his services are really worth, consequently the award was the quintessence of injustice. Now, Mr. Editor, is the reduction of wages in any case a fit subject for arbitration?

Frank Walton.

ALDERDICE, MONT.

LOCOMOTIVES are said to be cheaper now than ever before. Fine locomotives of 105,000 pounds weight can now be had for \$9,000 which hitherto cost \$10,200, and passenger engines weighing 91,000 pounds, can be had at a cost of \$8,700.

THE BEST MAN.

As I write, two men are held aloft for the gaze and admiration of the public. The press—the mighty press—the educating, elevating, conquering press, teems with description of two American citizens. The question, which one of the two is the *best man*, is on the lips of millions. I write on the 4th day of July, the anniversary of American Independence. It is a national holiday. Flags are fluttering in the breeze, drums are beating; there is music in the air, citizen soldiers are on parade, cannon are booming. The spirit of freedom is abroad. Great and good men pass in review, who, when Liberty was in peril and foreign hosts invaded our shores.

"With serene but awful sway,
Rolled the maddening tide away,"

And gave to the world an asylum for the oppressed. But such men—warriors, statesmen, patriots, philanthropists, are obscured by two men whose names and exploits command universal attention. After more than a hundred years of national life and centuries of christian civilization (?) a vast majority of sixty-five millions of christians turn their backs upon every trophy won from savagery since Jesus was born in Bethlehem of Judea and become intensely, frantically interested in a prize fight, and John L. Sullivan and Jake Kilrain are brought into such national prominence as to totally obscure all other men to an extent that defies exaggeration.

I do not recall the names of any two men on the face of the earth so prominently before the American people as are Sullivan and Kilrain the prize fighters. There is a splendid list of statesmen, warriors, philosophers, philanthropists, writers, scientists, educators and explorers who are little known compared with the prize fighters named, nor is there an empire, kingdom or republic, continent or island upon which, as I write, so much interest is centered, as upon the spot, the "ring," the enclosure, where Sullivan and Kilrain will fight.

What of these two men? This! they are two splendid specimens of human animals, trained like dogs to fight. The human has been trained out of them, the beast has been trained into them. We read of their limbs, muscles, calves, thighs, ribs, chests, arms, shoulders and fists, powers of endurance, etc. They have been transformed into beasts and fight for money, and for this they receive ovations wherever they go. They will enter the ring, agile as panthers—two trained bull dogs, and will for money, and for notoriety that makes savagery blush and civilization a stupendous mockery, hammer each other to a mass of bleeding pulp, or to death, while thousands will look on in beastly satisfaction. And the press

will be represented, and the sickening details will be given to the world over the land and under the sea.

Croaking is not in order. Gushy sentimentality is not required. On the one side, is our much vaunted civilization. On the other the prize fight. On the one side is the church, the school, the library, the press, the educating forces. There stands the statute, and there, right under the shadow of them all, is the prize-ring, the prize fighting arena. Look at them, and then tell the world just how far civilization has overcome paganism, savagery, low, beastly, vulgar vices. Here in the United States, prize-fighting constantly flourishes, is constantly increasing, regardless of the statute,

regardless of all the educating forces in operation, and yet with the fact in full view, there is a blubbery phariseism which affects to be horrified over Spanish bull fighting.

The prize fighter, in public estimation has steadily advanced until he receives a larger share of applause than falls to the lot of any other man regardless of achievements.

"Some shout him and some hang upon his ear,
To gaze in his eyes and bless him, maidens wave
Their 'kerchiefs, and old women weep for joy,"

while others, who have devoted their lives to good works, pass along the streets unknown.

Anon.

For the Magazine.

MY MOTHER'S BROW.

I 'VE read full many a page
Of entertaining lore,
Gathered from every age,
Of the thrilling days of yore;
But never so pure a white
Was a page that I now
Behold in the fading light
On my mother's wrinkled brow.

There are lines so plain to me
In her forehead once so fair;
In the characters I can see
The trace of sorrow and care.
Each furrow a history has,
There's a story, if one would look,
Written distinctly as
The page of an open book.

Above are the locks of white,
Below are the eyes so mild,
That many a weary night
Have watched o'er her sleeping child,
'Tis sorrow, and trouble, and care
That have marked her hallowed face,
And left their impression there
That nothing can ever erase.

I see one furrow as straight
As the way she has ever trod
In striving to reach the gate
That leads to the palace of God.
But another still I find,
A deep and devious one,
Like the footprints of the blind,
Or the path of her wayward son.

Ah, who would not fondly press
On a mother's brow a kiss,
And with filial love impress
Her burdened heart with this:
That years of affectionate care
That a patient life can fill,
And many an anxious prayer
Are cherished in memory still?

For softly over me steal,
As I gaze on her furrowed brow,
The lessons these lines reveal
In language that tells me how
Through toilsome days that are past,
No duty was left undone,
But faithful and true to the last,
Is a mother's love for her son.

—Geo. W. Hall.

STANBERRY, Mo.

Mechanical

Letters and Papers pertaining to Locomotive running, firing and management and other topics of interest to locomotive engineers and firemen are solicited for this department.

Correspondents are required in all cases to give their real names, not for publication necessarily, but as a guarantee of good faith.

Communications should be plainly written on one side of the paper only, and as brief as possible. No matter should be introduced for illustration or otherwise that does not have a bearing, directly or remotely upon topics of a mechanical character.

Contributions to this departments should reach the Editor not later than the eighth day of each month to insure publication in the next ensuing number, and should be addressed to

MECHANICAL DEPARTMENT,
Locomotive Firemen's Magazine,
TERRE HAUTE IND.

AUGUST, 1889.

Various Locomotives.

It appears now, that the run made by the Strong locomotive "Darwin," alias "Missing Link," as the boys have dubbed her, is not so unparalleled a performance as at first it appeared to be, for according to well attested cases, runs equally long and as near as could be free from stops, except for water, are being made with heavy trains, in some sections of our country every week, and are passed over as ordinary performances not worthy of special mention. It will be seen by the paragraph below, from the "*Railroad and Engineering Journal*," that the run of the "Jarrett & Palmer Fast Train," was claimed to be without a stop from Jersey City to Pittsburg, and would be a marvel, but as the editor admits making one mistake, it may be possible that he has made another one, for we were under the impression that the Pennsylvania railroad did not use the so-called track-tanks in the western part of its system. It also appears that an ordinary Schenectady locomotive made a run of 879 miles with that train, thus more than doubling the mileage claimed for the "Darwin."

In the article on the Strong locomotive, in the May number of the *Journal*, it was stated that the run which the Strong engine made from Jersey City to Buffalo on the Erie railroad was the longest continuous run of which we have any record, with the exception of a trip from Jersey City to Pittsburg on the Pennsylvania railroad some years ago. This statement, which was made from memory and without investigating the records, was, it appears, erroneous. The train, which was famous at the time as the "Jarrett & Palmer Fast Train," and which ran from Jersey City to San Francisco in 84 hours, was drawn over the Central Pacific railroad from Ogden to Oakland, 879 miles, by a single locomotive, which, like the Strong locomotive, made

stops at several points. Memory as to this run is refreshed by several correspondents, and the particulars were as follows: From Ogden westward over the Salt Lake Division, 182.7 miles, the average speed was 44.56 miles an hour; over the Humboldt Division, 236.5 miles, the average speed was 43.55 miles; on the Truckee Division, 204.5 miles, the average speed was 42.16 miles; on the Sacramento Division, 119.5 miles, the average speed was 31.28 miles, and on the Western Division, 136 miles, average speed, 42.06 miles. The greatest speed attained at any point on the journey was 60 miles an hour; the average speed for the whole distance, 36.8 miles an hour.

The engine which made this very unusual run was an ordinary eight-wheel engine, No. 149, built by the Schenectady Locomotive Works, having 16 by 24-in. cylinders and 5-ft. drivers. The weight of the engine was 65,450 lbs.; the tank capacity was 3,700 gallons. Only the necessary stops were made—the number of them we have not at hand—and the full time was 23 hours, 59 minutes.

As before noted, while neither this run nor the run of the Strong locomotive were continuous in a certain sense, both of the engines having made stops at several points, the run made from Jersey City to Pittsburg on the Pennsylvania railroad was really *continuous*, the engine having gone over the entire distance without stopping, water being taken up from the track-tanks on the way.

This, of course, does not detract from the work done by the Strong engine; it only shows that such runs can be made on occasion, but their rarity goes to prove that the making them is too much for the ordinary locomotive.

We cannot agree with the conclusion drawn by the editor in the closing paragraph, that these long runs are rare, because of the inability of the ordinary locomotive to stand it, but attribute it to the fact that such long runs would prove too much for the men in charge of them, and would not be possible except on some very extensive system. Locomotives on some of our eastern coal roads are often doubled, and in many cases have made runs of 800 and 1,000 miles, being taken from an incoming crew by a crew in waiting for them, and thus kept on the go for four or five days and nights, and are thus continuous in the same sense as the "Darwin's" trip.

If the "Darwin" is so much superior to the ordinary locomotive, she ought to show it now for we see by the *Locomotive Engineer* that "the Strong is wrestling with a four-car express train on the Reading, between Philadelphia and New York. If she really could pull thirty cars at eighty miles per hour, and the engineer 'holding her back,' it ought to be no trick at all for her to make an even hundred miles per hour—especially if the engineer could be induced to let her out" and would thus have a chance to show her mettle. We await further developments with all due patience, for we find that "W. E. Lockwood, him of the hammer blow, has got his pet engine, the Shaw 4-cylinder machine, and is going to give the Strong a whirl on the Bound Brook. The Strong weighs just about twice as much as the Shaw, but it is thought she will handle four cars about as well as her big rival," and thus between the two we shall no doubt hear of some big performances.

"The decapod locomotives, designed by Mr. George W. Cushing for pulling trains over the Cascade Mountains before the tunnel was finished, worked continually for two years on the heaviest grades ever operated by smooth-wheeled locomotives without a single failure or accident." This speaks volumes in favor of American skill and ingenuity in designing machinery for special service, and would seem to prove that we needed no foreign importations of doubtful efficiency, to teach us new ideas. In this connection we call attention to the following opinion of an Englishman on the lately imported Webb Compound:

Clement E. Stretton, C. E., an eminent mechanical engineer, of Leicester, England, writing to the *Engineers' and Firemen's Journal*, of Leeds, says:

"* * * It is a fact worthy of note that in this country the working of the compound system has never been fully and fairly compared with the working on ordinary engines; the compound has always had the advantage of twenty-five or thirty-five pounds more steam pressure.

"Compound locomotives have 175 pounds of steam in their boilers; they are provided with the best coal, best oil, and kept in first-rate order; the ordinary engines have only 140 lbs. steam pressure, and have to burn any coal."

"American engineers will test the compound sent over there with one of their locomotives capable of carrying 175 lbs. pressure, in order that the comparison may be perfectly fair."

"Already the advocates of the compound system are beginning to consider that the Americans ought to come to the trial with one of their ordinary engines with only 140 lbs. pressure."

"It will be very interesting to watch the results obtained in America by the Webb engine, but it is to be regretted that, if the Pennsylvania Company desired to purchase an English locomotive, it did not obtain one of the best standard patterns of English practice."

This seems to be a "bad give away" to a much vaunted locomotive.

Our readers will no doubt read with interest the letter "about the Swinerton locomotive" in the *Locomotive Engineer*, as follows:

If you will look on page 408 of the *Fireman's Magazine*, you will see that even so old a rail-roader as Mr. E. J. Rauch can have his eye shut very easily.

He has been riding on the Swinerton Flat-Driver locomotive, and endorses her as a great and good invention. Says she beats other engines of same dimensions, that the flat spots give her more surface in contact on the rail, and thus more adhesion, and that she has worn her driving tire down an eighth of an inch, still preserving the facets. I have not only been on the Swinerton, but about her for many days, and will simply say that Mr. R. has been misinformed about the weight on drivers. I understand that some of this weight has been taken off, as the driving-boxes ran hot all the time, but the original weight was 41,000 pounds on drivers, and this could be increased by traction increases to 47,555—considerable difference between that and 24,000.

Now, about those facets. I cannot find one, except some interested person shows it to me (?) and, if, as Mr. R. says, an ordinary wheel rests on the rail only in a mathematical line, the Swinerton would not touch at all when going from one facet to the other; and if the surface in contact determines the amount of adhesion, instead of the weight controlling it (as all laws of physics declare), why not make the rails ten or twelve inches wide, and the drivers the same?

Now when Mr. R. tells us that a driving wheel, with 105 little flat facets milled upon its tire, can run for a year, and wear down an eighth of an inch, *and still keep the flat spots intact*, why—I don't believe it. I would not believe it if I told it myself; it is not natural; it is not mechanically possible—it would wear off those corners, sure.

I send you herewith a photo of the "Onward," with all her weights noted. A FIREMAN.
LEXINGTON, MASS.

This would go to show, that if a man of Mr. Rauch's age and experience can "have his eye shut very easily," it behooves us to be very careful in our investigations, and to take nothing for granted, even if vouched for by good authority, unless it has common sense and well established proof to back it.

WILLIAMSBURG VA., June 17, 1889.

MR. EDITOR:—I desire to thank Mr. Evans for his reply to my inquiry on the vacuum question; it is clear and forcible, yet like Vulcan's old Scotch woman, I am hard to convince. You see my engine having worked all the week must have worked off all the atmospheric air and being left on Saturday night full of steam and water when she had cooled down on Sunday there could be nothing in her but water, then the space above the water must be something very like a vacuum. To Vulcan I would say that the conditions of your engine and mine were different; you can easily understand how mine had the advantage standing full and cooling down and yours being filled up with cold water forced into her. I did not mean to say that there was not a trifle of water about the holes, but not enough to give any annoyance by spurting when putting in the plugs, and duly appreciating your complimentary notice of my interest in the boys, I will say that I commenced Railroading in 1846, in my twenty-third year.

Another question, is it not possible to make it as easy to get on and off a locomotive as a passenger, and if so, how many men would stick to their post to be crushed and burned to death in a collision? By practice men will learn to catch on and drop off safely at a speed that would be dangerous without practice. There are many collisions and accidents in Britain but it is a rare thing for enginemen to be seriously injured. The footplates are lower for same size of wheel. Steps are more convenient and almost all are fitted with a foot-board and hand-rail on each side of the tender. The height of your foot-plate and inconvenience of your steps makes it a trial to get up and down—this is worthy of thought. Yours &c.,

Wm. Gore.

Of the recent order for 500 coal cars which the Valley road of Ohio placed with the Erie Car Works recently, over 125 have been delivered, and the order is being completed at the rate of over twelve a day.

Is it Possible?

It is an old saying, the truthfulness of which has never been questioned, that "One half of the world does not know how the other half lives," but suppose we were to change this, and say, "One half of the firemen do not know how the other half fires," and even exclude our cousins (the stokers, across the ocean—from consideration, and reduce our limits to the territory covered by our Order, and still we would be within the limits of truth. Some may be inclined to question this statement, and say "I have been firing long enough now to know all about firing, and know all that can be told about it," but probably, these men have served their time on hard coal roads and never tried a soft coal burner, or *vice versa*. Both are called firing a locomotive, but what a difference in the work! Take for instance, our brothers of the Manhattan Elevated road, burning say 100 or 150 pounds of hard coal in making a trip, and making say six to eight round trips a day, who can clean their fire while standing still, with one hand holding on to some convenient lever or brace with the other, and talking of hard work! Meal time, and quitting time come, to them with unflinching regularity. Again take a number of eastern coal roads all using anthracite coal, and you will find most of the coal runs so arranged that 100, to 150 miles form a round trip, and enables the crews to leave home, return and have their rest, and be ready to resume work again at the same hour next day. In some few instances the runs are made longer, with an interval for rest at the end, away from home, and the return trip made next day. In either case weeks and months pass, and the trips are made with unflinching regularity, not deviating more than an hour at any time, and the men reach their homes once a day or every other day in the week, and generally have Sunday to themselves with their families. Of course, when the firemen burns from four to seven tons of coal a day he has a little more to do than his brother on the L.

Again, take some of the roads centering in Chicago, and cases are not rare, where firemen leave their homes say 100 miles from Chicago, expecting to return that day, but are kept waiting for a train, and do not get home until the third or fourth day, and then only long enough to have the pail filled up, and return perhaps in two days again.

Take some of our south western roads for instance, where they have a rush of stock trains, and work their engines 6,000 and 7,000 miles per month, and have their firemen tell the stories of making 436 to 450 miles with heavy trains, and without a rest for themselves or their machines, and you will admit that probably there are some things about firing which you did not know

before. Had our friends in the East known of these facts, they would not have made so much of the performance of the Strong locomotive, in making 400 and odd miles with a passenger train, on a well ballasted double track road, for it surely needs greater endurance of men and machinery, to accomplish such a feat with heavy trains on single track roads.

It would be time well employed, if members in different sections of the country would use the pages of the *Magazine*, once in a while, to give each other an idea of what railroading means in their locality, and thus become better acquainted, and strengthen us by the bond of sympathy, for if "one half are ignorant of the trials of the other half," they can surely have no pity for hardships they know nothing of.

ST. LOUIS, June 16, 1889.

MR. EDITOR:—L. H. Evans ask in June *Magazine*, how steam is worked expansively which is a most sensible question. Working steam expansively is accomplished by the cut-off. When an engine is working, say at half stroke, the valve opens the steamport and leaves it open until the piston has traveled half the stroke and then closes it again, and the steam thus admitted into the cylinder, by its expansion, forces the piston to the end of the stroke, but of course the pressure on the piston at the last half the stroke is not as great as at the first half, because the law of gases is, that spaces occupied are inversely as their pressures. That is to say, if steam 100 pounds pressure per square inch be allowed to expand into double the space, the pressure would be fifty pounds but all the work performed after the steam is cut off is gain. *Le C.*

Patents About to Expire.

Relating to expiring railroad patents, which become public property during July. Furnished by F. B. Brock, Patent Attorney, Washington, D. C.

Counter-Balancing.

Revolving Weight vs. Steam Balance.

MR. EDITOR.—As the request in the communication of "M. M." in the July *Magazine*, page 800, seems a reasonable one, the above heading is given in compliance therewith.

I have been waiting for some time to get the opportunity, like some of the other brothers, "to give Mr. Lockwood a dig myself." Bro. Tucker, in the July *Magazine*, page 598, puts a question to Mr. Lockwood, which I will state in another way, and with your and Mr. L.'s permission, ask you to reintroduce two of his own illustrations.

Mr. Tucker's question, "Let us now suppose that in a locomotive of the Shaw type, the weight supported at each of the crank pins of the forward driver is 300 pounds, and that she is running fifty miles per hour. When the pins are in line above and below the center, according to your idea, the upper weight is moving seventy-five miles per hour, the lower one twenty-five miles per hour. Won't you please figure the momentum of these two weights, and show me how they can balance? This is one point that mystifies me. Won't Mr. Lockwood explain?"

If I have rightly understood Mr. Lockwood in the many articles he has written for the Mechanical Department on this subject, it is that the "axis of motion" of a locomotive driver is at the rail (when on the rail, and not off of it); that the "center of motion" is an imaginary line through the center of the driving axle.

The cut above is Fig. 9 of Mr. Lockwood's article in the December, 1888, *Magazine*, page 896. In this the rail is at rest, the parallel line above is the central line of motion through the drivers, and by translation represents a speed of fifty miles per hour; the single curved line above and below the center line represents one revolution of the crank pin from O^1 to O^3 . It is the application of power on this line by rotating and reciprocating parts in combination, rotating the crank pin, reciprocating, connecting and parallel rods, cross-head, piston-head and rod, that it is attempted to counter-balance by rotating or rolling weight alone, at varying speeds for the first at a minimum of twenty-five to a maximum of seventy-five miles per hour, while that

which it is to counter-balance, the counter-balance B, moves in lines B^1 , B^2 , B^3 , in a single revolution by lift and gravity from one hundred miles per hour, the top, to nothing, the bottom, the point of contact at the rail. It is this universal application of counter-balance to the standard type of locomotives that Mr. Lockwood calls "shocking bad mechanics." Mr. Lockwood has given us his remedy for this in the Shaw locomotive, and introduced Fig. 10, in the December, 1888, *Magazine*, page 896.

The above illustration, Fig. 10, he says, is "correct mechanics" and a "perfect balance," i. e. a two-cylinder locomotive operated by a single valve, acting upon duplicated rotating and reciprocating parts, equal distance from a common center, and moving in opposite directions to each other, one "pushing" and the other "pulling" at the same time, O^1 to O^3 being one revolution as in the first instance, C^1 the line of the top of the driver. The power in this case is applied by the steam acting by pushing and pulling alternately and continuously in the direction of the arrows and along or on the lines C and C^2 . I understand the original scale of these cuts to have been one-eighth of an inch to the foot. If, therefore, this is a "perfect balance," why do not these "power lines" cross each other on the central parallel lines, and not above them?

Eccentric.

Thanks for your illustrations and calculations on "Squaring the Circle," and excuse my oversight in not understanding your former article on the same subject, which I have since looked up and read. I meant my inquiry to be understood as relating to equivalents. Say, is one cylinder fourteen inches, eighty-four ninety-two ten thousandths of an inch ($14\frac{84}{92000}$) the exact equivalent of two ten and one-half inches ($10\frac{1}{2}$)? Please say this is or is not correct. If not, give us the correct answer. *E.*

MR. EDITOR:—"Vulcan" is very kind to give us the rules for "squaring the circle," but as it is above the comprehension of many of us, won't he give us some simple way, or kindergarten illustration, or what will answer our purpose for the present as well. Is one $14\frac{84}{92000}$ inches the exact equivalent of two $10\frac{1}{2}$ inch cylinders? If not, what is?—the stroke being 24 inches in each case.

Eccentric.

Manufacture of Interchangeable Mechanism.

Although interchangeability of parts is coming to be so general in almost every line of machinery, the system of gauging may still lack thoroughness, partly requiring measuring-rods and adjustable calipers, till a well maintained system of standard gauges is secured. The character of such standard gauge is very well shown from some illustrations adduced from the practice of the Grant Locomotive Works, of Paterson, N. J. A locomotive frame is shown, with pedestals and fittings and a number of the gauges, the most noticeable of which is a long gauge with hardened bearings for drilling. In a second illustration showing eccentrics, eccentric straps and gauges, there is on the right a jig-frame, which is of the nature of a gauge being a frame designed to hold a machine part while certain exact operations are performed upon it. In planing the hardened templates used are of the sections of the forms to be planed, and limit the operation. In turning, collars and rigid calipers are commonly used.

Now, while by such devices there is secured a practical uniformity in all the proper machine parts of a locomotive of the same class and make, yet if there was not such a multiplicity of standards or different designs of locomotive, the advantages of the system would be much greater. As nearly every leading railroad and nearly every locomotive establishment has its special designs, the system is largely impaired, not through any lack of standard sizes or accuracy of workmanship, but because standard is opposed to standard, and the expense of changing designs is an obstacle to uniform standards. Thus it is the uniform system that stands in the way of its own advancement. If the locomotives of any great railroad were built without reference to any close degree of uniformity, it would be comparatively easy to gradually effect the introduction of any uniform system; but if, as is the case, that railroad has already great numbers of locomotives of a specified design and standard, the effort to bring its standard into conformity with that of any other road or of any locomotive works meets at once another standard and a standing obstacle. On a great railroad the slightest changes in equipment are usually the subject of careful and conservative thought, because a small innovation, running through the whole equipment, becomes a serious matter of expense.

But when we consider how large a proportion of the whole railroad service is engaged in the work of railroad repair-shops the importance of a uniform system of standard locomotives becomes sufficiently obvious. On this subject I quote the following from

the Circular of the Baldwin Locomotive Works:

"By its means the expense of maintenance and repairs can be reduced to a minimum. A limited stock of duplicate parts, either ordered with the locomotive or at any time thereafter, can be kept on hand by the purchaser and drawn from to replace any worn out or broken part when required. Repairs can thus be made in the shortest possible time, and the use of the locomotive lost for only a few hours or days, or not at all. The first cost of duplicates will be much less than the cost of manufacture in the shop of the railroad company; in many cases it will be less than the cost of carrying the stock of raw material necessary for the purpose; while if the line is equipped with a limited number of classes of standard interchangeable locomotives, the quantity of duplicates necessarily carried in stock will be small and comparatively inconsiderable in the amount of capital represented. Much of the ordinary outlay for shops, machinery, drawings, and patterns, can be saved, and the necessity of maintaining for the purpose of repairs a large force of skilled workmen at a constant expense may be in a great measure obviated."

Without uniformity of parts repairs of locomotives, like any other species of tinkering are costly, out of proportion to the original expense of manufacture. As the requirements of a railroad in the matter of repairs vary greatly from time to time, the surplus force of skilled workmen, which must be maintained to meet contingencies, is usually employed in the building of locomotives, many repair shops turning out a few locomotives per month or per year. But while the advantages of the uniform system might be of still greater avail in the economy of railroad management in the manufacture of locomotives, this system has within the past twenty years wrought a great change, improving the product both in quantity and in quality, securing a more economical division of labor, putting the more skilled work into the hands of fewer men, and preserving administrative conditions of order and simplicity. The advantages derived may not appear great in descriptive detail, but they are by no means small in the aggregate. It may be said of machine work in general that the following were some of the evils to which the old methods of working were strongly liable. The lack of uniformity began in the drawing-room. The drawings were of various shapes, sizes, and scales, and when sent to the blacksmith shop would often become so singed and discolored that new ones had to be made. In the machine shop the machinist would need to be skillful in interpreting the drawings, and when in doubt as to the meaning of lines and figures intended for

other parts of the work, or as to discrepancies between figures and scale, he would need to consult the foreman or the draughtsman. No two men will measure exactly alike with a graduated rule or an adjustable pair of calipers capable of being sprung, and where these are used slight discrepancies will occur. And so when it came to the erection of the work, filing and fitting and making over, and perhaps conferences of the various fallible parties to apportion the blame for mistakes, were not unusual. Old castings and materials were often left lying about the shops, to the inconvenience of skilled workmen, and the whole work was carried on with trial and fitting and the apprehension of occasional mistakes.

In contrast is presented the following outline of the system pursued at the Baldwin Locomotive Works, where the interchangeable system was introduced about 1860. Standard office drawings to a uniform scale, with all parts figured, are first made of any new design proposed to be manufactured. Small sketch drawings, mounted on pasteboard and shellacked, are furnished to the pattern makers for castings, to the machinists for each finished part, and to the erecting shops to show the relative positions of parts only.

These cardboard sketches are on uniform sheets, and are carefully numbered and recorded, with all necessary references to the engine to which they refer, in a considerable system of book-keeping. They are given out as the work demands, and are required to be promptly returned to the accountant on its completion. But the drawings for the blacksmith shop are so liable to become destroyed that, with a view to this, they are made on tracing material, and the record is preserved in the original of the tracing. Each sketch, before being given out, is examined and verified by three men, the measurements which concern the work of each class, and these only, being figured on the sketch, which is not generally drawn to scale. The gauges are made in a gauge tool shop, which constitutes a separate department. From this shop the gauges are furnished as the drawings are furnished from the draughting room, and to it they are returned for comparison with standards. The calipers, rods and templets made for the work in the gauge-tool shop, are the only standards of measurement allowed in the machine shops, no graduated rules or scales being used. Most of the machinists have only to work to the templets given them, and cannot possibly misunderstand or make errors. All the bolts, fittings, and small parts for a particular engine are kept in a separate cupboard in readiness for assembling, and are interchangeable for the same class of engines. It is the duty of one class of laborers to remove to their proper places all refuse pieces of material which may be

left about on the floors of the shops, and to keep all material stowed away with economy of space. In short, the whole system is so ordered that each man has a simple work to do, in which he is unfettered and unhampered, and in which it is scarcely possible for him to err. No mistakes are made, nor is time and material wasted. These considerations are so valuable that in large works the saving in such a system, displacing less thorough and orderly methods, may be rated in the labor of hundreds of men.

At the Baldwin Locomotive Works all parts of the locomotive are made interchangeable, except the fitting strips for the boilers. It was formerly regarded impracticable to make check pipes and valves interchangeable, on account of the variation in the length of the boiler; but they are now made interchangeable by starting measurements uniformly from one end of the boiler. Valve gears are made interchangeable to the setting of the valve. The eccentric straps are drilled to templet, and the work would generally interchange but as a precaution the eccentric is drilled with the strap fitted. The frames are planed and slotted to gauges and drilled to steel-bushed templets; the cylinders are bored and planed to gauges; the steam-ports, valves, and chests are finished and fitted to gauges, and the tires are bored to gauges. The centers are turned, and the axles are finished to gauges; every bolt is made to gauge, every hole is drilled and reamed to templet, and the cross-heads, guides, guide-bearers, pistons, connecting rods, and parallel rods are finished in a similar manner.

At the Grant Locomotive Works the ports in the valve seat are milled to size by a cutter from a gauge which is bolted upon the valve-seat. This cutter works in a block, which slides in slots in the gauge corresponding to the ports. The guide-blocks are also faced off in a special chuck (which receives a full set) to an exact thickness. Some parts of the work are finished by jig-filing to hardened templets.—[*From Report of Chas. H. Fitch, D. E., to Superintendent United States Census, 1880.*]

Long Engine Mileage.

Engine No. 9, on the Indianapolis, Decatur & Western road, has run 139,000 miles without any repairs of importance or being removed from its wheels. Master Mechanic McKenna says that he proposes to let the engine run 20,000 miles more, and then take it into the shop.

It may be right and proper, and good management, to run a locomotive 160,000 miles without a general overhauling, but very much must of course depend on the general condition of the machine. In the anxiety to make a good showing for mileage, locomotives are frequently sent out, which are in no way fit for economic service, and thus repairs are saved at the largely increased cost of fuel.

Counter-Balance.

MARION, IOWA, June 17, 1889.

MR. EDITOR:—If I were a Master Mechanic of some good railroad one of the first men I should want to send for would be my friend Mr. A. H. Tucker, for he has, by his articles in the Mechanical Department, given me more food for thought, next to "Amboy Division," than any other writer. At one time my lamented friend, the late Mr. Charles T. Parry, of Messrs. Burnham, Parry, Williams & Co., (the Baldwin Locomotive Works), gave me the position of "Superintendent of Motive Power, Marine and Land Service," of a small road of which he was the owner, but the prevailing American rule came in, "where competition ends combination begins," and this line being absorbed by the great Pennsylvania system, Mr. Tucker's best chance for a position under me went with it, as it was probably my first and only opportunity, unless the railroad service has a better appreciation of "double cranks" over "single" ones, because they, the double ones, are always and at all speeds in balance, while the single ones never are or can be, at any speed.

A pressure of important matters makes it next to impossible to answer Mr. Tucker in time for the August *Magazine*. Possibly it may not be necessary if he will answer the following questions so as to carry conviction.

In the *Magazine* for July, 1889, page, 599, says Mr. Tucker: "I will now give a few reasons why I think a locomotive can be counter-balanced so nearly perfect as to render her harmless, so far as disturbing influences in that line are concerned."

First. Will Mr. Tucker tell us how, or by what rule or law of dynamics he can calculate the existence or non-existence of a hammer-blow in a locomotive driver, with the usual counter-balance, at any given speed, when the calculation must be made upon the basis that said driving wheel "combines the speed of rotation with the speed of translation."

Second. The rule or law of mechanics which can balance rotating or reciprocating parts working in combination, by rotating or rolling weight alone, when the axis of motion, as in this instance, is on the rail.

Third. Please give us the rule for counter-balancing drivers upon the road with which he is connected.

Fourth. Say apply this rule to some well-known passenger locomotives on the same road.

Fifth. Give us the weight on front and rear drivers, wheel diameter, length of stroke, amount of counter-balance in each front and rear driver, and the weight of parts which it is supposed to balance.

William E. Lockwood.

LOCH ERIE, July 1, 1889.

MR. EDITOR:—L. H. Evans asks how to calculate the load a Locomotive can haul on a level track at a given speed with a given boiler pressure. The tractive power of a Locomotive depends upon the average steam pressure in the cylinders, the area and the stroke of the pistons, and the diameter of the driving wheels. The adhesive weight of a Locomotive is about one fifth of the weight on the driving wheels, that is, when the rails are dry and clean. If the weight on the driving wheels is 60,000 pounds, it would require a force of about 12,000 pounds to make the wheels slip. In calculating the tractive power of a Locomotive, we multiply together the area of the piston in square inches, the average steam pressure in pounds per square inch on the piston during the whole stroke, and four times the length of the stroke of the piston, and divide the product by the circumference of the wheels. If we have a cylinder 16 inches in diameter, with 24 inches stroke, and an average steam pressure of 75 pounds per square inch, the area of the piston would be 201 square inches. In order to find the tractive power, we proceed as follows: $201 \times 75 = 15,075 \times 4 = 60,300 \times 2 = 120,600$ foot pounds of energy exerted by the two pistons during one revolution of the wheels. If the driving wheels are five feet in diameter their circumference will be 15.7 feet—therefore, 120,600 divided by 15.7 feet would give us 7,680 pounds which is the force exerted through each foot that the circumference of the wheel revolves. Now it has been found that it requires a force of 6 pounds per ton to keep a car moving on a straight and level track, if a car and its load weighs 50,000 pounds 25 tons it would take a force of 150 pounds to keep it moving slowly, as the speed increases, the resistance increases at a speed of thirty miles per hour, the resistance is about $11\frac{1}{4}$ pounds per ton.

If we kept the Locomotive moving slowly, say at the rate of five miles per hour, with a tractive force of 7,680 pounds, we should be able to pull a train of fifty one cars on a straight and level track, each car with its load weighing 50,000 pounds or 25 tons, at a speed of thirty miles per hour, each car with its load being the same weight, the Locomotive having the same tractive force we should be able to pull a train of about thirty-four loads and a half. F. T.

LAST week the schooner T. W. Dunn left Philadelphia loaded with ten locomotives, built at the Baldwin Locomotive Works, for the Provincial Railways of Buenos Ayres. These locomotives are 5 feet 6 inch gauge, and six of them are of the Mogul type, with cylinders 18x24, for freight service, and four of them are of the American type, with cylinders 17x24, for passenger service. The latter have driving wheels 6 feet in diameter, and the tenders are fitted with water scoops.

WOMAN'S DEPARTMENT

AUGUST, 1889.

WOMEN IN THE HOME.

There are certain obligations absolutely essential to successful married life which, although of a material nature, are equally important with those of a higher or more spiritual character. It is as necessary to look after the physical as it is the moral welfare of the household and, indeed, the latter is largely dependent upon the former. People who suffer bodily discomfort cannot be happy or contented. When a man marries he obligates himself to provide the necessities of life for his family. If he have not a reasonable prospect of being able to do this he makes a very grave mistake in founding a new family. This obligation holds through life and calls for industry, economy and self-denial on the part of the husband and father. It is a serious and important responsibility and one which should be most carefully considered by every man. Well may he pause and ask himself, first, if he is capable of the sacrifices he will be called upon to make; and second, if he will be sufficiently repaid. In regard to the former of these two propositions he must judge for himself. He gives up to a large degree his absolute freedom of action; he makes himself accountable to another; he enters upon a life of enforced toil; he accepts the responsibility of caring for a wife in sickness or in health, through trials and troubles of various kinds; of rearing children, with all the attendant expenses and demands upon time and strength and patience.

It is no light thing for a man voluntarily and gladly to take all this upon himself, and he who faithfully and to the best of his ability discharges his important duties as husband and father is entitled to a full measure of respect and sympathetic consideration. In regard to the second part of the question, there need be no hesitation in making an affirmative answer. If a man secure a helpful, loving and congenial wife he will find himself repaid a hundred fold in his matrimonial investment. The varied experiences of life offer no substitute for a home, and the most enduring of friendships are but trifling when compared with the

tender, faithful and unwavering love of a wife. There are many unsuccessful and unhappy marriages but the number of men is comparatively small who would willingly resign home, wife and children for the precarious and unsatisfactory pleasures of a bachelor's life. They may seem delightful and alluring when a man is young and restless, fond of change, full of vigor, impatient of restraint; but when the fires of youth grow dim, when imaginary pleasures become stale and tiresome, the domestic nature of the man asserts itself and he longs for the peaceful rest, the sacred refuge of a home and for the pure and unselfish affection of a wife, the respect and devotion of children.

Wedded life is wholly dependent for its success upon the united action of the man and the woman. No husband, no wife, unaided by the other, ever succeeded in making a happy home. Each has his and her share of the duties, equally important but wholly separate and distinct. We refer particularly to the material obligations. In their relations to the state, the church, society, the training of children, they should be able to work together, in the same line and same manner, but as regards the physical welfare of the family there must of necessity be a division of labor. The husband must go out in the world and earn the money, the wife must see that it is wisely and economically used. It is almost impossible that one person should combine these two tasks. It is a violation of the natural laws when the wife and mother is compelled to earn the money, and for the husband to perform her duties is an impossibility.

But this fact must not be ignored, the obligation on the part of the husband to earn the living is no greater than is that of the wife to perform her share of the marriage compact. We have a thorough contempt for the husband who fails to support his family and no less is the wife an object of condemnation who is an incompetent housekeeper. The husband of such a woman may justly receive most profound commiseration. He has indeed a heavy burden to carry. What hope is there for the man with an extravagant wife, who, to use the homely, old phrase "throws out more with a spoon than he can bring in with a shovel?" He is perfectly helpless, for no remonstrance can stop the endless leak. Alas, for the husband who has a slovenly wife! The discomfort, the wretchedness of a family where the housewife is what is known as "a poor manager," cannot be put into words. There is another inelegant and ancient proverb, "The way to a man's heart is through his stomach," which is very apt to give offense to the progressive and ambitious woman. She does not like to be told that she must work her way up through her husband's

stomach to the higher demands of his nature. And yet, like most of these ancient maxims, there is a great deal of truth at the bottom of it. We do not see how a man can have any respect, and much less any love, for a wife who habitually serves up badly cooked meals. He is defrauded of what he has a right to expect if, having provided the materials for a good meal, it is spoiled in the cooking. The health of the household depends upon properly prepared food, and contentment and amiability and happiness and a long list of desirable qualities are governed by the state of the health. People cannot accomplish good work of any kind if the digestion is imperfect and this is the inevitable consequence if food is badly served. Every family feel or should feel grateful to the housewife who invites them daily to well-served meals and they are correspondingly out of humor when the reverse is the case.

Wives must consider their husbands' stomachs. It is right that they should, and it does not lower their dignity any more than it does that of the husband to earn the food. Although women do not lay so much stress upon eating as men do yet they would not love a husband who permitted them to go hungry. It is not romantic to acknowledge these things but it is sensible. It is not always possible for the young wife to know how to cook but, with the many books on this subject and with other wives always willing to teach her, there is no excuse for her remaining in ignorance. It may not be necessary for her to devote all her time to the kitchen but she should be able to exercise an intelligent supervision over the one who does. We are in favor of granting to woman all the rights and privileges possessed by men, of allowing her every opportunity for taking care of herself when she is obliged to do so, but these liberties do not release her from any of the obligations of wifehood or motherhood. When she marries she must accept the responsibilities that are inseparable from marriage. We most decidedly object to any "system" or any "emancipation" which will make women less capable as wives and mothers in the discharge of all the duties essential to these sacred relations; but we believe that a higher education, a broader development and a wider experience will enable them to do this with more intelligence, judgment and ability.

SINCE the last issue of the *Magazine* Prohibition has received a heavy defeat in Rhode Island and Pennsylvania, being opposed by a three-fifths vote in the former state and by nearly 200,000 majority in the latter. The daily press, for political and other reasons, is very jubilant over this result and announces in prominent head lines,

"The People Have Been Heard From;" "The People Do Not Want Prohibition;" etc., etc. Without entering into a discussion of the merits of this question we only wish to say that "the people" have *not* been heard from and that the vote just polled in these two states is no indication whatever that "the people" do *not* want prohibition. If the two Legislatures had disfranchised one-half of the *men* in these states and then taken a vote on this or any other question, would the newspapers announce in capital letters, "The People Have Spoken?" No class of persons in the whole world is so vitally interested in the matter of temperance as are the women and yet when it is taken to that final arbiter, the ballot-box, they are as completely ignored as though they were not human beings. "The People Have Spoken!" Yes, the Whisky Trusts, the distillers, the brewers, the saloon-keepers, the drunkards, the gamblers, the ward-politicians have spoken on the greatest moral question before the nation, but the mothers, the wives, the sisters, the daughters, the large temperate, law-abiding element of the country are gagged and bound. In the face of this outrage, which cannot be denied, it is hard to have anything but a feeling of contempt for those women who are so weak and unwomanly as to say, "I do not want to vote."

We sympathize with those of our correspondents who do not see their communications in print as soon or as often as they would like. We prepare ten or twelve pages of reading matter every month and usually not more than half of that number can be spared for us. Perhaps our lady readers do not know that it is not an uncommon thing for some of the "dear, brave, noble boys" to send in a request for the Woman's Department to be abolished. But the Grand Officers (and they deserve the name,) stand firmly by us and they are generously supported in this by the majority of the Brotherhood.

ACROSTIC.

Some may say, "What's in a name?"
Though there's much to you and me,
And there's a star to guide the humble—
Rough and dark the night may be.

Onward is this Lodge progressing,
For their star shines ever bright,
They are always found together
Holding meetings Thursday night,
Each one ready to do his part.

When the interest of the Brotherhood is at heart,
Exchanging ideas when meeting together,
Sometimes debating for "The good of the order,"

Thus may prosperity ever attend
No. 340 Lodge, is the wish of a friend.

Betsy.

NEWTON, KAN., June 8, 1889.

WOMAN'S WORK.

(CONCLUDED FROM LAST WEEK.)

The nobler born the maiden, the more bound,
My father, to be sweet and serviceable.

We publish below the last half of an essay written by Miss Frances Gillam Holden, and originally published in the *Town and Country Journal*, the largest weekly newspaper in Australia. This essay won the silver medal at the Exhibition of Woman's Industries at Sydney, New South Wales. It was sent to Mrs. Eugenie Selby by a friend of her husband's and she has wished the readers of the *Magazine* to share with her the pleasure and profit of the article. We ask our contributors to give it a wide circulation as it is a beautiful and instructive presentation of the subject "Woman's Work."—Ed.

First, let us define what woman's work in the home is broadly. It is to keep home healthy and attractive, and to rear up children in vigor and virtue of mind and body. These are high aims, reaching to divine heights beyond human ken. But their realization rests upon a multitude of insignificant and lowly offices, untiringly and faithfully performed, in the light of a womanly heart and an educated intelligence. And what does a woman require for this great and sacred work of rearing her children for God and their country's service, and their own honor and happiness?

She needs in the first place, health for herself; a vigorous bodily frame, vital with well-strung nerves, cheerful temper, and well-balanced mind, ready to meet and accept with calm courage the labors, the trials the anxieties, both physical and mental, which will surely fall to her lot as wife and mother—to give the ever-ready sympathy, the needed "praise, blame, love, kisses, tears, and smiles," for lack of which, childhood is so often dwarfed and unfruitful. It is her very, primal duty to care jealously for her own physical well-being, as it is to care for her children's. Nothing else can be of equal importance. Health is the only stable foundation for the integrity of home life, physical and moral. To attain this end, she must intelligently understand the principles of sanitation and hygiene; that is, the laws of health. She must know the due use of air, water, and sunshine in relation to the human body; the use and abuse of human study, exercise and recreation, of clothing and sleep. She must understand fully what is wholesome and unwholesome food for infancy and childhood, in health and in sickness; and she must know how to prepare good material so as to obtain its maximum of benefit—how to roast, to boil, to grill, to make broth, so that the meal may be both nutritious and appetizing, pleasant to both the eye and taste. Not merely must she know whether it is nicely done when it comes on the table, but, given a piece of meat, a bag of potatoes, a measure of wheat meal, how herself to place them on the dinner table as good health-

producing food. Not as fried steaks or chops, because "the frying-pan is so little trouble;" not hot cakes or cakes fried in grease, because indulged appetites crave dainties, or the "bread has run short;" but juicy well-grilled meat and wholesome day-old bread. She must not necessarily do this herself; but she should be practically able and cheerfully ready to do it should occasion arise. She should be able to make and keep a room neat and clean and attractive, with scrubbing brush, broom and duster; and she should have a hand, and back and nerves, which can sweep and dust, and feel none the worse, but the better, for such domestic gymnastics.

A daintily-clean house, well cooked, appetizing food, suitable comfortable clothing. Ah, women, ye do not know how many lunatic asylums and gaols are built, how many drunkards and reprobates are made through lack of these! What sin and misery are generated by their opposites! Why, three-fourths of the vice of the land would vanish as if by magic, if all the men and women from infancy upward had wholesome food to eat, and clean surroundings to live in; pure air and good water. Moral vice is but too often the analogue and outcome of material uncleanness. Cease to lament the first; but rather remove the cause by remedying the second. Women should all know this infinite influence which material environment exercises upon budding life especially; know that the inner spirit is moulded through every sense; through eye and ear and touch, through taste and perfume. Not every one, like Wordsworth's Highland Maid, can grow to youth among the sublime and romantic hills and glens of Scotland, where "beauty, born of murmuring sound, shall pass into her face." But the brightness of the cheery, well-swept hearth, of the sparkling tins and polished table; the beauty of the flower in the window sill, or the vine trained around the door; the comfort of the neat, well-ordered meal; the music of the gentle tones, the serene light of a mother's smile, the pride in a father's face, the little sister's sunny curls, the bright "good morning," the tender "good night" kiss; the pretty picture for waking eyes; the snowy linen of the little bed; all these sink into the very make and being of the boy, subtly permeating and controlling the very fibre of muscle and of spirit life, and go to rear the self-respecting, home-loving manhood, which widens into the sturdy patriotism; which again, when the call comes, is transformed into a dauntless unconquerable heroism, as when the simple farmers and yeoman of America fought the trained armies of the old world for the honor and freedom of their humble homes—and conquered. Think not that a William Tell emerges from city slums; a Lincoln or a Garfield from New York dens. No! Manly fibre and moral worth are not so nourished and built up. Poverty and hardship there may be in the fashioning of hero souls. That matters not. But love and virtue, truth and tenderness, pure air and sunshine (that is, moral and material purity) these are the factors whereby man-

hood is developed to its highest and its best. Let every woman grave on her soul this truth, that material surroundings and conditions are the stuff out of which spiritual life and emotions are born: those material conditions which are so largely in her province; and in the light thus cast upon humble offices ask herself: "Is the work not large enough and grand enough for woman's ambition? Now, all that has been said involves that every girl in the land should be taught to do, and do well, these simple things; plain sewing, plain cooking, and housekeeping, dusting, &c., in short, good housewifery. This, again, involves (for there is no other permanent basis for intelligent good housewifery) that every girl should be taught physiology, a knowledge of her own being, and of the being of children who will probably call her "mother;" what heart, and lungs, and skin, and nerves, and stomach need for healthy life; what every organ of the body requires for the full integrity of development and function; for cheerful life and vigorous health. Not the poor inadequate thing so many people are pleased to term health (meaning, not absolute ill health), but rich vitality thrilling bravely with keen sense of enjoyment, through the whole framework of muscle, brain, and nerve. This is what the beautiful make of the body means. This is what we should have. "Life, fuller life, 'tis this we want." Now, many of the requirements insisted upon seem very simple. But, simple or not, they are not met with at this present time. Some will say "What woman cannot cook a chop, or make a garment, or tidy a room?" I reply that the large majority of women can spoil a chop, can "cobble" a garment, and slur over housework; while only one in hundreds can send up a chop hot, tender and juicy; cut a garment shapely, and make it neatly; keep a house clean and sweet and fresh. And towards this consummation, the first desideratum appears to be that the mass of women should be penetrated with a sense of the dignity and worth of common duties; should see that all work is of equal duty if done from right motives, for high aims; that the welfare of humanity is the true measure of worth; and have their eyes opened to see how vitally the highest aspirations and noblest labors of human beings are influenced and controlled by the well or ill done lowliest service. This belief once taken to heart transfigures life with microscopic power.

If all clergymen taught, as I have heard one in Sydney teach, that all true home-workers were true church-workers, that often it was a much more religious thing to stay at home to help in a mother's mending; to make a father's or a brother's evening hour brighter; to amuse a little sister; than to appear at the Dorcas or prayer-meeting; that so-called devotion to church work was often the very worst kind of selfishness, viz., religious selfishness; that the distinction between sacred and secular was false; that all duty was equally sacred; women would soon attain truer and more wholesome views about life and work than those which now

abound, and so lamentably blight both on every side. And, surely, no one can learn—what physiology makes as plain as the sun in the sky—the tremendous issues which (as I have pointed out) hang upon what is contemptuously termed "menial work" well or ill-done without the greatness of the effect dignifying the cause. It is literal truth that life and death, happiness and madness, virtue and vice are the direct fruit, in a multitude of cases, of domestic duties, yes, of "menial work" rightly or wrongly done. An eloquent writer speaks of "the unsuspected lurking places and hidden mysterious recesses of the ultimate germs of disease, and fungi of vice and crime." Shall I tell you where they are to be found? In the greasy frying-pan, the ill-boiled potato, the leathery chop, the overdrawn tea, the unaired bedding, the frowsy, unventilated room, the unclean skin. I tell you that often drunkenness, disease, profligacy, divorce, and death are but the final end of a chain of which these are the first links. This, then, is one tremendous lesson the present generation needs to take to heart in connection with women's work; the infinite importance of the trivial, the seemingly unimportant duties and offices of life—to realize indeed that "trifles make the sum of useful things;" to feel that the roughness is the very foundation of satisfaction and respect in domestic life; not to slur anything; to take into their very souls the wise saying of St. Frances de Sales: "It is not necessary in order to attain perfection to do singular things; but it is necessary to do the commonest things singularly well." For "Little things on little wings bear little souls to heaven." Yes; even such small mundane things as clean saucepans, nicely made cups of tea and coffee, floury potatoes, well buttoned shirts, and good bread and butter, have more to do with walking in the path of righteousness—that rugged up-hill way—than the world yet understands. And a due amount of this simple housework regularly done, how good it is for the body doing it, and through the body for the mind and spirit! See in a band of young women, doing downright tiring manual labor for three or four hours every morning, what healthfully hued cheeks, what bright eyes, what pleasant voices, what merry laughing what harmless jokes and tricks with each other! And how leisure and recreation are enjoyed! And all because the blood is sent coursing through the frame like a living current, bearing vitality to every fibre, instead of stagnating like dull puddles in inaction. Nothing but good honest systematic exercise can do this; and a queen can not get it done vicariously. Work or die is the law of the universe.

Is it not plain, then, that every woman's life-training should be based upon a practical knowledge of housework? Upon that foundation let any noble superstructure be raised which personal talent dictates, and Providence allows. Let a woman's duties as a woman form the broad, wide stable base; then let a beautiful pyramid of intellectual acquirement aspire majestic to the

very skies. Let her be fitted for Nature's place of wife and mother first, then every talent and accomplishment under the sun at will. There are many humble blades of grass for one stately lily; numberless simple violets for each grand hothouse blossom. But who shall say that the grass and the violets are not of equal value in Nature's great purposes, filling in humility and modesty their destiny on life's stage. "Whoso is wise will ponder these things."

TO MRS. NELLIE BLOOM.

I'm now in penitential mood,
A very bad transgressor.
And on your time I shall intrude.
I'll make you my confessor.
On bended knees with moistened eyes,
Imagine me before you,
And from my heart a load of sighs
You'll hear me gulping o'er you.

Contrition, with terrific force,
Gives certain indication
We'll meet a fellow called "Remorse"
Before we gain salvation.
Now hear my litany of sins—
Please soothe, and don't confound me
With cynic sneers, and doubtful grins,
Because they'd deeply wound me.

I now confess my wayward pen
Delights too much to frolic;
Instead of seeking shady glen,
And singing strains bucolic,
I've let it rant at ease around
In free, Bohemian fashion,
But never meant a soul to wound
Or studied a transgression.

Yourself and many ladies more
I've playfully saluted;
Good naturedly you've always bore
My pranks, and ne'er disputed
The meaning of each railing song,
You never deigned offended
Between the lines in search of wrong
That never was intended.

I sung of twins (God bless the mark!)
Of Silves, Sues, and Sadles,
Of widows, clad in raiment dark,
And ancient maiden ladies;
Of callow youth, of hoary age,
Just as my fancy led me,
And sullied many a virgin page
To win the girl that wed me.

I've shivered many a rhyming lance
On widowers, whose weeping glance
Scarce hid the counterfeited glance
Of grief at loved ones sleeping.
Right well I knew the heartless set
Strove hard their joy to smother,
I knew the dead they'd soon forget,
And quickly wed another.

What does it all amount to now?
I pause in consternation,
And rub my deeply furrowed brow
In anguish and vexation.
To think of all the driv'ling mass
My doggerel mill supplied me,
Enough to vote me down an ass
By thousands who deride me.

The devil isn't half so black
As he is hourly painted;
There's many a slave on railroad track
Deserving of being sainted.
Among the latter class, I feel,
With all my sins forgiven,
I yet can by St. Peter steal
Serenely into heaven.

So now I am at ease, like all
Old sinners shrived and hoary.
You'll think it took a stock of gall
To tell you this true story.
I feel relieved, my breast is light,
My heart begins to gladden,
I send regards to Irene to night,
And love to Miss McFadden.

"Is marriage—" heaven steer me wide
From words that would disparage
The boys and girls on Hymen's tide
With sails all set for marriage;
But—give me ab-solution please;
My stomach soon grows roily,
Whene'er I cruise on wedlock's seas,
Unless the waves are oily.

—Shandy Maguire.

HANOVER, N. H., June 24, 1889.

Editor Woman's Department:

DEAR MADAM:—On the first page of the Woman's Department in the *Magazine* for June, I find a paragraph that seems to call for a few words from me.

From the reading of the paragraph I am unable to decide whether you think the author of "Narrow Gauge" in the April *Magazine* has stolen my composition or I have stolen his.

Neither statement is true as I have never composed nor signed with my name any verse or verses with the title of "The Narrow Gauge" for the *Firemen's Magazine* nor any other publication.

"About a year ago" is a little indefinite. Will you please state in what number of last year's *Magazine* "The Narrow Gauge" that I wrote or did not write was published as I am unable to find it.

It is unpleasant to say the least, to rest under a public accusation of this kind for two months, and I trust that you will publish my "explanation." Also allow me to suggest that "explanations" are still "in order."

Most sincerely,

Alice O. Darling.

[The Editor hastens to apologize to Alice O. Darling. Upon reading the poem in the April *Magazine* entitled "The Narrow Gauge," it instantly occurred to me that I had examined the manuscript of those verses and sent them in for publication in the Woman's Department. I do not remember in what number they appeared and will be under many obligations if some one of our readers will look them up and inform me. The peculiarity of the poem made an impression upon me and my recollection was that it was written by Alice O. Darling, as her poetry is always unusually meritorious. The comment was made in the hope of drawing out an explanation from "Will O' the Wisp," which I believe was the name signed. In both instances the poem was sent in as "original." Among our thousands of readers there is surely some one who can straighten out this matter and tell us who really was the author of the verses.]

CLINTON, ILL., June 14, 1889.

MRS. HARPER, *Dear Madam*.—I have come again with the result of a little thought and a few minutes pen work. Though I have treated the subject in a very crude manner I have done as well as I can. Unlike the contributor who objected to your foot note, I look for them with pleasure and judge of the merits of the letters by the foot notes and skim lightly over those which have none. You see you can't please us all, so please yourself, and we will be satisfied.

Respectfully,

Mrs. L. Hinchcliff.

I can't understand how persons can answer so confidently the question, "Is Marriage a Failure?" We have no right to judge except in our own individual case. There is such a difference of opinion as to what constitutes failure or success. A mercenary couple who had each earned a good salary before marriage might become discontented and think they had made a mistake if, after a time, they found that one salary did not furnish the comforts they had been accustomed to. Such thoughts would show great selfishness but there are people who would allow the question to rise in their minds, have I gained or lost by marrying? There are others who seem to have every wish gratified. They have wealth and position. Society's doors are open to them, and they entertain on a grand scale, and yet they are not happy. I believe selfishness is the cause of their trouble and not the fact that they married. They would have been just as miserable single. The greatest wrong they do themselves or society, is when they bring children into the world tainted with their dispositions. There are others who complain of nothing but that they are childless. Though denied this blessing they should not pronounce their marriage a failure. They are thus enabled to make their lives very endurable by adopting some of the many little ones who need their care and protection, and who would pay them in kind in after years. But for selfishness they would do this. In striking contrast are those who, after several years of married life, find so many little backs to clothe and mouths to feed, that they find very little leisure time in which to enjoy themselves. Though poor they are not selfish, and herein lies the secret of their not having considered the question of marriage a failure. They still show each other little thoughtful considerations which are lovingly appreciated and which make their happiness more secure than anything on earth can. I do not deny that there are miserable failures in marriage owing to extreme youth when entered into and uncongenial dispositions coming together.

But I believe in the majority of cases unhappiness between husband and wife arises from selfishness. If in each case they would give themselves a thorough catechising, then confess to each other where they had been in the wrong and begin anew with the determination to be patient and bear and forbear, their troubles would fly to the four winds and we would hear

comparatively little of the failure of marriage. But this concession must be mutual to be of lasting benefit. I have no patience with the woman who is continually falling on her husband's neck in tears and assuming all the blame for their differences. Small wonder that after a time she succeeds in convincing him that she is altogether in the wrong and that he is a much abused man. I do not believe in one-sided business, either in courtship, marriage, or the responsibilities that follow. I wonder if these women who talk so glibly about "women having their own way and making home just what they want it, and leading husbands just where they wish with a perpetual smile," are ready to bear the consequences of failure if they fail in making a happy home for themselves. If a husband is not a perfect nonentity he will be happy in doing his share towards making home happy. He will give smile for smile, and be ready with tender sympathy in all the little annoyances of domestic life. A few words of sincere appreciation from a husband goes farther towards resting a tired wife and mother than all the recreation money could procure for her.

Only when marriage is entered into with mutual feelings of respect and love, and the contract is kept inviolate by both parties, will it prove a success?

Mrs. L. H.

CLINTON, ILL., June 14, 1889.

For Woman's Department:

TO EUGENE V. DEBS.

Many thanks for the gift that you sent me,
Which came by Wells, Fargo's Express;
'Tis nice to be kindly remembered,
By the friends we love truest and best;
As I hastily opened the parcel,
My pleasure I could not conceal,
For there in its beauty before me,
Was a neatly bound volume of the *Firemen's Magazine*.

Immediately I knew who was the donor—
None other than my friend E. V. Debs;
It was sent as a token of friendship,
To be prized and most carefully read;
And you cannot tell how it pleased me,
To know that I had won the esteem
Of him who had sent me the volume
Of the *Firemen's Magazine*.

It brought me a silent message—
It spoke, though it uttered no word;
And, as attentively I looked o'er its pages,
The depths of my feelings were stirred
With gratitude for the giver—
The friend I have never seen,
Who annually presents me with a volume
Of the *Firemen's Magazine*,

A "God bless you," I tender sincerely,
May you prosper in all things you do;
You have proved yourself a friend to the B. of
L. F.

And to the B. of L. E. staunch and true;
Tho' your duties were many and arduous,
Yet you fearlessly entered the fight,
Seeking only redress for "brothers" oppressed,
So that right should triumph over might.

Mrs. Nellie Bloom.

WEST OAKLAND, CAL., May 14, 1889.

Twelve hundred women voted in the Kansas part of Kansas City, at the recent election.

GREY EAGLE, MINNESOTA, June 13, 1889.

DEAR MRS. HARPER:—Enclosed you will find a poem for Woman's Department. I notice that "Irene," in her letter, refers to a baby being named after her, and I have wondered often since if it was my baby she meant. I named my baby, which is now almost eighteen months old, Lillian Irene, and I know that Mrs. Jones wrote to "Irene" once and told her about it when we lived in Dakota. The first time I ever saw the name was in the *Firemen's Magazine* and then in the *Brakemen's Journal*. I thought it such a pretty name, and besides I admire "Irene's" writings very much. She can express her thoughts so beautifully that it always does me a world of good to read her communications. I think the *Firemen's Magazine* a splendid periodical, and especially the Woman's Department. I notice that they have almost dropped the old song about the waste basket, which is a decided change for the better.

Yours very truly,
Mrs. C. S. Miller.

LOVE'S INFLUENCE.

"Leave me alone here to die," he said,
As exhausted he fell in the snow;
And his comrades, though powerless to save his life,
Reluctantly turned to go.

A blizzard was sweeping with terrible force
O'er Dakota's wide, unsheltered plains,
Where five men exposed and benumbed with cold,
Were struggling a refuge to gain.

But one of their number, completely o'ercome,
At last helplessly sank in the snow.
Oh, God, pity that lone one so utterly bereft
Of friends in his desolate woe.

With lightning speed the gust rushed through his mind—
The good and the ill—with its joy and its cares,
For we see ourselves then as never before,
When death in his grasp our frail bodies ensnares.

With anguish untold his heart yearned for home
And beloved ones, so far, far away,
But sleep—which always precedes such a fate—
Was o'erpowering him now with relentless sway.

He had carried for months while sojourning out West,
A portrait of his children and wife,
So ere death sealed his eyes once more he must look
At those forms to him dearer than life.

How his heart thrilled with love as he scanned
Each dear face,
Every pulse throbbed responsive with joy,
And the blood so stagnant before, now surged
Through his veins as it did when a boy.

He arose while the love-flame still burned in his breast,
Now determined to fight for life;
Success crown'd the effort—from the raging storm
He was safe ere the close of that night.

Oh, life is sweet, thrice sweet, when entwined
With the love of earth's hallowed ties;
Unrivalled by even the depths of the sea,
And its height reaches up to the skies.

MISSOULA, MONT. TER., May 27, 1889

To the Editor of Woman's Department:

I see several letters in the May number of the *Firemen's Magazine* on the subject of marriage. Is marriage a failure? seems to be the subject now before the public. I think marriage is not a failure—yet too often, those who contract marriage are a failure. Two parties entering into partnership should be congenial and companionable to get on together pleasantly. Marriage is a contract, a life partnership, and when two are to be married they should first know that there is a similarity in their tastes, not marriage their opposite, as some admire. Men want a companion, not a doll, not a pretty face or form, as the first soon fades, the latter often changes. These are not lasting, and if there is no mind—what is there to interest the man? Woman should cultivate the mind, become posted on all subjects that interest men, make themselves companionable for the man they are expecting to associate with for a life time, and on the other hand the man should not seek one for a wife who has nothing to recommend her except a pretty face. A pretty face is always acceptable but there must a well balanced brain to back it. A woman should never marry a man for his good looks, for a pretty man is always silly. Look for a nobleman—one who is true to himself and respects all that is good and honorable. If this advice were adhered to, marriage would not be a failure. One suggests that every girl should learn to cook, as the way to man's heart is through his stomach. I should think if any man reads this and think only of his wife as his cook, he would be ashamed. I am pleased to say this is a mistake, for we have kind, loving husbands out here and many of them do not get a square meal once a week. If my husband only sang my praises after I had roasted over a hot stove preparing him something good to eat, I know I should not care for him if he only respected me as his cook. Then another says "Home is the center of woman's sphere." We will admit this, but this sphere is large and she must be allowed to leave the center sometimes to attend a suffrage meeting or go to the polls and cast her vote. That is where woman is the equal of the man, as in some parts of this beautiful, free country of ours. Woman should learn to sew and darn—yet men find it very handy too, as I have noticed some of our boys can and do put a patch on their pants as neatly as any woman, and sewing on buttons is a very nice pastime for a man. I think it very well for a man to be able to wait on himself. All these things prevent marriage being a failure. I don't object to any woman making herself a convenience for her husband if she thinks it right, but I do not.

Mrs. C. E. C.

Miss Catharine Lee Bates, of Wellesly College, won the prize of \$700, and Mrs. C. A. Mason, of Brockport, N. Y., the prize of \$300, offered by the Congregational Sunday-school and Publishing Society for the two best MSS. for Sunday-school books.

Correspondence must in all cases be brief and to the point.

Subscriptions must begin with the January, April, July or October number and expire with the year.

Changes of Address of subscribers should be reported to us promptly to insure the safe delivery of the book.

Subscribers failing to receive their Magazine will please notify us, giving name and location of Agent to whom they subscribed.

Matter for Publication should be written on one side of the paper only, in a clear, legible hand, and all letters relating to the Magazine should be directed to

**LOCOMOTIVE FIREMEN'S MAGAZINE,
TERRE HAUTE, INDIANA.**

AUGUST, 1889.

WHEATON'S LETTER.

We take no pleasure in putting C. S. Wheaton, Grand Chief Conductor of the O. of R. C., in the pillory. We approach the task as a duty which we owe to the Brotherhood of Locomotive Firemen, and to other organizations of railroad employes, not excepting the Order of Railway Conductors.

We have no disposition to belittle Mr. Wheaton. Measured by his policy he is small; as seen through his letter, which we shall reproduce, he expands to proportions which do not require a microscope to detect traits of character which all honorable men abhor.

Mr. Wheaton, at the head of an order of railway employes, has irrevocably committed himself to a policy of implacable hostility to all other railroad employes, and in a spirit of swell-headed pompousness he assumes that by virtue of his position he can so warp, distort and degrade the Order of Railway Conductors as will make its members as debased as himself, so destitute of self-respect, independence and all honorable ambitions that he can hand them over to any railway corporation to do its bidding without protest. The conclusion is inevitable. When the members of the Order of Railway Conductors analyze their Grand Chief's letter we are confident no little indignation will be aroused. We do not regard it possible that Mr. Wheaton can drag down the order of which he is the chief to the degraded level he has assigned them. He cannot, we are confident, inoculate them with the virus of his relentless hostility to all other railway employes. To arrive at any other conclusion would be

doing a noble body of men cruel injustice. Conductors are wage men—dependent upon their *per diem* for a livelihood. They are observing men, they know through what perilous ordeals railway employes are forever passing to win a support, and the great body of them are quick to detect injustice, and when they come to realize that their Grand Chief is writing letters in which he assumes the authority to place them in positions of revolting humiliation, they will revolt. Their manhood will resent the indignity, and they will give Mr. Wheaton to understand that the prerogatives of his office do not permit him to transfer their allegiance to a corporation to perform duties more infamous than those assigned to a Pinkerton spotter.

Mr. Wheaton does not appear to comprehend the fact that the present is a most unfavorable time for him to form an alliance with railroad corporations for the purpose of depriving employes of the honest reward of their labor. The drift of events, the trend of opinion, the logic of circumstances, all point towards the emancipation, and not the degradation of labor. The present is not the time for Mr. Wheaton to deliberately concoct schemes for the inauguration of Chinese ideas in the field of American employments. Mr. Wheaton may learn, if he will, that the American idea is not to pauperize labor, but to obtain and to maintain fair wages, and this idea extends to members of the O. R. C. Being themselves ambitious in that direction, why should Mr. Calvin S. Wheaton write letters intimating that he can hand over to those who want them, the members of his Order, to play the role of scab, of Hun, Italian or Pole, to Hessianize and Russianize the railroad employments of the country, to reduce wages to a starvation level, to turn homes into dens, and fill the land with tramps? The question again arises, can the members of the O. R. C. be thus bartered, transferred, sold to any corporation Mr. Wheaton may elect? It is not for us to answer, but we are inclined to the opinion that he cannot do so vile a thing. It is not the American way.

But to the letter which we spread upon the opposite page. We display the document because it is, aside from the Pinkerton circular which we published in the *Magazine*, the most infamous proposition that has ever come under our notice. It breathes treason to workmen in ever sentence and line. We desire that it shall be read and pondered. We desire that the reader shall comprehend the animus of Wheaton's epistle to a railroad corporation, in which after denouncing railway employes in vile billingsgate, he offers his services and the services of his Order to crush them whenever they resist oppression. The following is the document:

OFFICE OF THE ORDER OF RAILWAY CONDUCTORS OF AMERICA, }
 PUBLISHERS OF THE RAILWAY CONDUCTOR'S MONTHLY, OFFICES 56 THIRD AVE. }

Grand Chief Conductor, Grand Secretary and Treasurer, }
 C. S. WHEATON. Wm. P. DANIELS. }

CEDAR RAPIDS, IOWA, ———, 18—.

Mr. —————:

DEAR SIR:—Replying to your kind favor will say, that I was very much pleased to receive it and you have my thanks for the prompt consideration. We are led to believe from the signs of the times, that there will be great need in the near future for a hearty coöperation of the loyal employés of the railway companies in order to sustain the operation of the railway lines. The amalgamation scheme which is being pushed by the engineers, firemen, brakemen and switchmen, and the rag tag and bob tail of the railway service will, in my judgment, unless properly handled by the officers of the railway lines, will cause a great amount of trouble, and the future of railway operation will depend entirely on the action of the officers of the first line which is tackled by the amalgamation, and it will not be very many months before we have an opportunity to try our mettle, in my judgment, pretty thoroughly. We are in earnest in our endeavor, and shall hope to meet with the coöperation of the managing officers of all of the lines.

Yours truly,

C. S. WHEATON, G. C. C.

The foregoing letter is remarkable in many ways. The opening paragraph shows that it is Mr. Wheaton's second letter. Truly, Wheaton is an ignoramus, a miserably illiterate fellow who can't write English much better than a pig can write Latin, but the "prompt consideration" lets the cat out of the bag. He had received a letter in reply to a letter that "very much pleased" him. Manifestly, Wheaton had made a proposition that had been accepted. What was the proposition? We have a right to believe that Wheaton had in effect said to the corporation: "Should you want conductors to scab, or to do anything else to beat your employés, I can hand them over to you." Read the context and no other conclusion can be formed. And such duties he assigns to "loyal employés." So "very much pleased" was Wheaton with the letter he had received from the corporation official that he proceeds to arraign all employés except conductors—"engineers, firemen, brakemen, switchmen, the "rag tag and bobtail" of the service." This man Wheaton hoists the signal of danger, he warns the corporations. He sees the "tackle" in the dim distance, and thinks it will "not be very many months before we (Wheaton and the men he can hand over) have an opportunity to try our mettle," and he thinks, "pretty thoroughly."

The question arises, Did Wheaton bargain his men, as do the Pinkerton chiefs? Were they to try their "mettle" without compensation? Were they to be employed as spotters are employed? These are all pertinent questions. On the face of Wheaton's letter there is a mercenary, venal appearance, there are "damned spots" on

it. That he offered his men for vile work there can be no doubt. That he denounced men like a blackguard is shown. And a man who would do such things, would not, if opportunity offered, hesitate for a consideration, to feather his nest by bartering men for scabs or for any other degrading employment.

We have placed the man Wheaton in the pillory. We have exposed his meanness. We have put him where all men have a right to loathe and execrate him. The letter we publish is genuine. We have the original on file. It will not be questioned. It bears the stamp of Wheaton's ignorance as well as of his viciousness. Strut he may, but with all his swagger he is essentially a rotten egg.

AN exchange remarks that locomotive engineers have peculiar methods of getting a cinder out of their eye. The writer being present when the discussion of the subject was on hand, says that one said that the common mistake was to rub the eye in which the cinder lighted. This was wrong. If the other eye was rubbed the cinder would drop out in two or three minutes. Another said that if the nose was blown violently the cinder would drop out. A third said that if he pressed his eye and repeated a certain word three times the cinder would invariably drop out. A fourth said he resorted to the old-fashioned method of pulling the eyelid down and holding it there for a short time, when the cinder could be wiped from the eye with a handkerchief. The fifth said he never had a cinder in his eye and did not believe a first-class engineer ever did.

STARVING MINERS.

There may be some word in the vocabulary that grates more harshly on the ear than *famine*, but we confess that it does not occur to our mind at this writing. As a general proposition, famine is regarded as one of those dire misfortunes which an inscrutable Providence sends upon the earth for reasons which mortals cannot comprehend. But such a theory does not apply in all cases in these latter days. Here, in the United States of America, the foremost christian land in all the earth, a land within whose meridians of longitude and parallels of latitude the voice of prayer and song of devotion, like the martial airs of England, follow the journeyings of the sun across the continent; here, where fabulous plenty rewards the farmer, and where surplus food products are exported to feed other nations; here, we say, in this God-favored land, there is famine—starvation. Here, by thousands, men, woman and children are doomed to suffer the agonies of hunger pangs—than which hell has no greater torture. The two famine-cursed districts of which we write, may be located, for convenience, at Braidwood, Ill., and Brazil, Ind., both mining districts, the mines being owned and controlled by millionaires, and the poor creatures who are starving are the miners, who are compelled to work in subterranean depths and darkness for a living, and when this was denied them, by the heartless autocrats who own and operate the mines, they struck for such wages as would secure a decent living for themselves, their wives and their children. For this they suffer.

We have on our table the *Chicago Herald* of July 7th. It seems that the benevolent people of Chicago were sending to the famine-cursed people at Braidwood money and supplies to feed the famishing people, and in this connection the *Herald* says:

A. L. Sweet, President of the Chicago, Wilmington and Vermillion Coal company, has made a desperate and despicable attempt to check the stream of money and supplies which has been pouring into the mining district and placing food in the mouths of starving men, women and children. In this he has been aided by the correspondent of a morning paper, who has written false reports, dated at the afflicted towns. These reports have claimed that there was comparatively little suffering among the miners, and that there was could be directly traced to the drinking habits of the workmen. A. L. Sweet has been most active in inspiring the printing and circulation of these miserable falsehoods, and has even gone so far as to call personally on Chicago merchants, who have been sending provisions, and urging them to stop it. One South Water street man had agreed to send a barrel of pork every other day. A. L. Sweet heard of this and, calling on the generous merchant, made the statement that there was plenty of work in Braidwood, but that the men were too lazy to do it. The merchant made a personal investigation and became convinced that A. L. Sweet's assertions were untrue.

Here we have it, upon high authority,

that a monstrosity, a freak of nature, a thing resembling a man, went about Chicago with a lie on his lips and sought to keep back food supplies from starving men and women that they might be starved into submission by hunger. There should be no misunderstanding in such matters, and that this may not be, we reproduce the following from the columns of the *Chicago Herald*:

Robert M. Reed, District President, and William Scafe, Secretary-treasurer of the Relief Committee, have issued an address to the people of the State of Illinois, in which they make the following statement of facts:

There are want and misery among the people in the mining district of Northern Illinois. Women and children are entirely at the mercy of the contributions sent to them from outside; these contributions are so meager that only the most pressing cases can be relieved; these contributions are now all exhausted, and unless immediate aid is given starvation must result.

The miners have been refused the chance to work unless they would work for less than they formerly received. The wages formerly paid averaged but \$20 per month. This would only support a miserable existence, and to work for less was a physical impossibility. For this reason the miners could not accept the reduction, which in some cases was more than 40 per cent. To accept such terms would result in starvation. To refuse to work was, therefore, the only recourse. There can be nothing in the claim that is made that only 6 per cent. is realized by the mine-owners, for, no doubt, if the profits should rise above 11 per cent., the stock watering would again take place so as to absorb the increase.

The monstrosities who own the mines at Braidwood and Brazil are as heartless as Corbin, of the Reading Railroad Company. They belong to a class who are pirates, and who have made money as foreign to honesty as honesty is foreign to burglary, and they do not like to relax their grasp upon the throats of their victims. It is stated that at Braidwood, Ill., a horse belonging to a Coal City teamster broke his leg and it became necessary to kill the unfortunate animal. The horse was shot and the carcass dragged to one side of the street. That evening many a miner's family had horse meat for supper. It was the first square meal many of them had eaten in weeks, and they enjoyed it. The introduction of horse meat as a diet for protected American workmen will be duly appreciated by the coal and iron barons. It reduces the standard of living and makes further reduction of wages possible.

This incident tells the whole story. It shows famishing working men and their families rushing after horse flesh to appease their hunger, and the coal barons who look on, calculate that when the poor emaciated creatures are so reduced that they will eat dogs, and cats, and rats, that they will be willing to resume work at such prices as may be dictated by their oppressors. And this infarnalism is practiced in christian America.

"It is of the first importance that organizations of working men should know what

is going on in the labor world around them," says a writer, in discussing conditions in the Illinois mines.

Human slavery still exists in America. A careful study of the contracts Illinois miners are compelled to sign proves that all the bad features and few of the good ones of the old black slave system still exist here in the North—in a land which went to war for the principle that all men are born equal.

This contract system places the workman completely at the mercy, not of employers only, but of every petty boss or bruiser clothed with brief authority who has won a place in the mines. He must promise to work a year without asking for a raise of wages, but his employer is under no obligation to furnish him work one day longer than he wishes, and the wages may be cut down at any time and as often as the employer sees fit. The slave must obligate himself to bear his burden in patience and uncomplainingly, and cannot, on pain of dismissal, join any organization having for its object the ennobling of labor. He must live in a house which belongs to the lord of the soil; must pay a rental fixed by that lord, and can draw no wages until that rent is paid. He must buy his provisions in a store stocked by the nabob; must be content to live on what he finds there; must pay the price that nabob demands, and must allow the bill, whatever it is claimed to be, to be taken out of his wages before he can call any part of the pittance his own.

He must not expect to get pay for the first day of any month until forty-five days have passed, being paid for each full month on the 15th of the month following. And although the sum total of these loans is easy enough to carry on the whole expense of mining, he cannot expect to receive any interest for the capital thus advanced. He is subject to a myriad of petty fines, a whole code of cruel rules, in each one of which his guilt is decided by the employer, and the toiler is mulcted for any amount the employer sees fit to fix. And finally, he is compelled to go down hundreds of feet into the moist and blackened earth, to toil ten or twelve hours at the hardest work ever placed upon the frame of man, and for this slavish, beastly, cruel labor he has at best only the hope of the slenderest possible income, even if he received all he earned, and was at liberty to invest it as a free man should.

If an American were to read of such things in any autocrat cursed country he would throw up his hands in holy horror, and wonder that men thus crushed and enslaved did not revolt, and prefer death to degradation. But it would be difficult to find, even in Siberian mines, where the Russian Autocrat sends men for life for daring to express a wish for freedom, a parallel of the cruelty practiced in the Illinois mines. The writer adds:

He must support himself out of the pittance he finally wins. For all the shameless burdens laid upon him not one responsibility is assumed by the company. In sickness, in adversity, in welcome death, he must pay his way, or it will be the worse for him. Life, love, marriage, paternity, social ties, intelligence—these cannot be considered. He must present himself a willing sacrifice each morning, and must toil incessantly all day, and for that toil he must be content with whatever he is told is his, and even this he can only have at such remote time as the employer chooses, and after it has run the gauntlet of all rents, store bills, sulphur fines and dockages that Moloch sees fit to place before it.

In this later, bitterer slavery, no man is free to vote as he will, to talk as he will, to buy what and where he will. In all the departments of

life he must bend his being to the will of the company. Its known wishes must be his law. There is no lash, as there was in those other days, but the heart is smitten with a keener whip. The flesh is not lacerated, but the spirit is crushed. Homes are not invaded—there are no homes to invade. No shelter is guaranteed this white slave. For the sacrifice of his manhood, for the utter renunciation of his freedom, for his bitter, pitiless toil, the miner is assured of no food in health, no care in sickness, no burial at death. In no sense is he master of himself or his earnings. He may not leave an employer without that employer's permission. He must make no acquaintances; hold no converse with persons not approved. Discharged of all responsibility that would follow chattel rights, the employer may give him what he chooses, and that must suffice. There can be no assurance on the part of the man that the settlement is right. He cannot question. Over his head hangs a heavier calamity, which can and surely will silence him.

Here we have a revolting picture of white slavery in Illinois. Nor is it a whit better in Indiana. The degradation is the same. It is Russianizing the labor of America. The work is going steadily forward. There is but one hope, and that is in organization and in federation. It is by every righteous appeal possible to working men to look facts square in the face, and get ready to withstand the power of organized capital in the hands of conscienceless men. If that fails, then working men are without hope in the world.

* *

WE acknowledge the receipt of a little book bearing the title of "A Tale of the Twin Cities," by Eva Gay. The author, who has won prominence as a newspaper correspondent, says in her introduction: "Should the reader note a lack of continuity, an absence of polished phrases, a dearth of imaginative power or other serious defects in the work, a reasonable excuse may be found in the fact that the writer belongs to the sex whose members are popularly supposed not to have any abilities outside of that involved in managing a kitchen or choosing a spring costume." The work of "managing a kitchen," it should be born in mind, has recently advanced to distinguished prominence; so much so that *chefs* receive as much as \$10,000 a year for their culinary proficiency, and as for "choosing a spring costume," if Eva Gay could do it so as to please the votaries of fashion, it might happen that she would throw aside her pen, though mightier than the sword, and give herself up to the study of puddings or pad-dings. But her recital of the story of the strike of the street railway employes of the "Twin Cities" leaves us to hope that we shall see more of her graphic pen pictures in the future. Indeed, we think that strikes offer for her pen a fertile field, and her first effort, we hope, has brought her so rich a harvest as will induce her to include others than the "North Star State" and "The Twin Cities" in her future contributions to the labor literature of the times.

SWITCHMEN.

It is known that on the 6th of June, federation between switchmen, brakemen and firemen, was consummated. Hereafter these Orders of Railway Employés have some interests in common, they are federated for "mutual justice." A wrong to one may be so grievous as to warrant the interference of the Supreme Council—of all the federated Orders. The point we make is this: Each Order in the federation becomes profoundly interested in the growth of the other Orders. The stronger they are numerically, the better for all concerned. The Switchmen's Mutual Aid Association is the youngest of the three federated Orders, and being the youngest, is, in point of numbers the weakest. This *Magazine* has from the first, sought in every way in its power, to promote the interests of the Switchmen's Association, not recently, as a consequence of federation, but from the date of the initial step of the Order, and now that the Brotherhood of Locomotive Firemen is happily identified with the switchmen in carrying forward an enterprise designed to promote, not only the welfare of the federated Orders, but of all Orders of Railway employés, we do not hesitate to say that we are profoundly interested in the growth of the Switchmen's Association. We would have it numerically as strong as the Firemen's Brotherhood or the Brotherhood of Brakemen, and we write for the purpose of urging upon the members of our Order the propriety of doing all in their power to promote the growth of the Switchmen's Association. This mutual assistance of the federated Brotherhoods must of necessity be in the nature of increasing strength and influence. Do the switchmen, or the brakemen, or the firemen desire to institute a new Lodge, let all the members of the federated Orders at once lend a helping hand in securing success. In this way great good can be accomplished, and the peaceful objects of the Supreme Council of the federated Orders, can be greatly promoted. Upon this subject, which we regard of vital concern, it will be most agreeable to the *Magazine* to receive communications, not only from members of our Order, but from members of all the federated Orders.

**

We reproduce from the *National Car and Locomotive Builder*, the following letter of A. J. Hill, on open throttle:

I see in most all mechanical papers something about the effects of throttling or the effects of not throttling. I think if some of these half-open throttle men were to fire a while for a man that throttled the steam, and then for a man that did not, they would be convinced by experience that the man who runs with wide open throttle, and puts the reverse lever where it will do the work, is the best man. A great many engineers and firemen claim their engines won't steam with full throttle and lever near the center, but in most cases I think it is the fault of

firing, for I have never found one yet that would not steam better. It is a well-known fact that a Corliss engine is a more economical engine than a locomotive, one reason being the automatic cut off, which is governed by the governor to suit the load or work the engine is doing, initial pressure being the same all the time and as near boiler pressure as it can possibly be. Now, is it not just as sensible to use as near boiler pressure as possible in a locomotive and use the reverse lever as a governor? I see in one paper where a man is all the time talking about reverse lever being to near the center and one or two notches being too much, and, besides, tears up his fire. If he will use larger nozzles he will not tear up his fire and do better work. If one or two notches is too much, drop a bolt or spike in the notch ahead of lever and rest the lever against it, then you will have half notches. All engines should have a reverse lever that could be set as fine as desirable. Some engineers claim running with wide open throttle, and putting the reverse lever where it will do the work, is hard on the engine; but during my six years' experience as a machinist and two years' firing, I notice the wide open high pressure man keeps his engine out of the back shop the longest, and runs the longest with a set of flues, uses the least coal, makes the best time and is the easiest on firemen, although he hollows out his valve seat worse than the half open, old-time runner does. But it only takes about eight hours' work to square up a valve seat and twenty-one years to make a man, so let's not kill him by running with half-closed throttle and burning from one to three tons of coal more than the man who pulls her open and hooks her up and is not afraid of being thrown out of the front window if he tries to give her another notch. Let her go and see what she will do.

As a specimen of sound reasoning on this question, the letter will attract attention, and show to what extent the contemporary press feels interested in a discussion which was first started in these columns.

**

THE members of Rocky Mountain Lodge, No. 77, and Denver Lodge, No. 273, B. of L. F., on June 23, had a delightful picnic at Palmer Lake, Colo. The attendance was large, requiring a train of ten coaches to transport the pleasure-seekers, and every coach was packed full. The engine hauling the train was gayly decorated, and the excursion, from first to last, was one of unalloyed pleasure. A special to the Rocky Mountain *News* from Palmer Lake said:

The party was indeed a model one. There was no indulgence in the wild and woolly war-whoops which sometimes characterize excursion parties, no inebrity or disorderly conduct. The committee in charge were representative men of the Order, and exercised a wholesome influence over the vast number of recipients of their courtesy.

This is said to be one of the largest excursion parties ever brought to Palmer Lake, and it contained a great number of prominent men, among whom were W. A. Deuel, Division Superintendent of the road; A. McGregor, general Road Master; Messrs. Wilson and Monroe, traveling Engineers; J. Berlin, real estate dealer, and John H. Blood, attorney for Bradstreet's Commercial Agency.

It affords the *Magazine* real satisfaction to chronicle such incidents in the history of our Lodges. Such excursions are fruitful of health and happiness, helping to unite the members socially, and impart to the Brotherhood a charm not elsewhere found.

GEORGE W. HOWARD.

We are officially advised that Col. Geo. W. Howard, Grand Chief Conductor of the Brotherhood of Railway Conductors, has accepted the responsible position of Master of Transportation of the Mackey system of railroads. In making this announcement, we experience mingled feelings of satisfaction and regret. The Brotherhood of Railway Conductors will lose an efficient chief; this we regret, but since it must be so, we derive satisfaction from the reflection that Col. Howard takes a responsible and lucrative position on an important railway system, where his superior abilities will be appreciated. Nor is this all. Col. Howard's prominent connection with the Brotherhood of Railway Conductors, manifestly has elevated him in the estimation of railway officials. Human nature is so constituted, that as a rule, men admire courage, a manly defense of rights and interests, and however convenient it may be, sometimes, to employ scabs, lickspittles, base, fawning sycophants, spies and spotters, they are universally despised. Men of that character are never reliable. Their loyalty is a matter of pay and never of principle, and the case of Col. Howard triumphantly illustrates the idea that railroad officials admire courageous men.

The Brotherhood of Railway Conductors, organized under auspices created by necessity, and which has had a marvelous growth, will not cease to advance because Col. Howard will not be its grand chief. Some other good man will be found to lead the Brotherhood in its triumphant march, and it goes without the saying, that the Order will continue to have the benefit of Col. Howard's devotion and inspiring counsel.

* *

It has been the custom of various railroad corporations to employ spotters to hunt down railroad conductors. In old plantation days when chattel slavery shrouded half the continent in darkness, blood hounds were employed to hunt down runaway slaves. This was justly regarded as the acme of cruelty and savagery. The blood hound scented the fugitive slave, pursued him, drove him from his hiding places back to the plantation or mangled him like a wild beast. Hounds were trained for the business, and the forests and swamps of the South are still vocal with the groans of hound-captured slaves. The Pinkerton spotter, employed by certain railway corporations to hunt down conductors are in all regards worse than the blood hound slave hunters of slave times. They are trained liars, characterless scoundrels, who rob honest men of their living, rob them of their character for pay, and send their victims forth into the world to bear the tortures of suspicion, and to be classed among thieves.

Once in a while these Pinkerton blood hounds are estimated at their real value, and are given to understand that their infamous vocation is understood and appreciated. Such was the case recently, at Pulaski, N. Y., when the Rome, Watertown & Ogdensburg railroad was sued by a conductor for his salary, withheld by virtue of the testimony of Pinkerton blood hounds. The jury treated the Pinkerton spotters as they deserved to be treated, as liars, and the character of the conductor was triumphantly vindicated. The employment of spotters, villainous vagabonds, to swear away the character of conductors is one of the dark spots upon the management of railroads which cannot be too soon removed and it is to be lamented that the *O. R. C. Monthly* does not denounce the infamous practice.

* *

SUNDAY evening, May 26th, Messrs. Ed. Atkins, T. J. Hendershott and C. J. Lynch, representing the engineers and firemen of the Chicago & Alton railroad, at Chicago, presented Mr. M. Hanley with a beautiful gold watch. The speech of Mr. Hanley was as follows:

MY DEAR KIND FRIENDS:—In response to your kind words and handsome testimonial, the presentation to me of this beautiful gold watch, I can assure you that words fail to express to you my deep sense of gratitude. During my two and a half years, connected with you as your co-laborer and associate, and the respect and kind consideration shown me, have not, I see, been mere formalities, but have been the result of pure affection. This handsome watch, a parting token of that same esteem, a prize, I have thought that I never deserved, I shall consider as a fond souvenir. On many occasions in the future, though our avocations may not be in the same path, the affection, the kindness of the engineers and firemen, and employees shall never be forgotten. I hope that the future shall behold your cherished organization, progress and grow stronger and stronger as years roll by, and if accident should ever place me where a favor bestowed upon any of you should be beneficial, you can rest assured that the members of your Brotherhoods shall be first and foremost always in my esteem, in my affection, grateful for your gratitude, thankful for your thankfulness, and always mindful of your esteem. Gentlemen, once more I thank you from the bottom of my heart and can assure you that the constant ticking of this gold watch shall find a responsive chord in my heart amid whose pulsations your affection and esteem shall never be forgotten.

* *

PARTS one and two of the "Hand Book of Calculations for Engineers and Firemen," published by Theo. Andee & Co. 91 Liberty street, New York City, have been received. The work, when completed, will consist of ten parts, which will make a large volume replete with formulas and calculations that must be of inestimable value to students of the steam engine. The same firm continues to send, free of charge, their catalogue containing illustrations of the "Six Historical Engines," on receipt of application.

EDWARD ATKINSON.

The man, whose name we have selected as a caption for this article is reputed a rich man—not a millionaire, but in active sympathy with millionaires, and devoted to their interests. Mr. Atkinson started in life a poor boy, and has been fortunate in his efforts to accumulate a moderate fortune. He has an income, but being still in the prime of his manhood, he is able to work and supply his wants without trenching upon his income; this he adds to his capital which annually becomes larger, and which widens the gulf between himself and the class with whom he was associated in his youth and early manhood.

Mr. Atkinson is not only a man of wealth, who has an income, but he is said to be a student of political economy, which is sometimes named a "dismal science;" he is also a writer of somewhat extensive notoriety, and a lecturer upon topics of increasing interest to workingmen.

Mr. Atkinson is a citizen of Boston, Massachusetts, where there is great wealth, and a self-constituted aristocracy, based upon wealth, the most arrogant and exclusive to be found on the continent—sometimes referred to as "codfish aristocracy"—not only fishy but scaly, by which is meant, that like all American aristocratic pretensions, it is vulgar, anti-American, and every where regarded with undisguised contempt by common sense people. Mr. Atkinson living and doing business in Boston finds it profitable to use his talents, such as they are, in the advocacy of millionaire, aristocratic ideas, and having been a poor boy, he does not hesitate to urge the fact as a reason why workingmen should listen to him when he seeks to reconcile them to the conditions of want and penury, of which they complain, because they are denied their fair share of the wealth they create.

During the month of May, 1887, Mr. Atkinson delivered an address before the Central Labor Lyceum, of Boston, and had for his subject, "The Margin of Profits," the purpose of the speaker being to demonstrate that capital receives no more than its fair share of the margin. As an argument, we regard the address as a signal failure, weak and vapid to the last degree and worthy of notice only because its author is the champion of capitalists and their methods. Among the key notes sounded by this doughty defender of millionaireism is the following declaration: "I despise the talk about the rights of labor." That is the shibboleth of the capitalistic clan. It is the bugle blast that marshals them all for battle against workingmen. A man who despises the talk about the rights of labor, has no regard for such rights, even if he believes that workingmen have any rights at all. The notable fact is, that while Mr. Atkinson

"despises the talk about the rights of labor," he has the effrontery to appear before a body of workingmen to lecture them upon their duty to themselves and to others. Such impudence, it would be difficult to match anywhere, or in any calling. It illustrates practices in feudal times, when the lord of the castle lectured his retainers and gave them to understand that their duty to submit to his rule should be their pleasure, and he may have added "I despise all talk about the rights of labor."

It does not matter particularly what Mr. Edward Atkinson's views are regarding the rights of labor or laborers, but his utterances may be accepted as voicing the sentiments of capitalists whom he serves, and by virtue of which service he has been able to secure in many places the reputation of a cogent reasoner upon economic topics, and therefore obtain, not only the privilege of lecturing workingmen upon their duties but a reading for vapid mouthings, which otherwise would be denied them.

One of the most urgent demands of the times is to have a healthy, strong, vigorous labor literature. The monied interests of the country have had the influence of the press of the country from the first. In this regard, things have changed somewhat, and the signs for a still greater change are encouraging, but the forces still arrayed against labor interests, though by no means invincible, are of a character to excite solicitude. Such writers and talkers as Mr. Edward Atkinson need to be exposed, though they may not be silenced. He not only says that he despises the "talk about the rights of labor," but he says "the poor are not poor because the rich are rich," nor "because capital takes a bigger share than it ought." That is to say, in the division of the "margin of profits," the rich may rob the poor, without impoverishing the poor. Where is the soulless shark who could frame a more unjust proposition. He follows this up by saying, "If by taking the profits from capital you lost the service of the rich men, you would be compelled to work a great deal harder and a great deal longer than you do now in order to get as much." He seeks to impress upon the workingmen of Boston and elsewhere, their overwhelming obligations to the rich men of the country. He belittles work and seeks to exalt riches. He never so much as alludes to the central, pivotal fact, that but for labor, there would be no rich men, no growth, no advancement, that stagnation would take the place of activity—though every pebble were a gold eagle and every rock a solid mass of gold. He says to his audience, "I tell you my friends, when you are talking about the wages due to laborers, you had better measure the wages due to capitalists." Fortunately, workingmen are endeavoring to

measure the wages due to capitalists, and they are making commendable headway. The problems are difficult to solve, but the investigation is proceeding and labor intellect is growing. It is grasping bottom facts, and as it advances the world is astounded at the discoveries that are made. Laws made in the interest of capital, and that labor might be robbed, are giving place to laws founded in justice. The movement may be slow, as yet, but it is in the right direction and the signs of the times are hopeful. Of this fact what better testimony could be offered than that the congress of the United States appointed a committee to investigate the "labor troubles" in the anthracite regions of Pennsylvania, where capitalists are not only robbing the public but labor as well.

Mr. Edward Atkinson professes to be exceptionally well equipped for the discussion of labor troubles and for giving workingmen sound advice, and notwithstanding the monstrous outrages perpetrated by monopolies, trusts and syndicates, notwithstanding the cornering of food products which artificially advance prices and reduce the purchasing power of the workingman's dollar—he says to his audience, "You think capital gets too big a share of the profits; I don't," and that "all this talk about wage-slavery is nonsense." And when he refers to the effort being made to reduce the hours of labor, he tells the workingmen of Boston that "the way to shorten your time and to work less hours, is to do more while you do work." Such language would be cruel if addressed to a beast of burden, and when addressed to American workingmen has nothing to redeem it from insult, and the climax is reached when he asks, "Isn't it better to work ten or even twelve hours a day, rather than not live at all?" Such language might properly be addressed to felons, men who had forfeited their liberty or their lives, but when addressed to American workingmen in the city of Boston, it is proof, strong as Holy writ, that if workingmen secure emancipation from the thralldoms and curses which capitalists impose, they will be compelled to unite their forces, and inaugurate a revolution by the almighty power of the ballot, by the conquering influence of facts and arguments. Till then, the infamies of the past will proceed.

•••

HON. JAMES G. BLAINE, Secretary of State, is said to be a very rich man. He is largely interested in the Hope Silver Mine, which has already paid \$4,500,000 in dividends, or \$1,300 for every dollar invested. He is also one of the proprietors of the Pride of Erin Mine at Leadville, which is now paying dividends at the rate of \$25,000 a month.

THE WASTE BASKET.

We receive many letters for publication in which the writers close by saying: "If this don't get into the waste basket," "I fear the waste basket," "Please don't give this to the waste basket," etc. In writing for the *Magazine* the correspondent need have no fears of the "waste basket" if he has anything to say worth printing, by which we mean anything of value beyond the boundaries of his Lodge—anything of value to the Order. If the writer has neither news nor opinions of value to the Brotherhood, he should wait until he has, and if he does not, his communication ought to go into the "waste basket."

Writers for the *Magazine*, for twenty-five cents, can purchase a little pocket dictionary that will help them amazingly when they have a bad spell on them, a small dose of Webster being a remedy for the annoying complaint. For the expenditure of ten or fifteen cents a little work on composition can be had which will teach them when and where to use capital letters, and instruct them in punctuation. This done they need not have such frequent attacks of "waste-basket" fears. Nor is it required for writers to apologize by saying, "Not having seen anything in the *Magazine* from our Lodge," etc., but pitch in and write news—and sense, and the *Magazine* will see that the communication escapes the "waste basket."

•••

SAMUEL GOMPERS, President of the A. F. L., has issued a ringing circular "to the working people of America" upon the inauguration of the eight-hour working day, May 1, 1890. He says:

It is our hope; we have an abiding faith that the good sense of the employing and corporate classes will see the wisdom and necessity for a reduction in the hours of labor and concede it without recourse to strikes or interruptions of work. But it must be borne in mind that notwithstanding the establishment of the eight-hour work day would benefit all classes in society, there is but one convincing and conquering factor, and that is organization. Organization thorough and complete.

Organization instills confidence in the hearts and minds of the toilers, and it inspires respect for them and their just demands by their employers. It is the mainstay of the present and the hope for the future.

In this Mr. Gompers speaks wisely; everything depends first upon organization. This done, then if victory is achieved there must be federation. Upon the proposition of eight hours for a day's work, workingmen must be practically a unit. And be it forever remembered that when workingmen unite for their own good, they unite for the good of society.

•••

THE new railroads constructed for the first half of the year 1889, in the United States, Canada and Mexico, amount to 1,644 miles, of which the United States has 1,410 miles.

JOINT OR EQUAL RESPONSIBILITY.

The *Frog* copies from the *National Car Builder* the following:

There has been an inclination displayed of late years by officials having to investigate the causes of railroad accidents to hold the fireman of a locomotive jointly responsible with the engineer for neglect in running past signals. A fireman can nearly always escape penalties of neglect where an accident is caused by signals being overlooked by asserting that he was attending to the fire when the spot where the signal should be seen was passed, but still it is a wise and desirable precaution to hold both occupants of the cab, as far as possible, responsible for keeping the vigilant lookout constantly necessary to secure the safe operating of trains.

With the foregoing in sight the *Frog* remarks as follows:

It is all right to hold a locomotive fireman jointly responsible for accidents on the road but it is not right to hold him *equally* responsible with the engineer. On the mountain divisions of the western roads, a fireman who can keep 140 in the shade by giving the engine his undivided attention is considered a good man. Men who have never looked into a fire-box when an engine was working know very little about the ability of firemen to look out for switches and signals. When a fireman looks into a fire-box on a very dark night he is unable to see for several minutes, owing to the blinding effect the intense heat and light has on his eyes; and, in many cases he is compelled to put in another fire before he has regained his sight sufficiently to see the pointer on the gauge. In such a case it would be hardly fair to hold the fireman equally responsible with the engineer.

The point in the controversy hinges upon the meaning of the two words, "jointly" and "equally." Manifestly the *National Car Builder* in using the term "jointly," means to be understood, that the firemen are "equally" responsible with engineers for railroad accidents while the *Frog* would make a distinction between "jointly" and "equally." The question is of sufficient importance to be subjected to analysis. Can a fireman be "jointly" responsible with an engineer for a railroad accident and not equally responsible? The *Frog* itself settles the question, since it points out that in certain cases the fireman is not responsible either jointly or equally; in other words, not responsible at all.

Let us give Mr. Webster's definitions: Jointly means, "in a joint manner; together; united; in concert." Does that mean equally? If not, wherein lies the difference? Equally, means "in an equal manner or degree, without difference, alike."

A locomotive fireman's duty is to fire an engine, break up coal and shovel it into the fire-box. This has to be done almost continuously while the engine is in motion. The *Frog* tells the story graphically, and settles the question definitely, when a fireman is attending to his duty, he is necessarily as oblivious of what is ahead on the track, as a passenger. He is not on the lookout nor can he be. The one responsibility that

rests upon him, is to fire the engine properly; if he neglects this, and an accident occurs in consequence of his neglect, he is responsible, not jointly, not equally with the engineer, but solely. In defining duties, responsibilities are defined, whether specifically mentioned or not. An engineer must be on the lookout constantly, not so with the fireman, because it is impossible. It goes for nothing to say a fireman should do this or that first, he should properly fire his engine, this done, he will, if fit for the place, do all other things in the line of good work, lookout for accidents, study his machine, and perfect himself in his chosen profession, but such things are incidental, and in no wise render him jointly or equally responsible for any neglect of duty on the part of the engineer, and any attempt to blend responsibilities, results in never ascertaining where the responsibility for an accident rests.

There is still another view to be taken of the subject. The engineer is absolute master of his engine. The fireman is under the orders of the engineer, whose responsibility touches all things connected with running the engine. His orders are to be obeyed implicitly. It is not a joint responsibility, shared with the fireman or any other person—and any responsibility of the fireman for an accident could be shown only after unquestioned proof that he failed to perform his duty, and that duty is sharply defined by his employment—to fire the engine in a way satisfactory to his engineer. When not thus engaged, a fireman will be a close observer of all other things pertaining to his work, and in the matter of aiding his engineer to prevent accidents, will be quick to report anything he may see or that the situation may suggest. To intimate anything to the contrary, is to assume, that a fireman is not only totally regardless of all sense of duty, but equally indifferent to danger, and self preservation.

* * *

John Livingston, President of the Railway Share Association, has filed complaint of discrimination against forty or more railroad companies, in issuing free transportation to the delegates of the Brotherhood of Locomotive engineers and their families who attended the annual meeting in Richmond, Va., a few months ago. He asks, if they are not prosecuted for this violation, that in future they must be given to understand that they must refrain from such discrimination.—*Rocky Mountain News*.

This Mr. John Livingston is distinguishing himself as a common scold. He, like Corbin, McLeod and Bonzano is working to overthrow the various organizations of railroad employes, but we doubt if he will be able to make the Inter-state Commission a party to his scheme, and even were he to succeed, the matter of passes would not suffice for the accomplishment of the purpose so near the heart of Mr. John Livingston.

IS ALL WELL WITH US?

The foregoing is the caption of a paper by Major O. J. Smith, of New York, in which he refers to numerous defects in the government of the United States. The author is not an optimist, nor yet, in an offensive sense, a pessimist. He thinks the Constitution of the country fetters the people and prevents progress. If the conclusion is correct, the remedy is provided in the Constitution itself. It can be amended, or, by the fiat of the people, it can be abolished and a new Constitution adopted. The difficulty, therefore, in the way of progress, if such there is, is to be found in the ignorance or apathy of the people, rather than in the Constitution. A constitution is supposed to reflect the will of the people at the time of its adoption. That a constitution can be made in one century to meet all the exigencies of a future century is preposterous, and the framers of the Constitution of the United States did not so decide. The Constitution has been often amended, and, if the people so elect, may be amended as often as circumstances require.

That under the Constitution, as it now stands, the "spoils system" has flourished, is too self-evident to admit of controversy, but it is questionable, if laws, human or divine, will ever be able to correct the evil. The remedy lies outside of the realm of statutes. Mr. Smith says minorities, instead of majorities, govern. This defect will not be denied. It results from ignorance, the prolific parent of vice, but only in part. The ignorant are corrupted, and the ballot in their hands, becomes often a dangerous weapon, but those who corrupt the ignorant, though educated, are a far more dangerous class. Majorities are not powerless because of the Constitution, since that instrument clothes the majority with sovereign power; they are powerless only because they tamely surrender their sovereignty to the minority for a consideration, often of such a base character as to make thoughtful men despair of man's capacity for self-government. It occurs to us, however, that the time has not come to give up the ship. In so far as the original Constitution needs amending, we are ruled, by "the dead." But, there are certain great principles enunciated in the past that are as fundamental and as vital now as when first declared. It would be a sad reflection indeed, to admit that wisdom "died with the fathers." That it did not, there is ample proof on all sides. If the Government does not "respond to the living," the fault is found in the fact that the living are wedded to the ways of the dead. To some extent this is true, and often to an extent well calculated to create alarm. But there need be no panic. A wide and critical survey of the field must lead to the conclusion that ignorance is giving way to intelli-

gence. The great national heart beats responsive to truth, justice and honest endeavor. True, the corrupting influence of money is seen and felt. Great political parties make sounding declarations of purity and fealty to righteousness, and when in power make such exhibitions of treason to profession as are well calculated to disgust honest men and make angels weep. But while there are men who dare expose such Phariseeism, who dare denounce hypocrisy and venality, there is hope of a better day coming. Amidst all of our national mistakes there is a marked progress in the right direction. In this, we do not refer particularly to material progress. Russia and Turkey, and even China, may boast of such progress. We refer more directly to the advancement of the masses, the majority, the great body of workingmen, in intelligence and a comprehension of their rights. As Mr. Smith says, "We are educated by our errors." It requires time for men to discover their mistakes. The school of experience, in which all must learn, is in continual session. It is never "let out" for the pupils to play. It is a terrible master. No mistakes are condoned. The prescribed penalty comes with the certainty of death or the tax-gatherer. It may be delayed, but is never remitted. Slavery was a mistake. It flourished. It became great, powerful, resistless. The children paid the penalty of their father's mistake, and the Constitution was equal to the emergency and the majority ruled. There are other errors growing, taking deep root and are flourishing like "green bay trees." The possessors of money are becoming arrogant to a degree that it would be difficult to find a parallel in all history. There must come a change. In the United States the masses must not be pressed too far. Here, where food abounds, famine must not be inaugurated by the decree of the money power. There is a slumbering power of resistance to wrong which must not be frenzied. History repeats itself. Preventives are better than curatives. Labor is coming to the front and says in tones not to be misunderstood, attempt no fettering process, forge no chains. Labor is everywhere organizing for peace, for justice and for fair dealing. In this lies the hope of the country. Rescue labor from degrading conditions, and the waste places will be glad and the wilderness will blossom, and there will be peace on earth; good will toward men. But change the programme: Well, let the reader's fancy sketch the picture.

We have read the paper of Mr. Smith with great satisfaction. He points out with consummate clearness remedies for evils and believes the Constitution of the country should be radically changed. What he says is well calculated to set men to thinking and should have a wide reading.

CRIMINALS AND IDLENESS.

Under the caption of "Criminals and Idleness," the *Lafayette Sunday Times* prints the following editorial article:

Under the whip and spur of demagogue labor leaders, many of the States have enacted laws breaking up the industries of our prisons because they were competing with legitimate work and wages in various pursuits. In every instance the destruction of industries in our prisons has resulted in increased taxation for the support of criminals and in greatly repairing all reformatory measures.

Steady labor is one of the indispensable methods of all reformatory institutions. Idleness is the fruitful fountain of criminals. It sends more people to prison than all other causes combined. It is the prolific parent of crime, and the road is direct from idleness to crime and to the penitentiary. Employment is, therefore, a public necessity; indeed it is a double public necessity—first to reform, and second, to lessen the cost of crime upon the honest industry that pays for its support; and every experiment made in the line of idle convicts has been disastrous.

With reasonable care in the direction of our prisons, every criminal can be employed without injury to any industry in the State, and a judicious discrimination should be exercised in the lines of employment of prison inmates. Both sound theory and now well tested experience prove that criminals must be employed. Economy for tax-payers and reform for criminals alike demand it, and while the State may well consider how and in what channels prisoners may be employed, the necessity for their employment is accepted beyond controversy.

It has been demonstrated to the satisfaction of all capable of grasping the subject, that prison labor is in direct conflict with labor outside of prison walls. It is the employment of criminals to the injury of honest, law-abiding citizens. The proof is overwhelming. Already honest men are suffering because they can not obtain work at fair wages, and in ten thousand instances can't find work at any price. While this condition of things exists the State transforms its prisons into great workshops, hires out its crime-cursed muscle and skill to greedy contractors who grow rich while honest men are unable to find employment, and homes are wrecked by enforced idleness. It is doubtless true that it is good for criminals to be employed, good for their health and their happiness, but it is equally true that it is good for the health and happiness of men who are not criminals, to have employment, good for their children, good for society and good for the State. The leaders of the labor movement of the day are not "demagogues." They are interested in the welfare of honest men. It may not be that those who slobber over criminals, are not "demagogues." They are generally sentimental Don Quixotes, or people who permit their hostility to labor organizations to obscure the purposes of such organizations.

Ostensible the purpose of transforming penitentiaries into great manufacturing establishments, is to reform criminals, but

the real purpose is to make crime self-supporting, and, if possible, make it a source of revenue to the State. The contract system has enabled many men to amass large fortunes, and they are in favor of the contract system, but it has not been shown that by keeping criminals at work, by giving them books, good food, good physicians and spiritual advisers, the work of reformation has been such as to warrant a continuance of employment that takes the bread out of the mouths of honest men, and the conclusion has been arrived at that if anyone ought to suffer by idleness it is the convict, and not the honest man. If anyone ought to have the comforts of life it is those who obey the laws rather than those who violate them. To take burglars, murderers, rapists, foot pads, and the entire list of able-bodied scoundrels, and work them for revenue and reform, when such work entails idleness and misery upon those who are trying to lead honest and upright lives, is an outrage, which, in some of its features, is scarcely less than a crime.

Penitentiaries are not reformatory institutions as at present conducted. On the contrary, notwithstanding all that is said, criminals become hardened while in prison, and the young in crime come out of prison after their first term, worse, if possible than when they first entered their cells. This is the rule. The State feeds and clothes its criminals, and then hires them out to mercenary contractors for a mere pittance, and they are worked in a way that injures honest men, and when a protest is made against such a policy we are told that criminals should have their lives and their health protected regardless of the influences of their work and skill upon laboring men who are trying to be honest, and to bring up their children in an honest way. If any one is to be idle let it be the felon, regardless of its effect upon his health. The State should not pursue a policy calculated to impoverish working men. Such a policy simply makes criminals, and ought to be universally denounced by all men who have any regard for the welfare of society.

* *

SOME years ago, a New York millionaire got drowned from his yacht. His estate was valued at \$10,000,000 and his daughter, Miss Marcellite Thorn Garner, inherited the bulk of the estate. The young lady now resides in France, and though receiving a princely income, wants \$25,000 more annually, chiefly because her dresses cost her \$10,000 a year. It is barely possible that Miss Garner is a candidate for a title. They are lying around loose in Europe, and an American girl, not long since, married an Italian Count and became what was called a "Countess," but which turned out to be a no accountness.

On the 10th of June, last, the Pennsylvania railroad, for the purpose of reducing expenses, inaugurated the eight hour day in all its shops west of Pittsburg.

* *

The authorities of Washington City have determined to assess real estate at its real value. Hitherto it has been taxed at about half its value. All such legislation has the ring of honesty.

* *

The people of Milwaukee have been paying horse car fare for stand-up rides long enough, and propose to sit down on the business. They say they won't stand it any longer, and the cry in the city council is "No seat, no fare."

* *

The estimate is that it requires an annual expenditure of \$200,000,000 to support 20,000,000 dogs in the United States. If the statistician has said 10,375,881 dogs cost \$201,875,371.19 for their support annually, a great many people might believe it.

* *

It is interesting to the farmers to know that in Senator Farwell, of Illinois, they have a man who can sympathize with them. The Senator has a farm of only 2,000,000 acres, and knows what it is to plow long corn rows, pick up potatoes and water his stock.

* *

In Boston, the codfish aristocracy, owing to the scarcity of mackerel, have concluded to wear their clothes another season, and as a consequence, 6,000 tailors are idle. They will have to live on roast goose and seam content, or they may sue their landlords for rents and patch over the situation.

* *

Some one says that Paul Morton, General Freight Agent of the C., B. & Q., is making a greater record than when he was in the passenger department of the road. As a passenger man Paul eclipses Ananias. He was ambitious, and by this time may have got ahead of his royal forked-tail highness who ruined Adam and Eve and Brother Job. Rah for Paul!

* *

The work of federation goes bravely on. The Amalgamated Association of Iron and Steel Workers, the most powerful trade union in America has just adopted an amendment to their constitution to take in all men working around the mills. An aristocracy of labor will soon be a thing of the past.—*Chicago Knights of Labor.*

No mistake "Federation" is the shibboleth. Federation is coming. "Dinna ye hear the slogan?" Those who do not hear must be hard of hearing. Those who can't see it advancing are suffering from defective eye sight.

The Chicago Herald of recent date, in an editorial, says:

It turns out that the great wheat deal of June two years ago in which so many men were ruined, and as the result of which E. L. Harper was landed in the Ohio penitentiary, was nothing but a bunco game on a large scale. The report of the committee of Kershaw's creditors shows that there was a plot first to run up the price of wheat through one set of brokers, and then to sell the market short through another set. Harper, who was supposed to be engineering a corner, turns out to have been a mere puppet, and the men who really reaped the profits were those whose names have never yet been connected with the deal. The committee are taking steps to bring these unknown parties to an accounting. What they may be able to accomplish financially is impossible to say, but that they will succeed in unearthing much rascality is not doubtful. The true inwardness of that deal and the names of the parties concerned in it have never yet been made public. It is more than suspected that the Standard Oil Company, or the prominent men connected with it, were deeply interested in that deal, and that they made money out of it. It is to be hoped that the committee will prosecute their investigations until the whole plot is revealed.

Let it be understood that E. L. Harper, of Cincinnati, was not sent to the penitentiary for participating in the bunco wheat corner crime, but for stealing money to put into the game. In this bunco game we see to what infamous purposes money is often applied in this country. Take the Herald's statement of the case, and the bunco game was a deliberate robbery, and yet the law tolerates just that sort of villainy. The men who go into the game are far worse than safe blowers, burglars and highway robbers, and yet they practice their game openly and above board. They not only rob one another, rob banks, as did Harper, but they rob workmen, by artificially advancing the price of wheat or whatever food product they seek to corner. The time may come, and ought to come speedily, when such rascals could be properly punished.

* *

At last the great amalgamation scheme has taken definite shape, three different organizations of laboring men who have so far failed to adjust their own grievances to their own satisfaction, in their own best way, have deemed it the wisest and best plan to pool their interests, pool their united judgments in a matter wherein their interests are in no wise identical.—*O. R. C. Monthly for July.*

In the first place there was never on the part of the Orders to which the *Monthly* refers, an amalgamation scheme, small or great. The *Monthly's* error results from its ignorance; it does not know the difference between amalgamation and federation, and the O. R. C. should spauk its *Monthly* and then send it to a kindergarten for a term. Manifestly, the *Monthly* not knowing the difference between amalgamation and federation, does not know enough about anything connected with the interests of railroad employes, to give its opinions weight in the estimation of men of sense.

THE Pennsylvania railroad earns \$56,000,000 annually.

RAILROADS can consolidate in Tennessee if they want to, the legislature refusing to interfere.

THE railroad property of Alabama is assessed at \$40,163,776, an increase over 1888 of \$1,855,919.

FOUR roads, not including the Pennsylvania, lost by the recent floods in Pennsylvania, \$1,500,000.

THE movement to abolish Sunday trains goes steadily forward, and up to a certain point, success seems to be assured.

THE Postmaster General will recommend to Congress the reduction of letter postage to one cent. Let her go, Gallagher.

THE Fall River cotton mill kings advertised in English papers for 5,000 weavers. They could have been imported without being taxed at the Custom House.

EMPEROR WILLIAM, of Germany, is permitted to hear the workmen of his imperial capital sing starvation songs. In response, he sends orders to the barracks.

THE 325 Congressmen at \$5,000 a year, cost the people \$1,625,000. There is talk of reducing the number to 165. If it could be done the country would be greatly benefited.

AS INDICATING the mildness of the winter of 1888-9, as compared with 1887-8, it is said that there were but seventeen broken rails in the latter, whereas in the former winter there were 740.

THE Chicago, Milwaukee & St. Paul railroad has secured a loan of \$150,000,000 on its property, except its lands. This loan puts the road on its feet, and those who know say that the outlook is cheerful.

NATIONALISM is the latest Boston development, which means that the nation shall do all things and the individual nothing at all. As a matter of course the Bostonians want the nation to bake their beans, catch their codfish and mackerel, etc., to the end of the chapter. Clubs are to be formed everywhere, and that they may be numerous, membership is to be limited to 250. Just where the speculation comes in, is, as yet, a secret. Boston don't play philanthropy for fun.

THE Fourth of July demonstrations in favor of the eight hour day, evinced everywhere, on the part of workmen, a purpose to win the fight. The declarations of Independence were numerous and to the point.

A LADY, present, while Jay Gould sat by, witnessing the bathing of his grandson, remarked to the millionaire, that he "never seemed more pleased than when watering his own stock." "Yes," said Gould, "it is interest-ing."

IN the early part of April, engine 118, on the Vandalia road, pulled into Indianapolis forty-one loaded cars, the heaviest train ever hauled over the road by one locomotive. The engine was built at the Pittsburg Locomotive works.

MR. J. T. HARAHAN, is said to be the coming man for General Manager of the Bee Line and Big Four Consolidation. Mr. Harahan, will always be the coming man, when a superb railroad man is wanted. He fills the bill every time.

FIFTY FIVE railroads of the country report for the month of March, 1889, 10 per cent. gain over their earnings for March 1888. And still complaints are made of bad times, and roads claim that they must reduce their force and reduce wages.

HON. CHAUNCEY M. DEFEW, President of the New York Central, is said to be one of the most overworked men in America. During the Centennial week in New York, he made on an average three speeches a day, all of which were fresh and vigorous.

CONGRESS, at its next session will be asked to modify the Inter-state commerce law, so that there will be more latitude and longitude in the long-and-short-haul clause. The cause for this, it is said to enable American roads to get even with the Canadian roads.

THE Pennsylvania railroad has determined to test the value of the steel cross-tie, which is made in the shape of a rectangular shell with wooden blocks directly under the rail. An aperture is cut in the shell large enough to accommodate the rail. The advantage claimed for this tie is that by the combination of steel and wood the rail has the necessary cushion-bed, while the wood is protected from the weather, and it will be impossible for the rails to spread. The tie will cost about double the ordinary tie, but it is claimed will last ten times as long. One mile of track, where the road carries its heaviest traffic, is to be laid on this tie.

THE Lafayette, Ind., *Sunday Times*, has been interviewing a clergyman upon the subject of wedding fees. The clergyman is reported as saying:

"I think the clergy have too much to say about the smallness of some of their wedding fees. There is no earthly reason, in the first place, why a clergyman should receive any fee for his services on such an occasion. If fees are to be given at all, they would be much more appropriate when a clergyman is asked to officiate at a funeral, which in some cases may consume several hours of his time. But, granting that a wedding fee is allowable, my experience is that such fees are, as a rule, too large rather than too small. I have officiated at the weddings of a great many mechanics and workmen, and in the majority of instances the bridegrooms have given me ten dollars, some of them have given me fifteen and even twenty dollars. Now the lowest of these sums is out of all proportion to the income of the average mechanic. It is much more than they can afford for a service which a Christian minister should be glad to render for nothing. And in my own practice I have always returned the fee in such cases, unless the man was so foolishly proud as to refuse it. But in so doing I admit that I am running counter to the almost universal custom of the clergy. My own personal opinion is that in an age like this, when the world is so ready to find fault with the clergy, it would be wise to abolish wedding fees entirely. At the same time I do not assume to decide the matter for any one but myself."

In the case of wedding fees, we have both fashion and pride to contend against, as in case of a funeral. In the first place, there is no necessity for employing a clergyman at all. The law does not require it, a Justice of the Peace answers every purpose. Nor is there any necessity for the expenditure of larger sums of money for wedding costumes, big suppers, wedding tours and the like. If people have an abundance of cash and desire to expend it in that way, well enough, but when people of small means get married, and seek to emulate the rich, they make a very foolish mistake. Parade, show, glitter, pride, fashion and folly, should have no place, when two young people with small means begin their married life. It should be commenced on common sense principles. Pay the clergyman or the official, a fee in consonance with means and permit heartless Fashion to go her way regardless of her edicts

* * *

A brakemen on a Connecticut railroad not long since met his death while on duty, and the Coroner of Norwich, Conn., in reading his verdict, among other things said:

"I find that John Pender's death is directly chargeable to the perilous requirement of brakemen on freight cars, as now constructed, in being furnished with a footway on a board or boards fifteen to twenty inches wide on the top of the cars, and being required at all hours, and in all weather, to pass on this narrow footway over cars of different heights to set brakes—in which duty a misstep, or a slip, sends them to their death. And is there no way to avoid it? I say yes! A thousand times yes! One way may be: Let freight cars be constructed with a short platform at either end, where the brakemen can stand and operate his brake. Then construct a walk about a foot wide from and near the brake

along the side of the car with and iron rod or rail to prevent falling off, so that a brakeman can start out of the caboose and set his brakes from car to car without peril to life or limb. Freight cars may average eight feet wide or more, so that such safe walk may reduce the capacity of the car for freight at the most only one-eighth, requiring about nine cars instead of eight for the same capacity of freight and in the same ratio for any train, so that by adding two or more cars to a freight train the lives of brakemen would be as safe as if inside."

We do not believe the time is remote when railroad corporations will be required to afford brakemen greater protection in the discharge of their perilous duties than they now have. The sense of justice and right, the value of human life, and the ever increasing emphasis of the demand upon legislators, will at no distant day remedy the evils of which brakemen justly complain.

* *

We are in favor of Federation, first, because it is right, notwithstanding the order recently sent out by the Reading railroad to the effect that if the employees of that accursed corporation want to hold their jobs they must *not* organize; *yes*, worse than this, they say to engineers, that if they expect promotion they must withdraw from the Brotherhoods. The great Federation scheme is gaining ground every day. Time is a great educator. Past experience tells us we must stand together as railroad men, or the abuses heaped upon us by soulless corporations will soon become intolerable. When we say this we don't wish to create dissatisfaction among employees who are well paid as they are in the West.

* * * * *
Every engineer in the country, especially in the West, owes it to himself and his family to see that delegates are sent to Denver this fall who are not too proud to cast a vote, should an opportunity be presented, in favor of Federation. The success of this great scheme depends largely on the B. of L. E. It is human to err; it is not cowardly to acknowledge it. It does not always pay to be proud just because we happen to be pretty.—*The Mog*.

Federation is a success, and does not depend "largely," or at all, on the B. of L. E. The principle of federation is right, and the movement is absolutely free from reasonable objections. Men of sound judgment approve it, and it is bound to grow in public favor.

* *

MR. RUSKIN is credited with saying, "If you want knowledge you must toil for it; if food, you must toil for it; and if pleasure, you must toil for it. Toil is the law. Pleasure comes through toil, and not by self-indulgence and indolence. When one gets to love work his life is a happy one." All of which is doubtless true, but it so happens that under our advanced civilization there are thousands who are denied the luxury of toiling for food, and in the midst of abundance, are required to submit to hunger pangs. As, for instance, the police estimate that 50,000 people walk the streets of New York, not knowing where they will sleep at night, and 50,000 other people sleep as best they can, not knowing where or how they shall break their fast after the coming dawn.

THE C. B. & Q. has started a locomotive firing school. An old engine has been fitted up for the business which goes over the road, stopping at convenient places, for firemen to take lessons, hear lectures and receive marks for proficiency in "theories and nomenclature of scientific firing."

* *

THE Canadian Parliament has enacted a law, which will restrain the baggage smasher when inclined to be festive with the trunks, etc., of the traveller, and in all of the Dominion railroads will be required to handle baggage with caution, or be responsible for damage. The world do move.

* *

MONTE CARLO is the great gambling resort of Europe. Men go there with fortunes, stake their money and lose, and then commit suicide. During the month of February the winnings amounted to \$750,000, and twenty-one unfortunates committed suicide, or one suicide for every \$35,000.

* *

At the recent election of officers of the Pennsylvania railroad, 773,139 shares were voted, exceeding by 135,000 shares the largest vote ever cast. Of this vote, 560,000 shares were American stockholders and 213,000 shares of foreign holders. Over 40 per cent. of the stock is held abroad.

* *

ONE-TWENTIETH of the steel manufactured in the United States was produced in the the Cambria works at Johnstown, and also about an eighth of the Bessemer steel rails. The beautiful pleasure lake of the millionaires played havoc with the works and the workmen, but as a result nobody is to blame.

* *

THE State Board of Valuation values the railroads of Missouri as follows, for 1889:

Roadbed and superstructures	\$43,032,147
Rolling stock	8,483,480
Buildings	1,025,830
Bridges	2,450,000
Telegraphs	665,813
Total	\$55,657,270

This is an increase over 1888 of \$4,386,117, and does not include machine shops, round houses, ware houses, etc.

* *

THE Pennsylvania Railroad Company has decided to attach hose with a steam pump on their engines. The hose will be in length, equal to six passenger cars and will be carried on the tender, and in case of fire, on any part of the train, the hose can be brought into use at once. Tests have been made as to the efficiency of the hose, and gave entire satisfaction. All passenger trains will be equipped with the appliances, and passenger train crews will be drilled in their use.

THE Philadelphia & Reading management announces its determination to fight the railway labor associations and other labor associations to the bitter end. There is strong suspicion that the pirates who so long had control of the Reading, are preparing to wreck the property.—*Railway Service Gazette*.

Suspicion, indeed! The "pirates" long since wrecked the property.

* *

JAPAN is rushing railroad building, and the Government sees to it that everything is done in order. For the present, engines, rails, etc., have to be ordered from other countries—France, Germany and England, but very soon the Japs will catch on and be independent of the workshops of Europe.

* *

THE treasury vault, built to hold 100,000,000 silver dollars, is now full, containing 86,000,000 dollars, 14,000,000 less than the estimate. The "daddies" never expected that their dollars would be so plentiful, nor that their children would have so few of them.

* *

COMMISSIONER FINK has wrestled with the Inter-state Commission until his health shows that the task has been a severe one. He now surrenders his salary of \$25,000 a year and goes to Europe in search of strength. His army of friends will be glad to hear of his success. To say that he is a great railroad man is putting it mildly.

* *

UNITED STATES Senators, many of whom are millionaires want their salaries advanced to \$10,000 a year. The opinion is very generally entertained that a majority of them are not worth the pay they now receive, \$5,000 a year. Considering that labor pays everything, and gets about half paid itself, \$5,000 a year ought to be regarded as liberal pay for Senators.

* *

It is reported that "Mr. Joseph Pulitzer is making a good use of the great wealth which he has won by his enterprise in newspaper work. His last benefaction is an offer of \$250 a year to twelve graduates of the graded schools who need help in order to obtain a college education." Mr. Adams, President of the Union Pacific railroad is a graduate of Harvard, and has said that he regards his college education in some important regards a failure, and worse than nothing. The world stands in need of educated men, but not in dead languages and many other trivialities of the college. Mr. Pulitzer could make a far better use of his money, by helping twelve poor boys to become graduates of graded schools, who show capacities for becoming master mechanics. We shall always have more than a sufficiency of college graduates, but never too many of first-class mechanics.

We note the following going the rounds:

A reduction of wages is to go into effect on the Illinois & St. Louis railroad, now operated by the Louisville, Evansville & St. Louis Consolidated Railroad Company, on July 1, which will affect all classes of employes. It is said the reduction ranges from 25 to 40 per cent. on the salaries heretofore paid.

The average of 25 to 40 per cent. is 32½ per cent. Now then beginning with employed at \$1.00 a day and running up to \$4.00 a day, and allowing 300 days for a year, let us see how this cut will pan out:

Wages per day.	Amount for 300 days.	32½ per cent off.	Amount received by Em- ploye.	Amount lost by Em- ploye and gained by Corpora- tion.
\$1 00	\$300 00	\$97 51	\$202 51	\$97 50
1 25	375 00	121 87	253 13	121 87
1 50	450 00	146 25	303 75	146 25
1 75	525 00	170 62	354 38	170 62
2 00	600 00	195 00	405 00	195 00
2 25	675 00	219 00	456 00	219 00
2 50	750 00	243 75	496 25	243 75
2 75	825 00	268 12	556 88	268 12
3 00	900 00	292 50	607 50	292 50
3 25	975 00	316 87	658 13	316 87
3 50	1,050 00	341 25	708 75	341 25
3 75	1,125 00	365 00	759 38	365 00
4 00	1,200 00	389 00	810 00	389 00

The above table represents thirteen different prices, and there is no buncumb in the figures. Take any pay-roll and you will find the figures. If the calculations are correct, the corporation referred to will gain by a reduction of the wages of thirteen employes one year, the sum of \$3,172.73. Suppose the corporation has 5,000 employes, not counting officers, in that case it would save, by the reduction of an average of 32½ per cent. of their wages, the snug sum of \$1,120,000. There is an immense amount of meat in such figures. It is fat meat for the corporation, but exceedingly lean meat for the employe. The time has come for work- ingmen to study them.

TORSEY KNAPP, writing of women in the railway service inquires, "when there are hundreds if not thousands of railroad men out of employment, who have had years of experience, why should they not be taken in preference to young ladies of no experience?" and then remarks that "there was, several years ago, in the employ of a certain railway manager in Ohio, as telegraph operator, a capable and energetic young man. One day he received orders to instruct a young lady in the mysteries of telegraphing. Faithfully he performed the duty, and when he pronounced her an able and efficient operator, he was asked to resign; imagine his disgust and despair. Well, he traveled three thousand miles before he secured another situation. As a sort of mild revenge he 'expressed' to the lady operator a pair of pantaloons, with an apology for having neglected the first lesson; that he neglected to pay express charges on the

package. The young lady, in a year's time, proved a disappointment to the manager, married a deacon, and also proved a disappointment to him, for he applied for a divorce, on the grounds that Kate, on sundry occasions had called him an 'old d—l,' and other pet names. When interrogated as to this, she declared she made the remarks before she thought, as she had been accustomed to hearing railroad men, when angry, vituperate each other after that manner. And the deacon further complained that when he requested her to look after missing shirt buttons, she invariably replied that she was not the accommodation train." Topsey's idea seems to be that in the railway service the right place for woman is that of a charming wife of a railroad man.

PRIZE fighting as an American industry is making rapid strides, and if matters progress in the future as they have in the near past, we see no reason why the United States should not be the most advanced prize-ring nation in the world. We have an abundance of the required raw material, bone, spine, muscle, courage, staying qualities. We have young men of the various weights and of the proper build, ready to enter the ring at any price named, from \$50 to \$5,000. If a man needs newspaper notoriety, the prize-ring offers every inducement that the most exacting could demand. The wires are at his command. From the day the "forfeit" is put up, and the bully begins "training," the press keeps him before the public. His diet, his running, walking, sleeping, bathing, his rubbings, everything is noted by the press the great educating power of the country. The trainer comes in for a fair share of fame. The backers, stake holders, bottle holders and referees, are not overlooked. As the time approaches for the fight, interest increases. The out-of-the-way locality where the fight is to take place excites the public mind. As the talk proceeds, the fighters grow in importance. They obscure statesmen, philanthropists, educators, explorers, warriors and divines, and when the battle is over, then great newspapers vie with each other in describing incidents. Every "round" is described with graphic accuracy. "First blood," "first knock down"—condition of "peepers," "smellers," "hash holes," etc., are particularly noticed. "Left handers" and "right handers" are given special prominence, and thus column after column heralds to the world the incidents of a prize fight. The great public devours the literature with eagerness. It is never surfeited, and yet the same papers will deplore the civilization of the Spaniards, who take delight in witnessing bull fights, and aid in raising money to send missionaries to convert savages. Funny, isn't it?

THE lawyers have discovered that Pennsylvania has no law for punishing a man for stealing a railroad engine, and probably none for stealing a railroad. Only a Corbin would steal a railroad engine and other equipments, and though we have more law to the square mile than any country beneath the sun, we have none to catch whales, only the small fry.

A CHINAMAN at Portland, Ore., was refused ten cents due him for washing, by a dead beat, whereupon the Celestial went on a strike and gave the puppy a severe thrashing. During the performance the police were called, but the decently drubbed white man was told—"served you right; hereafter pay your wash bills."

It is authoritatively stated that the Union Pacific is earning from \$50,000 to \$60,000 a week more than one year ago; the increased earnings in January being \$289,132, and still, between April and January the pay roll of the Union Pacific will show that it is being operated with 3,280 less men. To do this the men retained are overworked, and thousands of men are forced into idleness.

It is announced that while the railroads of the country show a handsome improvement in business, the great systems are reducing their force, and in many instances, the wages of their men. The cause of which, it is claimed, is the position the roads are forced into by the Inter state Commission. In every instance it will be noticed that labor is required to pay the penalty one way or another.

AUSTIN CORBIN, President of the Reading devil-fish corporation, the fellow, whose reputation for truth and integrity, is about like the aroma of the jimson weed flower, compared with violets, was recently in Indianapolis, and was interviewed. Speaking of the I., B. & W., Corbin is reported as having said that, "he personally had sunk \$500,000 in the I., B. & W., but he did not care for that if he could once get the road on a basis where it would pay its interest and operating expenses. He thought that in the near future there would be a scaling down of bonds and interest which would place the road in better shape, financially. The net earnings of the road the last five years have averaged \$436,000 a year, and this would pay 4½ per cent. on the first mortgage bonds and 3 per cent. on the seconds; but still he was anxious to get the road on such a financial basis that, whether the crops be good or bad, it would earn enough to pay operating expenses, fixed charges, and keep the property in good physical condition. He thought the outlook for all western lines was anything but encouraging. He did not want to put another dollar into western roads.

Eastern roads, however, are doing finely; the Long Island road had increased its business 100 per cent. in the last eight years, and it was still growing. He was getting the debts of the Philadelphia & Reading paid, and getting the road-bed and equipments into good condition, and would soon begin to earn money enough to help the stockholders; and the Jersey Central, also, was rapidly gaining. He said that the interstate law did not so unfavorably affect Eastern lines as it did western lines; and rates were not so demoralized as on western roads." This is the man, who in making a statement concerning the Reading, made a mistake of \$40,000,000, for the purpose of covering up stupendous rascalities, by virtue of which stockholders, bondholders, widows, orphans, workmen, and the public, had been swindled to an extent that it became necessary for congress to investigate the colossal villainy.

MR. A. N. TOWNE, some time since, gave testimony before a committee of the United States senate, and subsequently supplemented it by an open letter to the committee as to the effect of competition of the Canadian Pacific Railway on American lines. He recites the fact the Canadian Pacific was built as a military line, and that in addition to receiving a subsidy of \$25,000,000, and 700 miles of constructed railway, valued at \$35,000,000 it is free from taxation, is protected by its charter against any rival parallel lines, and had donated to it 25,000,000 acres of land, together with water and dock privileges, making it the most valuable concession ever granted by a constitutional government. As the road is not subject to interstate law, it can name through rates to intermediate points on its lines, which American roads cannot do. Mr. Towne wants the interstate law so modified as to permit American roads to meet the competition of foreign roads, and the request is one that congress will be likely to grant.

KIND WORDS.

THE *Railway Service Gazette* refers to the Grand Master of the Brotherhood of Locomotive Firemen and President of the Supreme Council of the United Orders of Railway Employés as follows:

It is fortunate for the public, the railway companies and railway employés that such a man as Frank P. Sargent is chosen president of the Supreme Council of the United Orders of Railway Employés. The editor of the *Gazette* has known, and known of, Mr. Sargent for a long time, even before he was called to the chieftainship of the great Brotherhood of Locomotive Firemen. In all positions he has exhibited ability and prudence, and none of the leaders of the great railway labor associations can show a higher, cleaner record. Mr. Sargent has able associates in the Council, and if circumstances should so direct, it is not improbable that the Council, composed at present of nine men, will become one of the most conspicuous bodies in America.

For the Magazine :

MY CREED.

God, the father of my soul,
Made the world and all above.
Man created from the dust,
Mind to think and heart to love.

Free to love—unloving else—
Man chose self to be his God.
Free to walk in paths of peace—
In forbidden ways he trod.

With the symphonies of heaven,
Out of harmony is sin,
Without ransom heaven's portal
Man can never enter in.

Lo! the Christ, true son of God,
(Comes to dwell in mortal guise!
Teaching how to live he lives,
That we may not die he dies.

His a life of pain and sadness,
Life of mercy truth and love,
Through His sorrows we have gladness,
Through his death may reign above.

Still, though passed from mortal sight,
May we have his presence here.
While in Him our souls abide,
Neither life nor death we fear.

Holy Spirit, gentle friend,
We may have thy presence near,
Guiding in the truth the way
During all our journey here.

Much of truth I may not know,
Till in the light with him I stand,
Only this I need to know,
That my Savior holds my hand.

To believe that Jesus died,
To obey His precepts given,
This is all my God requires,
Fitting me to enter heaven.

—Mar Martin.

* *

THE letter we publish elsewhere over the signature of C. S. Wheaton, Grand Chief Conductor of the O. R. C., should damn him forever in the estimation of all honest men. It was written to a prominent railway official at a time when there was some indication of trouble between the employés and the company, and Wheaton, true to his mission and principle, volunteered the services of the O. R. C. to defeat the employés, however righteous might be their cause. Such craven bartering is without a parallel. Every man who works for a livelihood ought to revolt against it, and more especially members of the O. R. C., who are offered as so many cattle to do the bidding of their master. Great heavens! can it be possible that such a man can long continue at the head of an organization of intelligent workingmen? What is his attitude as defined in his own hand writing? What does he say to the railway official he addresses? Simply this: "*How many scabs do you want, and in what capacity?*" Briefly defined, that is the position of Calvin S. Wheaton, Grand Chief Conductor of the O. R. C., and yet we are told to say nothing about it for fear of creating "bad feelings" and letting the "officials" know that we are not harmonious. Such

men must place a high estimate upon the intelligence of railway officials.

We are bold to say that organized labor has not to-day a more unscrupulous enemy than Wheaton, of the O. R. C. He stands ready to defeat any and all of the Brotherhoods in order to get a "little nearer the throne."

If the O. R. C. will much longer serve as Wheaton's hirelings, if they will submit to being led to market and offered to the lowest bidder, or to any bidder, we are deceived in the signs of the times. That is the position in which Wheaton holds them to-day. Thousands of members of the O. R. C. are high-minded, honorable gentlemen who would indignantly protest against being used as tools to crush their fellow employés and who would scorn to do a mean, contemptible act, and when they learn of the base purpose to which their Grand Chief has committed them, they will revolt at the outrage and seek by all the means at their command to enthrone retributive justice.

* *

MR. EDWARD ATKINSON is, by some, esteemed an economist of extraordinary weight, and his sayings have a wide reading. He is reported as saying that 90 per cent., or nine out of ten of our people, spend nearly all they earn. There is, comparatively, very little saved for the rainy day. Out of the other 10 per cent. some save sufficient to protect themselves against want, and the remainder acquire independence. Statistics show conclusively that fully 50 per cent. of the workingmen of the United States are barely able, by the most rigid economy, to make both ends meet. And this is done by renouncing everything approximating a luxury, and much that is of absolute necessity for health, comfort and respectability. There is a large per cent. of the workingmen of the country in forced idleness, but, so far, we do not remember that Mr. Atkinson ever uttered one word against laws and usages which make the rich richer and the poor poorer. Mr. Atkinson is a monopoly economist.

ANONYMOUS COMMUNICATIONS.

We are constantly in receipt of anonymous communications, and the number steadily increases. We have put up with the unnecessary annoyance until patience is no longer a virtue. And now we wish to inform the entire membership, and correspondents generally, that from this issue of the *Magazine*, no attention will be paid to any communication without it is accompanied with the true name of the writer. The name is not required, necessarily, for publication, but we must have it to guard against impositions. We assure our readers that there will be no departure from this rule and correspondents can govern themselves accordingly.

AUGUST, 1889.

Our New Name.

MR. EDITOR:—Our Order has been in existence about sixteen years, and when our next Convention meets it will be eighteen years old. It has passed through the various complaints incident to infancy, childhood and youth, and now has arrived at a stage in its existence, when it can be said with truth, that it has a robust constitution, which is likely to withstand any shock or complaint. When born it was not amid the splendors of the metropolis, but in the quiet valley of the Delaware, surrounded by the rugged peaks of the Blue Mountains, and its parents were not the wealthy nor the titled, but the poor and humble toilers, whose hearts were beating in unison at the call of distress, and whose hands were ready to obey the heart, even to go to the "bottom of the pocket" if necessary. The infant, thus born of "poor but honest parents," seemed imbued with vigor, and enjoyed several years of quiet growth, but was nearly starved to death once by an unfaithful nurse, who failed to administer the provided nourishment. It also passed through a severe spell of the whooping cough in 1877, which often made things look blue in front of the child, but it survived and grew right along, only having some pimples and boils now and then, and a few skin eruptions, such as are called rash, until the summer of 1888, when it had a long attack of the fever and ague, which made the very bones rattle, and which it was hoped by some of the youth's enemies would carry it off, but thanks to a robust constitution, and the heroic remedies administered in liberal doses, the youth still lives, and having proved that its constitution is sound, its appetite has resumed sway, and as its digestive functions were not impaired, it has rapidly recuperated, and now stands as full of life as ever, and wants to know who will dare to be the next to knock the chip from his shoulder, or dare to call him names.

The infant, whose birth and life we have described, was named Brotherhood of Locomotive Firemen, and at various times in its history, as it spread itself, it was found expedient to add various affixes, to designate the territory it was to cover. As the period of its majority approaches, when it may be presumed to have fully reached man's estate, and be ready for its life work, the youth naturally enough wants a name, suitably describing his business and standing in the community. The question is frequently asked, "What's in a name?" and answered "A rose by any other name would smell as sweet," but nevertheless, language is termed to convey meaning, and the words used should

ever be capable of conveying to the mind a full sense of their import, without any unnecessary additions.

The name Brotherhood of Locomotive Firemen, properly designated the infant, but as its laws are wide enough to cover three classes of railroad men, whose duties are widely different, the name Firemen does not adequately describe the Order now, and hence we have several propositions to change the name, so as to embrace the three branches if possible. Let us consider some of the names proposed. We find some advocating the name of Brotherhood of Locomotive Firemen and Engineers. This would no doubt lead to confusion, because from the very length of the name abbreviations and initials would be used, and the simple emission of an "F," would make the older Order and the younger one, the same. As this Order of ours is not given to apeing others, we would not attempt to take even so much as one letter of a name appropriated by any other Order. Besides this, the hostlers would still be out in the cold, so far as the name is concerned, and they might with propriety ask that their name be added, and thus we would have a "Brotherhood of Locomotive Firemen, Hostlers and Engineers." In this connection we would also note the suggestion made by Friend Hill, of the "Locomotive Engineer," of adopting the word "Foot-board," formerly used by the engineers but discarded by them. With all due respect to Friend Hill, we venture the assertion, that this Order will not take up with the cast-off second-hand garments of any other association, but no doubt the Foot-board is a place where all three classes meet in the performance of their duty, and in so far would be appropriate.

It is with no spirit of pride at our success, nor with any feeling of shame for our name as firemen, but from a sense of the inappropriateness of the name, that Bro. Debs no doubt made the suggestion in the April *Magazine*, that we change it, and call it Brotherhood of Locomotive Enginemen. This would be a name having the same initials all the way through, as our twin (?) brotherhood, and even if written out in full, in some men's hand-writing, it would be a hard matter to decide whether engineers or enginemen was the word intended, and this would produce endless confusion and misunderstanding. Another point is, that while it is a common practice to speak and write of our engines, it is not their proper appellation, and locomotive is, and ought to be used when you speak and write of these machines, which are able "to take wings, and fly to the uttermost parts of the earth." The name enginemen, although it has crept into our Constitution, ought to be expunged and a suitable equivalent adopted. At any rate it would be utterly superfluous to use both locomotive and enginemen, and if one was eliminated it would of course by the term engine. This would bring it down to the "Brotherhood of Locomotive men," as some correspondents in the *Magazine* suggest, but even this

term is more than is needed, although it must be confessed that there is a rather ringing sound in the phrase, particularly when the word *men* is properly emphasized, and applied in its fullest sense. But a brotherhood ought to be composed of *men*—not only in the physical form, but in those mental and moral qualities which constitute the highest type of manhood—and therefore, it would be needless to add the word *men* at the end of the name, and this would bring our name down to "Brotherhood of Locomotive," to which may be added the word "the" in front of locomotive for the sake of sense and euphony, and we have *Brotherhood of the Locomotive*, which certainly sounds well, and fully covers all the classes which are embraced within our Order. The initials B. L., or B. T. L., or B. of T. L., or B. of the L. would clearly designate our Order, and prevent mistakes, but if the four initials B. O. T. L. were used too freely, it might produce a headache on our shoulders, and a smile of derision on the face of others. While thus in favor of calling ourselves *Brotherhood of the Locomotive*, let us close by quoting the two closing paragraphs on the "New Name," by "Friend Hill," in the *Locomotive Engineer*, for June, and while Friend Hill uses the name "Brotherhood of the Foot-board" in those paragraphs, let us read it as *Brotherhood of the Locomotive*, and heed the instruction and advice contained in them, and it will not matter so very much by what name we call ourselves, for it will be synonymous of good:

"Let the firemen's Order become the Brotherhood of the Footboard. Let them preserve, respect and live up to their grand motto of Benevolence, Sobriety and Industry. Let them disband their grievance committee, and thereby two-thirds of their grievances, and put their striking power into the hands of the Grand Officers.

Let them establish higher standards of membership—expel men for drunkenness, before, rather than after, they have been discharged by the master mechanics. Let them establish lodge-room discussions, buy books and models, seek instruction, court examination, and offer to railroad companies better posted, better selected and more reliable men from the ranks of the Order than can be secured outside of it, and they will have found a practical solution of their dream of federation; for in ten years the Brotherhood of the Footboard would soar above orders with any other foundation, just as an eagle soars above a toad."

FORT WORTH, TEXAS, May 11, 1889.

To the Editor of the Firemen's Magazine:

I should like to say a few kind words in favor of one who has done so much good for true and tried labor in the columns of the B. of L. F. Magazine. May your pathway through life be one of pleasure. May the fairest flowers bloom and beautify your pathway, and may no thorns be found to detract from your happiness, and when the trials of this life are past, and your spirit is called to your happy home above, may your soul shine in Heaven as bright as a star in the blue dome of the skies.

A Fireman's Sister of No. 40, B. of L. F.

Is Marriage a Failure?

NEW ALBANY, May 13, 1889.

Editor Firemen's Magazine:

In your Magazine for the present month, I have read quite a number of letters on the query: Is marriage a failure? and I thought I would like to have something to say on the subject myself. Well, for a starter, I will say it has been a complete failure for me, as I have not been so fortunate as to find a better-half yet. But when I go to the homes of some of the engineers and firemen, and find there a good-natured little wife with from four to eight little ones, from three months to nine years old, judging from the number of children, I should say marriage has not been a failure with them. I am speaking of the Monon boys, principally. But excuse me, when the largest half of these kids are crying, with dirty faces, with hair uncombed, wanting something to eat or drink, and all needing a mother's care. Then ask, is marriage a failure? You would not ask such a question if you could look into the homes of some of the railroad boys, when in every direction a pair of eyes would meet your gaze. Therefore, excuse me from married life. Call it a success if you want to, but that won't change my opinion. I often think of the verse:

"When I go home from work at night,
No qualling babe lies there,
To rack my brain, or make me find
Some easy way to swear."

Yours without a mate,
(Coldager Ed.)

LYNDONVILLE, VT., June 18, 1889.

Editor Firemen's Magazine:

I have been a member of our Order nearly three years. I do not know as I have seen anything from here, so I will try and break the ice. I see there are a lot of Brothers situated just as I am; perhaps it is well we do not all think alike in regard to changing the name of the Order. I can not see why the name should be changed. Do you think it would grow and be of more honor? Who could ask for an Order to grow any faster than this has, under the present name? 17,296 members in sixteen years, I should call doing pretty well. We have twenty-four members in good standing, ten of that number are Engineers, and are satisfied with the name that they sail under, and are going to stay with the Order rather than leave and join the B. of L. E. I am sorry if I have got any Brothers that are ashamed of their Brother Firemen, just because they have been promoted to the right hand side. According to our Brothers from Colorado City, (in June No.) we are losing good men, who have no love for the B. of L. E., but who have taken it into their heads that they cannot be engineers unless they join that Order. I am proud to say Vermont is not filled up with any such stuff, but has got men that are not ashamed of the Order under which they were brought up, and have been promoted for the last three years. They are still solid for the Brotherhood of Locomotive Firemen.

Yours fraternally

301.

The New Name.

MR. EDITOR:—One would suppose from correspondence in the Brotherhood department of the *Magazine* that our dear old Brotherhood of Locomotive Firemen was soon to be a thing of the past. Great numbers of our members have suddenly concluded that we would derive benefits by assuming the name of Brotherhood of Locomotive Enginemen, or something similar. I admit that should our present little differences increase, that there is a possibility that in the future it may become necessary to change not only our name, but our principle; but at present I think that it would be a mistake and a departure from our past policy, to start an opposition engineers' organization.

This change would obliterate a name that now occupies a high position in the list of labor organizations; one that has the respect and friendship of all others, with probably the exception of the B. of L. E. and place in its stead, one in which the identity of the firemen is lost.

Probably the best reason that can be offered for making this change, is the manner in which we have been treated by the B. of L. E., and if I believed that their course in this matter would be perpetuated, I certainly would be in favor of a reorganization as the Locomotive Brotherhood of North America, to be composed of engineers, hostlers and firemen; but until the "rank and file" are heard from at the B. of L. E. convention at Denver, I sincerely hope that we will take no action in the matter. By "rank and file," that large element is referred to that, to a great extent are the body and sinew of all organizations, and who usually permit all business to be transacted by a few "bosses." As a rule, they take but little interest in Brotherhood matters until something is radically wrong, when they express their opinions in no uncertain tone, and any action on their part will be final, and a policy adopted that may be considered as permanent. In the past, official positions of the B. of L. E., especially that of delegate to convention, have been filled by "old timers," engineers long in the service, who cannot readily comprehend the present condition of affairs, and who forget that time changes all things. They are generally men who consider a fireman but a servant hired by the railway company for their personal use, and cannot realize that the firemen of to-day, as a rule, are far superior, mentally and socially, to their old associates in days gone by, when they handled the pick and the scoop.

There was a time, not long since, that most of the firemen in the South were colored, and whose first duty was to shine his engineer's boots and do his packing. And now that these conditions are changed it is not strange that these same "old timers" should legislate adversely in matters concerning an organization that has, to a great extent, made it compulsory that they do their own packing and pay a nickel for a "shin." I have no data at hand upon which to base any calculation, but believe that at least 75 per cent. of the membership of the B. of L. E. were

firemen less than ten years ago, and who, as a rule, permit the remaining 25 per cent. to manage all matters pertaining to the Order, which, in the present instance, has placed them in an unenviable position. The few that have managed the affairs of the B. of L. E. in the past have succeeded in two things, viz.: They have made many enemies in all other organizations and have proven their claim of being all powerful to be a fallacy. The majority of their members are intelligent and good men who will make themselves heard at Denver for the good of their Order. If the B. of L. E. will take no hasty action there will be no occasion for a change of name, as an engineer can then belong to both Brotherhoods, if he so desires, and we will continue an organization whose record will be conspicuous upon the pages of labor's history.

There is only one hope for the Brotherhoods and that is federation. If the B. of L. E. does not cease its antagonism to others, or if the B. of L. F. should at this late day commence to antagonize, federation will be impossible. If the B. of L. E. persist in their present course they will be running engines for two dollars per day; and if the B. of L. F. declare war by organizing an opposition Brotherhood, federation will never be a success. If the Brotherhoods fail to procure justice from railway corporations through lack of unity, do not let it be said that we were at fault. Our Brotherhood in the past has always acted with great discretion and before we "declare war" be sure that we cannot settle our grievances amicably. If the B. of L. F. should find that they will suffer annihilation by the opposition of the B. of L. E., then all sink together; but this extremity will never be reached, for as sure as they meet in Denver their policy will be changed. Let us not cause a rupture, for if we war between ourselves our common enemy will invade us and a reduction of wages will follow. Internal strife will scatter us as chaff before the wind. The C. B. & Q. strike was but a skirmish to the battle that we can and should avert. Railway managers hail our dissensions with delight and chuckle with glee at the prospect of a carnival of scabs.

263.

[The discussion relating to a change of name is going forward satisfactorily. There should be a thorough investigation and the members of the Brotherhood should express their views, the more freely the better. The original suggestion was based upon the simple fact that "locomotive firemen" did not sufficiently define nor correctly designate our Order, because, while it was a Brotherhood of firemen and engineers, the name limited it to firemen only. The point is clear, well taken and worthy of consideration. A name more exactly expressive of the true characteristics of the Order affects no principle nor condition of the Order; it simply suits the name to present conditions. It is in no sense antagonistic to the B. of L. E., in no sense a menace. There are a large

number of engineers in the firemen's Brotherhood, more will be added. The demand is, that they shall remain, that there shall be no good reason for abandoning their parent Brotherhood. In considering the subject there is no good reason for alluding to the B. of L. E. at all, as to what they will or will not do at Denver or at any other place or time. The B. of L. E. takes no further interest in the matter. We simply go on and do a prudent thing in a prudent manner demanded by conditions. We suit names to the conditions permanently established. We fail to see any reason for complaint from the "rank and file" "who permit all business to be transacted by a few bosses." In the Lodge room all firemen stand on the same level, and "bosses" is not a brotherhood term. If a change of name is decided upon, the "rank and file" will change it—"bosses" will not. There are no "bosses" to rule this Brotherhood, and if as stated, that "as a rule, the rank and file take but little interest in Brotherhood matters," the statement is humiliating and the "rule" should be changed. We have great and abiding faith in the common sense of the Brotherhood that it will act wisely, and that it will no longer wait to see what some other Order will do or will not do before it acts as prudence demands. It is old enough and wise enough to take the initiative in all matters that concerns its name and welfare. Caution is commendable up to a certain point, beyond which it becomes cowardice, and while commending the former it will be well to guard against the latter.—ED. MAGAZINE.]

EL DORADO, KANSAS, June 14, 1889.

Editor Firemen's Magazine:

The charter of Walnut Valley Lodge, No. 369, B. of L. E., is now draped in mourning for Bro. M. Fitzgerald, who died at his home, No. 918 South Market street, Wichita, Kan., May 27, 1889, of abscess of the brain, only being sick about fourteen days. He was buried at Wichita, May 28, by the Masons being a member of that Order at this place. At his death, Mr. R. Harding, Superintendent, and Mr. A. H. Webb, Division Superintendent, in conjunction with Mr. J. T. Jones, Master Mechanic, and Mr. Wm. Sneddon, Foreman, kindly gave permission and furnished us an engine and train to run from El Dorado to Wichita and return for the benefit of the firemen and Masons of this place, who wished to attend the funeral. Also Mr. John Page, engineer, Bro. J. C. Wickham, firemen, Mr. Lee Orr, conductor, and Gus Smucker, brakeman, tendered their services free. Both the firemen and the Masons of this place, feel heartily grateful to the above named parties, and extend to them their most sincere thanks. Bro. Fitzgerald leaves a large circle of friends who mourn his loss as that of a true friend and brother.

E. S. M.

MARSHALL TEXAS, June 30, 1889.

Editor Firemen's Magazine:

I have been a member of the B. of L. E. for over five years, during which time I don't remember of having seen anything from Sunset Lodge, No. 177, so I will endeavor to let you know how things are in this part of Texas. We have a good lodge here, composed of thirty-five as good brotherhood men as you will be likely to find anywhere. I have been talking with most of the brothers, here, in regard to changing the name of the Order, and all are highly in favor of it, and think the name "Brotherhood of Locomotive Men," is the most appropriate one, as that will cover engineers, firemen and hostlers; it also avoids similarity. The system of insurance proposed in the June *Magazine*, also meets their approval; under the name of B. of L. Men, we could give the engineers now belonging to our Order the protection they join the B. of L. E. for. I also think there would be a good many B. of L. E. men join our Order when the name is changed, as they would get a cheaper and better insurance and the same protection they get from the B. of L. E. The B. of L. E. has had ample time to repeal the obnoxious law at both New Orleans and Richmond; it seems to me they don't intend to repeal the law. I am in favor of changing the name at once, thereby retaining the engineers now in our Order, and those that are to be engineers in the future. Why not take a vote of the lodges and change it, as has been done heretofore in other matters? I don't see as there is any use in waiting until the next convention to change it. I would like to hear from some more of the brothers on this subject as it is of the greatest importance to all.

Death has again invaded our ranks taking from us our worthy and beloved brother Wm. Kane, who died June 6. Business has been very dull here for the past year considering what it has been heretofore. Fraternally yours

Change.

ONEANTA, N. Y., June 21, 1889.

Editor Firemen's Magazine:

The Annual ball given by Lodge No. 71, May 29th 1889, was a grand success, both socially and financially. The guests numbered about 300, and everything passed off splendidly. We were highly complimented on our order of dancing. The hall was nicely decorated and the Metropolitan Orchestra furnished us with very fine music. Dancing commenced at 9:30 P. M. and lasted until 3:30 in the morning. At 12:30 an excellent supper was furnished by S. Ottman.

Every one said it was one of the best balls of the season. There was also, a contest for a turkish chair, between Mr. Zho Howard, ex Master Mechanic and Mr. D. Forest Wilber one of the leading citizens of Oneanta. Mr. Howard won the chair. Among those present from out of town were Bro. Ed. and James McNulty, of Lodge 129, Syracuse. Bro. Ricketts and Bro. Rowe acted as floor managers, Bro. I Baker sold the tickets at the window, and Bro. Loucks took them up at door.

F. A. Y.

Finances of the Q. Strike.

MR. EDITOR:—We find the following article in the editorial columns of the *Locomotive Engineer* and presuming that the natural modesty of our editor would prevent their appearance in these pages unless special stress was laid on him we therefore insist upon their publication so that those of our members who do not have access to the *Locomotive Engineer* may know how well the labors of E. V. Debs are appreciated by our friend Hill:

Wherever we go we hear complaints from Brotherhood engineers about the manner in which funds were distributed during the C. B. & Q. strike—dissatisfaction, uncertainty and suspicion. During that struggle, the B. L. E. received and paid out between \$800,000 and 1,000,000; as fast as received at the general office, it was sent to the front in big blocks, and receipted for in bulk by the chairman of the committee in charge; he may have paid every dollar out to the men or kept half of it, no one knows but himself—suspicious are rife. The engineers should not blame the chairman, right or wrong; it is their own slipshod way of doing business that is to blame. They can well learn a lesson in correct business methods from the firemen. When the strike commenced, Grand Secretary and Treasurer Debs took it upon himself to keep the finances straight; he prepared a pay roll for every lodge that had men in the struggle and every month sent these pay-rolls to the lodges, with a draft for the total amount; the officers of subordinate lodges verified every name on the rolls, and paid each man his money, taking his receipt therefor, so that to-day there is in the Grand Lodge office a receipt for every dollar of the \$50,000 that they expended, by the men who got it; there was not a dollar lost or wasted. It was worth thousands of dollars in money and existence itself in harmony and confidence to the B. of L. E., to have a man in charge of the great seal, and the combination to the safe, who knew how to meet the emergency when it came, and carried the financial part of the programme through without the loss of a penny or the breath of a suspicion.

PUEBLO, COLO., June 15, 1889.

Editor Firemen's Magazine:

I see an article in the *Magazine* signed "Ex-Engineer Set Back," in which he says that "Royal Gorge, No. 59 is still alive but very inactive," and he goes on and says that "several of the boys have joined the engineers because they have a contract with the Company and can get what they want." He also says that there has been "eight engineers set back to firing and that they (the engineers) ask for six more to be set back which was refused." Note the contradiction. Now, does this look like the engineers got what they wanted? I say no, no. There are some firemen that are as mean and contemptible as there are engineers. It is hard to please all, and if our chief head had to ask their employees what they should do, there would be

nothing done, because no conclusion could be arrived at. Now, if Mr. "Ex-Engineer" would tend a little more to business, and not smoke so much on duty, and try to learn something, he might be running, instead of firing. However, it is no disgrace to fire, neither is it any great elevation to run an engine; a little more money is all. As to "Federation," this is something that I would like to see, but if the B. of L. E. don't want to join in with the rest, they don't have to. Neither do the other orders have to help them. Don't kiss a man's cheek unless you have to. It won't pay. While I am writing, I will say a few words for all interested. We are doing well as figures will tell.

There was one of our nice members who stole \$70.00. There was another modest man that beat us out of \$250.00, and still another young man (a ladies' man) got the best of us to the amount of \$86.00. Also a few traveling brothers who borrowed money from us and still owe it. Still, we live and pay our bills. Can this be prevented? Yes! How? By the trustees attending to business. I'll bet two to one that the officers books have not been looked after for two years. Whose fault is this?

As to the health of the boys, it is good. Bro. Perry Cunningham died a few weeks ago. Bro. Mat Lines buried his little baby two days ago. Bro. Wm. Walk, also lost his little baby boy this week, and quite a number of other babies are sick.

Fraternally yours,

I No U.

[The brother writing the foregoing has exactly the correct idea, as to the cause of financial losses of Lodges. Here we have a loss of \$406.00, the result of rascally speculations which would not have occurred, in all probability, if the proper officers had done their duty. We admire more the pluck of the boys of 59, but there should be constant vigilance on the part of officers of the Lodge to prevent stealing. —ED MAGAZINE.]

WAYCROSS, June 26, 1889.

Editor Firemen's Magazine:

I have been looking anxiously for some one in our Lodge to let the Order in general know, something about us, but it seems no one is going to say a word, and I must sail in. I am not much of a hand to write, and especially not as a correspondent, but I can say for Satilla Lodge that we commenced five months ago, with the small membership of eight, and now we have thirty members in good standing. It comes pretty hard for some of the boys to keep up their dues on the small salary we get here on this road, but they are all very prompt so far, and I want to say we are all proud of the *Magazine*, and I do so like to read the letters from subordinate lodges. I think if I could write such letters as some of the brothers do, I would write one every month. I hope some of the other boys will say a word or so before long.

I remain a

B. of L. F.

ROCHESTER, N. Y., June 15, 1889.

Editor Firemen's Magazine:

I see you are still kind to me, for which please accept my thanks. The boys of "90" don't stir worth a cent, and I guess I will have to lay it on a "leetle mite thicker" or else stop altogether. Perhaps I don't bear heavy enough on them. Roth gets very red in the face—Finch looks sad and "Dutch" gets very angry. You would like to find out who it is would you? Well, now, suppose it were a lady who is doing the whole business. You would all smile and tell her it was just "too sweet" for anything "don't cher know," but how you would swear under your breath. Well, you will have to hunt pretty sharp before you find the right party, and don't blame poor Orville, because he is not the party at fault. Bro. Mansfield is on deck, and blooming again. We have re-christened him and now he is known as the "Dutch Comedian." Brothers of the N. Y. C. and W. N. Y. & P., I am preparing a dose for you. Don't give up the ship. I would like to say a word or two about changing the name of our Brotherhood. I think the old name is good enough, surely we have prospered under it. If it was good enough for us when we were down, why cast it aside when we have reached the upper rounds of the ladder of prosperity? Since the day it was organized, the B. of L. F. has been the dupe and toy of the big E. They have used us until they could get no more good from us and then cast us aside without regard for truth or principle. When you go to an auction house you will see a great many articles laid on the shelves and they will tell you that they are sold. So have the engineers used the firemen. They have used them for all they were worth and then the whole world has known that the B. of L. F. has done with the B. of L. F. and marked them "Sold"—and we are held up to the public to receive their pity or ridicule. Don't think that I am condemning all who belong to the Engineer's Brotherhood; far from it. I know some who belong to it who are as white as they are made. Men who, if they had their say, would put forth their hand in good fellowship and welcome the firemen as their equals. But I do think the big "E" needs a thorough weeding out. There are those of them that can see that their old-fashioned notions are going to be ruinous to their welfare if persisted in. Time was when an engineer was a little god and expected to be worshiped, but engineers are too plentiful now, for that, and I advise them to heed the old saying that "discretion is the better part of valor." I would like to see B. of L. F. stamped on our banner forever and aye, I would like to know wherein the danger lies in denying the change of name and what we want of a new one. Under the old name we have fought, and let it be with us when we win, which we will surely do. Just as sure as fate the B. of L. F. will hold the reins of power and then B. of L. E., we will show you what true manhood is, we will set you an example of truth and principle that you will do well

to follow. We will one day be on the top rung of the ladder and those who laughed us to scorn, will be ready to break their miserable necks in order to do us a favor. I wish I had the education to back me. Brothers, I would keep a gun loaded for our enemies that would soon put them to shame. I would like to tell Wm. Michie that the men who would withdraw from as good an order as the B. of L. F. on account of its name, are men who would be no help to us in our need. If they are not an engineer until they join the B. of L. E., I say God help those who ride behind them. I agree with you, "Let well enough alone" except in the matter of getting a job easier as a B. of L. E. man than you could otherwise. I would like to ask our Grand Officers whether the ratio of applications is what is decreasing our ranks or if it is the old members dropping out because they are tired of being bounced about like a rubber ball by the B. of L. E. Please take notice of their answer, Charles H. Trenholm. Let the good old name remain and let F. P. Sargent remain as the guiding star is the sincere desire of

One of Them.

[There is something in a name. When the B. of L. F. was organized, all its members were firemen. It was then a Firemen's Brotherhood. Firemen graduated, became engineers. They were no longer firemen. This has gone forward until thousands of our order are engineers—and a large per cent. of the members of the B. of L. E. have been recruited from our Order. The argument in favor of a new name or an addition to the present name is simply to suit the name to conditions to facts, to have a name that tells who we are. It concedes nothing. It acquires significance, and of itself is in the line of strength of holding what is our own.—ED. MAGAZINE.]

PALESTINE, TEXAS, June 14, 1889.

EDITOR MAGAZINE:—I have been reading in the April, May and June *Magazines*, articles on changing the name of our Brotherhood; and I see that many are in favor of it, and I am afraid that when it comes to a vote that it will be changed; it should not for the reason that a man joins as a *fireman* and is *promoted* to hostler or engineer. It is true he is no less an *engineer* when he is initiated than he is when he receives his promotion, and some say that when a man is promoted to a hostler or engineer he is no longer a *fireman*; I say he is. We see a machinist go in the shop of some railroad; he is after a time made foreman; then general foreman, then Master Mechanic. Is he any less a machinist than he was the day he first went to work in the shop? So it is with the *fireman*. He is always a *fireman*, although some white shirt and pica-dilly collar engineers say he is not. They are like the engineer who rose from a wiper and then said he had cast his greasy overalls into the pit and erased that part of his record. I can honor that man more for showing his principles than

I am the one who wants to hide his past career as a B. of L. F. man under the cloak of a "B. of L. E. M." badge. Brothers, how many of you can remember the feelings with which you put your old B. of L. F. badges on the first time? You were a tenderfoot, so to speak, and if you were like I was, you were as proud as a boy with his first pair of boots. Now, you are an old timer, can hold your own with any of them; you want to throw that dear old badge, B. of L. F., into the melting pot and run another out to disguise the fireman. Don't do it. You never can be a better man with the changed name than you can under the banner of the B. of L. F.

Let the promoted withdraw; I have yet to see where the B. of L. F. has been hurt by their withdrawals. Nine cases out of ten, it is a case of "good riddance to bad rubbish."

Now, it is said that the Brotherhood of Locomotive Fireman is not a proper name, as some of our members are engineers. That is true, but I remember in La Junta, Colo., there is a merchant who wears a B. of L. F. pin; in Decatur, Ill., a doctor; in Omaha, an express messenger; and all over the country conductors and brakemen are wearing the B. of L. F. pin, and are in good standing. These men have just as good a right to kick as any engineer or hostler. Why not make a change to suit all?

And again. When King Solomon's temple was built, which was many centuries ago, there was an order formed called Masons. It consisted of the members of that craft who were employed in building the temple, yet now, there is such a small proportion of the members of that great organization who are masons, in a literal sense, that the identity of the organization would be lost did it depend on them to keep it up; but the bankers, merchants, machinists, carpenters, etc., are all called masons when they join the organization, yet they are not masons in a literal sense of the term; neither is a man necessarily following the occupation of a fireman because he belongs to the B. of L. F.

It is not the Order that makes the man, but the men that make the order; so, brothers, let us keep the name we have borne for nearly sixteen years, and make it respected all over the continent as it is some places in the United States. Master Mechanics and Superintendents are just beginning to know what the B. of L. F. means. They know that it is firemen that they are dealing with under that head; and they know that nearly all hostlers and many engineer are members.

I have a suggestion to make in regard to the engineers who want the name changed, also hostlers. If people can not tell what you are by the looks of you, get a pine board and make a neat sign, which will read: "I am an engineer (or hostler)," and carry it with you. It will save you much annoyance, and no one will take you for a "dirty-necked stoker." I am glad to see that there is a movement on foot to give us more insurance, but if the increase of insurance depends on changing the name, I say give us \$1,500

only, and leave the name Brotherhood of Locomotive Firemen.

Hoping that this subject will be well discussed in the Lodge rooms, and that each member will settle in his own mind conclusively before he votes, whether he wants the change or not, I will close.

Jim Dooley.

OSAWATOMIE, KANSAS, July 5, 1889.

Editor Firemen's Magazine:

Feeling that the Brotherhood at large would feel interested on knowing how the latest addition to their ranks is progressing, I will endeavor to tell them. We are slowly but surely adding to our ranks all who are eligible. The members take a deep interest in the Lodge meetings, and consequently they are well attended. Every member is taught that the lodge room is the place for him, and if you should come among us, you would find but little talk around the engine house, relative to brotherhood affairs. As we meet every Saturday evening at 7:30, we have ample opportunities for such talk, and we have some old, tried and true members who know from experience, what is required to make our little Lodge worthy of being a No. 1. We have discussed, pro and con, the advantages to be derived by changing our name, and realize that the time has come for a change. Now we have a contract with our company, but in it not a word is said for our brothers, who are engineers. The members of No. 400, are a unit in thinking it would be much better for us on this system, and for the Brotherhood in general, if our name was changed so as to cover all the ground, and when we have a contract with our different companies, have it so that it will afford protection to our members who are running engines, and that is we think, what we most need. There certainly can be no incentive for one of our members to withdraw from our fold if he is fully protected. We have a Board of Adjustment, both local and general, which considers well each step taken; by so doing, all petty grievances are nipped in the bud and whenever our General Board asks for a conference with the officials of the company it is readily granted. The firemen on the Missouri Pacific railroad have met with every courtesy from their superior officers, and hope the good understanding may long continue. On Sunday, June 23d, we ran an excursion train from Kansas City, as we were anxious to create a special fund for a sick and disabled member—Fireman Hueley. It was not a success although an enjoyable time was had, and our boys feel well pleased to find we had so many friends willing to help us. The company, through its first Vice President, S. H. H. Clark, and General Superintendent, granted us the train gratuitously for the object in view. We are also under obligations to Superintendents Dunnawry and Dalby for favors as also to the business men and the press of this city. We were disappointed in not having any of our Grand Officers with us, all of whom were invited. With the best wishes for all, I am yours in all that brother means in its best sense.

Resurrected.

"Let Well Enough Alone."

MR. EDITOR:—Having had the time which I usually devote to the Mechanical columns of the *Magazine* taken up by mechanical operations in the round house, I have concluded to write something for the "Brotherhood" columns, and the *Nom de Plume* of one of the contributors to the *June Magazine* has suggested a title. In discussing propositions involving the above antiquated saying it is of the greatest importance that we determine what is really "well enough." Whether that which was "well enough" yesterday is "well enough" to-day, or whether it will be "well enough" to-morrow. If the world of progress had stopped at any stage of development with "well enough," it is hardly possible to conceive of what the present conditions would be. The B. of L. F. was not brought into existence by letting "well enough alone." It has only been by bending every energy to improve that which might have been "well enough" for the time being, that we owe our present favorable position. Whether or not the name of our Order should be changed is a debatable question, but to argue that its name should not be changed because under its present title it has prospered, is to entirely disregard present conditions and past experiences. The fact that a large per cent. of our present membership are not firemen, seems to me undisputable argument that the name should be changed to correspond to its membership, or its membership should be changed to suit its name. If any brother favors the latter let him speak up and give his reasons. I favor a change of name. But I may be prejudiced. I am an engineer, and a Brotherhood one at that. I am not now prepared to suggest a name, but I suggest that the delegates to the next convention go there prepared to give the Order a name that will give its whole membership recognition and protection. Had this been done at an earlier date I believe it would have saved to us a large number of members who, up to the time of their withdrawal, had been consistent members of the Order. True, it may be that this class of members are not desirable. I think they are. Will anyone who thinks differently, please state why? One writer says he feels sure that the B. of L. E. will change their obnoxious laws at their next convention. I desire to ask him what guarantee he has this year that has not been worn out in the past two or three years. And what difference does it make if they do? Will a name appropriate to our membership be any less needful. The fear is expressed that if the Order is placed in a position to more fully recognize that portion of its membership who are engineers, that there will arise a conflict between two classes of members who will want to run the Order. To this I will say that men who have grown up with the firemen's Order, putting their best effort into perfecting it, investing their money in it year after year, and remaining in it after they have become eligible to membership in an order organized solely for the benefit of en-

gineers, do so from principle. They certainly do not remain for *fun*, especially those who hold membership in both Orders during such a period as last year's fight on the C, B. & Q., and belong to a class of men who could be trusted to run any Order. But these men are not desirous of of "running" the Order. They simply ask such recognition in the title of the Order as their calling and loyalty justly deserve. Neither do I think there would be any less friction or confidence between the two classes of employees meeting separately than there would be in all coming together in one Lodge working under a set of laws with which they were familiar and had had a hand in making. The B. of L. E. for the past two or three years have been acting as though they thought they were "well enough." I am entirely willing to see the B. of L. F. apply the maxim and "let them alone." If they have seen fit to pass an act that ought to cut off the principal source of supply to their ranks, it is eminently the duty of the B. of L. F. to make arrangements to care for the crop thus left on our hands. The B. of L. F. has made every effort to adjust this matter on the old lines and have been repulsed on every turn. They have now only to "keep still and saw wood" for the protection and encouragement of its present members, and this we are bound to do as honest men, whatever be our occupation.

A. H. Tucker.

CHILLICOTHE, Mo., July 4, 1889.

LA JUNTA, COLORADO, June 23, 1889.

Editor Firemen's Magazine:

With the new Lodges comes the Spanish Peaks, No. 32, of La Junta, Colo., with Bro. Graham at its head. Owing to the absence of the latter, Bro. Gilbert is acting in that capacity. He fills the position in a manner most creditable to himself and all the brothers. Bro. Hannahan was with us as agreed, and we passed a pleasant and enjoyable evening with that genial gentleman. All were very sorry that he could not stay with us longer, but a rush of business would not permit. Am very sorry to note that we are short of a communication in the *June Magazine*, but such is the case and we hope this will be better than none. With the interest our charter members take and the hopes of soon having several members of old standing with us, the Lodge cannot well help prospering and we hope to make it one among the leading Lodges of the country. Bro. L. W. Gilbert, our able Magazine Agent, is doing all in his power to procure subscriptions for the *Magazine* and we hope that it will not be long before the *Magazine* will be read by all the good people of La Junta. We are happy to note that the ladies in so many places are taking so great an interest in the welfare of the Order, and trust they won't be a bit backward in showing their respect to us here. We have as fine a set of boys as grace any Lodge room, and they are all, with their whole soul, working for the good of the B. of L. F. Hoping this short communication will soon meet the eyes of the public, I remain,

Yours fraternally,

Maloney.

GOODLAND, KAN., June 16, 1889.

Editor Firemen's Magazine:

I will attempt to write a few lines for the *Magazine*. As this is my first letter I have some scruples about writing. I am, I suppose, like all new beginners; I have a dread of the wastebasket. Now the first thing I wish to speak of is changing the name of our Brotherhood. I say let it be Brotherhood of Locomotive Firemen forever. I am opposed to changing the name. The B. of L. F. has thrived and done exceedingly well under that name ever since locomotive firemen have been organized, and I do not think we can accomplish any more by changing our name. "Locomotive men" applies to wipers, mechanics or any one that works about a locomotive, and "locomotive engine men" would have the same meaning. Now, I think, like our correspondent from Elmira, N. Y.; I say let well enough alone. I think our name applies to all we need. If an engineer is ashamed to sail under our flag, let him go, we don't want any one that is ashamed of our banner. The B. of L. F. is doing well and we cannot better our condition any, by simply changing the name. If we should change the name, it would necessitate some change in our laws and constitution which would temporarily disorganize us, and the Brotherhood would not be what she is to day. I have talked with several brothers about this matter, and they think as I do on this subject; and now, brothers, let us give three cheers for our old banner and stay by our mother and not let her change her name. We can protect her longer, as we have done so, this long. I would like to make a motion that we drop this subject and not allude to it any more. Now, I want to say something about this rag-chewing; I think it a good idea to drop that too. You have chewed the rag long enough. It is well enough, when we are wronged to rebel against such treatment, but what is the use of keeping up the rebellion, when we accomplish nothing by it. Now I don't suppose there is a fireman in the United States or Canada but has friends among the engineers, but you won't have them unless you let up on them to a considerable extent. We want Federation; is that the way to get it? I think not. If there is an estrangement arises between the B. of L. F. and the B. of L. E. that is as good as the railroad companies want, and it must not come to that. We want federation, and more than that, we want to concoct some plan to bring it about. If they do not want us in their Lodge room all right, we wont go up to them and say, "Please Mister, wont you let me in that room." But instead, we will go to our own Lodge as often as we can, transact our own business and prepare for any emergency; for we can gain nothing by chewing the rag with them. One brother said in the May number of the *Magazine* that they were (engineer's) "devoted of principle," or words to that effect. Now that is wrong. I know a good many engineers that are as good men as I ever met and would do all they could for a fireman. We should be careful about

our remarks. Now I expect some will think I am a crank, but I am not, and I think any member of No. 396 would tell you I am not. I have the interest of the Brotherhood at heart and will do all I can to advance the interests and welfare of our noble Order. And now one thing more, what has become of our lady correspondents? Are they going back on us too? We should give them a little more space. I like to read the encouraging letters we find in the Woman's Department, Sister Harper, bring them to the front again. I prize the Woman's Department very highly, and hope it will come to the front again as formerly. Well, brothers, I will not chew the rag with you any more at present. We are not very cranky out here. If you think we are, just make a visit to 396 and see. Our Lodge is just in its infancy but we are getting along fine. We meet every Monday night and have first-class meetings. Everybody takes an interest, and we have the prospect of having the finest Lodge on the Great Plains. I will bid you good bye.

I remain yours, fraternally,
S. W.

PHILADELPHIA, PA., July, 1889

Editor Firemen's Magazine:

I want to say, "bully for you," Mr. Editor, for sizing up the Reading, and its "devil fish" officials. Hit 'em hard, hit 'em often, you can't hit amiss. The congressional committee of which you speak went through the rotten concern, and laid bare its multiplied infamies. The good that will come of the investigation is to be seen, if seen at all further along. I do not anticipate much change, if any. The employes of the Reading are now in its grasp and wear their collars, like so many dogs. Their independence is knocked clean out of them, they have the appearance of slaves. They are a part of the Reading's rolling stock. They are the Reading's asses, mules, oxen, animals, just as Corbin, McLeod, Bonzano, and the rest choose to class them. They would obey orders now, no matter how humiliating. They have sold themselves for the privilege of filling their stomachs and guts, with such offal as the Reading will permit them to have; and they dance, and laugh, just as plantation niggers used to do, when they were chattels, and were sold like cattle. I see them frequently, but they no longer have the appearance of men. The Reading has given them permission to live and they appear devoutly thankful. They will rear their children to take their places when they are dead. They have chosen the occupation of slave breeders and the Reading will in due time have statistics prepared, showing their breeding capacity, just as slave owners used to do, when the value of little picaninny niggers was estimated as were pigs and calves and colts. They are even now known as Corbin's cattle and the millionaire may yet determine to brand them with a big "R."

You have hit the idea exactly, the purpose is to annihilate labor organizations, and the work is going bravely on.

Independence.

Sunday Work..

Editor Firemen's Magazine:

Mr. Forney, editor of the *Railway and Engineering Journal*, says:

The running of Sunday trains has been a subject of some discussion and considerable agitation lately. The American Sabbath Union some time ago issued a circular in regard to running Sunday trains, to which responses were received from a large number of railroad officers, the majority favoring the suspension of Sunday work. The question has been taken up by some prominent railroad lines, and President Depew, of the New York Central, has announced that on that line the running of all Sunday trains, unless strictly necessary, is to be suspended.

With the present organization of our social and economical system a complete stoppage of trains on Sunday does not appear to be possible, especially in the neighborhood of our large cities; but it does seem as if a great deal of the work now done on the first day of the week might be avoided. The railroad man ought to have his day of rest as well as any other American citizen, and by proper management it could be secured to him. That he would be benefitted by his Sunday off there can be no doubt, for hardly any class in the community is, as a rule, more intelligent or more ready to take advantage of opportunities.

We hope the agitation of this question will continue, and that it take root, spring up and bear the fruit of a day of rest, once a week, to railroad men as well as others.

NEW YORK, July 12, 1889.

Editor Firemen's Magazine:

As a locomotive fireman I am interested in all matters under discussion calculated to promote the welfare of the great Brotherhood. It goes without saying, that I read the *Magazine*. I read it through and through. I make myself familiar with the contents of each number. In this way I get my money back ten-fold. The *Magazine* is an *educator* in the best sense of the word. But enough in that direction. I notice what has been said about changing the name of the Brotherhood. The idea is a good one. The name of an order should, if possible, indicate the calling, avocation, trade, profession of its members. "The Brotherhood of Locomotive Firemen" falls short of this, and therefore is defective. Such facts were conclusively set forth in the *Magazine* in its first article upon the subject. This change of name is confined to conditions which exist in the Brotherhood. In discussing it no reference is required to any other organization of railroad employes; indeed, such reference is out of order—foreign to the purpose. The Order of Locomotive firemen is something more than its name implies. It includes engineers. There stands a fact. It will always stand, ought to stand, and in changing the name, the one simple purpose is to recognize a fact.

Now, then, comes the choice of names. What is wanted is the most expressive name in consonance with the fact; the most felicitous. "The Brotherhood of Enginemen" is good. "The Brotherhood of Firemen and Engineers" is good. "The Brotherhood of the Footboard" is also good. Let us have one of them, or, if another

good name can be suggested, let us have it; but at any rate, let us have a name that expresses the fact of membership. It cannot possibly work any wrong. It must in the nature of things be productive of good results. If not, why not? Firemen develop into engineers, thousands of them remain with their parent Order. If, then, we are a Brotherhood of Firemen and Engineers—and that is just what the Brotherhood is—why not say so? Why not let the name express the fact? I am proud of the Brotherhood. I am in it, and I am going to stay in it as long as my brethren will let me remain, but I want its name to express the fact of its grasp upon railroad employes. The new names, such as have been suggested, anyone of them, would add to the power of the Brotherhood. Of this I am satisfied. It is to be hoped that the Grand Officers will take steps which will permit the members of the Brotherhood to express their convictions and preferences. If it should be decided to hang on to the present name, O. K. I shall pull right along in the old harness, just the same. I am no klicker. I just want to do my level best for the good of an Order that hasn't a stain upon its flag.

Elevated.

ROCHESTER, N. Y., June 17, 1889.

Editor Firemen's Magazine:

There seems to be a desire on the part of one of the brothers of 99, to stir up the boys. Well, to begin with, I would advise this ambitious brother that it is not always pleasant to stir up a hornet's nest. Perhaps the habit you used to have when at Palmyra of stirring around, still clings to you, if so, I will forgive you, only don't hit Finch or Luttringer, *alias* Dutch, too hard, they might retaliate. I suppose they would find several little incidents which would touch the right spot. Never mind O. L. D., I, for one, am glad to see that there is one of the 99 boys that has some stir in that line, it looks as if they were a sleepy lot, but they have woke up and can stand most anything, but when this tornado, with the initials O. L. D. upon it, struck them, they all looked at each other and remarked what struck them. You might as well sign O. L. D. as to sign one of them, we are all dead on to you Orville. Take our advice, and don't try any more bluff about betting your month's wages. What about betting the white shirt? I also notice that our brother would like to know what became of our Bro. Mansfield, *alias* Dancing Master? Well, since his "love" went back on him, he has left A. D.; he is back firing the way-freight. Bro. Benedict has left us for awhile, the rumor is that he is peddling eggs. He says there is money in it; no doubt when all his neighbors have hen coops; Eh, Willie? I would like to have some one stir up Bro. Inman, *alias* Windy. I presume he is busy looking for strangers in his coal pile or looking for a new quadron on the 27. He says she needs it. Bro. Hardy is still at Warsaw, which brings him close to home. He says he has a better chance to hoe his corn now.

Rochester.

HERINGTON, KAN., July 1, 1889.

Editor Magazine:

Now, brothers, don't any of you blow up when you read this. I see a great deal about the obnoxious laws of the B. of L. E., but, brothers, I don't see anything wrong in them. I was a member of the B. of L. F. when these laws were passed, and am still a member. I thought they were right, and think so yet. I don't think that any man ought to belong to more than one labor organization at the same time. There is no law in the B. of L. F. that prohibits a K. of L. or any one else from joining us, if otherwise qualified. But let me tell you what my Lodge did. There was a number of the K. of L. men firing on the division, and as they became old enough in the service, they made application to join the B. of L. F. We had no laws prohibiting them from joining, but we all agreed to allow none of them to join until they had first withdrawn from the K. of L. Not that we were down on the K. of L., but we thought, as did the delegates to the B. of L. E. convention when they passed the same laws. I think it would be a wise thing for all labor organizations to do. All labor lodges are mighty good things and are O. K. in their place, but no man can do justice to more than one Lodge, and if he belongs to more than one, neither will derive much benefit from him, so I say belong to one, heart and soul. You should be a help to your Lodge and keep her going, for she has some steep grades to climb and is loaded heavily. Brothers, there are too many of us that howl about this and that; who, on meeting days, stand around with our hands in our pockets, like a knot on a log and growl because this or that is not done, rather than go to the Lodge room and help on the business of the Lodge.

I admit there are too many engineers who have forgotten they ever fired, but I think they are the exception. I have fired for a great many members of the B. of L. E. during the past five years and can say I found more friends than enemies of the B. of L. F. Now, brothers, give the devil his due, and don't blame the engineers as a body for what a few of the great I Ams amongst them do and say. It is not engineers we need in our Lodges, but federation is what we need and must have, and if the engineers don't want to federate, let them alone. Other orders will come in and form a federation as true and strong as the gigantic oak. In time it would be stronger if the engineers would join, but it will be strong without them, so strong that we will be able to secure our rights and be treated as men and not slaves. But we should remember there are just as true and as big-hearted men who wear the E. as ever lived, and are friends, and fast friends of the firemen, so don't make enemies of them for what a few pumpkin heads amongst them do, but cultivate friendship with them as man to man, not as Lodge to Lodge, but let the B. of L. E. strictly alone as a child does the fire after it is burnt, and they will come to time, and don't you forget it.

As for the "Q." settlement, I know personally,

members of the B. of L. E. who are just as much in favor of federation as anyone.

I think I hear one say, "This brother expects to be on the right side soon, and then he will pull off his hat and beg the engineers to take him in." In that you are mistaken, as my prospects for promotion are so far off I can't see them looming up in the distance.

Now, brothers, these are my opinions feebly expressed I admit, but they are the best my limited knowledge will admit, and as we have a right to our opinions, these are mine.

With great hopes for federation and the success of all poor toilers, I will subscribe myself,

Rip Van Winkle.

[We publish Rip Van Winkle's communication because, in many regards, it is so well suited to the *nom de plume*. Few writers have exhibited such rare appreciation of their contributions for the public eye. The opinion that the "obnoxious" laws of the B. of L. E. are right, ought to have been enacted, and ought to stand, are especially such as old Rip, after a sleep of twenty years, might very properly entertain and express. The intimation that the B. of L. F. as a Brotherhood, or any of its members have made war upon engineers is such as Rip might have entertained after his long nap in the mountains. The fact is old Rip didn't know much before he went to sleep, and vastly less when he waked up. We felicitate our correspondent upon his happy choice of a *nom de plume*.—ED. MAGAZINE.]

HORTON, KANSAS, July 12, 1889.

Editor Firemen's Magazine:

I have watched in vain for some members more competent than myself, to write a few lines to the *Magazine* and say a word in praise of J. H. Kirk Lodge, No. 376. 'Tis true, silence is golden, but why not let the brothers know we are true blue. The Lodge is in a prosperous condition, and we are proud of our retiring officers, as they performed their duty satisfactorily to all. Bros. J. A. Carter, T. F. Sheahan, W. J. Canney and J. S. Sandidge have ceased single blessedness in the last six weeks. They declare *marriage is no failure*.

No. 376 is unanimously in favor of our Order being called Brotherhood of the Footboard, and I hope soon to see it accepted as such. Now, by hoping success may ever lay in the paths of our Supreme Council of the United Order of Railway Employés, I close.

Roy.

SANBORN, IOWA, July 1, 1889.

Editor Firemen's Magazine:

I would like to tell the brothers there is such a Lodge as No. 190. Although we do not say much, we are Brotherhood men from the ground up. Our Receiver is doing good work; he is the right man in the right place. Bro. C. J. Walston and Thos. Helman have tired of living alone; we wish them many happy returns of their wedding day. Brother Stafford is very much pleased over the arrival of a daughter. Much joy, Bro. S.

E. R. W.

MONCTON, N. B., July 14, 1889.

Editor Firemen's Magazine:

It is upwards of two years since I addressed my last to the *Magazine*, and as it failed to appear, I am timid about trying it again; however, here goes to tell you and the Brotherhood that we are once more sailing in smooth waters, after the great storm on the "Q," which tried every plank in the stout old Brotherhood ship, and Glad Tidings Lodge, No. 233, with the rest. We lost some members but those who remain will do to the to. Brothers who are high paid, what do you think of firemen who receive \$1.40 a day, supporting families and paying the heavy assessments imposed on us by the strike, and are still good members of the Order? Well, that was the case in many instances on this road, so therefore, I think I am justified in doing a little blowing about the members of the B. of L. F. on I. C. R. In reading the July number of the *Magazine*, I read with interest and surprise the article on the Reading railroad, and I pause and wonder and say, can this be true? Is this the United States of America, and are the so called men who have surrendered their charters like cowards, Americans? It is true, nevertheless, and it makes me thank God I am a Canadian; for hear ye brothers, such an aggregation of pirates would not be allowed to pursue their hellish system of plunder in Canada one minute, and the curs who, at the nod of a Bonzano surrendered their charters and their manhood, are not worthy the name of Americans, and the Brotherhood of Locomotive Firemen is well rid of such barnacles. But, to change the subject to something pleasanter to contemplate, we will look on federation an accomplished fact, and I say in the name of the members of the B. of L. F. here, welcome federation. Another thing which meets our unanimous approval is the proposition to change the name of the Order, and as it is a matter which is red hot now, don't let it lay over till the next convention, but put the matter before the Order now and let our Order be known by a name that will embrace engineers, firemen and hostlers. "Brotherhood of the Footboard," about hits the mark I think, and a vote on the subject by subordinate Lodges should soon be in order. Make this an accomplished fact and we can say "what's the matter with our Brotherhood? Why, it's all right—you bet!"

Yours in fraternity,

Pop.

SOMERVILLE, MASS., July 6, 1889.

Editor Firemen's Magazine:

It was with pleasure that I read Bro. George R. Nichols' letter in the July number. I, like him, love true manhood, and I have gone one step further than he has, I have asserted it by calling for my final withdrawal card from Division 61, B. of L. E., and right here let me say that I have received no answer to my call. I have no desire to pose as a martyr, as some of the letters, communications, etc., would have us believe to be the cause of all such actions when they come from the members of the B. of L. E., but because I consider that a member of the B. of L. F. in

the B. of L. E. is regarded as a dangerous character, I have withdrawn. It is not a month since I was told to be "a man or a mouse," the speaker hoping that such a remark would make me give up the B. of L. F., I suppose, but, my brothers, the remark stung me to the quick, for I knew that I could not be a man in the B. of L. E. and retain my membership in the B. of L. F. It did not take me a great while to decide that the place for me, and others like me, is where we are treated and used as men in every respect, where compulsory laws are not needed to make men, where men are considered as such by their integrity; when the true qualifications of a man are true manhood, and such a place I have found to be Brotherhood of Locomotive Firemen. I consider myself no longer a member of the B. of L. E. by the old saying, "silence gives consent" to my application for a final withdrawal card. I find that our members would do well to read "Hall's Great Q Strike," and post themselves on the standing of the Brotherhood on that occasion, and read the *Magazine* thoroughly from beginning to end, and then they would not be taking back water on any subject relating to themselves or their Order. The idea of a fireman saying he is not "posted on the vital questions of the day," when he has the *Magazine* to read, is absurd, to say the least. You, by your non-perusal, give moral support to the idea that the B. of L. E. men are expounding, to-wit.: that you are hot-headed because of ignorance. The idea of a B. of L. F. man saying, "I don't know," but "so and so said so," when if he reads his *Magazine* he could say so himself with proper emphasis.

Charles H. Trenholm, of 57.

SCHRIEBER, ONT., April 14, 1889.

Editor Firemen's Magazine:

It has long been my desire, owing to the interest I have felt in the B. of L. F., to say a few words for the good of the Order through the columns of the *Magazine*. In travelling through the country I find many of our members very dilatory. They take little or no interest in the Lodge on meeting nights. They have some "engagement up town," and can't attend. I have visited where Lodges had forty, fifty, and as high as sixty members, and hardly enough would attend to hold a meeting. They are a hinderance to our Order. No wonder the B. of L. E. can keep us in. We don't know anything, and don't try to find out anything. When a brother comes along, eight out of ten don't know whether he is a Brotherhood man or not. If he has a card, they don't know whether he found it, or how he came by it. He may be beating the Brotherhood or he may not. They don't know, and they let him go by. Boys, some of you ought to take a tumble to yourselves, and do something to promote the welfare of our Order. A great many, after they have fired a year, join the Brotherhood to get a B. of L. F. pin on, and that is all they amount to. These fellows make good weak-kneed men for the B. of L. E.

O. Stopp.

Personal.

LODGES 100 and 160, were well represented at the organization of No. 317, at Henderson, Ky.

As SECRETARY of the Board of Adjustment of the Santa Fé system, Bro. Ben Williams is doing himself great credit.

D. J. BYRNES, of J. B. Maynard Lodge, No. 183, is universally known to be O. K. on all occasions and in every emergency.

W. E. BUTLER, Master of No. 94, though of light avoirdupois, measures up to the full stature of a Brotherhood man.

J. M. AND R. V. DODGE, now of Ramona Lodge, No. 386, are, as always, in the work of promoting the welfare of the Brotherhood.

FRED KELER, of Bayou City Lodge, No. 146, is a worker. The Lodge maintains its high standing and progress is its watchword.

H. L. BRIGGS, of Gulf City Lodge, No. 115, is justly known as the "old reliable," and can always be found on deck when wanted.

H. L. WALTERS, of Kaw Valley Lodge, No. 313, is a Brotherhood man of sterling qualities of head and heart. Such men are always in demand.

W. J. SHARP, of Lodge 159, is receiving the congratulations of his friends consequent upon his promotion from the left to the right hand side.

THE members of Lodge 306 are congratulating Bros. Danforth and Miller, who have laid aside the scoop and are now rendering efficient service as engineers.

J. C. MUZZY is one of our most active workers in New England. He fully comprehends the mission of the Brotherhood and does a good man's part toward fulfilling it.

E. WARE BOYD, Master of Ramona Lodge, No. 386, has exchanged the cab for the drug store, but his duties as a pharmacist, have not divorced him from the Brotherhood, in which, as ever, he is a dandy.

THE boys at Nashville were agreeably surprised with a visit from Bro. M. D. Tyndall, one of the old-time members of that Lodge, who is now located at Atlanta, Ga. Bro. Tyndall is always thrice welcome at Nashville.

TOM EDDINS, Esq., Travelling Engineer of the F. F. C. I. N. railway of Mexico, is a man of such generous qualities that he is ever ready and willing to extend courtesies to railroad men in good standing. He is their friend and well-wisher.

WE have it from Arizona, that Bro. Blaney, of No. 91, delegate to the Atlanta convention, is about to lead to the altar an accomplished lady whom he has selected for his bride. The boys are arranging to celebrate the event with becoming *ecstasies*.

HAVING served faithfully as Receiver of W. H. Thomas Lodge, No. 159, Bro. J. L. Enoch has been promoted, and is now running a passenger transfer engine in the Nashville yards. Bro. E. was just 21 years old when promotion came to him, an eloquent testimonial to his push and merit.

THE following from a local paper is reproduced with pleasure: "Geo. C. Watt, a young engineer on the T. P. & W., whose motto is 'say nothing and saw wood,' and do the best you can with what you have got, has lately been promoted to passenger engineer. He was given engine No. 38 to pull the pay car, run specials and extra passengers. Merit will win." Bro. Watt represented W. F. Hynes Lodge, No. 48, at the Atlanta convention, and is still an honored member of that Lodge.

C. F. SANBORN, of 306, (better known as Uncle Tom) visited his Lodge at Concord, N. H., in May last, and was cordially received. Bro. S. is running on the St. J. & L. C. He is a true Brotherhood man, and says the B. of L. F. is good enough for him.

THE "Pinching Bugs' Union," at Perifia Dios, is said to be a great institution. The first degree was lately conferred on Vice Grand Master Hannahan, and he has been in poulitice ever since. All the members are supplied with victual sticks and ple cards.

T. J. ROBERTS, Master of E. C. Fellows Lodge, No. 143, fills the bill of member and Master of the Lodge in a way that leaves nothing to be said in the way of ungenerous criticism. Members visiting the Pacific Coast will find in Bro. Roberts a warm friend and a courteous gentleman.

CHARLES H. TRENHOLM, Boston Lodge, No. 57, has been made President of the Steam Railroad Men's Protective Union. This organization is gotten up for all classes of men engaged in the steam railway service. The new Order is booming, and Bro. Trenholm is the right man to make it aggressive and efficient.

An Interesting Occasion.

Saturday evening, June 22d, was a gala day for the members of Just in Time Lodge, No. 149, New York City. The grand officers were in attendance, and a programme of unusual interest had been arranged. During the course of the meeting Mr. E. J. Rauch, Engine Dispatcher of the Elevated Railway, presented the Lodge on behalf of the Nathan Manufacturing Co., a model of their latest improved Injector and a model of their patent Lubricator. The presentation address of Mr. Rauch was particularly felicitous, and did that gentleman great credit. Grand Master Sargent responded happily, as he always does, in behalf of the Lodge.

Grand Master Sargent next awarded the Lodge, in behalf of the Grand Lodge, the first prize for having secured the best list of *Magazine* subscribers for 1888, which consisted of a draft for \$80, the price of four officers' chairs, the Lodge having preferred the cash. The next presentation was a gold watch to Peter Wetzel, the faithful *Magazine* Agent, who captured first prize as agent in the contest for 1888. The watch was suitably inscribed, and was presented by Bro. Sargent in a very complimentary address.

The meeting then adjourned to assemble at the festive banqueting board near by. All the good things of the season had been collected for the delectation of the eye and the palate, and it was remarked that all the guests distinguished themselves by displaying a zest and relish worthy of the occasion. Lean members grew fat and fat ones grew still. There were toasts and responses, stories and repartee, and the sparkling good fellowship that prevailed made all guests feel that in reality they were in the house of their friends. We regret that lack of space prevents a more complete report of one of the most delightful occasions it has ever been our good fortune to attend.

Leather Lodges.

By reference to the Lodge Directory published in each number of the *Magazine*, it will be seen that the Brotherhood has four hundred and two Lodges. The showing is eminently satisfactory. To build up these Lodges, to advance the welfare of the Order, maintain its influence and broaden its field of usefulness, is the mission of the *Firemen's Magazine*. How well it has accomplished its work has been repeatedly told by its contemporaries, and by them assigned a front place in the list of publications of the period in its advocacy of questions bearing directly or remotely upon the welfare of railroad employes. The members of the Firemen's Brotherhood are cognizant of the facts, or would be thoroughly advised of them, did they take sufficient interest in the Order, to read the *Magazine* and use their influence to extend its circulation. In numerous instances this is done, and when it is done, it is quite unnecessary to say, that those who engage in the work, are the brainy, influential men of the Order—men who believe in brain power, in intellectual growth, and who know and appreciate the fact, that high achievements lie along the track of intelligence and not of ignorance and apathy. The high purpose of the *Magazine* is to bring the Brotherhood of Locomotive Firemen into alliance with thinking men, to lift it above the plane of platitudes and twaddle, and make it a welcome visitor to the homes of men and women, young and old, who recognize in the present the demand for intelligence, and who comprehend the fact that without this intelligence, no matter how men may struggle, their doom is defeat, or, what is equivalent, non-advancement.

With these preliminary remarks, we recall the fact that for 1888, prizes were offered for the purpose of inspiring Lodges and *Magazine* agents to work for the purpose of extending the circulation of the *Magazine*. Something was done in that direction, but far less than we had the right to believe would be done, and could have been done, if the zeal of the entire membership had been at all commensurate with the importance of the work. To the Lodges which did the least in securing subscribers, a leather banner was to be awarded, and to the agent who distinguished himself by doing nothing or next to nothing, a leather medal was promised. The prizes to the workers have been awarded, the leather tributes to the drones, are still withheld, and an explanation would seem, under the circumstances, to be proper. In doing this, we wish to say there were sixty-six Lodges, with their agents, entitled to leather decorations—won by a total disregard of the interests of the *Magazine*, and therefore indicating precious little regard for the welfare of

the Brotherhood. These LEATHER Lodges for 1888, are numbered as follows:

MAGAZINE, VOLUME 12, 1888.

No. Lodge.	No. Lodge.	No. Lodge.	No. Lodge.
1	144	233	330
2	150	234	331
8	153	236	332
19	157	239	336
20	159	249	352
22	161	256	356
25	180	259	378
30	182	267	379
35	185	274	382
37	190	276	383
40	196	279	384
74	202	282	385
87	207	295	388
92	213	297	389
113	220	318	391
126	225	819	
135	232	324	

It must be remembered that these sixty-six LEATHER Lodges had each a *Leather Magazine* agent, and that all were entitled to leather prizes. To make the banners and the medals represent the astounding nothingness of results, was the perplexing question. If the prizes were to be large in proportion to results, there was not leather enough in the market to meet the requirements, for each banner would have to be the size of an elephant's hide; if on the contrary they were to be sufficiently small to represent nothing, in the way of subscribers, then the hide of a flea would be too large for the purpose, and the same was true of the medals. To send banners as large as the mainsails of a 74-gun ship, and medals as large as a round house, was out of the question, and to send the prizes deservedly small, would have made it necessary to send along a microscope. As a result, the prizes have not been awarded. Instead we send to each of the Lodges, and to each *Magazine* agent an urgent request to come to the front and work for the current volume of the *Firemen's Magazine*. We are ambitious that at the close of the year 1889, there shall not be a leather Lodge, nor a leather *Magazine* agent in the Order—and to help on the good work, commencing with the July number, we will send the *Magazine* for the remainder of the year for the sum of fifty cents, and those who would like to pay \$1.00 for the entire volume, beginning with January, 1889, can have the back numbers sent to them. We are persuaded, if the *Magazine* agents will take hold of this matter, even at this late day with becoming earnestness, splendid results will crown their efforts, and the agents of the *Magazine* should be assisted in their work by the whole membership of the Lodge and this assistance will be promptly and cheerfully given, in every case where the membership is animated by a desire to advance the welfare of the Order.

The office of Magazine Agent we esteem as one of very great importance. He has

the interests of the *Magazine* committed to him by the laws of the Order, and if energetic, he can make himself specially useful. If, on the contrary, he takes little or no interest in the *Magazine*, neither solicits subscriptions himself, nor appoints, as he has a right to do, assistants in the work, he should be unceremoniously relieved of his office and some one should be appointed who has some comprehension of the merits of the *Magazine*, of the good it has accomplished, and who can estimate prudently its future usefulness to the Order. The *Magazine* is a Brotherhood enterprise, its success is a Brotherhood success, and in demanding for it the best efforts of the Order to extend its circulation, we have only the good of the Order in view.

No More "Calls."

The attention of some of our Receivers is called to the fact that the laws of our Beneficiary Department were materially changed at our late convention, and that the new laws took effect on the first day of February last. Some of them, not seeming to be aware of this fact, allow their Lodges to be suspended for non-payment of assessments, and when notified of such suspension arouse from their Rip Van Winkle sleep and indignantly protest that they received no *call* from the Grand Lodge, and that they were waiting for such *call* before sending the money. To these Receivers we commend the reading of the Constitution of the Order. There is no penalty attached to a perusal of its pages, and the fact will be disclosed that the *call* system has been abolished for the past six months. Under the present system collection is made quarterly, in advance, and Receivers pay all assessments levied by the Grand Lodge *out of the treasury*. No *call* is issued. An assessment is levied, notice of which is published in the *Magazine* and forwarded by circular to each Receiver, and on receipt of such assessment notice he is required to make his returns to the Grand Lodge. As the Receivers herein alluded to are not the kind that read the *Magazine*, their friends will oblige us by calling their attention to this statement.

Lost.

On the 4th or 5th of July, Bro. C. W. Cheeseman, of Connecting Link Lodge, No. 25, Boone, Iowa, lost his receipt book between Salida and Denver. It contained his credentials as delegate to the First Biennial Convention of the B. of L. F., held at Atlanta; also two letters, one from R. D. Bushnell, Master Mechanic of the B. C. R. & N. R. R., and one from R. Ingalls, Master Mechanic of the C. & N. W. R. R. If presented by anyone to obtain favors of a B. of L. F. brother, please take it up and forward to Bro. Cheeseman, at Boone Iowa.

A Special Train and a Large Meeting.

On June 23d, Vice Grand Master J. J. Hannahan, instituted Itasca Lodge, No. 401, at two Harbors, Minn. The event was the cause of general rejoicing and was celebrated with a trip to Duluth, Minn., where a large meeting was held under the auspices of the Lodge at that place. General Superintendent Pope of the Iron Range road placed a special train at the service of the Brotherhood, an act of courtesy which evinced a generous recognition of its purposes and which the boys will gratefully remember. The special train was pulled by Bro. A. Shoemaker, of Vigo Lodge, No. 16, who is now on the Iron Range, and the time made was eloquent of Bro. Shoemaker's efficiency at the throttle. We extract the following report of the affair from a local paper:

A very important meeting was held last evening at the Knights of Labor hall, West End. Delegates were present from all the Lodges of the railway Brotherhoods of all roads running into Duluth. It was the largest meeting of the kind ever held in Duluth or in this section of the northwest. The meeting was addressed by Vice Grand Master John J. Hannahan, of Chicago, of the B. L. F., on the general welfare of the organization and especially on the status of the organization in the grand federation of railroad employes. A lodge of the L. F. D. was organized at Two Harbors, Saturday night, and a special train was given the employes of the road without charge by the management of the Duluth & Iron Range railroad to come to Duluth yesterday to attend this meeting. The train reached Duluth about 4:30 yesterday afternoon. This shows a much more liberal spirit of the Iron Range road at this time than was manifested some two years ago, when the employes were not allowed to run a hand car over their tracks to attend a meeting of this nature at Duluth.

Meetings on the Erie.

On Thursday evening, June 20th, we held a meeting at Hornellsville, N. Y., under the auspices of H. G. Brooks Lodge, No. 169. A session of unusual interest was held although the attendance was not as large as might have been desired. We found the members active and on the alert for the good of the Order and from the discussion that was brought out during the evening it was manifest that No. 169 in point of intelligence, occupies high rank among our subordinate lodges.

On Saturday evening the 21st inst., a meeting was held under the auspices of Deer Park Lodge, No. 1, at Port Jervis, N. Y., and a most interesting time was had. There was a large attendance, several adjacent lodges being represented, and the time was spent most profitably in the discussion of subjects pertinent to the occasion.

Grand Master Sargent delivered an eloquent address which won him the plaudits of all. The members of Deer Park Lodge, No. 1, we found to be well abreast of the times. They are cordial and enthusiastic and the man who carries the proper credentials need have no misgiving as to the kind of welcome he will receive at their hands.

A Universal Complaint.

Almost daily we are in receipt of letters from members complaining that they are unable to hear from the officers of their Lodge. The matter has gotten to be a universal nuisance. In some instances the officers are at fault, but this is not always the case. Indeed, such complaints not infrequently came from members who never corresponded with their Lodge at all, or, if they did, never waited long enough to receive a reply, or, what is worse still, never called at the post office for their mail.

Some time ago we received a letter from Bro. Simon Parker, of Midland Lodge, No. 147, in which complaint was made that he had written to all the officers and several members of his Lodge and that he was unable to hear from any of them. He expressed himself as being discouraged by the indifference shown him and appealed to the Grand Lodge to ascertain the cause of such apathy on the part of those charged with the affairs of the Lodge. His letter was written from Dallas, Texas. It was promptly answered by the Grand Lodge. In about ten days the letter was returned, as no such party could be found. It was then mailed to his *Magazine* address and returned as before, and we presume that Bro. Parker is now scoring the Grand Officers because they do not answer his letters. This kind of business makes us heartily tired. It is a waste of time and energy that might be devoted to better purposes. While we are willing to give patient consideration to all complaints, and apply the remedy if at our command, we haven't got time to make wild goose excursions or to find out why the U. S. Government doesn't patent some device that will enable a letter to hunt down the party to whom it is addressed, no matter how effectually he may conceal himself or how diligently he may seek to evade the missive.

Picnic at Portage, New York.

The union picnic held at Portage, N. Y., on Thursday, June 20, under the auspices of Lodges 12, 169, 379, 316, 99, 121, 227, 242 and 326, was one of the triumphs of the season and was much enjoyed by all who had the good fortune to be in attendance. The picnic ground was on the line of the Erie road at a point on the bank of the Genesee river, overlooking a fine cataract which was an object of ceaseless interest and admiration. There were special trains from Buffalo, Rochester, Binghamton, Elmira and other points, and a large concourse of people gathered to do honor to the occasion.

There was music and dancing and almost every other festivity known to pleasure seekers. One of the principal features of the occasion was the regulation picnic basket, which was of a size to evoke smiles from those who were patiently awaiting for the

"spreads" to make their appearance. Grand Master Sargent made himself unusually agreeable among the ladies. He flitted from basket to basket in a manner to indicate that he was not a spring chicken at the business.

During the afternoon there was an intermission in the programme and Grand Master Sargent delivered an address on the aims and works of the Brotherhood, which was received with frequent demonstrations of approval.

The ladies are entitled to great credit for their interest in the matter. They not only supplied all the dainties and substantial, but were there themselves to bear testimony with their wealth of smiles to their devotion to the Order.

A happy day was spent and the verdict was universal that the picnic was in all regards a gratifying success.

The Adopted Daughter.

One of the most interesting, instructive and harmonious meetings it has ever fallen to our lot to attend was that held Sunday, June 23d, under the auspices of Adopted Daughter Lodge, No. 3, Jersey City, N. J. The hall was well filled with a body of representative Brotherhood men, many of whom were visitors from adjacent lodges. After the regular order of business was exhausted, Grand Master Sargent delivered an address upon the vital questions of the hour which evoked the heartiest enthusiasm. The Grand Master was followed by a number of others and some telling speeches were made. Master Martin presided over the Adopted Daughter Lodge like a veteran. He maintains the most perfect order without the slightest exertion and if the meetings we attended is to be accepted as a fair sample, the Adopted Daughter Lodge can boast of parliamentary discipline second to none in our Order.

We found the membership profoundly in earnest, both aggressive and progressive, and amply qualified to guard the interests of the Brotherhood in that locality.

CUSTODIANS of the protective fund of subordinate Lodges are required to submit a report of their collection of said fund at the first regular meeting in October, and regularly thereafter at the first meeting in the last month of each quarter. They are also required to forward a duplicate report of same to the Grand Secretary and Treasurer, as provided in section 215, page 62, of the constitution.

Unknown Addresses.

JOHN DOBRICHOSKI—Supposed to be a locomotive engineer. Inquiry for his whereabouts comes from Bohemia, and any information regarding him should be directed to John Given, Division Superintendent, C. R. I. & P., Railway, Des Moines, Iowa.

This Department is for the exclusive use of the Grand Lodge of the Brotherhood of Locomotive Firemen, and will contain all Notices of Dues and Assessments, and other Official Notices, Reports and Statements emanating from the Grand Lodge. All Lodges and members of the Order should note carefully each month the contents of this Department.

AUGUST, 1889.

Assessment Notice for August.

OFFICE OF GRAND LODGE, B. OF L. F. }
TERRE HAUTE, IND., August 1, 1889. }

ASSESSMENT No. 5, \$2.00.

CLAIM No. 109. J. W. Dorsey, of St. Joseph Lodge, No. 43, died of Tuberculosis, May 30th, 1889.

CLAIM No. 110. H. F. Stearns, of Pine City Lodge, No. 81, died with Softening of the Brain, June 1st, 1889.

CLAIM No. 111. William Kane, of Sunset Lodge, No. 177, died of Dysentery, June 6th, 1889.

CLAIM No. 112. William Diemert, of Peace Lodge, No. 109, was killed by Engine Turning Over, June 10th, 1889.

CLAIM No. 113. James Muldoon, of Capital Lodge, No. 46, died of Paralysis, June 12th, 1889.

CLAIM No. 114. A. J. Hempstead, of Clinton Lodge, No. 84, died of Typhoid Fever, June 24th, 1889.

CLAIM No. 115. J. G. Purvis, of East Albany Lodge, No. 215, was killed by being Run Over by Engine, June 27th, 1889.

An Assessment of Two Dollars (\$2.00) has been levied for the payment of the above claims and the Receiver is required to forward said amount for each member, whose name appears on the rolls August 1st, 1889, as provided in Section 55 of the Constitution, said remittance to reach the Grand Lodge not later than August 20th, 1889. Any Lodge failing to make returns as above provided will stand suspended from all the benefits of the Order, as per Section 54 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. & T.

Acknowledgments.

ELMIRA, N. Y., June 24, 1889.

To the Brotherhood of Locomotive Firemen:

DEAR SIRS AND BROTHERS:—With feelings of gratitude, I wish to acknowledge the receipt of \$1,500 due me on my disability claim. I also wish to return my sincere thanks to the members of Liberty Lodge No. 242, and Weaver Lodge No. 379, who took such interest in my welfare.

Yours fraternally,

ANDREW FLYNN.

FREEPORT, ILL., June 26, 1889.

To the Brotherhood of Locomotive Firemen:

We hereby acknowledge the receipt of draft for \$1,500 due each of us, as the insurance on the policies of our late husbands. It is with feelings of gratitude that we shall always remember the brotherhood for the kindness and assistance shown us in our bereavement.

MRS. J. A. FLACK.

MRS. W. A. BRUBAKER.

SPRINGTON, PA., June 19, 1889.

Mr. J. W. Ashton, The Dalles, Oregon:

KIND FRIEND:—Yours of June 11, received, also one from "The Dalles bank." I went over to Meadville yesterday and received the money all right. I find in the various experiences of every day life, there are duties devolving upon us which sometimes amounts to a pleasure, such is the duty I now have to perform, in returning to you one and all, my deepest heartfelt thanks for your kindness and sympathy, so freely given in the hours of my affliction and bereavement. The remembrance of your acts will ever be an Oasis in the barren wastes of life's journey. A bright spot in the dark recesses of memory.

Hoping the same bonds of sympathy may ever bind us each to the other in all our trials and afflictions, I remain yours truly,

MRS. C. D. McCURDY.

WILMINGTON, DEL., June 10, 1889.

To Delaware Lodge, No. 231, B. of L. F.:

GENTLEMEN:—Allow me to thank you, and through you, the Grand Lodge, for the prompt payment to me of the money (\$1,500) due me at the death of my dear son, R. Lee Alexander; also, please accept my best wishes for the prosperity of the Brotherhood. Respectfully,

MRS. SUSAN ALEXANDER.

MOOSE JAW, N. W. TER., June 21, 1889.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I desire to return my sincere thanks for the payment of \$1,500, amount due on the policy of my son John E. Holdsworth, of Northern Light Lodge, No. 127.

I also wish to return my heartfelt thanks to the members of Cascade Lodge, No. 312, for their kind expression of sympathy in my sad bereavement. With best wishes for the noble Brotherhood, I remain,

Yours truly,

MRS. G. HOLDSWORTH.

PORTAGE, WIS., June 20, 1889.

To the B. of L. F.:

DEAR BROTHERS:—Allow me through the columns of the *Magazine*, to express my gratitude toward the order for a draft of \$1,500 due me as a disability claim. I sincerely thank those who rendered me assistance during my recent illness. May success crown the efforts of the Grand Officers. Wishing that the Brotherhood may prosper in the future as in the past, I remain your disabled brother,

JOE WEBBER.

LOGANSFORD, IND., July 2, 1889.

To the B. of L. F.:

GENTLEMEN:—I have received from M. W. Jamison, Receiver of Good Will No. 52, a draft for the sum of fifteen hundred dollars (\$1,500) the full amount due me on the Beneficiary Certificate held by my late husband, Henry C. Schwerdman. Please except my sincere thanks which are extended to the members of No. 52 for the kindness shown me in my sorrow and affliction. May God bless each and every one of you and may the brotherhood prosper and be to others as it has truly been to me a friend to the widow and fatherless,

Very respectfully,

MRS. KATE SCHWERDMAN.

LOUISVILLE, KY., June 19, 1889.

To the B. of L. F.:

GENTLEMEN:—I desire to acknowledge the receipt of a draft for fifteen hundred dollars (\$1,500) through the hands of Mr. Jas. C. Weeks, the amount due me upon the policy of my son Joe F. Cain. I desire to return my sincere thanks to the officers of the Plain City Lodge No. 238, for the prompt payment of same and also for the respectful and sympathetic manner in which they assisted in performing the last sad rites at the funeral. God, alone knows how I appreciated all your kindness to me. May Heaven's blessings rest upon you, one and all, is the sincere wish of his Mother and Sister,

BRIDGET CAIN.
ANNIE CAIN.

To the Brotherhood of Locomotive Firemen:

COUNCIL BLUFFS, IOWA, June 14, 1889.

DEAR BROTHERS:—It is with feeling of sincere gratitude I wish to acknowledge the receipt of \$1,500 due me on my disability claim and to sincerely thank the officers and members of Overland Lodge No. 123 for their many acts of kindness to me and my family during my sickness, they have shown their liberality, friendship and brother love which could not be excelled by members of any Order. I also wish to thank Lodges Nos. 20, 25,

45 and 17 for their kind donations to me during my stay at the springs, their kindness will ever be remembered and may God bless each one of us, and may the noble brotherhood prosper and be to others as it has truly been to me. Wishing the Brotherhood a prosperous future, I remain yours fraternally,

CHARLES POOLE.

AURORA, ILL., June 5, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I have received from Frank G. Boomer, Receiver of Self Help Lodge, No. 80, a draft for the sum of \$1,500, being the full amount due me on the Beneficiary Certificate held by my late husband, Charles H. Perdieu, who died at Spokane Falls, Washington Territory, December 14, 1888, from injuries received in a wreck. Please accept my sincere thanks, which I hereby extend, especially to the members of Self Help Lodge, No. 80, B. of L. F. and also, Division No. 32, B. of L. E., for the kindness shown me in my hour of sorrow and affliction; also for the many beautiful floral tributes by the Brotherhood and friends. I also extend my sincerest thanks to the Brotherhood in the West, for their kind care, and especially to J. C. Olson, who went west with my late husband as a brother and companion, who hastened to his relief and proved himself a true brother, doing everything possible to alleviate his sufferings, and to administer to his many wants during his affliction. His kindness, and that of the Brotherhood, shown me, shall ever be remembered and treasured in my heart. May labor ever be honored and blessed, and may the Brotherhood prosper, even while the spider weaves her web in the tyrant's palace, and the owl sings his watch songs on his lofty towers.

Yours very respect'fully,

MRS. C. H. PERDIEU.

KNIGHTSVILLE, IND., May 6, 1889.

To the Officers and Members of Tippecanoe Lodge, No. 36, B. of L. F., Lafayette, Ind.:

DEAR SIRS:—As we had to leave your beautiful city so soon after the funeral of our beloved son and brother, Mark, without a suitable opportunity to express our heartfelt thanks and deepest gratitude toward you, I desire to take this opportunity, in behalf of his bereaved wife and grief-stricken father, mother, brothers and sisters, to thank you as best we may, for the many acts of loving kindness bestowed on the dearly beloved husband, son and brother, in performing the last sad rites toward him. Never before did we fully comprehend the full significance of the doctrine and precepts of brotherly love of your noble Order until we saw them exemplified in your actions toward our beloved husband, son and brother, and in your many acts of friendship and brotherly kindness toward us. Although strangers in a strange city, and among strange people, we found hundreds of friends with warm, loving hearts, ready and willing to clasp our hands with the warmth of heartfelt sympathy and solicitude in our hour of direst and deepest grief, and ready and willing to try to alleviate, by numerous and continued acts of brotherly love, our grief and sorrow. May heaven's choicest blessings forever rest upon your noble Order, and especially upon Tippecanoe Lodge, No. 36, and its officers and members. Nobly have you fulfilled the divine teaching of the Grand Master, who said: "Love ye one another. Bearing one another's burdens." "Whatsoever ye would that others should do unto you, do ye so unto them." Surely you shall have your reward.

Thanking you one and all, individually and as a Lodge, again and again, our earnest prayer is that prosperity, peace and happiness may ever come to you and yours, and that, should the same sorrow come to you, that you may find friends in your hour of sorrow as true and sympathetic as you were to us. I am ever

Your friend,
JOHN W. HEWES.

Beneficiary Statement.

**OFFICE OF GRAND SECRETARY AND TREASURER,
TERRE HAUTE, IND., July 1, 1889.**

To Subordinate Lodges:

SIRS AND BROTHERS: The following is a statement of the Beneficiary Fund, for the month ending June 30, 1889:

NOTICE TO FIREMEN!

Do you have trouble with scale in your boiler, or corrosion from acid feed-water? The Pittsburg Boiler Scale Resolvent will remove and prevent scale formations and prevent corrosion. It contains neither acid or alkali, and is so bland in its nature that it can be used to dress a sore or a burn with excellent results. If you can persuade your Master Mechanic to let you try it, we will send a 30 gallon package without charge and prepay freight, on the simple condition that it be tested against the worst water on the road.

Write for circular to

Pittsburg Boiler Scale Resolvent Co.,
Lewis Building,
PITTSBURGH, PA.

LEGS and ARMS with Rubber Feet and Hands.
MARKS' PATENTS.

In 1884 Mr. Harms became the victim of a R. R. accident which necessitated the amputation of both of his legs. Five months after he provided himself with a pair of Marks' artificial legs with rubber feet. With these he was enabled to walk without the aid of a cane. A short time afterward he was appointed station agent, which he holds at the present time. The labors of this position are arduous, trying and difficult, requiring heavy lifting, much walking and quick movements. Mr. Harms says: "With the Marks' Rubber Feet and Patent Legs I am able to handle boxes, barrels and trunks weighing 125 lbs. I can carry them and place them on a car without help. I can get on and off a train when it is moving at the rate of 15 miles an hour." All persons who have lost one or more of their limbs, or who are acquainted with those that have, are invited to write for a Treatise of 400 pages, which will be sent free. Limbs fitted from measurements with guarantee of success without presence of the wearer.

A. A. MARKS, 701 Broadway, New York.

Railroad Square Patent

VENTILATED DINNER PAIL.

BEST PAIL MADE.

We have many testimonials like the following:

ARKANSAS CITY, ARK., January 15, 1889.

Reardon & Ennis:

Dinner pail arrived all O. K., and would say that it is just the boss for engine men and those who take their dinner or lunch to work with them, and will recommend it to all the boys on 'the line, and hope they will get it from you.

Respectfully

JOSEPH GREGORY, Engine 448.

Size of No. 2 Pail is 9½ in. long by 5½ in. wide by 9½ in. high when locked up
To introduce these Pails until further notice, we will deliver one No. 2 Ventilated Pail, boxed and expressage paid, at any express point in the United States on receipt of P. O. Order for one dollar and fifty cents. Try one.

REARDON & ENNIS,

Sole Manufacturers, Troy, New York.

ENGINEERS' : AND : FIREMEN'S

Time, Expense and Memorandum

ACCOUNT BOOK.

Designed and Copyrighted by E. W. YATES.

A pocket Memorandum Book with rubber-tipped pencil attached, with calendar and pages most conveniently arranged for the engineer or fireman to keep his own daily record of time and miles run, rate and amount earned; also for individual expense account each month and for general memoranda. A certain method of checking with the time-keeper in case of disagreement. It lasts one year and year and every engineer and fireman should have one.

Price, 50 Cents Each, \$20.00 for 50 Copies, or \$35.00 a Hundred.

Send 50 cents for one Copy and obtain the Agency for your Road.

AN INTERESTING HISTORY OF

Dimmick's Kidney AND Bladder Cure!

Having contracted a kidney difficulty while serving in the army in 1864, I was enabled to serve out my time only through the assistance of our regimental surgeon. Returning home in the fall of 1865, I found my old enemy [the kidney trouble] still clinging to me. I placed myself under the treatment of several successive physicians, who gave me temporary relief, but were unable to effect a permanent cure. I paid large sums of money to the different physicians whom I consulted, and tried all the various remedies which promised relief, but to no avail. I continued my efforts until the spring of 1875, my malady in the meantime increasing to such an extent that on several occasions I became unconscious and was confined to my house for several weeks at a time. I was then induced, through the earnest solicitation of a friend, to consult an old and learned practitioner of Chicago, then temporarily located in Binghamton. This physician gave me a prescription in liquid form, of which I used two bottles. The lameness in my back disappeared and I was relieved of the severe pains I had previously suffered. Having experienced such happy results, and feeling my utter helplessness in case of a recurrence of an attack of a similar nature, I decided, if possible, to purchase the recipe for compounding what is now so favorably known as "Dimmick's Kidney and Bladder Cure." The old physician, who was about removing to the Southwest, after some hesitation, consented to dispose of the recipe to me on payment of a considerable sum of money. About two years after the purchase, while acting in the capacity of a railway engineer, I became affected with a prickling sensation in the face, arms, right side and right leg extending to the knee, followed by numbness, or a partial paralysis. This gradually made such inroads that I practically lost the power of locomotion and had no use of my right arm. I was compelled to relinquish my position as an engineer, ran down physically, and became a mere shadow of my former self. The best medical talent abandoned my case as hopeless, and it was the commonly expressed opinion among my associates and acquaintances that I would soon pay the debt of nature. In my extremity, and not knowing the efficacy of the remedy I had purchased, a relative wrote to the physician from whom it had been obtained, for advice, and received the answer that I had in my possession a recipe that was a specific for that difficulty. I at once commenced taking it, and in 75 hours experienced a sense of grateful relief. I continued its use for about one year, taking in that time fifteen of the large sized bottles. This was two years ago and now I am as well and strong as I ever was and run my engine 110 miles a day. I feel that it has saved my life, and I heartily commend it to my fellow sufferers.

A. D. DIMMICK.

Castner & Curran,
General Tide Water Coal Agts.

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the output has increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

Special Announcement to R. R. Firemen!

The results of sales the past year by railroad boys acting as agents for

THE BEST *POLISH* IN THE WORLD.

BAKER'S
TRIPOLINE,

Having been so satisfactory, we will for the balance of this year, ending Jan. 15th, next

—GIVE FIVE PRIZES:—

Viz:—1st Prize, 150 lbs. Tripoline, or a Watch of Equal Value.

3d	"	100	"	"	"	"
4th	"	75	"	"	"	"
5th	"	50	"	"	"	"

Price same as last year, viz: \$2.40 per dozen for 1-lb. boxes. In lots of one-half gross, \$13.00. Lots of one gross, \$25.00.

3 lb. Pails 60 cents each, or \$6.50 per dozen; 5 lb. Pails \$1 00 each, or \$10.00 per dozen.

Cash must always accompany orders to avoid delays and mistakes.

ADDRESS,

The Matchless Metal Polish Co.,
88 Market St., Chicago.

N. B.—We cannot accept but one agent in same locality.

Correct account of sales of each fireman will be kept and award made and announced in next February number of Magazine.

"I would not trade my old Boss case that I have carried for twenty years, for all the watch cases in the world. It has been in many a tight place, and has always come out safe and sound, insuring perfect protection to the works—which are the best—a necessary luxury with us knights of the throttle. If you want a watch, take the advice of an old engineer, and get a Boss."

These cases are guaranteed to last twenty-five years. Many that have been in use for thirty years are still intact. They are made of two plates of solid gold, 14 $\frac{2}{10}$ karats fine, overlaying a plate of composition metal, in such a way as to leave no exposed surfaces. They are stronger, stiffer, and afford better protection to the movements than solid gold cases.

Every genuine JAMES BOSS CASE contains this trade mark stamped in the back. Refuse all others.

SEPTEMBER, 1889.

JOHN LIVINGSTONE AND RAIL- ROAD EMPLOYEES.

In writing of John Livingstone we are required to deal with an individual who is seeking notoriety as an implacable enemy of railroad employes who are members of organizations designed to promote their moral, physical, intellectual and financial welfare. In this age of the world, in this time of intellectual growth, when statesmen and philanthropists, educators and religionists are massing their mind-forces for the purpose of solving social and industrial problems, to find a man of any prominence seeking to retard the march of liberalizing views at once suggests the idea that such a person is a Judas Iscariot, who, for a consideration, more or less, would play the role of traitor. John Livingstone, of whom we write, is seeking notoriety as the enemy of railroad employes, and in so far as this *Magazine* can contribute

to his ambition, it will aid him. It would afford us special satisfaction to put a whip into the hands of every honest, self-respecting railroad employé, that they might apply it, *a la* white cap, to John Livingstone's bare back, and make him yelp like an egg-sucking or sheep-killing dog when caught at its exasperating practices.

John Livingstone, it appears, hails from Campville, Tioga county, New York. In writing about a nuisance which ought to be removed, it is proper to locate it. We do this in John Livingstone's case. We sympathize with the people of Campville, Tioga county, N. Y.

This John Livingstone is President of what is called the "Railway Shareholder's Association." Presumably, John Livingstone is the owner of railway shares. Possibly, his whole estate is in railway shares. Looking at him by the dirty work he is doing, John Livingstone belongs, doubtless, to that everywhere-detestable-class, called misers—sordid, avaricious creatures, and among all honorable men regarded as the objects of loathing and contempt. We do not put the case too strong. We will show that John Livingstone, President of the Railway Shareholder's Association, is so vilely venal, so niggardly mean, that he attacks working men for reasons which brand him a wiser creature, who

" * * * * Sound him with gold.
"T will sink into his venal soul like lead
Into the deep, and bring up slime and mud."

Why does this John Livingstone attack railroad employes? The readers of the *Magazine* shall see. We herewith lay before them John Livingstone's petition to the Inter-state Commission. We apprehend that it will be widely read. It is a precious document.

"The kindly throbs that other men control
Ne'er melt the iron of John Livingstone's soul;
Thro' life's dark road his sordid way he wends,
An incarnation of fat dividends."

John Livingstone's petition tells the story. It serves as a biographic sketch of its author. In some regards it makes its author hideous. It deforms him. His petition exhibits him as a monstrosity—a combination of hog and hyena. But the petition speaks for itself, and here it is:

THE INTER STATE COMMERCE COMMISSION,
WASHINGTON, D. C., July 6, 1889. }

—Railroad Company:

Enclosed please find copy of a petition filed against your company, embracing a statement of charges made by John Livingstone, President, etc., under Section 13, of the Act to Regulate Commerce, approved February 4, 1887, and amended March 2, 1889.

You are hereby called upon to satisfy the complaint or to answer the same, in writing, within twenty days from this date.

For the Commission,

EDWARD A. MOSELEY, *Secretary*.

BEFORE THE INTERSTATE COMMERCE COMMISSION
No. 210.

JOHN LIVINGSTONE, PRESIDENT RAILWAY
SHAREHOLDER'S ASSOCIATION, }
Against

THE DELAWARE, LACKAWANA AND WEST-
ERN RAILROAD CO., AND OTHERS. }

Complaint filed June 29, 1889. John Livingstone, petitioner, in person, Campville, Tioga county, New York.

To the Honorable, the Inter-state Commerce Commission:

The petition of John Livingston, President of the Railway Shareholder's Association, an organization incorporated under the laws of the State of New York, on the 24th day of November, one thousand eight hundred and eighty-three, respectfully shows unto your Honorable Commission as follows:

1. That in the convention of a labor organization, known as the Brotherhood of Locomotive Engineers, which assembled at Richmond, in the State of Virginia, on October 17, 1888, a "Committee on Thanks" was appointed, which on said last named date made their report as follows: [Report.]

2. Your petitioner complains, and on the above named report as the ground for his belief, alleges that in October and November, 1888, the above mentioned railroad companies issued free transportation over some part or portions of their lines to a large number of individuals claiming to be delegates to said convention, many of whom were not, at the time, employes of any railroad company, and to their wives, none of whom were railroad employes at the time, nor included in any of the classes enumerated in section twenty-two of the act to regulate commerce to whom free transportation is authorized; and that such free transportation was used by said so called delegates and their wives in travelling upon said railways, while other persons traveling over the same lines were at the

same time charged the usual fare; that by the conveying free of charge and without the payment of any compensation said so-called delegates and their wives over portions of the railroads of said companies they were guilty of such unjust discrimination as is prohibited by the second section of the act to regulate commerce, and gave undue and unreasonable advantage to a particular class of persons whereby others compelled to pay fare, and other railroad companies, which refused to grant like free transportation, were subjected to such undue or unreasonable prejudice or disadvantage as section three of said act declares to be unlawful.

3. That from February 27, 1888, to January 4, 1889, the members and delegates of the Brotherhood of Locomotive engineers were sustaining a strike by their brethren, whereby injury to amount of many millions of dollars was inflicted upon the public and upon the railroads of the Chicago, Burlington and Quincy system by the payment of monthly sums for the support of the strikers. That the acknowledged motive of many of said railroad companies by giving the free transportation above mentioned, was to conciliate the Brotherhood of Locomotive Engineers, a secret organization, which, holding its annual sessions in secret, arrogates to itself the power of dictating wages and of extorting such favors by threats of strikes, boycotts, and like methods, which have done much harm to the business and railroad interests of the whole country.

And your petitioner, upon information and belief, avers that a large majority of the railroad companies subject to the jurisdiction of your Honorable Commission desire to be relieved from the importunities and threats which have heretofore coerced them to grant such free transportation, and which they ask shall be declared unlawful.

Wherefore your petitioner prays for an order that the railroad companies herein above mentioned, do refrain from granting such free transportation as is charged against them, and that the same be adjudged unlawful, or for such other or further order in the premises as to your Commission may seem just and proper.

Dated June 18, 1889.

JOHN LIVINGSTONE,

Petitioner in person, Campville, Tioga county, New York.

We deem it worth while to analyze the document.

First.—We assume that John Livingstone totally misunderstands the character of the gentlemen who constitute the Inter-state Commission. Men of John Livingstone's mental makeup never did and never will understand high minded, honorable men. They are not built that way. Warped and distorted by venal vices, they measure other men by themselves—dwarf them to lilliputians, pygmean creatures, entitled to no more consideration than so many puppies. Men like John Livingstone have no conception of a liberal construction of law. They are as imperious to logic as paving stones. They howl for the pound of flesh, and John Livingstone would cut it out of every working man's breast, nearest his heart, and, unmoved, see them bleed to death. Possibly he can convert the Inter-state Commission to

do his bidding, but we shall admit it only when the pound of flesh lies quivering in the balance and working men bleed to gratify the tigerish thirst of John Livingstone and his cubs.

Second.—The charge of this John Livingstone, President of the Railway Shareholder's Association, is that certain railroad corporations permitted certain railroad employes to ride free to a convention of their order. This charge brings into view John Livingstone's implacable hate of railway employes' organizations, and organizations of working men generally, and in the intensified meanness of his nature, he seeks to make Congress and the Inter-state Commission parties to his malevolent spirit. He charges that certain railroads did not charge their faithful employes and their wives full fare, or any fare at all, and assumes, thereby, that the Railway Shareholder's Association lost money, something he will not tolerate in the future. Now, by all the gods at once, upon what diet does John Livingstone feed that prompts him to exhibit to the world that he has no more soul than a mosquito, that he belongs to the tribe of blood-suckers whose thirst is never satisfied? Look at the one hundred and eighty thousand miles of railway track that bind the States of this mighty confederacy together. Contemplate the number of trains that go dashing hither and thither across the continent. Think of the nine billions of money invested in the vast enterprise. Behold the army of engineers, firemen, brakemen, switchmen and conductors who attend these trains and make it possible for them to move. Now, then, for the picture—One of the organizations referred to of railway employes asks for permission to ride over these tracks to an annual or biennial convention. These men, by night and by day, in storm and shine, around curves, through tunnels, over bridges, up mountain declivities, ceaselessly in peril, have sought by faithful service to achieve success for the owners, for the Railway Shareholder's Association, and now they ask that a few of their number, only a few, may be carried to a convention free. At this time there appears on the scene John Livingstone. Look at him; look at his at-

titude; scan his features. In every expression there is venality and hate. He protests. He, like Shylock, of whom he is a degenerate representative, appeals to the law. He would inflict penalties upon roads distinguished for magnanimity. He would make generosity a crime. He would have every railroad official as soulless as himself. He would fan the fires of hate until in every breast they burned as fiercely as in his own. He would inaugurate, in this country, eternal hostility between railroad employes and employers, and create wide-spread pandemonium.

Third.—John Livingstone, in his fierce, unrelenting hate of labor organizations, would, if he could, annihilate them in a day, and he surmises that in his petition to the Inter-state Commission he has sounded a key-note—a death knell. He is in alliance with the tiger-shark, Corbin, of the Reading, in his efforts. Corbin flatters himself that he has triumphed over labor organizations where he has Russianized Pennsylvania, and John Livingstone takes courage, and men like Corbin and Livingstone assume that the time is near at hand when American working men will be prostrate under the hoofs of men of their ilk, peons and helots, out of whom has been crushed every aspiration for liberty and independence. We do not so read the signs of the times; we do not so interpret the shadows of coming events. As certain as that the "eternal years of God" are truth's, the Samson of labor is not to be bound nor have his eyes put out by the Corbins and the Livingstones of the period, nor, as we hope and believe, of any other period. Nor do we believe that the Congress of the United States or the Inter-state Commission will play into the hands of the oppressors of labor.

The reference which John Livingstone makes to the strike on the C., B. & Q. will prove barren of fruits. That struggle has passed into history. There was a well-defined principle involved, and Admiral Porter says a "pin is worth fighting for if it involves a principle."

We predict that labor organizations have come to stay. We believe they are wise and beneficent. We believe they mean the incalculable improvement of conditions, and

ultimately, the enthronement of justice, by virtue of which, society, the state and the nation will reap abundant harvests of blessings of contentment and prosperity. They will outlive such moral deformities as Austin Corbin and John Livingstone, and bud and blossom long after graveyard worms and reptiles have held banquets on their decayed carcasses.

.....
 THE announcement that Mr. E. T. Jeffery, General Manager of the Illinois Central, had tendered his resignation, to take effect in October, will be read with regret by every Locomotive Fireman on the entire system. Mr. Jeffery was universally recognized as an eminently fair and upright man, who in his dealings with the employes of the road, sought to find the right and courageously pursued it. It is stated that Mr. Jeffery's entire railroad career has been spent upon this road, which he became connected with in 1859. He has been General Manager for about three years. Mr. Jeffery was born in Liverpool, England, April 16, 1843. He entered railroad service in October, 1856, as office boy for the Superintendent of Machinery of the Illinois Central. He has since been apprentice in the machine shops of the company at Chicago, apprentice in the office of the mechanical draughtsman; mechanical draughtsman and secretary to the Superintendent of Machinery. In 1871 he was promoted to Assistant Superintendent of Machinery. In 1877 he was appointed General Superintendent of the company, and in December, 1885, he was elected General Manager, which position he has held up to the present time. Mr. Jeffery is a son-in-law of Mr. James C. Clarke, formerly President of the Illinois Central, and now President of the Mobile and Ohio. It is not to be presumed that Mr. Jeffery will have an extended vacation, provided he desires to put on the harness again, and most fortunate will be the road that secures his services. But should his withdrawal from the Illinois Central terminate his active railroad career, he will take to his retirement the good wishes of an army of employes for his health, happiness and long life.

.....
 "UNION PACIFIC"—Peace after a domestic brawl.

THE *Mechanical News*, in its special correspondence, captioned "Notes from Abroad," refers to the fact that in the English Parliament "a bill has been brought in to restrict labor in mines to eight hours per day," the clauses in which are as follows: "1. This Act may be cited as the Miners' (Hours of Work) Act, 1889. 2. A person shall not, in any one day of twenty-four hours, be employed under ground in any mine for a period exceeding eight hours from the time of his leaving the surface of the ground to the time of his ascent thereto, except in case of accident or other emergency. 3. Any employer, or the agent of any employer, employing, or permitting to be employed, any person in contravention of this enactment, shall be liable to a penalty not exceeding forty shillings for each offense." None can deny that some such act has been long required as a protection for the men against themselves, if for naught else. The bill is backed by the labor members. The correspondent refers to serious agitations in Germany and other continental localities, and says "the carpenters, masons, copper-smiths, roofers, box-makers, basket-makers and polishers, of Berlin, are gradually going out for a nine hours' day and 60 pfennigs per day; at Prague the tram drivers are out, and public sympathy is with them (it is only recently the Vienna quarrel was settled); in the Kladno district, Austria, over 17,000 men are out on a strike, and riots have ensued among the miners; at Dux and Bruex in Bohemia, the colliers threaten to come out; and in Rome the omnibus drivers have struck. When one finds such general discontent, the question arises, is this the work of Socialists?"

It is needless to say labor is coming to the front in all lands, and those who are oppressing workingmen will hear a hundred Moseses saying "Let my people go," and if the demand and command is not heeded there will be plagues, and ultimately a Red Sea disaster.

.....
 THE Cherokee Cattle Association offer the Cherokee Nation, for what is called the "Cherokee strip," \$5,000,000 for its use ten years, \$500,000 a year. With such figures in view it ought to pay to be a Cherokee, even a half-breed ought to feel happy.

THE SUNDAY QUESTION.

There are some propositions relating to man's moral, mental and physical well-being, which, fortunately, have passed beyond the realm of debate, among which is the statement that man requires one day in seven for rest; rest for mind and body, and it is this fact that stamps the Sinai command, "six days shalt thou labor and do all thy work," with divine wisdom.

The seventh day was called the Sabbath—set apart for rest and for worship. Since the day when Jehovah came down upon the mountain, amidst thunder and lightning, to talk with Moses, and with His own finger wrote His commandments upon tables of stone, the world has moved forward, and as the centuries have come and gone, the movement has gained in rapidity. Empires have arisen and disappeared; powerful nations have gone forth on the pathway of conquest, and of their pomp and power only a few scattering relics remain; their language is dead, but in all their mutations, upheavals and depressions the conquest of mind over matter, the triumphs of genius, the leveling up of the valleys and the leveling down of the mountains, there has been no change, no modification in the primal command, nor the still more primitive laws of man's mental and physical nature, requiring absolute rest from labor at least one day in seven, and those who have created circumstances making a violation of the law necessary have sinned against organic laws of man's nature—laws relating to man's moral, mental, social and physical well-being.

When men come to investigate the subject for the purpose of determining the reason why of this violation of laws, the sad consequences of which are physical and mental wreck and decay and social demoralization, they find in every instance it results from man's inordinate greed, his cupidity, a mercenariness that obscures all sense of justice, and conceiving that gain is the chief good and the chief end of man, proceed, in their mad rush for wealth, with vandal ferocity, and with as little regard for consequences as man-eating tigers.

Against this submerging tide of venality the church has offered a feeble resistance,

for in spite of its protests the employments requiring constant, unremitting toil have multiplied, until at last millions of men, living in lands denominated Christian, have not only no Sunday rest, nor its equivalent on any other day of the week. Their lives present only long stretches of toil without an oasis.

We need not say that the *Firemen's Magazine* is in favor of the Sunday movement. It is a righteous movement, and in consonance with man's mental and physical organism. It is an elevating and a redeeming movement. To create circumstances which deny workingmen rest, will eventually kill, as certainly as to deny them of food. It is a condition that not only kills, but it demoralizes. It not only wearies the hand but it paralyzes the brain and ossifies the heart. It makes men strangers in their own homes, strangers to wife and children and to the hallowed associations which should distinguish the family circle. There is no doubt but that such is the tendency of this everlasting grind, in which of a year of fifty-two Sundays there is not one the toiler can call his own, when he can walk forth in his Sunday clothes to church, to the fields or woods for rest, for enjoyment, to find recuperating pleasures in a world where the Creator is, in all the circling seasons, showering benedictions upon those who have hearts and minds and souls for their appreciation.

The question arises, can we have a cessation of Sunday work for railroad employés? We answer, it is possible, but we doubt the probability of such an era. Circumstances have been created that it will be found difficult to abrogate. The world has been adopting new theories of business, old things have passed away. The present is an era of such immense activity, of such momentum that to get back to old practices is apparently out of the question, and practically impossible. Let us see what railroad officials of high authority say upon the subject. On Monday, evening, February 11, 1889, President H. B. Ledyard, of the Michigan Central Railway, in an address, delivered in the city of Detroit, said:

"The work of running Sunday trains does not simply require conductors, brakemen, engineers and firemen, but it requires train dispatchers,

operators, section men, car repairers, foremen of engine-houses, hostlers and yardmen; in fact, I might say almost the entire force, with the exception of the clerks, to be on duty either wholly or partly. *To this army of working men no day comes for rest.*" (Italics ours.—Ed.) "While it is a rule with every railroad company that no man shall be allowed to go out for work if he has not had enough sleep since his last trip. I refer now to another and higher kind of rest, the rest for the mind and soul; to the day given to a man when he can pull himself together and think what there is behind him and what the future holds for him. Every merchant, every manufacturer, every banker closes his doors on Sunday, and until Monday morning rest is taken. On that day the mechanic, the laborer, has his period of rest, but here is an army of men, on whose conservatism, on whose intelligence, on whose physical and mental condition rest daily the lives of millions of people."—(Italics ours.—Ed.) "Why should they be denied that day of rest, the necessity for which is so imperative. * * * I have stated what is not a fanciful picture of the situation. You will probably ask me for the remedy; that I cannot give. I have struggled my best to decrease Sunday work, and I know that such is the desire of nearly every railroad manager in this country; but circumstances are too strong for them, and whenever anything has been done, it has proved of little avail. A railway company, leaving out its obligation to the public, is in the simplest sense a corporation, which has but one thing for sale, namely, the transportation of persons or property. It must receive its entire income from this one source, and therefore it follows that the company which has the best to sell for the least money can sell the greatest amount of transportation, or in other words, do the largest business, and earn the most money."

Mr. Ledyard proceeds to show the sharpness of competition between railway lines, and how completely the railroads are in the grasp of merchants and shippers and the traveling public, and adds:

"You may blame the railroad companies for doing this, and probably they are not blameless, but behind them stands the stronger force of competition, backed by public opinion. The absolute cessation of Sunday work would not be practicable, or if practicable, might not, perhaps, be wise. It would in many cases entail suffering and perhaps loss. If one of you should be called to-morrow to California on account of the severe illness of some member of your family, you certainly would not feel very kindly toward the railroad company that might land you in Oden on Saturday night and keep you there until Monday morning. These trans-continental trains between the Atlantic and the Pacific, in the interest of the public, in the prompt dispatch of the mails, ought perhaps to be run; but that the amount of Sunday work now going on would be necessary with a change of public opinion, no well-informed person believes."

We regard the foregoing remarks of President Ledyard as a fair presentation of the Sunday question from a railroader's point of observation. It is in consonance with our own observation and reflections. We deem it impracticable to stop Sunday trains. The mail trains must go. To stop them requires the action of Congress. This might be obtained eventually, but it is not in line with probabilities. Perishable freight stop-

ped *en route* would entail incalculable disasters. Turn which way he will insuperable difficulties arise which are readily suggested to every railroad employé.

We italicised this remark in President Ledyard's address, "To this army of working men no day comes for rest." This is the haggard statement, and for this tremendous wrong a remedy can easily be found and applied. The necessity of one day of rest in seven is admitted. The proposition is not controverted. It is axiomatic, pivotal, commanding and convincing. There is not one good reason why it should not be had. Some Sunday trains can be stopped. To this railroad managers assent. All cannot be stopped, hence some men must work on Sundays. Still, the one day rest in seven can be secured for all on some one day of the seven. It will involve the employment of extra men, that is all. It is simply on the part of the railroad manager a financial question. There need be no sentiment in it; there need be no discussion of the Sabbath, of worship—simply a day of rest—and whether it be Monday or Tuesday, or any other day of the week, it will be a day of rest; a day sacred to mental and physical repose, for the recuperation of mind and body, and therefore, in every essential, a Sabbath day. This is practical. The solution of the problem, so far as railroad managers are concerned, is in dollars and cents. Nor do we see in what particular the railroads would be financially inconvenienced. The pecuniary loss, if loss were to occur, would fall upon the employé, and not upon the employer. The employé would wisely sacrifice one day's wages for the vitalizing influences of rest, and if an extra hand took his place, wages would be the same, the sum total for wages would not be increased, and the rest problem would be solved.

DAKOTA is coming to the front in railroad affairs, proposing for the first article in its Constitution that the railroads of the State must carry all members of the legislative and judicial departments, as well as all State militia, at the uniform rate of one cent per mile. It is surprising that the demand was not made for deadhead tickets.

"THE SO-CALLED DIGNITY OF LABOR."

A Chicago paper bearing the title of the *Industrial World and Iron Worker*, in a recent issue prints an editorial article with the caption, "So-called Dignity of Labor." The editor starts out by saying:

A vast deal of nonsense has been written and spoken about the dignity of labor, mostly by men whose daily lives were a perpetual protest against the sincerity and correctness of their laudatory utterances. We insist, on the contrary, that there is no such real thing as the dignity of labor. What dignity is there in tasked muscles and a smirched face? What dignity is there in dropping sweat and a posture of merely physical exertion? What dignity is there in flagging strength and a tired frame? Let us not be deceived. Hardship is the most conspicuous attribute of labor. It is the outcome of the primal curse: "In the sweat of thy face shalt thou eat bread." It is degradation from a higher and nobler sphere of existence. Every adult member of society must work for his support, if he be not in independent circumstances; the many are obliged to labor for their daily subsistence; some are compelled to toil incessantly for the pittance which they earn; drudgery falls to the lot of those who are lowest in the community. A man wishes to complete his work; he is desirous of resting from his labor; he seeks a respite from his toil; he submits reluctantly to drudgery. Labor is hard work; toil is grievous labor; drudgery is debasing toil.

At the first glance, men may be disposed to fall in with the conclusions of the editor of the *Industrial World and Iron Worker*, and render a verdict against labor. Manifestly the editor of *World* draws his inspiration from the dictionary. He glues himself, so to speak, to the word "dignity," as an oyster attaches itself to a rock. He is as conservative as an oyster. His range of vision is limited. He does not see how he can make the term "dignity" play any part in the labor questions of the times. In this he does Mr. Webster, the great lexicographer, serious injustice. Mr. Webster defines "dignity" as "the state of being worthy or honorable; elevation of mind or character; honorableness, nobility of sentiment and action; true worth." That is Mr. Webster's first definition of "dignity." Now, then, we hold that a man at work, engaged in any kind of required labor, is in a state of being worthy, honorable. We hold that labor, work, toil, drudgery, elevates the mind and character of those who engage in it—that it is idleness that degrades mind and character, body and soul; wrecks the man physically and morally. The editor of the *Industrial World* (?) insists upon it "that there is no such real thing as the dig-
